As soon as the actual poles began to stalk down the roads the doubters changed their minds. Under the guidance of Stanley Ricketts, county extension agent at Las Animas, the farmers of the western part of Bent County began to organize a project of their own. Hamman suggested to Ricketts that one project, including Prowers County and the whole of Bent County, would be more economical than two separate projects and might move faster. By invitation some of the Bent-Prowers directors went to a meeting at Las Animas. They not only found the Bent County farmers willing to join the original project, but some Otero County farmers were at the meeting asking to get on the band wagon. A meeting of representatives of western Bent County and of Otero County was held at the courthouse in Lamar and it was arranged that the board of directors should be increased to nine and Bent County should have one of the additional three (there being already two directors from Bent County in the original six) and Otero County should have two directors. These changes were made and an allotment of $303,000 was obtained to extend the lines through Bent County and for a considerable distance into Otero, where the enthusiasm of County Extension Agent Heskett had been aroused by Hamman and Ricketts. Next came the territory around Cheraw, and after that the western part of Otero, and even a short distance into Pueblo County. And then Crowley County asked to join. And now Haswell in Kiowa County and Kit Carson in Cheyenne County are anxious to be taken in. And Hasty and Caddoa, including the work at Caddoa Dam, have added a surprising amount to the demand for "juice" right now with several million kilowatt-hours in prospect later in this year and for several years to come.

If these developments were considered only with respect to the dollars and cents involved (some $675,000) the result would be quite astonishing as well as satisfactory. But the dollars and cents results of Rural Electrification are the least important of these results. Nobody is striving for money dividends on stock as used to be the case when the utility magnates built up their private fortunes. The dividends from electricity on the farm are measured in terms of human comfort and human efficiency. Each individual member has the same opportunity to use this always-ready servant. No longer need a smoky lamp be carried from one dim corner to another. A switch is snapped and the whole kitchen is flooded with light. No more need one stumble dangerously down the cellar steps, balancing a lamp in one hand and a bowl in the other. Another switch and the steps and all the cellar beyond are in plainer view than they would be in the daytime. No longer need one lug buckets of water from the cistern. A faucet is twisted and the water pours out "just like in town." One need not any more trudge shivering in the middle of the night in overshoes and overcoats (and night clothes) out to the brooder-house to make sure that the kerosene hasn't clogged on its way to the heaters and the chicks are chilling. The always watchful electric thermostat is watching the temperature of the brooder as anxiously as a mother hen. No more need the old man exhaust his fairly ample stock of profanity cranking the cold gasoline engine in order to grind some feed on a cold morning. A snap and the electric motor doesn't even wait to yawn. Or it may be that the cows need milking, or it is summer and the milk needs cooling—wherever there is a job to be done this marvelous servant is ready to go to work.

It is true that the tools with which this servant, electricity, works cost money. But through their cooperative association the farmers have made that also available to the individual members.

No little credit is due to the men whose courage and industry pioneer this organization which in a few years is likely to change the whole character of farm life. It is hoped they will receive that credit; for that will be their only reward.

Do Outdoor Sportsmen Spend Money? Are Antipollution Advocates Simply Starry-Eyed Idealists?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

Mr. MUNDT. Mr. Speaker, under leave extended me by the House, I am inserting as a part of these remarks a highly interesting and informative article written by John G. Mock for the Sunday issue of the Pittsburgh Press. Mr. Mock's articles are well known among sportsmen, and the Pittsburgh Press is among those courageous newspapers interested in restoring the hunting, fishing, and recreational advantages of America and in seeing to it that the cause of the conservation of America's natural resources does not become the Waterloo of our civilized advancement. Other civilizations in ancient times have sipped too deeply at the well of industrial greed and the commercialization of all standards of value and the result has inevitably been the decay and collapse of these too-greedy States.

It is long past time that America begin seriously to weigh the results of a public-serving conservation and use of our natural resources against the present-day practice of submerging all other values to the possibility of exacting temporary profits for predatory interests.

DO OUTDOOR SPORTSMEN SPEND MONEY?—SO WHEN STREAM POLLUTERS TELL YOU THEIR MONEY KEEPS WHEELS OF INDUSTRY IN MOTION, SHOW 'EM THE FIGURES

[From the Pittsburgh Press of March 24, 1940]

DO OUTDOOR SPORTSMEN SPEND MONEY? MILLIONS IS ALL

(By John G. Mock)

Step forward, Mr. Sportsman, and take a bow. You are big business—in fact, big enough to be included among the foremost of the Nation.

Few persons realize that those who find pleasure and sport afield and astream play so vital a part in the economic structure of the good ol' U. S. A.

No other group of sports followers begins to approach the vast sum of money put into commerce and industry as that contributed by the outdoors men of the country.

To begin with, there are approximately 8,000,000 persons who acquire a fishing license each year and 7,000,000 individuals who make use of hunting licenses.

Many States exclude women, the aged, and children under certain ages from hunting- and fishing-license requirements. Most States permit the farmer to hunt and fish on his own and adjoining lands free of license obligations. From the coast of Maine to Florida and from California to Washington a vast army of fishermen enjoy their sport in the ocean depths, where no fishing license is needed. A conservative estimate of the nimrods and Waltons of the Nation is 20,000,000.

To reach the rural, isolated, and remote sections where hunting and fishing may be enjoyed, also the vast expanse of the seas on either side, requires transportation in some way or another. Rail and air lines play but a small part in this, the principal method being by automobile.

SOME FIGURES, EH!

Assured that more than one-seventh of the population of the country is engaged in some form of rod and gun activity, it should be reasonably fair to assume that the same ratio holds in arriving at the number of automobiles used in these pursuits.

Based on the national registration, the number of cars involved is 3,608,807. A nominal mileage for a season of hunting and fishing is 500 miles, which means that the almost unbelievable total of 1,804,403,500 miles is traveled to reach hunting and fishing.

Placing the average life of a new car in the hands of the original owner at 40,000 miles, there is an annual buying demand of 45,110 cars used solely for these purposes. At an average price of $600, the sportsmen contribute annually $27,066,000 toward the automobile industry.

When those cars come rolling from the assembly lines they will be equipped with 225,550 tires. In driving the hunting and fishing

miles, placing the average life of the tire at 25,000 miles, an additional 72,172 tires will be required, or a total of 297,722, which is a rather sizable contribution to the rubber industry.

Gas is what makes the wheels turn. On the average of 15 miles per gallon, the sportsmen burn up approximately 120,293,550 miles of the fluid, or, at 15 cents per gallon, $18,044,550. Changing oil every 1,500 miles, replacing the old 5 quarts of new, at 15 cents, brings the total contribution to the oil and gas concerns to $18,816,235.

Assuming that gas and oil taxes are 5 cents per gallon, the sportsmen contribute another $6,087,330 to Federal and State Governments because of their love for hunting and fishing.

FR'INSTANCE, SHOTGUN SHELLS

A sizable figure also may be added for such automotive accessories as inner tubes, batteries, radios, flashlights, tire chains, and others.

Suppose each of licensed sportsmen spends only $25 throughout the year on fishing tackle and arms and ammunition, which is a most conservative estimate, since in many instances it equals the price of only a rod, reel, or low-priced firearm. Those industries are benefited to the extent of $375,000,000. The extent to which some of the individual items are used may be noted by shotgun shells. During a recent year, some 80,000,000 shells were manufactured and fired from scatterguns. At 4 cents each, this item alone runs over $3,000,000.

The same conservative estimate of $25 per year, applied to accommodations at hotels, boarding houses, camps, and other places of habitation when afield and astream, including the cost of camping supplies, adds another $375,000,000.

Total revenue derived through the issuance of hunting and fishing licenses by various conservation departments and Federal migratory bird hunting stamps, according to the latest available figures, is $21,689,024, all of which finds its way back into circulation through salaries of office and field personnel, purchase of game, acquisition of lands, and stream easements for hunting and fishing purposes. Pennsylvania sportsmen alone have purchased almost 700,000 acres of land for public hunting grounds. Expenditures are made for game farm and fish hatchery equipment, propagation of fish and game, and the multiple other activities conducted by the various State game, fish, and conservation departments.

EVEN RED FLANNELS

Sportswear such as hunting pants and coats, woolen mackinaws and sweaters, shirts, socks, gloves, shell vests, hunting boots, sleeping bags, not to forget the good ol' red flannels, are purchased to some degree throughout the year. Licensed or unlicensed, those who venture afield must be clothed. Placing an estimate at $7.50 as the average annual expenditure, and none will deny this is a reasonable figure, hunters must be credited with a yearly purchasing power of $75,000,000.

The same goes for the fisherman in knee and hip boots, waders, ponchos, fishing vests and jackets, raincoats, fishing hats, and the numerous other accessories and gadgets with which fishermen adorn themselves, exclusive of the tackle; thus another $75,000,000 goes toward keeping the wheels of industry in motion.

Motorboats, outboard motors, including the gas and oil to operate them, various other types of boats, camp trailers, and tents are items which add materially to keeping commerce on the move.

Nearly every sportsman uses some kind of binocular, spotting scope, still or movie camera along with films to keep a record of the one which was caught and the location where the big one got away. If but $1.50 per person is expended for such equipment, the total ranges somewhere between thirty and forty million dollars.

After the quarry has been taken, the taxidermist comes into the picture. Here, again, sportsmen contribute hundreds of thousands of dollars—one iron cartwheel per inch of mounted marlin, for instance, soon runs into real foldin' money.

If but one of every 20 sportsmen harbors a four-footed pal—his dog—without considering the price, many of which cost several hundred dollars each, for which but 50 cents per week is spent in food, the surprising figure of $8,750,000 is arrived at. In addition, there are license fees, collars, leashes, kennels, all of which contribute to the welfare of many persons.

Purchase of hunting and fishing lodges and camps and the leasing of such sites puts many additional thousands of dollars into the tills of the Nation.

DON'T FORGET MAGAZINES

Numerous sportsmen's and conservation department magazines are published throughout the country, ranging in price from 5 to 50 cents per issue. Those in the lower brackets approach the million mark in circulation, in which hundreds of thousands of dollars' worth of advertising appears. Thousands of books are purchased annually pertaining to hunting, fishing, and the affiliated sports and activities, all of which play no small part in the everyday life of those engaged in the printing and publishing business.

Pennsylvania has more than 1,000 sportsmen's organizations. Blanketing the country are more than 35,000 of such associations. With an average membership of 100, the members paying an annual fee of 75 cents, it adds $2,625,000 to the benefit of others in postage, stationery, membership cards and buttons, purchase of ranges and fields for shooting and casting activities, winter feeding, campaigns, headquarters for meetings, and contributions to various conservation movements.

Less than 10 of the Nation's leading industries exceed the billion mark in the value of their products. The sportsmen's business equals, if not betters, that of several in this group.

So don't be backward, Mr. Sportsman. When you are asking for pure streams, for instance, just tell you representatives in State and National legislatures that you are as important as the industry which is now polluting your streams.

Mr. Speaker, I think the foregoing article from the talented typewriter of Johnny Mock is especially apropos at this particular time due to the fact that the whole subject of pollution—probably the most malodorous American byproduct of cur laissez-faire policy toward conservation—is still before the Seventy-sixth Congress for final disposition. Happily, this House has already spoken on this subject and it has carried to all America the hope that for the first time in history something more is to be done about pollution than merely to subject it to harsh words and critical speeches in Congress which resolve themselves into such inanities as the original version of S. 685, for example, which did positively nothing to stop pollution, either past, present, or future, but which gleefully bailed out vast appropriations of the taxpayers' money to study the problem. This House, fellow Members, can take pride in the fact that by approximately a 2 to 1 vote we adopted amendments which changes S. 685 from a pollution-protecting measure to a pollution-discouraging measure, and it is the hope of decent citizens throughout the country that the United States Senate will accept in conference the progressive steps written into this legislation by the House of Representatives.

Fortunately for the country, the House conferees are all men of high honor and ability who, being bound by the dual fact that all amendments written into S. 685 were accepted by the committee our conferees represent and the further fact that this House adopted them by virtually a 2 to 1 vote, are certain to fight to the last ditch for the House position when the conference committee meets. The gentleman from Texas, Mr. MANSFIELD, the gentleman from New York, Mr. GAVAGAN, the gentleman from Louisiana, Mr. DEROUEN, the gentleman from New Jersey, Mr. SEGER, and the gentleman from California, Mr. CARTER, comprise a five-man team who will represent the House point of view in conference ably and firmly; it is inconceivable that the Senate conferees will insist on sabotaging S. 685 by attempting to delete from its provisions to restrict and restrain new sources of pollution in America. Should such a travesty unhappily develop, it is hoped that both the Senate and the House will register its resentment at such a surrender to the forces of unrestrained pollution by giving a stunning defeat in roll-call vote to what would then be the worse-than-useless pollution-protecting rhetorical residue remaining in S. 685.

A community confronted with an epidemic of smallpox would have scant regard for the sincerity of doctors who would avow a willingness to treat patients who were ill and to study the evil effects of smallpox but who would stubbornly refuse to vaccinate against the spread of the disease or to cooperate in stamping out new sources of contagion. Americans are not the easiest people in the world to fool once their attention has been called to a suspicious situation. Citizens who would resent such quackery in medicine as described above will equally resent any trickery in legislation should we legislators avow a willingness to spend tax money to study pollution but refuse with equally silly stubbornness to vaccinate against the spread of the problem by at least setting up the moderate and considerate restrictions provided for by the Mundt amendment to S. 685, which would prevent the discharge of new sources of pollution until and unless approved by the board of water pollution control set up in the bill itself. Either we should legislate in honest sincerity to help correct and curb the problem of pollution or without any attempt to deceive our constituents we should defeat S. 685 in a roll-call vote in the event the Senate position of "criticizing, condoning, and continuing" pollution should prevail in conference.

After 150 years, if the regulation and restriction of detrimental discharges of new sources of pollution is too drastic

a step, let us confess that we propose to do nothing about the problem at all and at least save the taxpayers the expense and the disillusionment of a bill which, without the House amendment to control new sources of pollution, is a yellow-backed surrender to polluters and a rubber-stamped approval of legislation which the polluters proudly claim to be "their legislation." This House has shown the way to start solving the pollution problem of America. I trust and hope the Senate will protect the progress which has been made in the present version of the House-amended S. 685.

New York State Shows the Way to Congress—Railroad Lobby Routed by New York State Assembly

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. CULKIN. Mr. Speaker, it will interest my colleagues of the House to know that the members of the New York State Assembly have no illusions about the value of waterways in a balanced system of transportation. New York State dug the Oswego and Erie Canals at a cost of some $230,000,000 and is maintaining them at a cost of $3,000,000 a year, although the tonnage on these waterways is over 80 percent interstate. These canals, one of which runs from Buffalo to New York City from Lake Erie and the other from Oswego on Lake Ontario, have been toll free for more than two generations. For the past 5 years the railroads, including their representatives in Wall Street, have made a tremendous drive to impose tolls on these waterways. This procedure was vigorously opposed by agriculture, labor, and industry, and it never got out of committee until last week.

At that time it was reported out of committee and went to a vote in the assembly, where it was beaten by a smashing vote of 99 to 39. The legislation so beaten, be it understood, was railroad inspired and for the purpose of hampering the operation of the canals and in the long run raising the water rates to the level of the rail rates for the purpose of bringing the ultimate destruction of the State-maintained canals.

VICTORY FOR PEOPLE

This was a popular victory, won by an aroused people. It should give heart to those in Washington who have been fighting the Wheeler-Lea bill, S. 2009.

This legislation prescribes certain death to the Nation's waterways through the medium of regulation of the railroad-minded Interstate Commerce Commission. The Wheeler-Lea bill does not in effect provide tolls on water transportation but under the auspices of the I. C. C. all waterways will be given the kiss of death. Members of the New York State Legislature are to be commended on their vision and loyalty to the farmer, the consumer, and manufacturer.

I want to impress on the House that the attempt to impose tolls on the New York State canals was only an advance-guard engagement. The real battle will come here in Washington when the Wheeler-Lea bill, the objective of which is to wipe out water transportation, comes into the House from conference.

GIVE WHEELER-LEA BILL SAME DOSE

I urge my colleagues in the House to consider that smashing 3 to 1 vote in New York and recognize that the people not only in New York but in the entire country are aroused at the attempt of the railroads to destroy waterways which are the national yardstick on transportation. I urge them to remember that the smashing defeat of the railroad lobby in New York is but typical of what the rest of the country feels about this legislative iniquity known as the Wheeler-Lea bill. The New York State Assembly gave a handsome licking to Wall Street and its railroad lobby and I earnestly hope that this House will likewise carry the banner in the interests of the consumer, farmer, and manufacturer.

Relation of the Bituminous Coal Industry to the Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

LETTER FROM THE SECRETARY OF STATE

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Secretary of State with regard to the effect of trade agreements upon the bituminous coal industry:

MARCH 22, 1940.

The Honorable JENNINGS RANDOLPH,
House of Representatives.

MY DEAR MR. RANDOLPH: In answer to your inquiry and knowing of your interest in the welfare of the bituminous coal industry as it might be affected by trade agreements, I am glad to supply you with the following information.

The relation of the bituminous coal industry to the trade-agreements program cannot be considered apart from the broader interests of that industry in foreign trade. The interest of the domestic coal industry in the normal development of foreign trade is twofold.

First, the coal industry benefits indirectly by improved domestic demand for coal which results from increases in foreign trade in products other than coal. In spite of a not inconsiderable export trade which exists in coal, this indirect interest in exports probably constitutes the greater stake of the coal industry in foreign trade.

In the depression, which was greatly aggravated by the drastic decline of foreign trade following the Tariff Act of 1930, mine employment was greatly curtailed by the fact that heavy industry, a great consumer of coal, was affected more severely than any other branch of production. Railroads, the largest single consumer of coal, likewise were severely crippled by the decline in general prosperity and are greatly helped by increases in foreign trade, which moves to port partly by rail.

Our export trade, which in 1932 amounted to only $1,611,016,000 increased to $3,349,167,000 in 1937. Coal consumed in the manufacture and transportation of goods for export amounted in 1937 to some 15,000,000 man-hours of labor, or the equivalent of full-time employment of more than 11,000 men. In addition, considerable coal was used in the manufacture and transportation of goods not entering into our export trade but the manufacture of which was made possible by purchases from income received by persons employed in export industries. In fact, the benefits go even further because any increase in our foreign trade creates a chain of economic transactions throughout the country, the total effect of which is to increase purchasing power far beyond the volume represented by the original transaction.

The second interest of the coal industry in foreign trade is in the export trade in coal itself, which is of some importance to West Virginia. This trade, mostly with Canada, amounted to some 18,000,000 tons in 1929, fell to 9,000,000 tons in 1933, but increased to 13,000,000 tons in 1937, furnishing in the latter year some 27,000,000 man-hours of labor, of which somewhat over three-fourths was in the bituminous mines. In 1938 exports declined to 11,000,000 tons, primarily as a result of the decline in business activity in Canada, but in 1939 our coal exports exceeded twelve and one-half million tons. In comparison with the foregoing, our imports of coal have hardly exceeded half a million tons in the last 3 years.

The trade agreement with Canada has helped to assure American coal producers continued access to the Canadian market through bindings against increase of the Canadian duties on coal and coke and through removal of the 3-percent import excise tax on duty-paid value which formerly applied to all American imports into Canada, including coal and coke.

As you may be aware, the Canadian Government has been paying to Canadian coal operators freight subventions; that is, rebates

on freight charges, which were considered by American coal exporters as substantially higher than necessary to enable the Canadian operators to compete with American coal. Following the signature of the new trade agreement with Canada, this question was taken up with the Canadian authorities, and it was possible for the Department to obtain definite assurances from the Canadian Government that whenever minimum prices for United States bituminous coal exported to Canada are established in conformity with the provisions of the Bituminous Coal Act of 1937, and whenever the competitive situation justifies, freight subventions that were in force would be reduced to amounts no higher than actually required to meet existing competition from United States bituminous coal. On December 5, 1939, the Canadian Government announced that it was reducing certain of these subventions and withdrawing certain others, the new rates to be effective on December 8 in some cases and shortly thereafter in others. If the minimum prices for American coal exported to Canada are not put into effect, it is understood the Canadian Government is likely to adjust the subvention rates upward.

Exports of coal are considerably larger than imports. Imports, especially of bituminous coal, have never been very great. The few imports of bituminous coal come principally from Canada into Montana, Idaho, and Washington, which are far from the important American coal mines and could be supplied with American coal sufficient for their needs only at great expense. Some of the coal going into these States comes from the Canadian mines owned by American railroads which use the coal in their own operations. As of more direct interest in relation to the trade-agreements program, you are, of course, aware that no concession has been made in any trade agreement on bituminous coal.

Some concern has been expressed in the coal industry regarding the possible effects upon the industry of the concession on crude petroleum and fuel oil in the trade agreement with Venezuela which became effective December 16, 1939. The following information regarding this concession will, I believe, assure you that the coal industry has no real cause for concern in this connection.

The import tax on crude petroleum and fuel oil was reduced to one-fourth cent per gallon in the trade agreement with Venezuela. The amount of imports from all countries at this reduced rate may not exceed in any year 5 percent of the total quantity of crude petroleum processed in refineries in continental United States during the preceding calendar year. Any imports in excess of such an amount will be subject to the full import tax of one-half cent per gallon, which is bound against increase during the life of the trade agreement.

In view of the fact that the amount of crude petroleum and fuel oils which may be imported annually at the reduced rate of tax represents such a small proportion of domestic refinery output, it is not believed that such imports will adversely affect the domestic petroleum and coal industries to any important degree.

The type of crude petroleum imported from Venezuela is much heavier than the average domestic crude and yields principally heavy fuel oil and asphalt. About one-third of the petroleum asphalt used in highway construction in the United States in 1938 was made from foreign crude petroleum. I might add that we export much more crude petroleum and petroleum products than we import, the surplus of exports in 1938, over imports, having been 140,000,000 barrels.

A study by the National Bituminous Coal Commission, published in 1938, indicated that in 1937 the proportion contributed by imports of crude petroleum and fuel oil to the estimated national-energy supply amounted to only 0.6 percent of the total. A considerable part, even of this small proportion, went into the manufacture of asphalt or was supplied to foreign ships' bunkers or was reexported in other forms, and therefore could not possibly have entered into competition with coal.

The concession granted to Venezuela on petroleum constituted an important part of an agreement under which benefits were secured for a broad range of American industrial and agricultural products. These concessions, and those obtained in the other 21 agreements, concluded by the United States, are making a substantial contribution to the protection and expansion of our foreign trade and hence, to the prosperity of domestic consumers of coal. Since you are familiar with the evidence on the benefits of the program which was submitted at the hearings before the Committee on Ways and Means, on the resolution to extend the Trade Agreements Act, I will not attempt to detail that evidence in this letter. As one indication of those benefits, however, you will doubtless recall the figures prepared by the Department of Commerce, comparing trends in our trade with agreement and nonagreement countries, which show that in the years 1938–39 our average annual exports to the 16 countries, with which reciprocal-trade agreements were in operation during that entire period, increased by 62.8 percent, as compared with the 2-year period 1934–35, while exports to countries with which no agreements were in effect increased by 31.7 percent.

In the light of these considerations, I think you will agree with me that there can be no doubt that the coal industry, because of its direct and indirect interest in foreign trade, has an important stake in the success of the trade-agreements program.

If you desire any further information, I shall be glad to endeavor to supply it.

Sincerely yours,

CORDELL HULL.

Meddling Diplomats

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

Mr. THORKELSON. Mr. Speaker, I do not believe anyone familiar with the history of the past 23 years will question the German exposé of the Polish diplomatic documents which reveal that Mr. William Bullitt and others were involved in diplomatic intrigue in Poland.

Our diplomats of 23 years ago were pro-British or pro-internationalist. At any rate, they were anything but real American representatives to foreign countries. A British atmosphere in the State Department was developed when Mr. Bryan, in sheer desperation, resigned because he objected to paying homage to the British Crown. The new crop of diplomats then fooled and fiddled this Nation into the World War, and the State Department is now fiddling and trying to fool us into another war so the Star of David may embellish the White House as the insignia of a world union.

The present childish attempt by the State Department to hand the emigree Polish Government a bucket of whitewash and a brush to paint white stripes on Mr. Bullitt's red background will fool no one, for his philosophy is lauded in radical papers and he is recorded in Elizabeth Dilling's Red Network as a radical and Communist.

I shall now quote from a book which I think every American ought to read, entitled "Propaganda for War," which, if compared with other State papers and records, appears to be very authentic:

> The personal appeal for the enlistment of native propagandists did not end with newspapermen, preachers, teachers, and politicians, but was used wherever contact could be established with a person of importance. The result of this enlistment of articulate Americans can be noticed even in post-war years.
>
> An outstanding result of the practice of capitalizing on friendships was the development, by Americans, of organizations for defense or other purposes, but which actually became centers of pro-Ally propaganda. One of the most important groups in this category was the violently pro-Ally Navy League. The roll call of this league demonstrates the effectiveness of Britain's friends in securing the leaders of American economic life to back moves beneficial to the Allies. Among others it included: J. Pierpont Morgan; Thomas W. Lamont (Morgan); Elbert H. Gary (United States Steel); Harry P. Whitney (Guaranty Trust Co.—agent of Atlas Powder Co. and Hercules Powder Co.); S. H. P. Pell (International Nickel Co.); Cornelius Vanderbilt (Lackawanna Steel Co.); Ogden L. Mills (Lackawanna Steel Co.); Frederick R. Coudert (National Surety Co.); Francis L. Hine (Bankers Trust Co.); Daniel G. Read (Guaranty Trust Co.—H. P. Whitney); Frank A. Vanderlip (president, National City Bank—Standard Oil); L. L. Clark (American Locomotive Co.); and Percy Rockefeller. It would be difficult to assemble a more influential group of native propagandists in any country, and these were only a few of the financial leaders who, through these defense leagues, gave their sympathy to the Allies. ROBERT M. LA FOLLETTE commented on this list: "Shades of Lincoln! What a band of patriots—with their business connections covering every financial and industrial center in the United States. Owning newspapers, periodicals, and magazines, and controlling through business relations the editorial good will of many others. * * *"
>
> Closely allied in origin and objective to the Navy League was the National Security League. This organization was particularly involved in the propaganda of preparedness. There was also the American Defense Society of which Theodore Roosevelt's friend, General Wood, was "the patron saint, the guide, and inspiration." It must be borne in mind that members of these groups did not realize that in addition to their work for defense, they were also assisting British propagandists (pp. 30–32).
>
> The failure of the United States to enter the war engendered considerable anger in Paris and London. Page wrote Wilson that "the unofficial feeling is that the United States must declare war or forfeit European respect." Later, when it became apparent that Americans failed to share this unofficial feeling, there developed the "profoundest depression" among the British. Lord Bertie, in Paris, expressed nonchalance about America's joining the Allies, but privately his remarks were just the reverse. Kitchener said to House that he did not want Wilson "to think that Great Britain either made the request or had a desire for us to enter, but if we considered it necessary to do so, in his opinion it would greatly

shorten the war and would save innumerable lives, not only of the Allies but of the Germans as well." By autumn the feeling among the British was one of open ridicule. Page wrote to Wilson: "The English press, practically unanimously, makes sneering remarks about our Government." (Page, 170–171.)

The President's chief adviser was Col. Edward Mandell House, a man of no unusual ability or intelligence. Although his importance has undoubtedly been exaggerated, he did influence many of Wilson's decisions, and in his role as personal representative of the President he had considerable opportunity to affect the course of events. It was as a negotiator that Colonel House revealed his naïveté. European statesmen "believed the colonel to be influential with Mr. Wilson, * * * and so they courted him and praised his astuteness and the wisdom of his words." Perhaps because he was the son of an Englishman he was particularly responsive to the blandishments of British leaders. Edward Grey, Capt. Guy Gaunt, Sir William Wiseman, and to a certain extent Sir Cecil Spring-Rice, were able to make him believe that he was one of their dearest friends. Consequently they were not forced to deal with him as a representative of a foreign power but as a fellow worker who shared their ideals.

One is impressed by the fact that throughout this entire period Colonel House devoted himself to the advancement of British interests. From the very first he apparently thought that the British cause was "our cause." In 1915 he wrote to Wilson: "The position you have taken with both Germany and Great Britain is correct, but I feel that our position with the Allies is somewhat difficult, for we are bound up more or less in their success * * *." His cooperation with them is rather clearly shown by an incident which occurred in September 1914. A note had been drawn up in the State Department protesting British infractions of international law. "Its terms made the colonel's hair rise; instead, however, of merely recommending that it be toned down, he conceived the more remarkable idea of submitting it first to the British Ambassador. The next day he was in secret session with Spring-Rice over the formidable document * * *." Whenever difficulties arose with Great Britain, House always attempted to secure delay, "and delay was another name for the British diplomacy that was seeking to bring America into the war against Germany." He may not have deliberately attempted to involve the American Government in the European conflict, but certainly he was not active in directing policies so that the United States could be kept neutral" (p. 182–183).

Among Wilson's diplomatic representatives abroad there were very few who escaped the war hysteria. Walter Hines Page, in London, apparently believed all the propaganda without exception. He wrote home of young girls who had been violated by the Germans, of English soldiers whose noses had been cut off, and of Belgian boys who had been mutilated. He was not merely sympathetic with the Allies, but became such a partisan that he forgot he was an ambassador from a neutral country and zealously devoted himself to furthering the British cause. Sir Edward Grey wrote as follows: "Page's advice and suggestions were of the greatest value in warning us when to be careful or encouraging us when we could safely be firm" in dealing with the American Government. His efforts "went to such astounding lengths that some historians, weighing the documentary record which is now available, insist that the diplomat should have been recalled and tried for treason." The President instructed House to remonstrate with Page concerning his partisanship, and in 1916 called him home for the purpose of giving him "a bath in American opinion." Page, however, remained unaffected by Wilson's desires or instructions. One student of the period has recently stated: "* * * the American Ambassador was wholly unfit to represent the United States at London. Not only did his marked partiality for everything British seriously affect his judgment, but his ignorance of international law as interpreted by the American Government made him a striking example of the futility of drafting journalists into the diplomatic service" (p. 185–186).

The result of the increasing aggressiveness of armed merchantmen was a growing unwillingness on the part of submarine commanders to observe the rules of visit and search, which were equivalent to suicide. Before long, even Wilson and Lansing recognized the injustice of the situation. On October 4, 1915, the President wrote to Colonel House: "It is hardly fair to ask submarine commanders to give warnings by summons if, when they approach as near as they must for that purpose they are to be fired upon." On January 2, 1916, Lansing wrote Mr. Wilson: "You will recall the case of the *Baralong* where a German submarine was bombarding a vessel from which the crew had escaped in boats, when a tramp steamer approached, flying the American flag. The submarine remained on the surface and awaited the steamer, which on nearing the submarine lowered the American flag, hoisted the British colors, and with a gun mounted on the stern (a defensive armament according to our early definition) opened fire and sank the German vessel, killing all the crew * * *" (p. 198).

"My Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of submarine warfare and the defensive weakness of underseas craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent government, and is seriously considering instructing its officials accordingly." Such a course would have provided safety for crews and passengers on ships traveling in the war zone, and would have prevented armed vessels from entering American ports except under rules governing men-of-war (pp. 199–200).

"The *U–27* was struck by several shells from the *Baralong* and sank within a few minutes. Some of the crew were able to swim to the *Nicosian*, which had been abandoned by the British. While hanging to the ropes that dangled over the side of this British vessel, several of them were killed by gunfire from the *Baralong*. Four Germans who succeeded in climbing on board the *Nicosian* were hunted down by British marines, who shot them at sight. The commander of the *U–27*, witnessing this cold-blooded series of murders, seized a life belt and leaped into the sea. There he was shot while his hands were upraised in a signal of surrender." (Tansill, America Goes to War, p. 379.) (P. 199.)

These quotations are self-explanatory, and serve to show what leads to unrestricted submarine warfare. Did Great Britain show greater sportsmanship than any other power? She did not, for this is only one of the instances in which the same thing occurred. Did Great Britain observe the laws of neutrality or sportsmanship when it sailed under an American flag to within gun range, and then fired when the flag was struck for the English ensign? This again is only one instance, for that happened time and time again, and was an issue of considerable controversy between our own and the English foreign departments.

This quotation shows clearly that one side is no better than the other, when war is an issue and victory is at stake. I am neither blaming nor condoning either side, but I want to be fair and, above all, I do not want our own people to be misled or influenced by either side, for we can do more good for ourselves and for civilization by remaining neutral. The world today needs an example of human, Christian principles. We cannot establish or perpetuate such principles when joining other nations in mutual destruction of life and property.

British propaganda was very active during the World War and is very active today. Record of this may be found in the Geneva hearings before the Senate—the same book in which the British so-called secret-service letter is printed which appears in the RECORD of October 11. I shall now again quote from Propaganda for War:

The principal outlet for British propaganda in the United States continued to be the American press. All in all, there were probably well over 10,000 writers—Americans—who were preaching the Allies' cause in newspapers, as well as in books, pamphlets, and magazines. In the words of Ambassador Jusserand, "Ce fut une floraison comme on ne vite jamais la pareille." The regular weekly reports which Parker made to the British Cabinet clearly reveal his satisfaction with the assistance being given him by American newspapermen. The following excerpts are typical of that section of his report entitled "Influencing the American Press":

"May 31: The American press as a whole is friendly to the Allies and is anxious to give our point of view.

"July 26: The American press * * * made the most of the news communicated to it, and showed itself very ready to take up any hints in the official communiques, both as to the significance of particular events and as to the general course of the movement.

"August 23: The current week is remarkable for the large number of interviews from British sources.

"September 6: The headlines of newspapers of all shades of opinion have been remarkably open to the military operations of the Allies.

"October 11: The week supplies satisfactory evidence of the permeation of the American press by British influence."

Those who read this and the book on Propaganda for War, by Mr. H. C. Peterson, will note the similarity between this British evaluation of American stupidity and that set forth in the so-called House letter that appeared in the RECORD of October 11. In the letter, the estimated cost of converting an American into a British sympathizer was 53 cents per head, and this book, in my opinion, confirms that estimate.

Now comes Mr. Bullitt, who was very much to the front when the letters signed, "I am, my dear Mr. Litvinov, very truly yours, Franklin D. Roosevelt," and, "I am, my dear Mr. President, very sincerely yours, Maxim Litvinov," exchanged hands, as quoted in the New York Times on November 18, 1933.

Now then, who is Ambassador Bullitt? He was born in Philadelphia, January 25, 1891, the son of William Christian and Louisa Horwitz Bullitt. He was accepted by Moscow as the first American Ambassador to the Soviet Union, and was

perhaps the most outspokenly sympathetic bourgeois who could have been chosen. He was the last American envoy to leave the Union of Soviet Socialist Republics after official relations had been broken off with the fall of Kerensky, and it was President Wilson who sent him back to Moscow during the Peace Conference. With him went Lincoln Steffens, who described their experiences in his autobiography. They went to seek some understanding, Steffens writes. They rode from Petrograd to Moscow with Tchitcherin, Commissar for Foreign Affairs, and Maxim Litvinov—Finkelstein—Assistant Commissar. Bullitt, Tchitcherin, Litvinov, with Lenin nearby, negotiated daily, Steffens writes:

It was a new culture, an economic, scientific, not a moral culture which they saw and the Russians we were conversing with, the heads of the Soviet Government, were talking out of a new philosophy. Bullitt steered his way through an agreement with Lenin and Tchitcherin.

This is part of Bullitt's history, and with this record, can the State Department say positively that he is not involved in the Polish intrigue?

These remarks have been made to call your attention to the diplomatic background of our State Department over a number of years, so that you will not be led astray while apologists are spreading whitewash.

This secret diplomacy is responsible for national unrest, and is helped by a constant bombardment of propaganda in the press, over the radio, and on the screen. This propaganda is nearly all British, as they and their associates control all avenues of publicity except the short-wave broadcast directly from Germany, which reach but very few people in the United States.

Let me now quote from the Washington Post, April 1, 1940:

Trails followed by the Federal Bureau of Investigation, Secret Service, and Post Office inspectors in the coordinated antispy campaign ordered by President Roosevelt at the European war's outset, led agents to propaganda "factories" also, the officials said.

This paragraph is confusing, and, similar to all, has an international tinge. Why not look for the spies, instead of setting up an "antispy campaign?" What is the technique of an "antispy campaign"? The technique is to lead our own investigators off the trail, for "anti" campaigns of all sorts are set up by those who are guilty, to divert the Department's attention to patriotic citizens. Let the Department of Justice look for the spies and look for those who are engaged in un-American activities, and stop these foolish designations which fool no one except the Departments themselves.

He denied any intention by the Justice Department to expose the propagandists merely to discredit war incitement charges leveled against the Roosevelt Aministration in the White Book, but added "* * * the evidence which entails among other offenses bribery, theft, and the distribution of forged documents, conceivably will form part of the prosecution picture in indictments the Department procures for such Federal offenses as espionage."

Referring to the last paragraph, the question may be asked, What information can a spy obtain which he does not have now? If we are to believe the press and conversation on the Hill, it appears that various European governments have been supplied with secret military information over a period of years. Japan bought one of our largest airships, and has been furnished with chemical factories for the manufacture of poisoned gas. In the papers today we are informed that the Army is to turn over the very latest plans to England and France. With this free military information furnished to all governments who ask for it, what else can a spy look for?

The State Department's reticence on the White Book indicated that the administration, for the present, is depending on the emigree Polish Government in France to persuade the neutral world the documents in the book were forged.

Has the State Department reached the point where it now seeks to be absolved from guilt by the emigree Polish Government? And why should the Polish Government, after failure to receive aid from England and from our diplomats, bother itself about washing the sins from our own State Department? The request in itself, in my opinion, is the greatest evidence that our State Department is guilty, and this is particularly pertinent as we compare its policies with the past. The fact is that we were not neutral in the World War, and we are not neutral today. I hope that this attitude on the part of the State Department will not bring about an incident that might raise a disagreeable issue.

The American people should not be deceived by the present Neutrality Act, for it is neutral in name only. The State Department surely knows that neutrality is a self-selected duty of a nation that wishes to remain impartial to all belligerents. No law is required for that, for it depends entirely upon whether we wish to be neutral or unneutral. The Neutrality Act was merely an excuse—a lawful hole, if you please—through which the Secretary of State and the Chief Executive could escape, leaving upon the shoulders of Congress the full responsibility for whatever happened after the act was passed. It gave the American people an opportunity to spend millions of dollars in patrolling a 300-mile zone offshore; and for what purpose? What are these patrolling vessels looking for?

The British warships come and go out of every port from Cape Horn to Cape Barrow. The British merchant ships come and go, armed or unarmed, as they please, with a "welcome" sign when they arrive and a "come again" sign when they leave. It should be clear from this that patrols on the Atlantic and Pacific coasts are not only useless but cannot and do not serve any good whatsoever. The money expended upon this should be saved to the taxpayers of the United States; and, if it must be expended, let it go to those who are out of work—the idle laborer and the idle farmer of this Nation. Let it go to those who, through misfortune or because of old age, are unable to take care of themselves. Given to them, it will serve a good purpose. As the money is now expended, it helps Great Britain more than it does the United States.

Gavel Presented to Speaker Bankhead

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

STATEMENT BY HON. BUTLER B. HARE, OF SOUTH CAROLINA

Mr. HARE. Mr. Speaker, under leave to extend my remarks by inserting a short statement made by me in presenting a gavel to the Honorable WILLIAM B. BANKHEAD, Speaker of the House of Representatives, today in behalf of the Pendleton Farmers' Society, of Pendleton, S. C., I submit the following:

Mr. Speaker, in 1752 a 13-year-old boy, Andrew Pickens, migrated with his father from Buck County, Pa., and settled in the Abbeville district of South Carolina. Later he moved to what is now Oconee County and settled near the Indian settlement of Tamassee. At the age of 22 he was captain in the army of General Grant and displayed unusual courage and patriotism in battle against the Cherokee Indians. He soon became familiar with the life and ways of the various Indian tribes and commanded the friendship of the leaders of the Cherokee, Creek, Chickasaw, and Waxhaw Indians. He became an active, daring, and courageous leader for independence in the Revolutionary War, and was promoted from captain to brigadier general. It is well known in history that Pickens, Sumter, and Marion were the most illustrious military leaders of South Carolina during the Revolution. Among the outstanding conflicts in which General Pickens stood out conspicuously as leader we mention only the battles of Kettle Creek, Cowpens, Ninety Six, Eutaw Springs in South Carolina, and the recapture of Augusta in Georgia. A number of years later he was cited by Congress for his bravery in the battle of Cowpens and presented a sword in recognition of his courageous services.

Following the Revolution he was appointed by President Washington to negotiate with the Indians and successfully effected 10

or a dozen treaties in which the Indians ceded to the United States practically all of the lands south of the Ohio and east of the Mississippi Rivers. In 1793 he served as the first Congressman from that section of South Carolina which I now have the honor to represent.

Although endowed with the great qualities of leadership and possessed with a military genius equal to that of any man of his State, General Pickens devoted all of his time to agriculture when not engaged in rendering a direct service to his State or Nation. In early life he erected a large and commodious home, known as Hopewell, where a number of treaties with the Indians were effected. In dismantling this home a few years ago some of the timbers were preserved, out of which a few gavels have been made by members of the Pendleton Agricultural Society, of which General Pickens was a member. Now, at the request of the officers and members of this association, Mr. Speaker, I have the honor and peculiar pleasure in presenting to you this gavel in behalf of the friends of General Pickens and the Pendleton Agricultural Society. I sincerely trust you will accept it in the spirit which prompted the donors to give this expression of their high respect and admiration for you as a descendent from this section of South Carolina and as one who has been justly honored as a great leader in a great Government to which General Pickens contributed so much in its infancy and early history.

Reciprocity or Retaliation?

EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

RADIO ADDRESS BY HON. JOHN W. BOEHNE, JR., OF INDIANA

Mr. BOEHNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which was delivered by me last night over the radio:

You will probably find somewhere on the instrument which has made it possible for you to tune in on this station tonight the caption "Made in America." In fact, however, your radio is a product of the world because every continent has contributed something to its construction. A few years ago, it was stated by a former Secretary of Commerce that the materials in an ordinary American radio travel a total of 250,000 miles before becoming a part of the instrument which makes it possible for us to enjoy radio programs. That distance is 10 times the circumference of the globe, and seems hardly believable, but irrespective of the distance traveled by the various parts of a radio, the finished product demonstrates the ingenuity of American industry and labor and illustrates the importance of foreign trade. American industry not only produces enough finished manufactures to meet the domestic demand but also has a surplus left over for export. This surplus is by no means insignificant. In fact, it is valued at more than double the cost of the crude materials we import, and from which the finished manufactures are made. This brings the problem of foreign commerce squarely in focus and illustrates the meaning of reciprocity. Our purchases of the products of other countries give them purchasing power with which to buy the finished products we are eager to sell. This is an essential principle of foreign trade that the opponents of the reciprocal trade agreements program do not seem to understand. It is, in effect, the basis of any real reciprocity.

One of my Republican colleagues in the House of Representatives, the gentleman from Michigan [Mr. WOODRUFF], a fellow member of the Ways and Means Committee, recently said over this station that reciprocity was an accepted factor of American foreign trade policy before the present century. That is true, but the gentleman from Michigan [Mr. WOODRUFF] neglected to mention that during the twenties and early thirties the administration then in power made little or no real effort to carry out this policy. In fact, under the effects of the Fordney-McCumber and Hawley-Smoot Tariff Acts, the policy all but disappeared.

Instead of adhering to and carrying out a policy of true reciprocity, our Republican friends raised the tariff in 1922 and again, to excessive levels, in 1930. During the twenties our trade was sustained for a time by the artificial pump-priming method of foreign lending on an unprecedented scale. Following the collapse of this lending program and the enactment of the excessive tariffs of the 1930 act, our foreign trade collapsed as well and literally millions of our people were deprived of their livelihood. In other words, the administration then in power did not practice true reciprocity, and the consequences were disastrous.

The fact is we cannot enjoy anything like our present standard of living without substantial foreign trade, and our reciprocal-trade program, based on true reciprocity, is restoring our foreign trade. It is true that we could continue to exist without a great many of the materials and articles which come from abroad. Our ancestors lived in this country without railroads, automobiles, telegraphs, and telephones, without radio sets, and even without broadcasting performances, but a nation does not readily abandon progress which it has achieved. Nor is it in the least necessary that we now abandon our progress and turn backward.

I want to emphasize the fact that our foreign-trade policy is related not only to the radio which you are using but to your telephone, your automobile, and innumerable other items which contribute to your daily comfort and well-being. Our methods of modern living have been so developed that we depend every day, even for many ordinary conveniences which we take for granted, upon the products of foreign countries. Trade and commerce on a fair and equal basis have been a civilizing influence throughout history.

The purpose and results of our reciprocal trade agreement program have been to make it possible to obtain more of those things which add to our standard of living and in turn to exchange for them things which foreign countries need and of which we have surpluses. When the Congress first passed the Trade Agreements Act, in 1934, it did so on the simple common-sense assumption that if excessive barriers to trade could be reduced, trade would be stimulated. After a period of nearly 6 years the statistical data amply supports this common-sense view. Trade barriers have been reduced and trade has been increased as a result. This conclusion has been checked and rechecked in every conceivable statistical way. Without going into a long array of statistical details, we find the following effects of our reciprocal trade agreement program:

(1) Exports to the countries with which we have made trade agreements have increased, in the aggregate, twice as fast as our exports to other countries.

(2) Exports to the principal individual countries with which we have made trade agreements have in nearly every instance shown a substantially greater rate of increase than our exports as a whole.

(3) The share in our imports into trade-agreement countries has increased in greater measure than the increase in our share of the imports into other countries.

(4) These increased exports, along with greater prosperity, have made it possible to buy from foreign countries more raw materials and other articles, which have contributed to our economic well-being.

By questionable selection of figures, critics have attempted to make out an unfavorable showing of the trade-agreement program. They have attempted to show that both common sense and objective statistical data are wrong; that exports have not increased as a result of lower barriers; but that, on the other hand, imports have increased from such action. Statistical juggling cannot alter the conclusion that trade agreements have been helpful to our whole economic system.

Our critics keep saying that we import products which we do not need or want. They say that the reciprocity proposed by President McKinley, and which they profess to favor, was different from the present program because his kind of reciprocity eliminated competitive imports. The assumption seems to be that a successful program of tariff reciprocity could be carried out by merely swapping free-list articles but leaving our high tariff walls standing. I think President McKinley was more of a realist than this suggestion by die-hard Republicans would indicate. Whenever a thing is imported by a businessman, it is imported to fill what he considers a need, or it would not be imported at all. Under our economic system the judgment of the businessman is a determining factor. If our business people are to continue under a competitive, profit system, they must have certain rights and privileges to determine what sort of business they see fit to engage in. The term "need" is not defined by the opinion of some monopolistic industry or some Government agency, either legislative or executive. The businessman, together with the consumer, are the final arbiters as to what constitutes need. The monopolists would like, of course, to eliminate a part of the supply so that they could fix prices to suit themselves. That is why they sometimes persuade Government bodies to accede to their wishes and adopt trade regulations and restrictions of all kinds, including excessive tariffs. The final purchaser, if left to freedom of action, decides whether or not he needs or can afford a thing. The price factor naturally enters into the equation of what constitutes a need by consumers.

Recently, when my colleague the gentleman from Michigan [Mr. WOODRUFF] went on the air to discuss our reciprocal trade agreement program, his main point was that other countries were making bilateral agreements and discriminating against the United States, although he did not give any real evidence of discrimination. He rather attempted to leave the impression with his radio audience that each of the 1,400 or so bilateral agreements which he alluded to was a discrimination against the foreign trade of the United States.

In the first place, a mere enumeration of bilateral agreements does not mean that there is any discrimination in a single one of them. Discrimination in commerce is a question of fact, and the executive departments of the Government are best qualified to ascertain those facts. In a few cases there may be incidental discrimination in some of the arrangements alluded to by the gentleman from Michigan [Mr. WOODRUFF]. The opposition willfully ignores the fact that every trade agreement negotiated by the United States under this program has eliminated some discriminations. Common sense suggests that the way to eliminate more discriminations is to have more trade agreements. That is the only safe and sane way to get real equality of treatment in foreign trade.

It might be mentioned in passing that the Republicans had the authority to prevent discrimination against American commerce in

the Tariff Acts of 1922 and 1930 and that not a single case was settled by the big-stick method they now suggest. That kind of negative action might be to their credit if they had not increased tariff rates and discriminated against every country in the world in the Hawley-Smoot Act. We did not gain anything from that trade war, which we are now correcting by practicing real reciprocity through the trade-agreements program.

Many of these bilateral agreements alluded to by my colleagues do not relate to commerce at all, and therefore, could not involve commercial discriminations. Moreover, it does not necessarily follow that a country with which we have an agreement discriminates against us just because it makes a clearing agreement or some other arrangement with a third country.

The important point is that we obtain our proper share of trade by quotas, exchange allocations, or any other arrangement. That is substantial equality of treatment, the basis of the reciprocity program. If in a trade agreement we obtain fair treatment, it does not immediately concern us what arrangements other countries make between themselves. If agreement countries discriminate against a third country and cut it off completely, we have no control over that.

In the last analysis, when the opponents of trade agreements talk of some 1,400 bilateral agreements they seem to take the position, when we are not even involved, that the United States should be the police force of the world. They would not only see to it that there is no discrimination against American commerce but they would also attempt to prevent discrimination anywhere in the world. That is a large order and would require far more authority than has ever been vested in the Executive.

At the close of his address my colleague [Mr. WOODRUFF of Michigan] said: "Nations, in trade, are more or less like individuals. When they depart from common sense and common fairness, they depart from success." I am glad that he made that statement. Apparently in an unguarded moment he spoke what most of us really believe. To my mind the rest of his speech was a departure from common sense and common fairness. If we adopted the suggestions made in his address, we would certainly depart from the success already achieved in increased trade through our program of real reciprocity.

W. P. A. Figures

EXTENSION OF REMARKS
OF
HON. GEORGE S. WILLIAMS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1940

EDITORIAL FROM THE WILMINGTON (DEL.) JOURNAL-EVERY EVENING

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal-Every Evening of Wilmington, Del.:

[From the Wilmington (Del.) Journal-Every Evening of April 2, 1940]

W. P. A. FIGURES

Colonel Harrington's announcement that the W. P. A. rolls will be cut by about 700,000 during the next 3 months comes just at the time when Congress is preparing to deal with the relief appropriation for the coming year. And, once again, one is struck with the tremendous difficulties which stand in the way of intelligent treatment of the problem. It seems to be almost impossible to separate the actual facts from the political and emotional confusion which surrounds them.

The American Federation of Labor, for instance, has come out with an estimate that there were 10,572,000 unemployed in February. With other labor groups it can be counted on to fight for larger relief appropriations and more generous payments to the unemployed. Meanwhile, a week or so ago, figures were published putting the total number of jobless several millions lower.

The trouble with these figures is that no one can say for sure which is nearer the truth. We simply do not know the basic facts about unemployment and we shall not know them until the census figures are tabulated next fall, and they will be several months old by that time.

But there are certain things which should be remembered by anyone who hopes to keep a clear head while claims and counterclaims are flying about during the next few weeks.

The first is that the 700,000 who are being cut off the W. P. A. rolls are not being dropped in a lump; they are going off gradually over a period of 13 weeks. The second is that this is a period of the year when employment normally rises and when relief needs normally decrease. The third is that business activity and employment have been gradually rising over an extended period and that even President Roosevelt, confirmed spender that he is, has tentatively set relief costs at a billion dollars lower for the coming year. And the final consideration is that political demands have forced W. P. A. employment to its highest peaks in the months just before every recent national election, regardless of business conditions, employment, or actual need.

Congress could help matters enormously by insisting on fuller and more accurate information and by returning administration of relief to State and local authorities who are much better informed on the situation in their own communities. Pending that, the least it can do is to make its way carefully through rival claims and make appropriations fit relief requirements rather than the needs of a political campaign.

The Livestock Situation

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1940

RESOLUTIONS OF THE KANSAS LIVESTOCK ASSOCIATION

Mr. REES of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the Kansas Livestock Association at its twenty-seventh annual convention, held in Wichita, Kans., March 6, 7, and 8, 1940:

Be it resolved, That:

I. We are opposed to legislation, local, State, or National, which tends to increase the cost of distribution of agricultural products by imposing discriminatory taxation upon any legitimate form of business.

II. In view of the large volume of importation of livestock, livestock products, fats, oil, and other commodities competing with our industry, that adequate tariff protection be accorded our domestic products, also that Congress continue its vigilant guard against importation of livestock and its products from Argentina and other countries infected with disease. We also urge Senate ratification of trade treaties by two-thirds majority.

III. Mounting taxes are slowly confiscating property and strangling business. The tax burden on agriculture must be lightened and equalized. We recommend that values on all farm property be lowered in view of the lower evaluation on utility and urban property.

IV. We recommend that Kansas take steps to solve its water problems through a long-time, State-wide program of building ponds, of the enactment of suitable laws, or of providing for surveys of watersheds and engineering studies for developing definite plans to secure conservation through storage or preventing run-off; and that the State highway department and county commissioners cooperate in putting this program into effect.

V. We reiterate our previous attitude favoring a truth in fabric law.

VI. We approve and commend the regulations and activities of the State livestock sanitary commissioner in supervising community sales of Kansas.

VII. We offer our continued opposition to the off-market buying of livestock by packers, as tending to depress livestock prices and condemn as an unfair monopolistic trade practice the present policy of packers engaging in feeding livestock for the purpose of manipulating market prices.

VIII. We contend that the recent interpretations of the Wage and Hour Administrator would deprive the livestock and meat industry of the flexibility as to hours that Congress intended to provide processors of agricultural products who are confronted with the problems of seasonal production as outlined in the Fair Labor Standards Act of 1938. We are further convinced that these interpretations would create new costs to be borne by the producer. We therefore protest the interpretations contained in Interpretative Bulletin No. 14 and ask that they be withdrawn and said act clarified.

IX. We commend the spendid work being done by the National Live Stock and Meat Board in increasing the consumption of meat, and urge stronger financial support be given this Board. We also urge that producer organizations interested in greater consumption of meat use the National Live Stock and Meat Board for this purpose.

X. We urge continued effort toward the adoption of more uniform sanitary regulations between States.

XI. We recommend continuation of a constructive program for the elimination of Bang's disease.

XII. We urge the Kansas Legislature of 1941 to provide funds necessary to provide proper rehabilitation of the physical plant of the animal husbandry department of Kansas State College.

XIII. We reiterate our indorsement of the McCarran antitheft bill and commend the work of the National Brand and Theft Commission.

XIV. We recommend that the President appoint a standing transportation committee, consisting of five members, to make a comprehensive study of transportation facilities in Kansas, and submit their findings to the board of directors.

XV. We respectfully request the legislature to provide means to the end that a comprehensive system of brand inspection be inaugurated at the earliest possible time.

Kenneth Kline, chairman; C. W. Floyd, W. H. Burke, Dan Casement, Ludvig Nelson, Francis Arnold, John W. Briggs, Roy W. Ellis, W. J. Brown, Earl Kielhorn, Bert Culp, E. C. Carp, J. T. Price, Will Condell, H. G. Hille, Senator W. E. Ireland, Senator William Schmidt, Representative Wayne Rogler, O. W. Lynam, Jess W. Greenleaf, E. L. Barrier, R. F. Brock, Chester Davis, Dr. C. W. McCampbell.

Keep the Record Straight

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

Mr. SPRINGER. Mr. Speaker, it is highly important that we keep the record straight. It has been said on many occasions, "Let us look at the record." That is a sound statement and that is good advice. Let us look at our national record which covers the past 7 years, which has been the record of the present administration, and let us see what it discloses. Seven years ago we had approximately 11,000,000 of our people who were unemployed. Today we have approximately 11,000,000 of our people who are unemployed, although many, many billions of dollars of the people's money has been ruthlessly spent in order to aid the unemployment situation and to create jobs for our people. The truth is that all of the vast sums of money which have been spent to reduce the unemployment situation has amounted to temporary relief only. The fatal mistake made by the administration now in power is in making no effort to stimulate industry and business in order that it might be enabled to permanently employ the unemployed in private business and industry. The continuance of the payment of a dole to people without encouraging business and industry has created a vast public debt which is now in the aggregate amount of more than $42,000,000,000 in direct obligations.

This stupendous debt which this administration has created is making necessary the levying of more and higher taxes upon our people. These taxes have reached such great proportions that the breaking point has almost been reached.

It is surprising that there is an apparent lack of interest in the people who are going to have to pay the bills. When I refer to the people who will have to pay the bills I refer to all of the people, because the hidden and indirect taxes which are now imposed upon the people reach every citizen in this country—the rich and the poor, the employed and the unemployed, and the W. P. A. worker, and the businessman, and the banker—and all are called upon to make their contribution in an amount equal to approximately 25 percent, or the sum of 25 cents out of every dollar, in the discharge of the tax burden. That means just this: That out of every dollar we earn approximately 25 cents thereof is absorbed in the payment and discharge of the taxes which have been levied upon us. I shudder when I think of the average wage earner in my congressional district who seeks to support his family and to educate his children, who receives the sum of $20 for his week's work, and that almost $5 of his week's earnings are required for the payment of the hidden and direct taxes imposed upon him, because these hidden taxes are paid when we buy bread, flour, meat, clothing, and every other essential and necessary commodity required by our people. That tax is imposed for the purpose of obtaining money with which to meet the debt created by the huge spending program inaugurated by the present national administration. May I say that I do not propose to vote for any appropriation of money which will tend to increase the taxes upon the people in my congressional district in the State of Indiana; that would merely deprive the average family of those things which they need and which they are now unable to buy because of the high taxes? We wonder why the high cost of living. The answer is, the taxes which are hidden and which we must pay when we buy. We thereby obtain less food and less clothing for the money we spend than we would be able to obtain if those hidden taxes were not imposed upon us.

Thus we complain of the high cost of living, but it is merely the high taxes involved which makes the high cost of living apparent to us. These hidden and concealed taxes are a burden upon every class of our people—the rich and the poor alike; every citizen must pay them when he buys the necessaries of life. With the head of every average family in the State of Indiana paying out $200 or more each year in discharging the hidden and indirect taxes imposed, I do not propose to vote to add any additional burden upon him. The fact, and it is a fact, that some of our people do not have to pay income taxes, and that they are not required to pay any taxes upon either real estate or personal property, it does not follow that they are tax exempt—because they have to pay the hidden taxes upon food and the necessaries of life when they buy. The tax is involved in the cost price of the article, and the people have to pay. Therefore, we have the answer to the question: "Why does it cost so much to live?" This applies to every class of our people.

Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein a splendid editorial written by Mr. Leo Kinman, editor of the Shelbyville Republican, of Shelbyville, Ind., and which editorial appeared in the issue of March 30, 1940, which editorial follows:

TAKE A LOOK AT THE RECORD

Mr. Roosevelt, in his frequent confidences with the public, is accustomed to say, "Let's take a look at the record."

It's good advice.

While the President would imply that his record in office is all that it should be, there is certainly room for a few rather serious doubts.

For example:

When Mr. Roosevelt went into office, there were approximately 11,000,000 unemployed in this country. Today—more than 7 years later—there is virtually the same stupendous number of unemployed.

Mr. Roosevelt, after an arduous campaign during which he had condemned in no uncertain terms the unthriftiness of the Hoover administration, found that the public debt was twenty billions or thereabouts. Today—slightly more than 7 years later—the country's public obligation is approaching the constitutional limit of $50,000,000,000 and there is some talk of raising this limit to allow further indebtedness.

Candidate Roosevelt talked feelingly of the hungry mouths throughout the country, and the necessity of feeding them. President Roosevelt's only gesture in that direction has been the inauguration of a vast program of public works that has provided jobs at starvation wages, and brought about the creation of an American serfdom.

Mr. Roosevelt had a farm program. But that program has brought about no more permanent solution of the actual farm problem than had been hitherto tried. Moreover, it has been discovered that in many cases the "relief" was concentrated in the hands of farmers who actually needed no relief. Regardless of whether or not that was the intent, it was the result.

The record shows, moreover, that adverse legislation has discouraged every trend toward normalcy. Labor and industry have been the constant victims of the administration's inane attempts to solve their differences.

Labor and industry have been in the same boat with reference to the administration's reciprocal trade policies. They've both been forced to compete with cheap imports that come into the county duty free.

The record reveals, after a close scrutiny, that the country is in no better shape today than it was 8 years ago. Further, it reveals that the morale of the people, placed by circumstances in the lower brackets, is at a lower ebb. It reveals, in addition, that the chances of youth now to attain the success that American youth one time expected as its rightful heritage is steadily diminishing.

That's the record.

It's a record that President Roosevelt, never accused of overmodesty, may ask the people to consider as justification for his asking the highest office within their power to bestow for a third term.

Americanism

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1940

ADDRESS BY FRANK J. MACKEY

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address on Americanism, by Hon. Frank J. Mackey, candidate for Congressman at Large, State of Illinois, this address being carried by the Illinois Observer, an outstanding paper, which is doing so much to eliminate subversive influences within our border as well as to influence our people to stand for sound and constitutional legislation.

[From the Illinois Observer]

FRANK MACKEY FINDS NEW DEAL ANCIENT POISON

(By Paul Wagner)

LESSON IN AMERICANISM

Frank J. Mackey, candidate for one of the two Republican nominations for Congressman at Large, is widely known in Europe and America as a World War historian. Not so well known is the fact that the royalties on his famous book, Forward March, go to the Disabled American Veterans of the World War, in which organization he is a director of the department of rehabilitation.

His campaign speeches are models of scholarly thought from a plain American businessman, whose proud boast is that as a Chicago precinct captain through all the Democratic landslides of recent years he never has lost his bailiwick to the Democrats.

The following speech, delivered recently by Mr. Mackey, is an historic analysis of new dealism and a stinging castigation of its apologists that should be clipped and preserved by every loyal American.

In an address before the fifth ward regular Republican organization, Frank J. Mackey, candidate for nomination for Congressman at Large, said:

"In 1923, a great President of the United States, Calvin Coolidge, sounded a warning to which few people paid any attention. Referring to our Constitution, he said:

" 'The Constitution is not self-perpetuating. If it is to survive, it will be because it has public support. Such support is not a passive, but an active, operation. It means making adequate sacrifice to maintain what is of public benefit.

" 'The Constitution of the United States is the final refuge of every right that is enjoyed by an American citizen.

" 'So long as it is observed, those rights will be secure. Whenever it falls into disrespect or disrepute, the end of orderly organized government, as we have known it for more than 125 years, will be at hand.

" 'The Constitution represents a government of law. There is only one other form of authority, and that is a government of force.

" 'Americans must make their choice between these two. One signifies justice and liberty, the other tyranny and oppression.'

"HOW COMMUNISTS OPERATE

"In 1930 the Congress of the United States, taking notice of the activities of the promoters of foreign 'isms,' appropriated $55,000 and appointed a committee, headed by Congressman HAMILTON J. FISH, Jr., to investigate the growth of communism and other un-American philosophies of government.

"The Seventy-fourth Congress appointed the McCormack-Dickstein committee, and the present Congress appointed the Dies committee to investigate similar activities. Over a quarter of a million of the taxpayers' dollars has been spent by the Congress in conducting these investigations.

"The facts revealed by these committees are astounding. The evidence reveals that the Communists have this country of ours laid out like a huge battlefield in areas, sections, and divisions, just like in wartime. They have maps and plans of every city, village, and hamlet in the United States, just like your city engineer.

"They have established over 500 offices in our principal cities, with paid secretaries, and from here they send out tons and tons of literature, all of which advocates the overthrow of our institutions by bloodshed. They have over 6,000 highly paid orators preaching communism.

"They have the United States divided into 26 districts, Chicago being No. 8. They own and control outright more than 700 newspapers and periodicals, printed in practically every language. These are printed in the United States and distributed by the United States Postal Service at the taxpayers' expense.

"They have more than 35,000 paid strike agitators fomenting strikes, discontent, class hatred, in every State in the Union. I need not go into detail on the effect these agitators have had on our coal, steel, textile, automobile, oil, lumber, and other industries. Our shipping has been ruined. Our merchant marine is gone. Many great industries are facing bankruptcy.

"WORKING ON CHILDREN

"As bad as these things are, that which we fear most and which is probably the most vicious thing they are doing is the work among the youth of our Nation. Many of our public schools, high schools, and colleges are literally honeycombed with Bolshevik and Communist teachers, hiding behind the skirts of so-called liberalism, ridiculing God, religion, and the family unit, the very bulwark of our Nation. They have established many youth organizations with patriotic-sounding titles that we term 'sugar-coated dynamite.'

"On investigation, we find that the Communists and Fascists have over 100 summer camps in the United States, to which they take innocent little children, from the poorer classes, the illiterate and foreign element, between the ages of 6 and 16, at the time when they can mold the child's mind.

"In the morning they raise the red flag or the swastika; they line up these little kiddies in military fashion and teach them to salute the red flag or the swastika with the clenched fist or the Nazi salute. All day long these innocent children are taught songs of hatred against God, against the flag, against the Constitution, against everything that our generation was taught to respect, defend, and hold sacred.

"You are all more or less familiar with these facts. The newspapers have been carrying the stories every day for several years. But the average American is a rather smug individual. He is indifferent and will say, 'It can't happen here.'

"GENERAL PERSHING'S WARNING

"In a recent article in the American Magazine, General Pershing, our wartime leader, said:

" 'Make no mistake about this: Our Nation is confronted by a crisis as serious as the crisis of the World War. * * * In the war, once we were aroused, we made an effort that astounded the world. Just so today the American citizen, once that he is aroused to the dangers that menace his country, will, I devoutly hope and believe, gloriously redeem his indifference of the past.'

"You will be glad to know that the facts revealed by the congressional committees and the statement by their war-time leader has aroused the men who served under General Pershing in France.

"The Disabled American Veterans of the World War, the Veterans of Foreign Wars, and the American Legion have all gone on record in their national encampments against these foreign isms and, today, while the average American twiddles his thumbs and refuses to see the dangers threatening America, these boys who offered their bodies and their lives in defense of America during the World War are again in the fight.

"The veterans have adopted a real program of Americanism which merits the support of every red-blooded American. The whole idea of this program is to get the facts before the American people. If the people knew that there is nothing new in communism; that it has been tried time and again and has always failed; that some of the American colonies, notably Virginia, were founded as communistic societies, they would stop and think.

"RIGHTS DERIVED FROM GOD

"And what is fascism? It is nothing but the type of government that existed in Europe from the time of the fall of the Roman Empire until the signing of the Magna Carta by King John in 1215. Absolute monarchs, the history books call the rulers of this period. The philosophy of the absolute monarchy and fascism is identical.

"And what is Americanism? Congressman DIES has defined it well:

" 'Americanism is the recognition of the truth that the inherent and fundamental rights of man are derived from God and not from governments, societies, dictators, kings, or majorities.'

"As we turn back the pages of history, we have indisputable evidence that every great nation and every great civilization that was ever built was founded on the theory that the inherent and fundamental rights of man are derived from God. And we find indisputable evidence that every nation and every civilization that denied that these inherent rights of man came from God and has claimed that such rights come from kings, dictators, majorities, or minorities has perished from the earth.

"Turn back the pages of history and you will see where the ancient civilization along the Tigris and the Euphrates perished and disappeared when they abandoned the principles that made them great.

"PYRAMIDS FIRST W. P. A. JOB

"You see the Pharaohs of Egypt building a civilization which in some respects we have not equaled. You see them light the torch of western civilization. Then comes a succession of selfish kings and nobles with excessive taxes that kill initiative. The man of the people had no incentive to work or to lay up for the future, when he knew that his cattle might be confiscated or he himself, his wife, and children imprisoned without his having power to prevent it.

"So a great depression hit the land of Egypt, and you get the first historical records of W. P. A., as thousands of unemployed are put to work building worthless pyramids. You see this great nation go bankrupt and fall to the Persians.

"You see a Greek civilization attain a glorious height in art, architecture, poetry, government, and statesmanship, which has not been equaled in all succeeding ages. Greece owed her glory chiefly to her intellectual independence, the freedom with which her citizens examined all the problems of life and exercised all their faculties of mind.

"AN ORATORICAL DICTATOR

"You see these great people begin a decline when it abandoned the policy of Aristides the Just, and by excessive taxation robbed the weaker allies of their money and their liberties.

"Four hundred years before Christ you see this civilization destroyed when Antiphon, the greatest orator of his time, without the advantages of the radio, persuaded the people to adopt a new constitution which disfranchised them.

"The gilded splendor of ancient Rome holds you enraptured. Then the republic falls because a bunch of scheming politicians sold the people on a dictator. Then you see this great nation, the mistress of the civilized world, go on the dole.

"The first great relief agencies were established. The old philosophy, 'Root, hog, or die' was changed to 'Here is your swill. Come and get it.'

"The people got soft and figured that the government owed them a living. Then you see the hordes of Huns and Goths invading their territory and in 455 A. D. you see the Eternal City destroyed in 14 days of heartless pillage by the vandals from beyond the Rhine.

"You see the modern nations of Europe developing with war, war, nothing but war. You hear the tramp, tramp of the armies of Napoleon. You see the rivers of Europe running red with blood of men who did not know what they were fighting for—thousands of men whose lives were sacrificed to gratify the ambition of 'The Little Corporal,' Napoleon, who rose from obscurity to plunge all of Europe into war, with its terrible aftermath of famine and disease.

"AMERICANS DRAGGED BACK

"You see a group of American colonies, made up of men and women who had fled from the shores of Europe and her everlasting wars, struggling in a savage wilderness, declare their independence of all European connections. You see them fighting for and winning their liberties. You see them throw open their doors for the oppressed of all nations. You see them conquer the forest, conquer the plains, conquer the savages, cross the mountains and build the greatest nation of modern times.

"Then you see them dragged back into the quarrels of the Europe that their forefathers had abandoned. You see the 'scraps of paper' that hurled 60,000,000 men at each others' throats. You see a 'tactical blunder' that wiped out a hundred thousand men and mutilated twice as many. You see famine shriveling the bodies of children and destroying the souls of men. You see the giants of the sea, torpedoes, plunging to their watery graves, while men aboard—our American boys—the flower of American manhood—cling like insects, only to drown.

"You see the poppy fields of France, with row upon row of little white crosses, beneath which lie the mutilated bodies of American boys—their young lives snuffed out before they had yet begun to live. And for what?

"Twenty some years pass. Again you see Europe an armed camp. Steel helmets and sharpened bayonets glisten everywhere in the noonday sun. Huge death-dealing artillery guns bristle defiance on every international border. A hundred thousand modern airplanes, laden with poison gas bombs, designed to wipe out innocent women and children, darken the skies as they hum their song of hate and fear along every European frontier.

"Every nation at war today is governed by a dictatorship. If America should enter this war, we will be required to surrender the liberties which we enjoy. The records show that once individual liberties are surrendered, they are gone, and are not restored when the emergency passes. If the democracy which we now enjoy is to survive, America must keep out of war.

"NEW DEAL ON ROAD TO WAR

"Franklin D. Roosevelt and the New Deal are on the road to war. They are devising means and schemes to nullify the Neutrality Act. They are trying to figure out ways to make loans to warring nations. They are talking about invoking economic sanctions against Japan. They are talking of sitting on the seat of judgment, and officially branding certain people as an aggressor nation. They are meddling in the internal affairs of other nations. They are permitting the paid agents of other nations to meddle in our affairs. This is the road to war.

"War means dictatorship. The radical element in America is supporting the New Deal program because the New Deal program leads to dictatorship. The radicals are united. The basis of unity in radicalism is not love but hate. Radicals love their cause less than they hate those who oppose it.

"The radicals hate the Republicans. The radicals love the new dealers. If the new dealers, who have given encouragement to every long-haired visionary who has shown his face in Washington, and who have encouraged quackery until quackery has become popular, are kicked out in November, America will turn to the right and radicals will pack their carpetbags and go back to Russia.

"America has its choice:

"A Democratic victory means a totalitarian dictatorship, a war to distract popular attention from domestic troubles, a Communist upheaval, and bloody chaos.

"A Republican victory means rigid economy, honest encouragement to private enterprise, mind your own business, and peace."

Neutrality

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

Mr. SHANLEY. Mr. Speaker, I have today introduced a concurrent resolution expressing the full and complete endorsement of the principles and practices of the neutrality proclamation of September 4 wherein the President stated that "the United States is on terms of friendship and amity with the contending powers," and asked for the fullest cooperation in our strict and impartial neutrality. I have pointed out that when the President, acting under the new neutrality laws of the special session, again reiterated this stand in the November 4 proclamation he but reiterated the principles and philosophy of our strict and impartial neutrality.

My intention is to tell the world and especially that part of it that is called belligerent that the United States Congress expects the utmost adherence to the principles of strict and impartial neutrality. I make no effort to conceal my efforts are directed at any contrary inference that nations, belligerent or neutral, may draw as to the real intentions of America, perhaps falsely misled or in doubt because of the utterance of Minister Cromwell of the implications of the alleged archival disclosures from the Polish Government. Irrespective of the truth or falsity of these documents the world must know that since September 4 the American Congress has taken the injunction of strict and impartial neutrality as its most solemn obligation and with its constitutional powers will see to it that every American in or out of the Government, in high or low office, stationed here or abroad, will follow suit.

May I again quote the admonitions of the President of the United States in his radio address to the American people September 3 to this effect:

> I can add to that by saying that I hope the people of the country will also discriminate most carefully between news and rumor. Do not believe of necessity everything you hear or read. Check up on it first.
>
> It is of the utmost importance that the people of this country, with the best information in the world, think things through. The most dangerous enemies of American peace are those who, without well-rounded information on the whole broad subject of the past, the present, and the future, undertake to speak with authority, to speak in terms of glittering generalities, to give to the Nation assurances or prophecies which are of little present or future value.
>
> This Nation will remain a neutral Nation, but I cannot ask that every American remain neutral in thought as well. Even a neutral has a right to take account of facts. Even a neutral cannot be asked to close his mind or his conscience.

While it is true that we must all echo the thought of the President in the paragraph:

> I think that we have every right and every reason to maintain as a national policy the fundamental moralities, the teachings of religion, and the continuation of efforts to restore peace—for some day, though the time may be distant, we can be of even greater help to a crippled humanity.

Belligerents and threatened neutrals ought to understand that America does not envisage any role as the redressor of wrongs. They must not expect an American Galahad.

I add with one change an admirable statement of a realistic Englishman of Victorian greatness, William E. Gladstone, which is most pertinent:

> Is America so uplifted in strength above every other nation that she can with prudence advertise herself as ready to undertake the general redress of wrongs? * * * Is any power at this time of day warranted in assuming this comprehensive obligation * * * that she not encourage the weak by giving expectations but moderate language from aggression on the weak?

In this bill I have placed a definition of what I consider the finest statement ever penned on strict and impartial neutrality, a quotation from Prof. Edwin Borchard, of Yale University, and Mr. William Lage, coauthors of Neutrality for the United States:

Neutrality is an old institution which finds its source in candor, in the obligation to hold the scales even, to remain a friend of both belligerents, to lend support to neither, to avoid passing judgment on the merits of their war. It assures both belligerents that they are dealing with a friend, not a disguised enemy. The belligerents must know who is in the war and who is not. In return for obligations assumed by a neutral, the belligerents undertake to respect his rights as a neutral, including the right to remain out of other people's wars.

Democratic Party Goes Back to Spending Program

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1940

ARTICLE BY GEORGE ROTHWELL BROWN

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal American on April 2, 1940, entitled "Spending Program Resumed, Economy Program Abandoned":

[From the New York Journal-American of April 2, 1940]

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, April 2.—The abandonment by the Democratic majority of the House of Representatives of the early economy program of its own Appropriations Committee, and of the House itself, in fields where November votes may be expected to be garnered, now constitutes a major issue in the approaching Presidential campaign.

Last week's Treasury raid, in increasing funds for C. C. C. and the National Youth Administration together by about $67,000,000, was accomplished without President Roosevelt raising a hand, so far as there is any evidence to the contrary, to stop this reckless squandering.

One of two conclusions is inescapable, either that President Roosevelt did not want to stop this Treasury raid, or that the Democratic leadership of the House has completely lost control of that body when it comes to political spending, notwithstanding the state of this year's deficit, and the grand total of the appalling New Deal national debt.

In either event the American people, as they see this debt approaching the $45,000,000,000 statutory limit, and this country going into the eighth year of a frightfully unbalanced Budget, must now face this incontrovertible fact:

That the only way to stop this orgy of deficit spending is to replace the present spendthrift President with an economy-minded President, of whatever party, and to replace the present spendthrift Congress with an economy-minded Congress.

Unless this shall be done at the November elections, the United States of America faces financial ruin. President Roosevelt and the present Democratic Congress cannot be relied upon.

Spending today in Washington is following the familiar Roosevelt pattern, with the worst apparently yet to come.

The Budget estimate for the National Youth Administration was $100,000,000. Mr. Roosevelt made his customary January showing of spending reform and retrenchment when in his Budget message he cut this to $85,000,000.

The estimate of $280,000,000 for C. C. C. Mr. Roosevelt made a great show of by cutting to $230,000,000. The Appropriations Committee accepted the President's figures in both instances in the bill reported to the House.

When the Treasury raid on these items began, the Democratic leadership in the House could hold in line only 30 or 40 of the overwhelming Democratic majority.

Some strange spectacles were witnessed. PAT BOLAND, of Pennsylvania, Democratic whip of the House, who invariably reflects White House desires, voted for the Treasury raids increasing the items for C. C. C. and N. Y. A. by nearly seventy millions.

In the past, when an administration bill was under fire, Speaker BANKHEAD has taken the floor and voted the White House way. This time he did not vote. Did he and Whip BOLAND know that the increases would not be distasteful to the President? That is their secret.

Democratic Leader RAYBURN voted to support the Appropriations Committee. As leader, that is his duty.

But 14 out of the 25 Democratic members of the Appropriations Committee, which had sponsored the President's own Budget figures, voted in the House to increase them. Eight Democratic committee members voted against the Treasury raid, and three did not vote.

The Ways and Means Committee will have to raise the money to pay these increases, yet is making no effort to do so. But strange to say, nine Democratic members of this committee voted for the increases for C. C. C., and only four voted against the raid.

The Republican record on increases for both C. C. C. and N. Y. A. was nearly 100 percent perfect.

There is only one conclusion to be reached. Mr. Roosevelt doubtless could have stopped these huge increases if he had tried to do so. Apparently he made no effort.

There must be a complete change in the psychology of the White House and Congress if disaster is to be averted. Well, that will be up to the American people to decide come next November.

National Labor Relations Act

EXTENSION OF REMARKS
OF
HON. HARRY N. ROUTZOHN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1940

ADDRESS BY FULTON LEWIS

Mr. ROUTZOHN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extract from a broadcast by Fulton Lewis on April 2, 1940:

Now, the much discussed question of proposed changes in the National Labor Relations Act seems to be heading toward a final show-down, in the House of Representatives, tonight. * * *

As you know, the House has had a special investigation of the National Labor Relations Board under way for some 5 or 6 months * * * that is the so-called Smith committee. * * * About 4 weeks ago that committee finally made a report to the House of Representatives recommending various amendments and changes in the present system, and those amendments, in the regular routine of procedure, were referred to the Labor Committee of the House, for consideration.

The chairman of that committee—Mrs. MARY T. NORTON, the Congresswoman from New Jersey—said at that time that she was vigorously opposed to any changes in the labor law, as it now stands, and most of the members of her committee took the same position, but Mrs. NORTON was called to the White House for a conference with the President, and thereafter she modified that position to some extent. Her committee began holding sessions to study all proposed amendments—the ones proposed by the Smith committee and all others as well—and those hearings have been going on for about 3 weeks.

The committee has approved several minor amendments, one to increase the Labor Board from three to five members, so as to take control out of the hands of two members who now have control.

The strategy behind that has been to provide a few slight corrections, here and there, which will leave the Labor Board very much as it is now, but the hope is that these minor changes will be enough to appease the general Membership of Congress, and to reduce the demand for the Smith amendments.

And that strategy was plainly brought out today when the Labor Committee adopted a motion by Representative WELCH, of California, to the effect that these substitute proposals by the Committee shall be brought to the House floor under what is known as a closed rule; that is to say Mrs. NORTON will bring them up for consideration by the House as a whole only on condition the House agrees to accept them in full, without changes or additions, or reject them, on the same basis.

For your information, that's a bit childish from a practical standpoint, because the only way she can get that permission is by a two-thirds vote of the House as a whole, and the chances are about one in a hundred of getting that. When that fails Mrs. NORTON'S only course is to say that she declines to bring any amendments to the House floor at all, and in that event, Representative SMITH can take the reins away from her, on a moment's notice, by merely getting a petition, signed by 218 Members of the House, which will bring his own set of amendments to the House floor.

From my own poll of the House, there's no question that Representative SMITH can get those 218 signatures. He probably can get them within 48 hours. So the long and short of it is that the present deep strategy work by Mrs. NORTON and the Labor Committee is like a small boy, sitting on the ocean beach and arguing with the tide. Whether she likes it or not, the House of Representatives—one way or another—is going to vote on the Smith amendments.

Now, a great deal has been said by Members of Congress about "organized labor being solidly opposed to the Smith amendments," the C. I. O. has come out against them, with a blanket disapproval, Mrs. NORTON has done the same thing, and a great deal of loose talk has been tossed around in the newspapers, and in radio news, that the American Federation of Labor also is solidly opposed to them.

So in order to check that last angle for you, I spent about an hour and a half today in a personal interview with the President of the American Federation of Labor, Mr. William Green. I went over the Smith amendments with him, one at a time, item by item, and I found these reports are entirely untrue. Instead of being solidly opposed to them, the American Federation of Labor is friendly to a large part of them, and in numerous cases it is vigorously supporting the Smith amendments.

To begin with, Representative SMITH wants to abolish the present Board completely, and set up a new board of three new members in its place, in order to get a change of personnel. Mr. Green said the Federation of Labor is in favor of that one. If it cannot get that, it is willing to take the increase in membership, from three to five members, to accomplish the same general purpose, but the Federation prefers the Smith amendment.

On the proposal to separate the present Board, so that there will be a sort of labor court, distinct and separate from the administrative functions of the Board, Mr. Green told me that he doesn't oppose that particularly. He merely thinks it's unnecessary, because he thinks that would have difficulty getting through Congress. He believes that the troubles which that plan is designed to cure will be cured automatically when the Labor Board is in the hands of men of higher caliber. If it is not cured, he said, the Federation of Labor probably would support that proposal, sometime in the future.

Then there's another proposal, by Representative SMITH, that any striker who is guilty of "willful violence or unlawful seizure or destruction of property" forfeits the right to be reinstated to his job by order by the Labor Board. Mr. Green said the last part of that—"unlawful seizure or destruction of property"—refers to the sit-down strike; and the Federation of Labor is in favor of that much. He said he's a little afraid of the part that refers to "willful violence" because that might be used unfairly. The employer might send thugs to pick a fight with peaceful pickets, and if the pickets defended themselves they might lose their right to reinstatement; but he said that if due protection can be written into the amendment to protect against that the Federation of Labor is in favor of that one, too.

In any event, it's in favor of the amendment, insofar as it applies to sit-down strikes and destruction of property.

On the Smith amendment, to give the employer the right to speak to his employees and tell them his views on unions and labor problems—which the employer cannot do at the present time—Mr. Green said the Federation of Labor is in favor of the amendment. There's a provision there that says that the employer does not have the right to make any statement in the nature of threats or coercion or intimidation, but otherwise he can talk to his employees as he sees fit.

Mr. Green said the Federation of Labor is also in favor of the Smith amendment to give the employer the right to ask the Board for an election among his employees, just as the worker or the union has that right.

And he told me that the Federation of Labor also is in favor of two more of the Smith amendments; one of them gives the courts the power to overrule actions by the Labor Board from the very outset of a given case, even preliminary actions; at the present time the Supreme Court has ruled that the courts can only consider the final decision of the Board in a given case. It cannot go behind that to decide whether the steps that led up to the decision were fair and proper. And the other one has to do with the issuance of subpenas, calling witnesses for a hearing. With certain restrictions, it provides that the Board must subpena all witnesses for both sides in any controversy.

Of course, there are some of the Smith amendments which the Federation of Labor does not approve.

One is a provision that exempts agricultural workers from the terms of the Labor Relations Act. Mr. Green said the Federation of Labor does not believe that the farmer should be required to bargain collectively with his regular farm hands, but he said the Smith amendment on that score is too broad as it now stands. He believes it would take cannery workers and other groups of trained agricultural labor out from under the protection of the labor law.

There's another provision by Representative SMITH that the term "collective bargaining" which is required under the Labor Act—in fact, that term is the backbone of the whole law—it says that collective bargaining means that the employer shall confer with employees and make every effort to reach an agreement with them, but it shall not mean that he must sign a contract with them.

As a matter of fact, that is the situation, really, as it stands today. Mr. Green said he agrees in principle, but he believes that amendment is not necessary, because the policy already is in effect, and he thinks a change in the personnel of the Board will be sufficient guarantee that it remains in effect in the future.

So there it is. The American Federation of Labor does not approve, completely and entirely, of all of the Smith amendments, but it does approve of a large number of them, statements to the contrary notwithstanding.

Correspondence With Secretary Hull Regarding Investigation of German White Book

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

LETTER TO THE SECRETARY OF STATE AND REPLY THERETO

Mr. FISH. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD, I include the following letter I addressed to the Honorable Cordell Hull, Secretary of State, relative to the statements alleged to have been made by Ambassador William C. Bullitt, and contained in the German White Book, and a letter received from Mr. Hull in reply to my request that Mr. Bullitt remain in this country to testify before congressional investigating committees:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 2, 1940.

Hon. CORDELL HULL,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: I have read in the press that Ambassador William C. Bullitt is expected to return to France on the Clipper leaving April 3. In view of the grave charges made in the German White Book, in which Mr. Bullitt was seriously involved, I think it is in the interest of our country that the Ambassador remain in the United States long enough to appear before proper committees of the House and the Senate before which resolutions are now pending, in order to be given an opportunity to officially refute these charges and to defend himself.

If Ambassador Bullitt is the victim of fabricated or forged documents, he should welcome this opportunity to officially present the facts to the Congress and the American people. On the other hand, if he should return before such an investigation can be held it might create a false impression in the public mind.

These charges, emanating from the foreign office of a government with which we are at peace, must be fully answered, and any attempt at evasion would be misleading, and to remain silent would be to give them the stamp of authenticity.

I am convinced that neither you, as Secretary of State, nor any official in the Department of State at Washington, had any knowledge whatever of the statements alleged to have been made to the Polish Ambassador in the United States or regarding the other statements alleged to have been made by Ambassador Bullitt.

I trust you will be able to cooperate, and request that Mr. Bullitt remain in the United States for another 2 weeks so that he may be available to testify before any committee authorized by either branch of the Congress to investigate these charges.

With high regards, I am,

Sincerely yours,

HAMILTON FISH.

THE SECRETARY OF STATE,
Washington, April 2, 1940.

Hon. HAMILTON FISH,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: I have received your letter of April 2, in which you request that Ambassador William C. Bullitt be asked to remain in this country for another 2 weeks in order to be able to testify before a committee of either branch of Congress relative to data contained in the German white paper recently issued.

I may say in the first place that Ambassador Bullitt has succinctly and categorically denied any imputations relating to himself as contained in that published matter. The executive department of the Government has accepted that denial without question. Furthermore, Ambassador Bullitt has been delayed by the illness of his daughter in returning to his post, where he is needed.

In the foregoing circumstances it is not felt that the public interest would be served by delaying more or less indefinitely the departure of Ambassador Bullitt as planned.

Sincerely yours,

CORDELL HULL.

The Secretary of State has declined to retain Ambassador William C. Bullitt here to testify before an authorized committee of the House or Senate and possibly both.

If the German charges are fabricated and forgeries they ought to be exposed. They cannot be salted away with pious

tears of righteousness and by glittering generalities from the White House.

The American people, irrespective of party, are entitled to know the facts regarding the official conduct of our Ambassador to France. It is vital to their security and the preservation of peace to ascertain through an impartial investigation whether our Ambassadors in France and Great Britain represent or misrepresent us, and whether they deem it their main function to promote peace or enter into secret diplomatic commitments to involve us in war.

I do not see how Congress can proceed with the investigation of the German White Book documents without the presence of Ambassador Bullitt, as it would be like playing Hamlet without a Hamlet.

It is to be regretted that such serious charges made by a nation with which we maintain friendly relations is to be left unanswered officially and in detail. Can it be that discretion is the better part of valor for our traveling ambassadors who felt the urge of returning to tell us that a third term is necessary during the war crisis in Europe, but are strangely silent over their alleged efforts to foment it?

The Democratic Party is in the hands of the internationalists and interventionists, and is rapidly becoming the war party in the United States. I hope the Republican Party will meet this issue squarely and without evasion, and let the American people know that it is for American neutrality, peace, and keeping out of Europe's wars. If they do they will sweep the Nation.

A Dean of Legislators

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

EDITORIAL FROM THE BELLE FOURCHE (S. DAK.) POST

Mr. CASE of South Dakota. Mr. Speaker, the dean of the South Dakota Senate died the other day. He was known to many Members of this body, having visited the House on many occasions. His name was L. M. Simons. He was a native of New York State. He served in our senate for 16 years. He became a great parliamentarian and an outstanding legislator in a country which values legislative assemblies. He was a regular delegate to the council of State governments.

I have not asked for this time, however, to eulogize "Si" but to ask for permission to place in the RECORD, which he read regularly, a remarkable editorial from a newspaper of his home town, the daily Belle Fourche Post. I do so because the editorial, although brief, will be interesting to every man who has served in this typically American institution, an elective legislative body.

The editorial follows:

INTRODUCING "SI"

The following editorial tribute to L. M. Simons was published in the Post Tuesday, November 1, 1938, at the time he was making his last run for reelection to the State senate: * * *

BUT HE WON'T TELL IT

Some candidates for public office believe that the campaign is the thing, and for weeks preceding election go about the countryside telling of what they have done or will do in the office they seek. There are others who believe that the people know of their abilities and that there is no need for active campaigning.

Of the last group is L. M. Simons, Republican candidate for State senator from this district. He goes to an occasional political rally if it does not intefere with his regular duties. If he makes a talk he neglects to mention his own fitness for the office he seeks. His words follow the line of the ideals of his party or perhaps explain what free government should mean to a people.

But every now and then some of his supporters, hearing the tub-thumping of the opposition, begin to wonder if somebody shouldn't "raise a voice for Si"—tell voters that he is a leader in the senate. Remind them that last session press representatives, who cover the capitol and see all, voted Mr. Simons the most able man in the legislative body. Recall to their minds that he is a level-headed type of leader who holds high office in every organization to which he belongs, and has held these offices over long periods of years.

For 31 years, Mr. Simons has been treasurer of the South Dakota Bar Association and for 15 years has held office in the State Masonic order. Tell them that for 14 years he has represented Butte and Lawrence Counties in the senate, though this is his first campaign under the new districting combining Butte with Harding County.

One thing of which you may be sure with L. M. Simons is this: He will do his job and do it well, no matter what it is. But after it is over, you will never be able to make him tell you how well he did it. If that's told, somebody else has to do it. * * *

Today we add:

Dear Lord, the above is to introduce Si. He won't say anything for himself; so we're doing it for him. He must be pretty bewildered at the suddenness of it all, but he won't admit it. He will probably act gruff, but that's just Si.

And Lord, he is all the things we said of him almost 2 years ago, plus all the hours he has given his family, his friends, his community, and his State since then. Understand him, love him, as we have.

Governor McNutt's Views on Industry and Unemployment

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

Mr. LUDLOW. Mr. Speaker, businessmen all over the United States have been impressed by the splendid business administration Paul V. McNutt gave to the State of Indiana during the 4 years he served as Governor of our Commonwealth. The more they study his record as a business administrator of public affairs the more pleased they are with it. He reorganized our State government on a basis of economy and efficiency. In many States the educational systems were paralyzed during the depths of the depression by inability to raise funds to pay the school teachers. In Indiana, under Governor McNutt's superb management of the State's finances, all obligations were met and every school teacher received in full the salary that was due on the day it was due. There is no record of any State administration, anywhere, at any time, that was more efficient and more satisfactory in every way than the administration that Governor McNutt gave to the State of Indiana. His administration will bear comparison with the very best.

The latest issue of Mill and Factory magazine carries an interview with Governor McNutt which is challenging the attention of business men because of the sound philosophy it contains. Cooperation between industry and Government is necessary to solve the Nation's unemployment problem, Mr. McNutt asserts.

The interview, which appears in the April issue, is one of a series with outstanding Presidential candidates on the subject of what industry can do to relieve unemployment. By unanimous consent of the House I submit Governor McNutt's interview for printing in the RECORD, as follows:

"Neither industry nor Government alone can solve the problems of unemployment," Mr. McNutt says. "Together, however, they can establish an economic order which will go far toward eliminating this great curse of our machine age.

"First, I believe that our system of unemployment compensation must be extended, benefits increased and waiting period reduced. By maintaining the purchasing power of the temporarily unemployed we can prevent the downward swing of the business cycle from gathering momentum.

URGES REDUCTION IN COST

"Second, industry must, in my judgment, exhaust every effort to reduce the cost of production without affecting the wage scale. That this can be done by increasing the efficiency of worker and machine has been repeatedly demonstrated. That this process, if accompanied by a corresponding decrease in price, so far encourages increased consumption that it actually creates more work as well as raises the standard of living, has also been demonstrated.

"Perhaps the most striking example of this process is the automobile industry. Such results will not be obtained, however,

unless businessmen generally are committed to a genuine competitive system.

"In the next place, industry should take seriously the problem of stabilizing employment. This, of course, is largely a cooperative enterprise. Nevertheless, some progress can be made by those engaged in seasonal production by combining other lines to utilize their labor force throughout the year. Through trade-association agreements designed to balance production, peak periods can be leveled off to permit a more nearly uniform rate of operation.

"The achievements of a few industries are so notable in this respect that similar efforts in others might be expected to yield corresponding gains. Such a program calls for an industrial coordination in which the Government can play a greater or lesser part. Insofar as industry can handle the problem alone, I believe it desirable for government to be as inconspicuous as possible.

MUST ACCEPT BARGAINING

"Finally, I believe industry can go far toward a solution of the unemployment problem by completely accepting two principles: One, the principle of collective bargaining; the other, the principle of government as a cooperating and coordinating agency in our national economy.

"Organized labor is an existing fact in our community. The principle of collective bargaining, as a part of the democratic process, is accepted by the Nation. Industry should also accept it and deal with labor willingly on that basis.

"The Government should not seek to interfere with the normal and proper play of individual enterprise. It has two functions to perform in connection with business and industry. It is obligated, by the very nature of democracy, to preserve the competitive system. This means curbing monopoly and insuring a minimum standard of ethics in competition.

SHOULD PREVENT SWINGS

"It is also bound to maintain such a balance in our national economy as is necessary to prevent violent swings of the business cycle such, for example, as the inflated prosperity of the late twenties and the collapse of the early thirties. This means certain monetary powers and credit controls, as well as spending and investment functions.

"With increased understanding of the complementary roles of business and government in our economic order, with sympathetic cooperation between the two, and with mutual confidence of both, many of the psychological barriers to complete recovery can be removed. Government and business must meet each other half way to preserve the best factors of capitalism and democracy."

Washington Bureaucratic Control of State Agencies

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

ARTICLE FROM THE OREGON SUNDAY JOURNAL

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oregon Sunday Journal of March 31, 1940:

[From the Oregon Sunday Journal of March 31, 1940]

FEDERAL BUREAUCRATS DEMAND AND GET OBEDIENCE FROM TWO STATE ADMINISTRATION BOARDS

(By Ralph Watson)

Mister Oregonian, do you have even a faint conception of how rapidly and relentlessly the tentacles of Washington bureaucratic control are being wrapped around the once-free functions of the State government? It might surprise you were you to stop, look, and listen for a moment.

Just the last week the hard-boiled dictation of Federal underlings reached across the continent, not once but twice, to throttle reluctant and protesting obedience by two of the State's major administrative departments to their demands. How the grip is growing ought to be of compelling interest to citizens who harbor the belief the executive and administrative machinery of the State and county governments still is operated by their elected agents.

Last Tuesday the Unemployment Compensation Commission bowed in submission to Federal command—and hired a couple of subordinate employees handed it by bureau dictation on pains of having its budget disallowed should it exercise its discretion in selecting those of its own choosing.

The Federal Social Security Board has its hooks in the State commission because Federal funds are sent into Oregon for commission use. It insists that it, and not the administering commission, shall control the selection of employees. Accordingly it, not the commission, has set up its own civil-service system, the examinations and listings of which it controls. The lists, under the Board's regulations, expire every 2 years.

Not long ago the commission at Salem filed a supplemental budget and asked two additional auditors. As the current service list was scheduled to expire March 31, it asked permission to select two men of known qualification for temporary employment pending a new examination.

It was told to "extend the list" of bureau-approved registrants and pick its auditors from that. The commission demurred and was told to do as it had been ordered or its budget would not be approved. It met last Tuesday and bowed down in obedience.

The public-welfare commission is in the same fix—only more so. It also is under the thumb of the Social Security Board because of Federal old-age assistance funds sent to the State. The Board set up a "merit" system in 1937 under which all local employees were to be hired and graded. This includes not only these of the central headquarters staff but those of the county groups in each of the 36 counties of the State—probably upward of 600 in all.

The commission met the demands of the 1937 merit system and in the last 3 years has built up an experienced personnel without regard to patronage demands from any source. Now the Washington bureau insists upon an entirely new merit system, requiring new examinations all down the line. The central commission, all the county commissions, strenuously objected on the ground that the procedure was disruptive, of greater cost, of less efficiency, red-tape bound, and cumbersome. They were told to toe the mark or Federal funds would be withdrawn. Friday the commission met and capitulated, because it can't meet assistance payments without the Federal contributions.

That is not the whole story. Already Washington bureaucrats are commencing to tell State agencies using Federal funds how and when to disburse not only the Federal but the State moneys jointly used or else the Federal money will fly back home.

Nor does this touch the fact that a major portion of the State is in Federal forest reserve, national parks, wildlife reservations, or what not; that Washington bureaus more and more are taking control of the fish and game, of land and water, of forest and stream, even of the air above, out of the hands of supposedly sovereign States.

H. R. 7147, To Include Continuous Service in War With Spain, Philippine Insurrection, and the China Relief Expedition

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

Mr. SMITH of Washington. Mr. Speaker, I am advised that Members are receiving inquiries from their constituents in regard to H. R. 7147, a bill to amend the service-pension acts pertaining to the War with Spain, Philippine Insurrection, and the China Relief Expedition to include certain continuous service. In order to render available the desired information, I am appending the report from Gen. Frank T. Hines, Director, Veterans' Administration, which fully explains this legislation which has passed the House and is now pending before the Senate. It corrects an injustice to certain veterans of the War with Spain, Philippine Insurrection, and the China Relief Expedition who have heretofore not been entitled to eligibility to service pensions for continuous honorable service owing to service in each conflict being treated as a separate enlistment and not combinable under law. This is a very meritorious bill and will undoubtedly be favorably acted upon by the Senate.

The report is as follows:

VETERANS' ADMINISTRATION,
Washington, January 17, 1940.

Hon. MARTIN F. SMITH,
Chairman, Committee on Pensions,
House of Representatives, Washington, D. C.

MY DEAR MR. SMITH: This is in further response to your request of July 13, 1939, for a report on H. R. 7147, Seventy-sixth Congress, a bill to amend the service pension acts pertaining to the War with Spain, Philippine Insurrection, and the China Relief Expedition to include certain continuous service.

The bill provides as follows:

"That in determining the period of active service for the purpose of the act of May 1, 1926 (Public Law No. 166, 69th Cong.), the act of June 2, 1930 (Public Law No. 299, 71st Cong.), and the act of May 24, 1938 (Public Law No. 541, 75th Cong.), granting

service pensions to veterans and dependents of deceased veterans of the War with Spain, the Philippine Insurrection, and the China Relief Expedition, continuous active service entered into during the War with Spain, the Philippine Insurrection, or the China Relief Expedition shall be included although part of such continuous service extended into either the Philippine Insurrection or the China Relief Expedition."

The act of June 5, 1920, allowing service pensions to those persons who had served during the War with Spain, the Philippine Insurrection, or the China Relief Expedition, provided, in part:

"That all persons who served 90 days or more in the military or naval service of the United States during the War with Spain, the Philippine Insurrection, and the China Relief Expedition, * * * shall, upon making due proof of the fact, * * * be placed upon the list of invalid pensioners of the United States * * *."

The Department of the Interior, which then had jurisdiction of the administration of laws granting pension, construed the foregoing act as permitting the combination of service rendered in any one of the three campaigns, so that although the veteran was not shown to have had the requisite period of service (90 days) in any one of the three campaigns, if there was service during the period April 21, 1898, to July 4, 1902, 90 days or more, by a combination of more than one enlistment, and if there was honorable termination of all of such enlistments, it was held that pension could be paid. The Department, however, held that if there was more than one enlistment, and there was other than honorable termination of any of such enlistments title did not exist under the act of June 5, 1920.

On May 1, 1926, the act of June 5, 1920, was amended by substituting for the conjunction "and" the word "or". Following this amendment the Department held that the effect thereof was to separate the three periods of service, so that a person having the requisite length of service in any one of the three campaigns, and an honorable discharge from such period of service, and otherwise having title, could come within the purview of the amendatory act, even though there may have been other service during the period in question which would have barred pension under the prior laws. The Department also held that the effect of the amendment separating the periods of service made impossible a combination of service in the various campaigns, so that a person who did not have the requisite period of service in any one of the campaigns did not come within the purview of the amendatory law, it not being possible to combine the periods of service.

In addition to providing a service pension (service connection of disability not required) to those persons who served 90 days or more during the War with Spain, the Philippine Insurrection, or the China Relief Expedition, and who were honorably discharged therefrom, or who having served less than 90 days, were discharged for disability incurred in the service in line of duty, the act of June 2, 1930, provided for the payment of pension to those persons who served 70 days or more in the War with Spain, the Philippine Insurrection, or the China Relief Expedition, and who had been honorably discharged and who were suffering from disabilities of a permanent character, impairing them from earning a livelihood, but such pension was fixed at rates lower than those rates payable for 90 days or more service. It was held by the Department of the Interior that in view of the language of the act of June 2, 1930, following the phraseology of the act of May 1, 1926, there could be no combination of service rendered in the different campaigns.

In this connection your attention is invited to the letter of July 7, 1939, addressed to your committee by the Veterans' Administration wherein the case of Elmer G. Mouso, C-2, 463070, was discussed, and in which it was stated that he was held not to come within the purview of the amendatory law of June 2, 1930, since his service of 70 days did not occur in either the Spanish-American War or the Philippine Insurrection, but was partly in one and partly in the other. And in connection with the decision in the above case, it was stated in my letter of July 7, 1939, above referred to, as follows:

"I am advised by the acting solicitor that if the question of combination of services under the act of May 1, 1926, or the act of June 2, 1930, were one of first impression, he would not agree with the position taken by the Department of the Interior. However, the matter is not one of first impression but involves, for the purpose of allowing the pension in this case, a reversal of an administrative position of over 13 years' standing, and the acting solicitor advises me that as he cannot say that the position taken by the Department of the Interior is wholly in error, he hesitates to recommend that I reverse that position without legislative authority.

* * * * * * *

"In view of the foregoing, I am constrained to the view that, in the absence of a statutory change, the claim of Elmer G. Mouso cannot be allowed under the act of June 2, 1930."

The bill is interpreted to require application of the criteria of eligibility under the existing service pension laws which include, among others, the requirement of honorable discharge.

It is noted that the bill would not completely restore the practice under the act of June 5, 1920, as it would not permit the combination of fragmentary periods of service occurring in more than one war period for the purpose of making up the requisite number of days of service. The bill limits its application to cases of continuous active service involving more than one of the war periods. Furthermore, eligibility for service pension under the existing laws based upon honorable service in one of the war periods, notwithstanding service other than honorable during one of the other war periods, would not be disturbed by the bill.

Should the bill be enacted into law, its provisions would be for prospective application. By remedial legislation of this nature no retroactive awards for any period prior to the date of enactment of the proposed legislation would be involved, whereas a reversal of long standing interpretation of the existing law heretofore discussed in connection with the case of Elmer G. Mouso would involve retroactive awards over extended periods of time. In order to remove the necessity of administrative interpretation it is suggested that the following provision be included:

"Payments of benefits under the provisions of this act shall be effective the date of enactment thereof as to those persons on the rolls and as to claims pending on the date of enactment of this act. In all other cases awards of pension authorized hereunder shall be effective from date of application therefor after the date of enactment of this act."

It is suggested that in line 10, page 1, of the bill, that the conjunction "and" be changed to "or" in order that the language will conform with the language of the existing laws affected by the bill.

It is estimated that increased pensions would be paid to approximately 300 veterans who are now on the rolls at an additional cost of approximately $133,000 the first year. In addition, there would be a group of veterans who are not now receiving pension who would be entitled under this act as well as certain dependents and even though it is not possible to estimate with any degree of accuracy how many would be eligible or would apply, it is believed that the number of such potential beneficiaries is small and therefore the cost would not be great.

The principle involved in the proposed legislation is not new and is more in conformity with the principle governing the determination of the requisite period of service in World War cases. Further, the proposed legislation will remove an injustice in the cases of continuous service which is not believed to have been contemplated by the enactment of the service-pension acts heretofore referred to.

For the reasons above set forth, the proposed measure, if amended in accordance with the suggestions herein contained, is recommended for favorable consideration by your committee.

Advice has been received from the Director, Bureau of the Budget, that there would be no objection by that office to the presentation of this report to your committee.

Very truly yours,

FRANK T. HINES,
Administrator.

A Spendthrift House

EXTENSION OF REMARKS
OF
HON. GEORGE S. WILLIAMS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1940

EDITORIAL FROM THE WILMINGTON (DEL.) JOURNAL-EVERY EVENING

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal-Every Evening of Wilmington, Del.:

[From the Wilmington (Del.) Journal-Every Evening, of March 29, 1940]

A SPENDTHRIFT HOUSE

The House, and not the President, must take the responsibility for the oversize appropriation bill providing funds for labor and youth activities. The measure it passed yesterday not only exceeds the recommendations of its own appropriations committee but tops the Executive Budget figures by more than $55,000,000.

Though the President asked for $230,000,000 for the Civilian Conservation Corps, the House voted $280,000,000. And though the President sought $85,000,000 for the National Youth Administration, the House decided that this was not enough and added $17,450,000 to that figure.

Some economies were made in voting funds for the National Labor Relations Board and for the administration of the wage-hour law. The House whittled down the request for the N. L. R. B. by $337,000, and it cut $1,080,000 from the amount recommended for enforcement of the wage-hour legislation. But the savings are only a drop in the bucket compared with millions added.

Moreover, it is doubtful that these reductions would have been made but for the criticism that has been directed at the Wagner Act, and it must be added that hampering the activities of that agency is far from being a cure of the evils of the law. An adequate amendment of the National Labor Relations Act is the real

remedy needed. Congress should, of course, check extravagance wherever it exists, but tightening the purse strings is not a substitute for revision.

The appropriation bills passed by the House yesterday are no credit to that body. Worse, they threaten a wave of log-rolling that can only end in a new outburst of extravagance. If that comes, the House must share with the Senate the blame for throwing away the key to the Treasury.

Today's Trends Toward Yesterday's Techniques

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

ARTICLE BY HON. KARL E. MUNDT

Mr. KUNKEL. Mr. Speaker, one of the greatest threats against the preservation of free enterprise and individual initiative in this country is the continued growth of monopolies. The New Deal has loudly shouted its disapproval of monopolistic practices but its legislative record and administrative acts, from the original N. R. A. on down, have been designed to perpetuate and increase this tendency. The New Deal policy has been to encourage the formation and growth of monopolies; and then to ask the power to regulate them or to own them. While a private monopoly may be regulated or dissolved, the possibility of either regulation or dissolution vanishes when the Government itself becomes the owner and operator of the monopoly; and the monopoly becomes more deadly and more far-reaching when backed by the resources of the Government. Some of the problems of this situation are called to our attention strikingly in the following article by my colleague, KARL MUNDT, which appeared in the March issue of the magazine Education.

Fifteen or twenty years ago, when I was studying economics as an undergraduate student in Carleton College, where I enjoyed the able and stimulating tutelage of Professor J. S. Robinson, at whose invitation I am preparing this article for Education, the subject matter and textbooks of economics were vastly different from any realistic analysis of the techniques of economics as they are practiced today. What was at that time quite largely a study of private money-making and money-spending activities has become largely—and in my opinion too largely—a study of public and political activity in the economic field of human activity.

Four or five years later, when I was doing postgraduate work at Columbia University, economic science was still concerned primarily in analyzing and developing private techniques for the highly inter-dependent commercial activities of individual proprietors and private corporations. The public interest was indeed considered in these economics classes of the twenties, but few, if any, outstanding economists were advocating the doctrines of economic centralization in the hands of politicians which we find so widely practiced at the beginning of the forties, in many countries of the world.

It is to a brief analysis of today's trends toward yesterday's techniques that this article is devoted.

Economics has always been and must always be a virile, growing, dynamic science to which the expert's finis can never be appended. My concern is not that economic theory has changed, but that applied economics has ceased to move forward into new techniques and has started to retrace its steps toward devices for controlling and correcting economic behavior which were employed roughly since man first tried to organize economic activity for the common weal. As a college instructor in economics from 1927 to 1930, it was my aim to stress the need for constant change in the development of economic tenets and in the application of these to new economic problems. No wonder that I am disturbed to see the United States reaching back into the past to find methods for meeting today's problems rather than working out modern methods for dealing with our present economic inequalities. Unfortunately, it seems that as we have grown older in years we have grown still older in the technique of governing our economic activities.

Monopolies have always been anathema to economists. Monopolies put into discard those economic principles that aim to bring greater opportunities for the many; and few men except those with "vested" interests rise to their defense. Economists have ever tried to develop devices for placing the public interest above private advantage. At times some progress was made, but at other times the monopolists seemed immune to the combined efforts of economists and legislators who sought to curb these antisocial practices. Perhaps in the general field of monopoly may be found a good example of the direction of "today's trends."

Students of economic behavior a generation ago were fond of discussing such monopolies as Standard Oil, the American Aluminum Co., the Sugar, Tobacco, and Steel Trusts. Methods of coping with these giant business units were suggested. Private monopoly seemed injurious to the public interest, and economic experts were busy devising antitrust legislation, recommending boards of regulation and control, pointing to legislative schemes for protecting the people against industrial privilege. During this same era little was written about another type of monopoly which through the ages has rivaled, if not surpassed, private monopoly in its infringement upon the rights, opportunities, and privileges of the average citizen.

I refer, of course, to the public or political monopoly whereby the Government itself exercises economic authority or engages in economic enterprise to an extent that may be termed "monopolistic." Little was heard in that era of the uneconomic aspects of political monopolies because the Government was not engaged in business in competition with its own citizens and the drive against monopoly was properly directed against the monopolies then existing in the field of private enterprise. Critics of political monopoly could find only the United States Postal System as an example of government in business on any significant scale. Largely noncompetitive and rendering a necessary public service with reasonable efficiency, the Postal Service was generally accepted as a natural or social monopoly and consequently the crusade against monopoly was directed almost entirely against privately owned monopolies. The economic trend of the day was governed by present circumstances, and modern techniques were devised to correct the situation. Laws were passed to curb monopolies; boards were established to promote fair-trade practices; public opinion began to see results in the breaking down of combinations in restraint of trade.

Now let us examine the present with equal candor. The situation concerning the private monopolies has not changed greatly. Certain trusts have been dissolved, some of the more obvious monopolies were removed, and, at least until the Blue Eagle era gave them a new lease on life, many practices for restraining competitive trade were outlawed. But interlocking directorates, employers' associations, codes of business conduct, and other methods have still perpetuated certain monopolistic practices. The "little fellow" does not yet, as a rule, have an equal chance with the "big fellow" in the game of business or industry. The final word of controlling the industrial tycoon without harming the commercial tyro has not yet been written into law. But the infringements on the rights, privileges, and opportunities of businessmen have been increasing with alarming rapidity during the past decade. This I have referred to as political monopoly because, after all, Government in business is simply politicians in business under a system of representative democratic government. A few instances will perhaps give point to my thesis.

No longer is the Postal Service the great example of a political monopoly in America. Today, the Federal Government is the biggest single business enterprise in the country. The Government loans more money to private borrowers than any bank or chain of banks in the land; the Government builds more homes for private householders than any building and loan association; it writes more insurance against unemployment, accident, and old age than any insurance company; it develops and sells more electrical power than any competitor; it owns, operates, rents, repairs, and manages more individual homes than any landlord, or any association of realtors. The fact that the Government obtained these homes through foreclosure makes this statement no less true. The same is true with regard to farms which were also taken by foreclosure and are now managed by politicians, appointed by other politicians, to carry out instructions of still other politicians for the primary purpose—as is always the case—of vote-catching rather than of applying sound economic principles. The Government "of, for, and by the people" is now the biggest and most ruthless competitor that we as individuals have.

Not only have we put our own Government into direct competition with ourselves in strictly economic enterprises but we have entrusted broad powers and large funds to the Federal Government, and it exercises these powers with typical monopolistic abandon. Government enterprise so far outstrips the size and finances of its competitors that it is aware of no effective competition. These political monopolies pay their losses from the public purse. Their objective must always be to seek public favor lest they write their own death warrants. They can never operate in conformity with sound economic principles because where such principles prove unpopular they must be abandoned on the philosophy that it is better to be uneconomic and to stay in existence than it is to be efficient and to be voted out of power.

So fearful are these political monopolies of public opinion and political pressure that sometimes these publicly financed, politically operated enterprises are incorporated in States outside the District of Columbia where they are beyond the direct control of the representatives of the people, and where their transactions need not be made through the General Accounting Office that was set up as a watchdog of the public funds. Thus these enterprises are not subject to the independent audit of the General Accounting Office and since they are operated by political appointees of the President, they succeed largely in operating with public funds

without being subjected to direct public control. The Commodity Credit Corporation is incorporated in the State of Delaware; Electric Home and Farm Authority was incorporated in Delaware in 1934; and the R. F. C. Mortgage Company was organized under the laws of Maryland. Having squandered its funds speculating on commodities—speculation which incidentally did not prevent prices of certain commodities from dropping last August to the lowest figures since the reign of Queen Elizabeth three centuries ago—the Commodity Credit Corporation came, hat in hand, to Congress to restore its "impaired capital" and actually received $119,500,000 in a single month last year to restore this "capital impairment."

"Yesterday's techniques" of trying to correct private economic activities by substituting Government ownership and operation are as ancient as the absolute despotisms of antiquity. They are based on the false assumption that you can make a saint out of a sinner or an efficiency expert out of a ward-heeling politician by appointing or electing him to public office. In the early European and Asiatic governments that Dean Roscoe Pound calls "administrative absolutism," it was accepted that the King could do no wrong, that the citizen was the creature of the state, and political (state) ownership and operation of economic enterprise was the accepted custom. But in a representative democracy, political business enterprises are foredoomed to failure because in the frequent clash between economic efficiency and public favor the politician-proprietor must always play to the public. And divorcing the management of an economic enterprise from the necessity of paying for the losses due to mismanagement is a prime rule in the handbook pointing the road to bankruptcy.

In America, today, our economic life is caught midway between the techniques of communism and capitalism. We stand confused and bewildered by a system which is half fascist and half free. So long as we remain a Nation partly of free enterprisers and partly of political monopolists we are certain to reap the disadvantages of both systems. Political proprietors of economic enterprises fear public opinion and private competition; private enterprisers on the other hand are afraid to expand their plants, invest new funds, employ more men, introduce new methods because they fear the next "socialistic" experiment of the Government will be in their particular field of activity. Thus distrust begets fear by both the politician and the private operator; fear brings about a paralysis of economic activity; economic paralysis perpetuates the depression, continues unemployment, retards recovery, and results in more unbalanced budgets and a perilously pyramiding national debt. "Today's trends toward yesterday's techniques" have brought us to the brink of a national disaster and we must soon decide to accept either yesterday's tyrannies by centralized absolutists in both politics and economics or to develop democratic devices for meeting today's problems with today's tactics.

National Rivers and Harbors Congress

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

RESOLUTIONS OF THE NATIONAL RIVERS AND HARBORS CONGRESS, 1940

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the thirty-fifth annual convention of the National Rivers and Harbors Congress, Washington, D. C., March 14–15, 1940:

This Congress, a national organization representing every State in the Union, the Territories, and insular possessions of the United States, reaffirms resolutions adopted at its 1939 sessions and reasserts its interest in the development, improvement, conservation, and utilization of our rivers, harbors, waterways, and water resources, and in all matters relating thereto, and adopts the following resolutions while assembled in its thirty-fifth annual convention at Washington, D. C., March 14–15, 1940:

THE PRESIDENT'S MESSAGE

Last September events abroad led the President to state in his neutrality proclamation that "a national emergency exists in connection with and to the extent necessary for the proper observance, safeguarding, and enforcing of the neutrality of the United States and the strengthening of our national defense within the limits of peacetime authorization. * * *" We recommend, therefore, that it is especially fitting in these times to consider carefully the status of river and harbor works with a view to evaluating their importance to the national economy and to national defense, and with a view to bringing to rapid completion works that are integral parts of the comprehensive system of such improvements.

RIVER AND HARBOR LEGISLATION

We recommend the passage of a new river and harbor bill at the present session of Congress, to include the authorization of complete projects, to approve plans and make partial authorizations for comprehensive long-range projects, and to authorize necessary preliminary investigations and surveys. This legislation is urged in order that the inland water-transportation system, so valuable to national defense, may be properly safeguarded and strengthened in accordance with the proclamation of the President of the United States. We likewise favor the passage of a new flood-control authorization bill.

BEACH EROSION

We recommend that the procedure established by Congress with respect to preliminary examinations and surveys for river and harbor improvements be extended to include studies and surveys of beaches and shores of the United States upon which Congress desires information, such beach and shore surveys to be included in the section of river and harbor bills providing for preliminary examinations and surveys for rivers and harbors, the cost of all surveys to be borne by the United States and to be paid from appropriations heretofore or hereafter made for the maintenance and improvement of rivers and harbors; and that all river, harbor, beach, and shore surveys be functions of the Corps of Engineers, United States Army, and its head to be administered under the direction of the Secretary of War and the supervision of the Chief of Engineers.

APPROPRIATIONS

We recommend that the Congress of the United States assure ample annual appropriations to advance the construction of authorized projects for river and harbor improvements in the interest of proper preparedness of our water transportation facilities, and in the interest of furnishing widespread employment. We believe that such work is one of the best means of giving direct employment to a large number of skilled and unskilled workers and indirect employment to many basic industries of our Nation. We believe the 1941 Budget estimates for navigation maintenance and improvements and flood control are too low and should be increased. The maximum economy in prosecution of waterway improvements will be attained through maintaining a steady rate of adequate appropriations since varying appropriations will require alternate disruption and rebuilding of the organization of the construction agency.

IMPROVEMENTS OF OUR WATER RESOURCES FOR NAVIGATION, FLOOD-CONTROL, AND ALLIED PURPOSES

We recommend that all planning and execution of public improvements of our water resources for navigation, flood-control, and allied purposes continue as in the past to be under the jurisdiction of the War Department as a function of the Corps of Engineers. Similarly the operation and maintenance of navigation improvements and the prevention of their injury by commercial wastes or pollution should be a duty of the corps. We reaffirm our faith and confidence in the Corps of Engineers, whose devotion to this Nation and loyalty to the Chief Executive have made possible the orderly and efficient development of the greatest waterway and flood-control projects on earth. In their many years of experience they have met emergencies such as during the latest depression when work on highly useful projects designed by them provided employment to thousands that otherwise would have been on relief. Furthermore, we believe that only through the plans developed by the Corps of Engineers can we secure a consistent and coordinated improvement of our water resources.

HYDROELECTRIC POWER

We recommend that where plans call for the development of hydroelectric power in connection with the construction of a dam for flood control, the planning and execution of such dam and the generation of electric power involved shall be under the jurisdiction of the agency responsible for the project and the power shall be turned over at the switchboard to a suitable Federal agency such as the Federal Power Commission for distribution and sale. We believe that Federal planning, execution, operation, and maintenance of public improvements relating solely to the distribution and sale of electric power should be under the jurisdiction of the Federal Power Commission.

IRRIGATION

We recommend that Federal planning, execution, operation, and maintenance of public improvements relating solely to the distribution of water for irrigation should continue under the jurisdiction of the Interior Department, and we believe that the present cooperation between the permanent agencies of the Government with respect to multiple-purpose projects affords the most economical and efficient executive management of such projects.

SOIL CONSERVATION AND REFORESTATION

We believe that Federal planning, execution, operation, and maintenance of public improvements relating to the prevention of soil erosion and to reforestation, including such investigations and estimates of run-off and water-flow retardation in the various watersheds concerned as are considered to have useful or practical values, should continue under the jurisdiction of the Department of Agriculture.

NATIONAL DEFENSE

We believe that "proper observance, safeguarding, and enforcing of the neutrality of the United States and the strengthening of our national defense" require that our water transportation facilities, especially our sea-coast facilities, be able to meet the demands of a rise in normal industrial activity, plus an increased load that

might be caused by an emergency. We remember that after our entrance into the World War, our railroads became overtaxed, and the Railroad Administration took steps to develop supplementary transportation on inland waterways, only to learn that expensive improvements could not be attained promptly enough in a time of great national effort. Under the circumstances the waterway contribution toward alleviating transportation shortages, though great, was far short of what it might have been if properly prepared. Furthermore, we are aware of the high value placed upon inland waterways by those European nations now at war. Accordingly, we earnestly recommend that full recognition be given to these facts, and that the improvement of our waterway facilities be pushed vigorously in this critical period so as to afford the maximum benefit for national defense.

FREE NAVIGABLE WATERWAYS

We reiterate that the policy of free navigable waterways in the United States is traditional and we recommend that our waterways be deemed public highways and remain free forever. Tonnage tax or tolls in any form on water-borne commerce constitute a menace to prosperity and are particularly obnoxious to us. We are unalterably opposed to the control and regulation of the water transport services upon the inland waterways, intercoastal, coastwise, lake areas, and harbors by any regulatory commission.

APPROPRIATION RIDERS

We oppose as unsound policy any limitation in appropriation bills which may curtail, delay, or invalidate the construction of rivers and harbors or flood-control projects already authorized by Congress.

WHEELER-LEA TRANSPORTATION BILL

We recommend that the Congress of the United States do not enact the bill now in conference and generally known as the Wheeler-Lea transportation bill (S. 2009, H. R. 4862). We urge that there be enacted no restrictive legislation, destructive not only to the return on the huge public investment in waterways but even to the capital investment itself. We point out the facts that equal regulation does not mean identical regulation; that additional regulation will result in increased transportation costs and rates and resultant increased production cost, decreased consumption, and prolonged retardation of industrial recovery and general reemployment; that crippling of water or other carriers will not effect any ultimate improvement of the railroad problems; that some production activities in low-grade commodities are possible only because of low water transportation costs and termination of these low costs will destroy production from these sources; that as a result of deficiencies observed during the World War in 1917–18, the Congress of the United States established the policy of fostering the development of adequate inland-waterway transportation and a merchant marine in part as a measure of national defense, and that any legislation renouncing or restricting this policy is retrogression of a type that the Nation cannot afford to even experiment with during the present condition of world affairs.

DROUGHTS AND MIGRATIONS DEMAND RECLAMATION PROGRAM

The National Rivers and Harbors Congress again calls attention to the need of appropriations for the Bureau of Reclamation to combat conditions in the Great Plains and far-western States. Droughts have driven thousands of additional farm families westward to join the more than 100,000 groups who last year were already in the West in search of irrigated land on which to reestablish themselves and become self-supporting. With no facilities for settlement or employment, they have caused Federal relief expenditures in excess of $2,250,000,000 in the 17 arid and semiarid States during the past 7 years.

A twofold program is urged:

1. Conservation of water resources in the Great Plains to anchor farm families and halt further migration, estimated to cost $5,000,000 in reimbursable funds supplemented by relief labor.

2. Speedy completion of reclamation projects under construction to provide for settlement and employment of homeless farm families, estimated to cost $100,000,000 a year of reimbursable funds for 5 years.

WATER PROJECTS CAPITAL INVESTMENTS

Inasmuch as all navigation, flood-control, irrigation, and water-conservation projects, which are authorized by Congress only after conclusive proof of their economic justification, constitute a definite and permanent contribution to the national wealth and the national defense, we urge that expenditures for their construction shall not hereafter be appropriated as a charge against the current and ordinary running expenses of the Federal Government but shall be considered and designated as capital investments and that the accounting and budgetary procedure of the Government be revised accordingly.

OWNERSHIP OF SUBMERGED LANDS

Enactment by the Congress of the United States of any legislation attempting to assert or claim title or rights to any land or bottoms or minerals thereunder not presently owned by the United States under any waters or waterways is repugnant to the National Rivers and Harbors Congress, as it will deprive present owners and claimants of property rights without due process of law, many of these bottoms being owned by some States and in other instances is the property of individuals. We particularly condemn legislation now pending in Congress known as Senate Joint Resolutions 24, 83, and 92, House Joint Resolutions 176 and 181, and all similar legislation. We further condemn same as an invasion of States' rights, a violation of those rights guaranteed to property owners by the Constitution.

ST. LAWRENCE WATERWAY

Due to the fact that Canada is now at war, we hereby rescind the former resolution of the Congress concerning the St. Lawrence deep waterway, and we recommend that before taking action the Senate of the United States carefully consider all implications arising from the proposed construction of the St. Lawrence waterway.

RESOLUTIONS COMMITTEE

Representative Robert T. Secrest, of Ohio, chairman; W. B. Amberg, O. S. Barrett, John Bass, C. A. Baumhauer, C. R. Baxter, Frank E. Birch, Frank E. Bourgeois, G. M. Bowers, H. E. Boyd, A. Willard Breidenthal, J. G. Burke, E. L. Chandler, Rene Clerc, Alma Davis, John J. Diamond, J. B. Donohoe, W. Y. English, Newt Graham, Floyd Hagie, Phil Hamburger, C. J. Hamlin, V. K. Harney, H. E. Hedger, C. S. E. Holland, Arch Hurley, Col. John Jacobson, F. L. Judd, Col. H. L. Kellogg, Frank Kelso, R. H. Kipp, Joseph G. Kuhn, J. M. Lampert, M. O. Leighton, H. O. Locher, Capt. George F. Loughlin, J. F. Marais, Thomas E. Martin, Burnet R. Maybank, Charles F. McLaughlin, H. F. Merrill, Oscar Monrad, L. S. Moody, J. Hampton Moore, J. P. Newell, C. A. Newton, N. E. Offenhiser, John D. Preston, Fred Reybold, S. W. Richards, Walter C. Robb, L. F. Robinson, Philip Shutler, William A. Slothower, A. M. Smith, C. N. Smith, William B. Spagnola, A. Thomas, S. W. Thompson, C. A. Trimmer, Senator E. L. Tungseth, C. McGregor Wells, Jr., M. W. Woods, Jesse Wright, George S. Yerger.

The Census

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, April 4 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. CHARLES W. TOBEY, OF NEW HAMPSHIRE

Mr. TOBEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address delivered by me on April 1.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At the break of dawn tomorrow, and throughout the month of April, an army of 130,000 politically and locally appointed census enumerators will invade every home in the country and demand that you unbosom to them intimacies of your private affairs and the private affairs of the other members of your family.

Some of the questions were never authorized by Congress and others violate article 4 of the Bill of Rights which provides that "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated."

Despite the fact that many thousands of people have petitioned the Congress for elimination of the income questions as provided for in my resolution, and despite the fact that both the subcommittee and full Committee on Commerce reported favorably the resolution, holding that these questions were never authorized by Congress and are therefore illegal, the Department of Commerce has refused to strike these questions from the census schedule.

A member of the committee announced that he and other opponents would use every dilatory tactic possible to keep the resolution from being voted on in the Senate. Twice I attempted to bring the resolution up in the Senate, but each time the majority leader refused to allow it to be considered; this, despite the pleas that you made to him and other Senators asking for immediate action.

In addition to being illegal these income questions discriminate unfairly against those who earned less than $5,000 last year, for they are required to reveal the exact amount that they earned, whereas those who were lucky enough to earn $5,000 or more, are exempt from doing this.

Some time ago, on the radio, I said that there was a growing suspicion in Washington that the Government has an ulterior motive in seeking, for the first time, to learn the wage and salary incomes of the low-income groups. Listen to what David Lawrence wrote recently about these questions: "The underlying purpose in gaining the information, of course, is to prepare a tax plan some day that will extract taxes from the low-income groups."

Fellow countrymen, the greatest threat to our Government is not open dictatorial policies; it is something more insidious than that.

This Nation is only 150 years old. We take for granted that it will last forever. But it was set up by our forefathers only after a *struggle*, and it can be maintained by us only if we are constantly vigilant. The greatest menace to the permanency of this country, which we hold so dear to our hearts, is the common man's loss of faith in his Government, a faith lost when men in positions of trust attempt, by subversive practices, to deceive the common people by methods of trickery.

In this census controversy a highly responsible official of the Government has resorted to a trick designed to deceive the honest men and women of America in an attempt to lull them into a false sense of security. This act of deception, put over on a trusting and unsuspecting people, cannot be condemned too strongly. Let me tell you the story:

After thousands of men and women had written to me and to the other Senators protesting against these illegal-income questions, and had urged that they be stricken from the census questionnaire, Secretary Hopkins issued a reassuring statement through the press announcing that he was yielding to these protests by substituting a new plan under which the people could answer the income queries, as follows, and I quote from his statement: "By writing their answers on a blank for which no signatures will be necessary, sealing the blank in a franked envelope, and giving it to the enumerator to be mailed by him to the Census Bureau in *Washington*. Blanks and envelopes are furnished by the enumerator."

I have before me a copy of this new blank on which you are to write your wage and salary income. In heavy print, placed in the middle of the sheet, are the following words, "Your signature is not required."

The natural inference that you would draw from this plan, under which no signature is required, would be that your identity would not appear on the blank and that the confidential information about your income would be anonymous.

How completely this device fooled the people is demonstrated by their reaction. Only recently one of the foremost newspaper writers in the country, Chester Rowell, of California, gave proof of the success of the deception when he gave his own honest interpretation. He wrote as follows:

"So Secretary Hopkins, to allay even this fear, has provided that these questions may, if desired, be answered unsigned on a separate sheet, sealed by the person giving the information in a franked envelope which the enumerator will furnish, and mailed to Washington, where nobody can find out from whom it came."

Headlines in the press which announced the Hopkins plan gave prominence to the provision permitting you to omit your signature from the income blank. The New York Times' headlines read as follows: "Hopkins revises census query to meet protest on income data. Compromise order permits objector to fill out blank, unsigned, and seal it in franked envelope for mailing."

The Philadelphia Record's headlines read: "Hopkins acts to end row over census. Citizens may seal unsigned answers on incomes."

The newspapers, beyond doubt, acted in good faith, and themselves felt that anonymity was part and parcel of the Hopkins plan.

But now listen to the subtle trick which gives the key to your identity just as effectively as if you placed your signature on the blank itself. At the very bottom of the income blank are two spaces for the enumerator to fill out. The first one is headed "Sheet No." and the second is captioned, "Line No." To the average unsuspecting person this, if noticed, would appear to be but a routine detail having no connection with the identity of the person who filled out the blank, but those two spaces put in there for a notation by the enumerator constitute a trick which will connect your identity with the income blank just as completely as if you placed your signature on the question sheet itself.

Let me show you how this is accomplished. On the large population sheet on which the enumerator writes down your answers to the many other questions, there is a space in the upper right-hand corner which gives the sheet number of that population blank. In the left-hand column are a series of numbers, and your name is to be written opposite one of these numbers. So, when the enumerator writes the corresponding sheet number and line number on the income blank which you fill out, and takes it home with him or mails it into Washington together with the sheets containing the other questions, all that they need to do is to compare the two in order to learn which income blank you filled out.

What hypocrisy! What deceit! What a fraud upon the American people, telling you in a press statement that you do not need to sign your name on the income blank, putting in bold-face type on the income blank the phrase, "Your signature is not required," leading you to believe that your identity will not be contained in the income blank, and then, through a subtle system of earmarking your identity, learning the amount of your income by deception; this deception practiced by that member of the President's Cabinet who, when he was head of the W. P. A., and playing fast and loose in his position, said, "The people are just too damn dumb to know what it is all about."

Fellow countrymen, I have been in public life for many years. I have served as Governor of my State of New Hampshire, as a Member of the House of Representatives in Washington, and now as a Member of the United States Senate. I have seen dictatorial methods used, but usually they are used openly and with candor. But when a man in a position of high trust in the Government resorts to such a clever plan to deceive a trusting people, it is time for the American public to demonstrate in no uncertain terms that they have reached the limit of their endurance.

Protests by the American Legion and testimony before the Dies committee have revealed that the Communist Party has succeeded in getting active Communists established in census-taking positions ranging from enumerator to district supervisor, so that much of the private information given by American citizens will go directly to these Communists.

These revelations about the Communist element being placed in positions of confidence in the census machinery have come to light only by chance. How many more Communists there are among the 130,000 enumerators and hundreds of supervisors no one knows.

In this much-talked-about oath of secrecy the enumerators take God as a witness of the solemn promise made by them, but it is common knowledge that the Communist does not believe in God, and such an oath to him is but a mockery.

What danger may result to the people of this country from this voluminous confidential matter coming into the hands of Communists and disciples of Stalin cannot be overemphasized; yet the dictocrats say, "Answer these questions or go to jail."

Bearing in mind this communistic network in the census army, now listen to the authority given to these census enumerators under the Department's instructions to the enumerators. The policeman in your local home community or even an agent of the F. B. I. is not allowed, under the law, to cross the threshold of your home unless there is a crime being committed there or unless he has a search warrant granted upon probable cause, indicating that you are either a suspicious character or a confirmed criminal. But, under the census instructions, the enumerator is advised that he has what amounts to a search warrant when he comes to your home and the right to cross the threshold of your home, even though you protest. This holds, whether your protest is grounded on the belief that he is not of good moral character or that he is a Communist or on any other ground.

Paragraph 17 of the official instructions reads, "You have the right of admission to all dwellings within your territory for the purpose of obtaining information required by the Bureau of the Census." This, according to high legal opinion, is a clear violation of the Constitution.

A Texas supervisor recently gave this warning to the people in his locality, "Census takers will not just knock at the door and ask for information. They have the power to enter all homes, and the head of the house must invite him in to ask the questions."

What a weapon to put into the hands of an irresponsible enumerator.

There is a method provided under paragraph 28 of the official Instructions to the Enumerators, whereby the political bosses in foreign-speaking wards will have access to the secrets of the people without having to take the oath of secrecy. This instruction authorizes the enumerator to select anyone he chooses to accompany him to act as an interpreter, as he goes from door to door to demand private information from the Greek, Italian, Polish, French, and other groups, and the interpreter does not even have to take the oath of secrecy.

Many a housewife who has written to me has taken it for granted that when she is questioned by the enumerator she will be permitted to write down the answers herself on the blank, in order to be sure they are correct, or at least be permitted to check the enumerator's report as he writes her answers down in order to see that he doesn't either negligently or purposely put down misinformation. But the enumerator is instructed, under paragraph 21, not to let her do this, even though the schedule will be used as evidence against her if she is later charged with giving misinformation. Moreover, the enumerator is instructed not to accept any statement from the housewife which he believes to be false, but to enter the correct answer as nearly as he can ascertain it. So if the enumerator believes that you have a mortgage on your home or are divorced or have been married more than once, and you tell him differently, he is to put down what he thinks, and not what you tell him, if he does not believe you.

And have you ever stopped to think what happens to the questionnaire containing the so-called confidential information about you after the enumerator leaves your house?

I talked to the Assistant Director of the Census, and at first he said that at the end of each day the enumerator deposits all of the completed questionnaires in the office of the district supervisor. Under questionning he retracted that statement and admitted that the enumerator takes them home with him each night and they are kept in his home until his job is completed at the end of April. So now we find that Tom, Dick, or Harry, the census enumerator, keeps the schedule which deals with your intimate, personal affairs on the mantlepiece or in his pockets or in his bureau drawers or on the family table for 4 weeks, open to anyone's scrutiny, before turning it over to the office of the district supervisor.

What a travesty on your privacy.

Many of the questions discriminate arbitrarily against women. Only the women are asked if they have been married more than once; the men are not. Only the women are asked their age at their first marriage; the men are not.

A few days ago I sent for the Assistant Director of the Census and protested against this discrimination, and finally the real truth

came out, and the answer was of such a nature that it could not be divulged over the radio, but I can mention that it is akin to the first steps that marked the inception of a program of social planning which has resulted in much of the intolerable state of affairs which prevails in Soviet Russia.

The officials of the Department of Commerce say, "Answer these questions or go to jail." They threaten the American people with imprisonment for refusal to answer any of the questions; despite the fact that the income questions were never authorized by Congress and that they discriminate against those who earned less than $5,000; despite the fact that there is a network of communism in the ranks of the census army; despite the fact that the enumerators are given a search-warrant right of entry into your home in violation of the Constitution, and that you can't check on the accuracy of the enumerator's report about you; despite the fact that the enumerator leaves your answers around his house during the month of April; despite the fact that the enumerator writes down what he thinks is right, regardless of what you tell him; despite the fact that the income questions are for the purpose of planning a tax burden on the low-income groups; despite the fact that certain intimate questions discriminate against women; and despite the fact that article 4 of the Bill of Rights provides that your right to be secure in your person, house, papers, and effects against unreasonable searches and seizures shall not be violated.

No; I cannot condone the threat of imprisonment for refusal to unbosom your private affairs to your fellow townsmen. I have introduced a bill to remove the penalty of imprisonment.

Under the penal statutes of this country, we put criminals in jail for serious offenses, such as rape, burglary, blackmail, and the like; but it is not the American way to threaten honest-living Americans with imprisonment for adhering to their faith in the Constitution.

Can anyone doubt that a more accurate and complete census would be accomplished without the threat of imprisonment? No. And if the administration is sincerely interested in obtaining a successful census, it will not throw obstacles in the path of this bill to remove that un-American imprisonment penalty.

And now, on the eve of this census inquisition, I gratefully acknowledge this opportunity, made available to me by the National Broadcasting Co., to talk to you frankly and to give the advice which you have been asking for, namely, what you should do to prevent this attempt to invade your rights. Sometime ago, speaking to you over the radio, I made the following statement: "If you stand upon your constitutional rights and refuse to answer the questions which violate your right of privacy, as guaranteed under the Constitution, you will have plenty of company. Thousands have already expressed their determination to resist these questions, and I shall do the same. And I predict that if they insist on this snooping campaign, there won't be jails enough to hold the American people who have the courage to cry, 'Hold! Enough!'"

Immediately following this, the President said, through his secretary, at a press conference, that, for the first time within his knowledge, a United States Senator had openly advised the American people to violate the law. My answer, given on the same day, was that an unconstitutional question, or a question never authorized by Congress, does not come within the law, and so I replied to the White House, "What law, Mr. President?" But he did not and could not answer that.

And I went further in my answer and said that an unauthorized ruling of a departmental bureau does not constitute a law of the United States and that it is time to call a halt to attempts of departments to arrogate to themselves the function of a legislative body, especially in matters which threaten the people of this free country with imprisonment for not bowing to the will of a bureau.

My position has been supported by many authorities, including William Starr Myers, an accepted authority on the Constitution from Princeton University, the Senate Committee on Commerce, and Mark Sullivan, who said, "These disputed questions are not laws; they are regulations, which is quite a different thing. Persons who refuse to answer the questions are not lawbreakers; they are merely regulation defiers." This position has also been supported by many authorities who have written to me from various parts of the country.

The Government has no authority in law for asking these income questions under the census in any form whatever. Since these questions are without the authority of law and are in violation of the restriction placed in the census law by the Congress, any individual is acting within his legal rights if, in answer to the demand to furnish this information, he gives the census taker an emphatic "No."

I am also advised by eminent legal authority that many of the other questions in the census schedules, even though tolerated by Congress, are a direct violation of the rights of the people as guaranteed under the Constitution.

Some people, who can afford to do so, have advised me that they intend to consult a reputable attorney for legal advice as to which questions they may properly refuse to answer under the protection of the Constitution. Others have felt they could not alone afford such legal advice and have, with their neighbors, formed a club whereby each will contribute a small amount to defray the expense of legal counsel. I advise you that if you feel that any of these questions will embarrass you or be a hardship to you, to consult a reputable attorney in your community, either individually or through mutual cooperation with your neighbors.

In giving this advice I have in mind the commendable doctrine expressed by Prof. Andrew C. McLaughlin, professor emeritus of history of the University of Chicago, who wrote, "It must be remembered that no one is bound by an unconstitutional act. Such an act is not law; in strictest theory it binds no official and no person whatever; and if no one objected to a law, it would be difficult or impossible for a court to pass upon its validity; an officer carrying out an unconstitutional act before as well as after a judicial declaration of unconstitutionality may be held personally liable for invasion of private liberty and property."

The time has come in America for thoughtful men and women who love their country and yearn to preserve the liberties guaranteed under our form of government to demonstrate a patriotic determination to resist this growing encroachment upon the individual liberty of the free American people before it is too late.

Fellow countrymen, we are straying far from the doctrines so carefully set up by the founders of our Nation. This trend of the Government is fraught with danger. Turn back to the advice of Thomas Jefferson, that great champion of individual liberty, who wrote in a letter to Judge Tyler, "What country can preserve its liberties if its rulers are not warned from time to time that the people preserve the spirit of resistance?"

Turn back to the words of Woodrow Wilson, who said, "Liberty has never come from the government; liberty has always come from the subjects of it. The history of liberty is the history of resistance."

In closing, I want to read something to you. This is not CHARLES TOBEY, a Member of the Senate, speaking now; I am speaking the words of one who has a permanent place in the hearts and intellects of America and one who is a great liberal. I refer to former Justice Brandeis of our Supreme Court. Listen to his words to the people of America in 1927, and what he said is as true today as it was then. It will be true 100 years from now, please God, if we bring this Nation back to the principles of liberty and freedom on which it was founded. I quote: "The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well-meaning but without understanding. * * * The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. They recognized the significance of man's spiritual nature, of his feelings, and of his intellect. They knew that only a part of the pain, pleasure, and satisfaction of life are to be found in material things. They sought to protect Americans in their beliefs and thoughts and emotions and sensations. They conferred, as against the Government, the right to be let alone—the most comprehensive of rights and the right most valued by civilized man. To protect that right every unjustifiable intrusion by the Government upon the privacy of the individual, whatever the means employed, must be deemed a violation of the fourth amendment."

All honor to these stalwart men that I have referred to and all the men and women who have the courage and patriotism to act in the knowledge that this census encroachment upon the right of privacy of the free American people is not alone a threat to themselves but a threat to those who come after us. And may you who stand firm on your constitutional rights take satisfaction in the knowledge that in resisting this threat to the American way of life you are acting not only for yourselves but to preserve the security of your children and of your fellow countrymen.

Alien Registration

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4 (legislative day of Monday, March 4), 1940

LETTER OF ATTORNEY GENERAL McMULLAN OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask uanimous consent to have inserted in the Appendix of the RECORD a highly interesting and informative letter addressed by Hon. Harry McMullan, attorney general of North Carolina, Raleigh, N. C., to Hon. Thad Eure, secretary of state, Raleigh, N. C., upon the subject of alien registration.

In view of the conflicting opinions relative to legislation by States pertaining to the all-important subject of alien registration and employment, I am thoroughly of the opinion that the situation can be met only when the American people are provided the protection to which they are entitled, by national legislation, which I have consistently sought through several bills which I have introduced in the Senate, which have as their objectives the registration of aliens, the deportation of alien criminals, the restriction of immigration, and similar purposes.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF NORTH CAROLINA,
DEPARTMENT OF ATTORNEY GENERAL,
Raleigh, March 28, 1940.

Subject: Alien registration—constitutionality.

Hon. THAD EURE,
Secretary of State,
Raleigh, N. C.

DEAR THAD: You inquire as to the constitutionality of the Bolich Alien Registration Act which was enacted as chapter 185 of the Public Laws of 1927 and is codified as North Carolina Code Ann. (Michie, 1939), section 193 (a)-(h). The Registration Act provides, briefly, for the registration of aliens residing in North Carolina with the clerk of the superior court of the county in which such alien resides. At the time of registering every alien is required to furnish certain information which is set forth in the statute. The secretary of state is required to distribute booklets known as Alien Registration Certificates to the clerks of the superior court. Failure of an alien to register or the altering of a registration certificate is made a misdemeanor. A registration fee of $1 is required.

I know of no case in which the Bolich Alien Registration Act has been held invalid. However, a Pennsylvania alien registration statute was held invalid by a United States district court in the case of *Davidowitz* v. *Hines* (30 F. Supp. 470 (M. D. Pa. 1939)). The Pennsylvania statute provided for the annual registration of certain aliens and a registration fee of $1 was required. Failure to register or to carry an alien identification card was made punishable by fine or imprisonment or both. The court held the act invalid as an encroachment upon a field reserved to Federal action and as denying equal protection of the laws to aliens. The court said:

"The act, therefore, is unconstitutional because it purports to operate in a field in which the individual States of the United States are without authority to legislate. Therefore, it may not be justified as an exercise of the police power of the State of Pennsylvania. It attempts to usurp power confided by the Constitution to the Federal Government."

The Commonwealth of Pennsylvania contended that the act was valid since it provided for nothing more than a census. The court did not adopt that contention and said that the statute placed conditions upon the right of an alien to reside in Pennsylvania.

The North Carolina statute is similar to the Pennsylvania statute but is not so stringent, since only one registration is required and the only offense created by the statute is the failure to register. However, it may well be that the North Carolina statute would be held unconstitutional on the grounds that it invades a province of legislation reserved exclusively to the Federal Congress.

That there is some room for State legislation relating to aliens is an inference which may be drawn from the case of *Arrowsmith* v. *Voorhies* (55 F. (2d) 310, E. D. Mich. 1931). In that case a State statute required unnaturalized foreign-born persons to obtain certificates of residence, prohibited certain aliens from acquiring legal residence in the State, and prohibited their employment, etc. The Court held the act invalid "because it seeks to usurp the power of government, exclusively vested by the Constitution in Congress over the control of aliens and immigration." The Court expressly refused to discuss whether certain features of the act were sustainable saying the whole act, being inseparable, must fall. The inference, of course, is that there is a possibility that if the act were separable certain provisions of it might be sustained.

The Supreme Court of the United States in *Truax* v. *Raich* (60 L. Ed. 131 (1915) passed upon an Arizona statute which prohibited the employment of nonelector aliens of more than 20 percent of the pay roll of any employer having five or more employees. The act was held invalid, the Court saying:

"The assertion of an authority to deny to aliens the opportunity of earning a livelihood when lawfully admitted to the State would be tantamount to the assertion of the right to deny them entrance and abode, for in ordinary cases they cannot live where they cannot work. And if such a policy were permissible, the practical result would be that those lawfully admitted to the country under the authority of the acts of Congress, instead of enjoying in a substantial sense and in their full scope the privileges conferred by the admission, would be segregated in such of the States as chose to offer hospitality.

"The authority to control immigration—to admit or exclude aliens—is vested solely in the Federal Government."

In *Ex parte Ah Cue* (35 Pac. 556 (Calif. 1894) the California court construed a California statute which prohibited Chinese from unlawfully coming into the State and provided for registration, certificates of registration, and the exportation of criminals, etc. The court held that the power exercised by the California Legislature was exclusively in the United States Congress by virtue of section 8, article I of the United States Constitution.

While there would be ample authority to justify the courts in holding our statute invalid, yet the probable purpose of the statute is more in the nature of a census and it may be that the field relating to aliens is not so completely outside the jurisdiction of our general assembly that it could not validly pass the act in question. I am not constrained therefore to render an opinion that the statute is invalid but feel that the matter is one which in the final analysis must be passed on by the courts. In my opinion the office of the secretary of state as well as the clerks of the superior court would be warranted in complying with the statute until such time as the matter is finally decided by the courts.

Very truly yours,

HARRY MCMULLAN,
Attorney General.

The Indians of California

EXTENSION OF REMARKS
OF
HON. LYNN J. FRAZIER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 4 (legislative day of Monday, March 4), 1940

STATEMENT BY ADAM CASTILLO AND ETHAN ANDERSON ON BEHALF OF CALIFORNIA INDIANS

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by two Indian representatives of the Indians of California in regard to a pending bill which affects the California Indians.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CALIFORNIA INDIANS SPEAK—A CHALLENGE TO CONGRESS AND TO CALIFORNIA—TRULY A CENTURY OF DISHONOR

Washington, D. C., March 20, 1940.

The undersigned, Adam Castillo, San Jacinto, Calif., president of the Mission Indian Federation of Southern California, and Ethan Anderson, Lakeport, Calif., delegate, Indians of California, Inc., representing and speaking for the majority of the 23,000 Indians of the State, issue the following statement of facts and appeal for justice in behalf of our people.

Coming from the southern and northern sections of the State respectively and, because of the many years each of us have spent in the many problems facing our race, and particularly our claims and rights growing out of the taking of our lands and rights following the treaty between the United States and Mexico in 1848, we have again been sent to Washington to do what we could to advance the interests and defend the rights of the Indian people of the State. We are supported solely from funds donated voluntarily by Indians of the State for bare expenses; no salaries are paid to anyone.

We have now been in Washington about 5 weeks, and during that time we have made a very thorough study of the situation and conferred with many Members of both Houses of Congress, as well as officials of the Indian Bureau and other Government agencies. We were accompanied from California by Mr. Puri Willis, a white man, the able counselor of the Mission Indian Federation, a man known throughout the State as a courageous and intelligent friend of the American Indian; a believer in legal justice to all alike. Mr. Willis is probably best known as the one who initiated and sponsored the claims of the so-called nontreaty Indians of California now universally approved by all, and included as a basic part of both bills now before the Congress—H. R. 3765 and S. 1402.

It is well to here give a brief history of the problem facing the hopes of the Indians of the State. In 1928 Congress enacted a law —45 Stat. 602—known as the California Indian Jurisdictional Act, by which the Indians of the State were authorized to sue the Federal Government in the Court of Claims on account of the failure of the Government to carry out the terms of certain unratified treaties, 18 in number, which were made with about half of the Indian nations and tribes within the State in 1851–52. The Indian leaders who signed those treaties were required to agree to cede to the Government all their lands and rights thereto in return for the Government's promise to set aside and reserve forever for the nations, tribes, and bands who had signed the 18 treaties, certain areas or reservations in various sections of the State, the total area of which reservations amounted to some 8,800,000 acres. In addition the Government commissioners promised other things, including schools, cattle, farming machinery, clothing, etc., etc., including also the services of farmers and other artisans as instructors.

ATTORNEY GENERAL OF CALIFORNIA ARBITRARILY NAMED AS INDIANS' ATTORNEY

The act of Congress named the attorney general of California to file the suit in behalf of the Indians of the State. Never before nor since has such an unusual and inherently unconstitutional policy been followed by Congress toward the Indians of the Nation. The California Legislature had also enacted a law intending to give its attorney general authority to act for the Indians. (See 643, Stat. 1927, and ch. 2. Statutes and Amendments to Code, pp. 1180–1937.) Eminent legal counsel now advise these provisions are not in accord with the State constitution.

Indians have made an effort to be allowed to have their own selected attorneys associate with the attorney general, but without success. In 1935 Indians and their friends brought forward the claims of the nontreaty Indians, and asked for an amendment to the original act to include such interests. They were successful in 1936 in convincing Congress that the nontreaty Indians' claims were just as sound as those with whom treaties had been made (S. 1793). Though Congress unanimously approved that bill, the President failed to sign it. Efforts have been continued to secure this amendment. Appeals have been made to the attorney general for his cooperation, but without avail. He was also urged to not proceed in the courts until an amendment could be secured. Thereupon, the attorney general, Hon. U. S. Webb, answered these appeals from Indians by writing them as follows (see p. 43, hearings on H. R. 3765, March 1939):

"SAN FRANCISCO, CALIF., *August 4, 1937.*

"* * * It has long been my view that the Indians of California should have the right to select their own counsel. * * * Always, however, this view has been subjected to the condition that the State of California be relieved from further responsibility in the matter. * * * It also is and has been my view that under the act of 1928, adequate or proper relief cannot be furnished the Indians of California."

Thus after some 9 years in charge of our suit, that able official came to the inevitable conclusion that the State of California should withdraw from our suit, and that we should select our own counsel. This advice was accepted by Indians with acclaim. They accepted Mr. Webb's advice as eminently sound. Apparently the way was now open to give us the same consideration as has been extended to all other Indians—the right to choose our own attorneys. Even in the face of this advice from our own attorney, some Indians supported the attorney general to continue in charge of our suit.

ATTORNEY GENERAL WEBB REFUSED TO RUN FOR REELECTION—A NEW ATTORNEY GENERAL

Attorney General Webb refused to run for reelection and a new man was chosen and took office in January 1939. Immediately Indians throughout the State became interested in the attitude the new attorney general, Hon. Earl Warren, would assume regarding the recommendation of his predecessor. A delegation from southern California called upon Mr. Warren in November 1938 and conferred with him as to what his policy might be. Mr. Warren informed these persons that he did not know yet what he would do, but would be guided by what Mr. Webb, his predecessor, recommended. He was shown that official's advice on the questions at issue. Mr. Warren said he would make his position known after he took office in January 1939.

These persons, at the request of their Indian people, again visited Mr. Warren in January 1939, after he assumed his new duties. These delegates tried to impress upon his mind the importance of our attorney assuming full charge of the plan to urge upon Congress an appropriate amendment to the act of 1928. They declared that it was the first duty of their attorney to secure the needed amendment before going on with the suit.

INDIANS URGE THE NEW ATTORNEY GENERAL TO CONTINUE UNDER CERTAIN CONDITIONS

These delegates offered their full cooperation to the new attorney general, and gave him the following letter carrying the wishes of their organization (see pp. 35–36, hearings, H. R. 3765):

"The Indians generally feel * * * that the attorney general should devote his time to their case on exactly the same basis as if he was their private attorney. We want your approval of the bill, or your recommendations as to changes you deem necessary; they want you or a competent deputy to go to Washington, and there sponsor the amendments * * * and to direct the move to secure an appropriate amendment to the act of 1928."

These delegates urged Mr. Warren to select Indians who had valuable knowledge of their claims and send them to Washington as expert witnesses. He was urged to pay their actual expenses out of the fund the legislature had given the attorney general. On checking up, the attorney general stated the fund had been returned to the general fund. We were urged to ask the legislature to again give him funds for his use, and which is to finally come out of the Indians' judgment. This was done. (See hearings.) However, no assistance was extended Indian delegates. They immediately went to Washington, and asked for a hearing upon H. R. 3765, already introduced. The attorney general was notified and requested to be present for the hearings. About the middle of March 1939 Mr. Earl Warren, the attorney general of California, came to Washington to represent the State in its fight against the Government's resolution just introduced in Congress claiming ownership to the great oil reserve lying below high tide along the California coast. The legislature gave Mr. Warren a special assistant, a former Congressman.

One of the undersigned heard the fight put up by our able attorney general, showing that he had made extensive preparation in acquainting himself with the issues involved in that important controversy. Mr. Warren was successful; Congress acknowledged California as the owner of that vast oil field. Two days later, Mr. Earl Warren, the attorney general and who is also our own attorney, appeared before a special subcommittee of the House Indian Affairs Committee as attorney for the California Indians. Indians who heard the able presentation of Mr. Warren in his fight defending the State of California in the oil controversy hoped that official had equipped himself just as well for the cause of the Indians. Though he had spurned the offer of Indians to give him the evidence and informaion they had gathered over the years, we still felt that possibly he had been able to prepare himself to meet the issues soon to confront him—to meet the opposition of the Department of Justice, who would represent the Federal Government.

ATTORNEY GENERAL WARREN ADMITS HE KNEW NOTHING ABOUT OUR CASE

Indians who heard Mr. Warren make his statement before the House Indian Committee say they were greatly disappointed. They state it was sickening and disheartening to hear our own attorney, and who so ably a few days previously had made a great fight defending the great and wealthy State of California—and the people, the taxpayers who pay his salary—admit his utter unfitness in the following language (p. 21, hearings, H. R. 3765):

"By Mr. Warren: Mr. Chairman and members of the committee, I am quite sure that I know less about this bill and about Indian matters generally than any man at this table. * * * Our legislature at the present session adopted a resolution memorializing Congress to recognize the moral rights of nontreaty Indians."

If there was any further proof needed to make the verdict unanimous that Mr. Warren was not qualified to represent us, or that he "knew less about our case of Indian matters generally than any man" at the table around which the Congressmen were met, here was clinching evidence. It is fortunate that we had urged a reporter to be present to make a record of what witnesses said. We would urge all Indians to read their statements. Mr. Warren was absolutely in error regarding the resolution adopted (at the sole request and effort of Indians after he had refused to even say one word in favor of the resolution) by the legislature. Here is the resolution in question, and it is readily seen that it makes no reference to "moral rights":

"Resolved by the Senate and Assembly of the State of California (jointly), That the Congress of the United States be most respectfully urged to forthwith amend the California Indian jurisdictional act of 1928 to provide for nontreaty Indians."

It has been stated by leading Indians of the State that if Mr. Warren had equipped himself regarding our case he could have secured the unanimous approval of the House committee to favorably report out the bill with constructive amendments needed, even if he proposed to continue in sole charge of our suit. He was so weak, and admitted it in every word, and was apparently depending on the advice and help of the Government attorneys who are handling the fight against us to gather his information. He made no fight against the "moral rights" claimed by the report of the Secretary of the Interior and the Commissioner of Indian Affairs as our only right; in fact, he practically admitted this was his belief. Not only had Mr. Warren admitted that he knew nothing about our case, but he stated to the committee that he had no one in his employ who was qualified to handle the suit for us, and that he was going to go outside and find some attorney to take charge.

THE ATTORNEY GENERAL OF CALIFORNIA FAILED TO APPEAR IN COURT

Our case was called in the Court of Claims in Washington on December 4, 1939. Mr. Warren nor anyone representing him was present to speak in behalf of our cause. The court threatened to dismiss our suit for want of prosecution. This order was, on January 2, 1940, vacated. Thus only by a close margin was our suit kept from being dismissed. We have examined the record in the Court of Claims here in Washington. Is there one Indian who would now still urge Mr. Warren to continue in charge of our destiny, for that is what it really means? There is absolutely no justification for the flagrant neglect and delay and inattention on the part of the attorney general of California.

RUMORED THAT A STAFF MEMBER OF COMMISSIONER COLLIER WILL BE NAMED BY MR. WARREN TO TAKE CHARGE OF OUR CASE

Since we have been in Washington, and for many months previous, we have heard rumors apparently coming from a reliable source, that "soon the attorney general of California would make an announcement that he had already selected one of the staff members of Mr. Collier's Office to be his assistant in charge of the California Indians' suit." We naturally hope this rumor is not well founded, for, knowing the qualification and background of those included in this rumor, as likely candidates, we would not be willing to place our cause in their hands. We surely must do everything to have Mr. Warren see the lack of wisdom in such a plan. He should appreciate, as Indians do, that the training of special assistants of the Commissioner has been along the lines and beliefs and claims of the Commissioner, and those are, "that the California Indians have only moral rights," that we "lost our legal and equitable rights when we failed to go before the special land commission which came to California in 1851–52." (See his full report, hearings on H. R. 3765.)

Mr. Collier, following the same thought, that we only have "moral rights," has continuously claimed "there was no need for the Indians to have their own attorneys, because all controversial matters are of record, etc., and it will not take much effort to present the Indians' case," would undoubtedly choose an assistant who had the same ideas. This is wholly a reasonable assumption. We are able to

show by conclusive evidence of record that the basis of that vicious report of the secretary is not sound. It does not seem fair, and this imposition on the constitutional rights of citizens has never been attempted toward any other group of American Indians. Regardless of the qualifications which such a man might claim, or that may be claimed for him, it is inherently a mistake to place any man who has held an official position with the Bureau in charge of such an important suit.

We should state here that on February 9, 1940, the undersigned met the attorney general of California before an unofficial committee of the California Legislature at Sacramento, and after hearing that official blindly and without any attempt at supporting evidence, attack Indians and certain white friends, "and ambulance-chasing attorneys," Mr. Warren stated:

"I have already made up my mind that I will have to go outside and select a person to take charge of this Indian suit. In fact, I have already chosen that man" (and turning to us he continued) "and regardless of what you say, I am going to hire him."

Despite repeated attempts since that date to get the name of the party Mr. Warren has chosen to be our attorney, he has been silent, excepting to say he will "make his plans known later."

It is also rumored from sources close to official that this newly chosen official, acting in conjunction with the officials of the Bureau, will soon start a campaign among Indians and others in California, in the hope they can get a compromise, rather than to make the fight in the Court of Claims as has always been the wish of the great majority of the Indians. We believe Indians must be alert and show a united front against any compromise. We have evidence and facts which cannot be successfully refuted that we do have just and legal grounds to justify our plan to settle our rights in the courts.

We ask our Indian friends and others to wait a few days when we are certain the rumors which we speak of here will be fully confirmed by the announcement of the Commissioner of Indian Affairs and the attorney general of California. It means, in effect, that our hopes will all be placed in the hands of the very Bureau officials from whom we have prayed and plead to be relieved and freed for many generations. Thus our Indian people are to be kept under the heel of the very governmental bureau (if this rumor proves correct) which Senator KING, of Utah, in February 1933 in a lengthy address before the United States Senate, declared:

"The Indian Bureau is a petrified, crystallized machine, indifferent to criticism, hostile to reform, ambitious for authority, demanding increased appropriations and a rapidly expanding personnel."

OUR CHALLENGE TO CONGRESS

Our Indian forefathers became citizens of the United States under specific provisions of the Treaty of Guadalupe-Hidalgo with Mexico in 1848. This article was taken from the Louisiana Purchase Treaty with France in 1803. This provision states:

"The inhabitants of the ceded territory shall be incorporated into the union of the United States and admitted to the enjoyment of all the rights, advantages, and immunities of citizens of the United States."

It is well to here quote from the Constitution of the United States, regarding the authority conferred upon Congress to deal with Indians as such. Section 8 of article I states:

"The Congress shall have power to regulate commerce with foreign nations, and among the several States, and with the Indian tribes."

Congress, in 1928, undoubtedly felt that the interests and welfare and the future protection of the rights of the Indians of California would best be served by allowing the attorney general of the State to file the suit in our behalf instead of the practice followed before that date in all Indian cases. The California experiment has proven the opposite from what its sponsors expected; it has not proven equitable or fair and has divided Indians and caused many to believe there is no justice for an Indian.

It is time Congress take the initiative and view this case not through the wishes and personal prejudices of the Commissioner or other unfounded rumors but give the Indians of California the same opportunity for a settlement of our claims against the Federal Government it has without exception granted all other groups of Indians. Congress would be wholly justified in following the sound advice given us by Mr. Webb, the former attorney general, who said it was his opinion that we should be allowed to choose our own counsel and that the State of California should withdraw. The attorney general at the present time says he is not asking to be retained against our will; he leaves it up to Congress. A decision can be made by Congress which will clear the way for a settlement of our case for all time. We ask it be done—win or lose.

We cannot believe that Congress would knowingly back up the old policy of the Indian Bureau in treating with all Indians as incompetents, solely because we are Indians.

Here we want to make a brief reference to the two bills now before Congress—H. R. 3765 and S. 1402. We definitely cannot approve H. R. 3765, principally because of two specific reasons:

(1) There has been attached to H. R. 3765 a clause depriving us of the right to demand interest, a right recently approved by the Supreme Court affecting the Klamath and other Indians, and which has never been imposed on other Indians.

(2) H. R. 3765 would continue the attorney general of California as our only attorney, thus arbitrarily refusing us our inherent constitutional right to select our own counsel. This clause also has never been attached to any other Indian jurisdictional bill in the history of the Nation.

Both H. R. 3765 and S. 1402 include the same general provision for the rights and claims of the nontreaty Indians, and which naturally all Indians and officials alike now endorse. We, therefore, believe that Indians should now express themselves on the fundamentals or basic features of legislation they would urge Congress to approve as an amendment to the act of 1928. Thousands of Indians have already done this in the form of a petition to Congress in the following language, and which we most heartily approve:

"To the President and the Congress of the United States:

"We, the undersigned Indians of California, do hereby respectfully and most earnestly petition you that under the act approved May 18, 1928 (45 Stat. 602), be amended to provide a just settlement of all claims the Indians of California have against the United States, including the inherent constitutional right to choose and be represented by attorneys who would consequently be responsible to their clients—the Indians of California—the plaintiffs; that the number of such attorneys be limited as Congress may see fit and be chosen by duly authorized Indian delegates in a State convention under regular parliamentary procedure; and that attorneys and other persons whom the court finds to have rendered a meritorious service to the Indians of California, relating to said act and amendments thereto, shall be compensated therefor in accordance with the usual procedure authorized by Congress in Indian cases."

OUR CHALLENGE TO CALIFORNIA

California, our own native land; California, the home of our worthy forefathers. It is undoubtedly the richest in Nature's endowments of any State in the Union. We challenge any official or other person within or without the State to show us one bit of honest and dependable evidence, either in law, ancient or modern, under old Spain or Mexico, or by any precedent of the National Government, that justifies in any manner the taking of our ancestral lands and rights by the State and Government, as all now admit they have so ruthlessly done. Is there no justice for an Indian?

The Legislature of the State of California by resolution is first to be blamed for the failure of the United States Senate to ratify the 18 treaties. That resolution called upon the Senate to turn the treaties down because "the lands being reserved to the Indians under those treaties are worth not less than $100,000,000."

Was it possible that 8,800,000 acres of the more than 75,000,000 acres which our forefathers owned, occupied, controlled, enjoyed, and claimed was worth in 1852 more than $100,000,000? Today those treaty lands are worth many times that huge sum. Even the value of the oil taken from just one of those reserved areas (from Bakersfield south to the town of Lebec) would amount to more than their valuation on the whole 18 treaties. Our rights have never been extinguished to the lands we occupied and owned. We express the feeling that we honestly believe every Indian in the State has, and that is, that we consider that we have been ruthlessly robbed. We ask no charity or advantage, but simply the right to choose our own attorney and place our evidence in his hands for presentation to the proper courts. We shall only then be satisfied with the judgment rendered. And we pause here to ask, Does California believe might is right?

We are fortified with numerous—yes; almost numberless—decisions of high authorities from the earliest days of recorded history under old Spain on down through Mexican rule showing Indians had legal and equitable rights to the lands they occupied similar to those exercised by our forefathers. For instance, here is a recent claim in an action in the California courts made by the Department of Justice attorneys in behalf of a certain Indian tribe, a group of Indians who have lived on their lands from time immemorial, not under any grant, treaty, or Executive order—just Indian occupation. Here is their claim:

"That for at least 50 years before 1859 and from time immemorial the lands (described) were Indian lands occupied, used, enjoyed, and claimed by Indians of the ——— Indian Tribe and by Indians of other tribes; and at no time from time immemorial to the present time has any of the rights and claims of said Indians in and to said lands and premises been extinguished."

If these claims are found by the United States district court to be favorable to the Indians, it may be the start of a new chapter in Indian history of California.

Our people are law abiding and peaceful; we have always been loyal to the principles of the American Government, though we have been systematically denied the full protection of its laws. In fact—we as a race, and solely because we are Indians—are considered by those who would perpetuate their arbitrary control over our lives and property as incompetents and wards. We claim the Constitution of the United States fails to give Congress or any other governing body legal authority to so consider our race. However, because of lack of finances we are deprived of the right to control the expenditure of our own tribal funds or the individual share belonging to each member of a tribe who might have such funds—we are blocked from protecting our rights. Apparently, there are no substantial friends who will come to our rescue.

The great and powerful State of California could well afford to stop and take stock of the questions raised here and the very challenge they bring to those who believe in tolerance and equal justice under law. We know our rights, but because of the century-old system under which we have been ground down to the level of serfs or in effect practical slavery, we have not been able to organize and defend ourselves from complete annihilation, or a

place in the social and economic life of the State from which apparently there is no escape. Our present condition, let us repeat in all sincerity, is caused, not by the usual economic pressure or survival of the fittest in a modern world of acute competition. Our plight—and it is to be seen wherever you find an Indian—is laid at the feet of the very officials and people today as in the past, who preach tolerance and justice, and the practice of Christian virtues, and the protection of the weak; those who call the loudest for this powerful Nation to go into foreign lands in order that justice might be done to an abused group. We ask, do they know the real meaning of those terms?

Our fight may be useless; it may be too late, as some have already said, for the Indian race to be worthy of the honors once conferred upon our people: "The American Indian is honest; his word is his law; he is the truest of friends; he has the virtue of the noblest of men; his natural ability is equal to that of any other race." We believe, and ever will, that hardships and abuses forced upon us, and the manner in which we have been robbed of our rights and possessions, and though we admit we have our backs to the proverbial wall, and on every side there is evidence of complete subjection and the passing of the American Indian as such; we have a very strong faith—a faith born into every fiber of our bodies and souls—that character and virtue and fortitude and patience and honesty are all so closely allied with the plans of the Great Spirit, and which controls the destiny of the white race as well as the Indian—we believe that such inherently noble qualities in men never die.

OUR APPEAL FOR SIMPLE JUSTICE

We feel that the message we have given here, our appeal for the same share of justice the average person wants for himself, will be accepted in the spirit in which it is written. We would like to have the legislature and the Governor and other responsible officials consider our case simply on its merits. Win or lose, we desire to have our case settled on the evidence we have; we desire that the State of California withdraw from our case; to take whatever steps are necessary to give us the right to go before Congress with a free and unhampered opportunity to be considered on the same basis as they have always heretofore legislated for all other Indian groups—we want the right to place our case and whatever it brings us, in the hands of our own counsel.

With due respect,

Sincerely,

ADAM CASTILLO,
President, Mission Indian Federation, San Jacinto, Calif.
ETHAN ANDERSON,
Delegate, Indians of California, Inc., Lakeport, Calif.

ADDENDA.—Since issuing the above statement, we have seen the telegram of the attorney general of California, confirming our prediction that he had already selected a staff member of the Indian Bureau as his special assistant, in charge of our suit in the Court of Claims. That man is Mr. Fred A. Baker, at the present time special land agent in the Land Department of the Bureau. It is stated that Mr. Baker has been an employee of the Bureau about 30 years. Many California Indians will recall that Mr. Baker was one of the enrolling agents for California about 1930. Mr. Baker has also been an Indian superintendent in Oregon and Montana. Upon being advised by him today of his new promotion, he stated that in 1928, he assisted Attorney General Webb in the preparation of his first brief, upon that official's request.

(Signed) ADAM CASTILLO.
ETHAN ANDERSON.

WASHINGTON, D. C., *April 1, 1940.*

P. S.—Mr. Baker stated to us today, when we informed him that we did not believe the Indians would approve of his appointment, "Well, if the Indians do not want me, I will go on to Europe and live in peace the rest of my life as I had already planned to do."

ETHAN ANDERSON.

Accomplishments of the Work Projects Administration

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

Mr. CANNON of Missouri. Mr. Speaker, the 4½ years of the operation of the Work Projects Administration, up to January 1, 1940, witnessed the addition of vast increments to the public assets of every State in the Union and practically every city and town of the Nation. An inventory recently released covers the work done on some 250,000 separate projects during this period. This inventory shows in a graphic manner the huge increase in national wealth resulting from the policy of meeting the unemployment problem by a work program rather than by a dole in the form of direct relief.

Expended in the form of a dole the funds used in this program would have left behind no visible results, no tangible evidence, save the improved economic conditions which it primarily sought to achieve. But when applied to the construction of public works and facilities, it has provided the same measure of relief and rehabilitation and in addition has brought to every community in the land permanent contributions to the assets of States and municipalities which could not otherwise have been supplied and the value of which cannot be measured in terms of dollars and cents.

One-seventh of all the highways, roads, and streets in the United States, or more than 457,000 miles, have been built, reconstructed, or improved by W. P. A. workers in 4½ years of operations.

In addition to roads and streets, the largest single classification of W. P. A. projects, the first report covered the construction of airports, airways, and other transportation facilities. For every 10 miles you drive, an average of 1½ miles have been built or improved by W. P. A. workers.

Adopting a familiar form of comparison, the total mileage of highways, roads, and streets built or improved by W. P. A. in 4½ years would be approximately equal in length to 147 transcontinental highways from New York to Los Angeles or Seattle.

The accomplishments on airports and airways represent the bulk of public-property improvements in this field of transportation during recent years. New airports built by W. P. A. during this period number 197; 337 were reconstructed or improved, and additions were built to 35. There were also 176 landing fields built by W. P. A., with 298 improved and additions to 45 others. Construction of new runways totaled 1,756,000 feet, or more than 332 miles, in length. More than 1,000,000 lineal feet of new runways were paved.

Airport buildings constructed by W. P. A. total 387. There were 430 such buildings reconstructed or improved and additions were built to 45. Outstanding among other improvements to airports and airways were the construction of 9,588 airway markers and the installation of 7,873 light standards to illuminate boundaries. Sixty-four landing areas were floodlighted and 65 airway beacons were built. Extensive improvements to existing facilities also were made in promoting aviation safety.

Major improvements to the Nation's transportation system, as shown by the W. P. A. report, also include:

Approximately 56,000 new bridges and viaducts, ranging from large steel structures to small spans of wood or masonry. The aggregate length of this new construction was 1,766,701 feet, or nearly 335 miles. An additional 37,020 bridges and viaducts, totaling more than 1,500,000 lineal feet, were rebuilt or improved.

Nearly 3,400 miles of culverts were included in the list of new construction, and more than 400 miles of existing culverts were improved.

Roadside drainage work by W. P. A. showed a total of nearly 43,000 miles of new pipe or ditch, with reconstruction or improvement of more than 68,000 miles.

New sidewalks and paths aggregated 15,341 miles, of which 12,679 miles were paved. An additional 5,470 miles were rebuilt or improved.

Construction of curbs reached a total of 14,403 miles. An additional 4,100 miles of gutters were built, and more than 1,700 miles of guardrails and guard walls were erected.

Traffic safety also was enhanced by the painting of control lines totaling 4,576 miles in length and the erection of 638,848 traffic signs. In improving road and street lighting, 21,696 light standards were installed, equipping nearly a thousand miles of thoroughfares, and an additional 55,312 light standards were rebuilt or improved along 1,378 miles.

Forty-nine thousand miles of roadside landscaping improvements also were shown by the report.

Illustrative of the variety of items included in this report were a total of 629 new tunnels built for vehicular or pedestrian traffic, or both.

Even waterway-transportation facilities were affected by the W. P. A. program during this period. Construction of 240 docks, wharves, and piers was reported, with the reconstruction or improvement of 234 such structures.

The statistical summary is as follows:

Projects through Dec. 31, 1939

HIGHWAYS, ROADS, STREETS, AND RELATED FACILITIES

Item	Unit of measurement	Number or amount
Highways, roads, and streets, total	Mile	457,734
Rural roads, total	Mile	400,887
High-type surface, total	Mile	27,979
New construction	Mile	14,674
Reconstruction or improvement	Mile	13,305
Low-type surface and unsurfaced	Mile	372,908
Urban streets and alleys, total	Mile	49,763
High-type surface, total	Mile	20,082
New construction	Mile	11,145
Reconstruction or improvement	Mile	8,937
Low-type surface and unsurfaced	Mile	29,681
Other roads (in parks, etc.), total	Mile	7,084

SCHOOL CONSTRUCTION FEATURES W. P. A. PUBLIC-BUILDING PROGRAM

Twenty-three thousand new public buildings, including more than enough school buildings to supply one to each of the 3,070 counties in the United States, are among public improvements the Nation has received in exchange for its work-relief program during the last 4½ years.

Other improvements include approximately 5,000 new playgrounds and athletic fields and almost 1,500 new water, sewage treatment, and other publicly owned utility plants.

As a part of a comprehensive inventory of W. P. A. accomplishments, the present report covers public buildings, public utilities, sanitation and recreation facilities, on which more than one-fourth of all W. P. A. workers have been employed.

The period covered is from July 1935, when the program began, through December 1939. In the 4½ years virtually every community in the United States has benefited through one or more improvements of these types.

In the public-building category alone, he added, W. P. A. has constructed more than 23,000 new buildings and made improvements and additions to 65,000. Schools, hospitals, town halls, and auditoriums are among the types included. In addition to the nearly 5,000 new playgrounds and athletic fields, he said, improvements and enlargements had been made to 10,000, and 7,700 new tennis courts and more than 600 new swimming pools had been built. In the field of sanitation and public health, he continued, W. P. A. constructed over 15,000 miles of sewers, built 1,750,000 sanitary privies for homes without plumbing facilities, and drained nearly 3,000,000 acres of mosquito-breeding swamps.

The unemployed who have been put to work by W. P. A. have made a great contribution to our national wealth. There is not a county or city throughout the Nation which has not been enriched in some tangible way—a new or improved school, a water plant, new sewerage lines, a park, or swimming pool—through the labor of W. P. A. workers.

These are improvements which would not have been made had there not been a program such as this to make workers available, bearing nearly all the labor costs and defraying a portion of other charges.

By giving the unemployed jobs on useful public projects we have also kept them off local relief rolls and preserved—in many cases, improving—their skills in preparation for the time when they could again find private employment.

Public-building projects constitute one of the most important fields of activity for W. P. A. workers. Of particular significance are the 3,985 new schools which range from small two-room structures in rural sections to large city high schools and college buildings. W. P. A. also reconstructed or improved 27,664 school buildings and built 1,480 additions. New libraries numbering 110 were built and 752 were improved.

Of 6,435 new recreational buildings, 848 are gymnasiums and 318 are auditoriums, he said. The remainder are miscellaneous structures, such as field houses, pavilions, picnic shelters, and so forth. New office and administrative buildings, which include town halls, police stations, courthouses, and so forth, total 1,063, while improvements and additions to 3,710 are reported.

One hundred and fifty-six new hospitals were built, many in areas where no adequate facilities previously existed. W. P. A. workers also reconstructed or improved 1,436 hospitals and built additions of 66 others.

Outdoor recreation areas built or improved by W. P. A. include 1,302 new parks aggregating slightly more than 59,000 acres, improvements to 475,463 acres and park additions totaling 2,471 acres. New playgrounds total 2,271, two-thirds of which are on school property. More than 10,000 new tennis, handball, and horseshoe courts were built, and 295 miles of ski trails cleared and graded. New swimming pools total 629 and wading pools 636. More than 12,000 acres devoted to fairground and rodeo use were prepared or improved.

The 1,470 new publicly owned utility plants constructed by W. P. A. include electric plants, incinerators, water works, and sewage-treatment plants. A total of 9,646 miles of new water lines were laid and 239,000 consumer connections made. New sewer lines total 15,191 miles and 352,000 service connections were made.

A valuable aid to public health has been achieved through the drainage of 2,981,000 acres of swamp, the construction of 15,654 miles of drainage ditches, and the application of over 2,000,000 gallons of spray in mosquito-control work.

The statistical summary is as follows:

Accomplishment on projects cumulative through Dec. 31, 1939

PUBLIC BUILDINGS, EXCLUDING UTILITY PLANTS AND BUILDINGS AT AIRPORTS

Item	Unit of measurement	Number or amount		
		New construction	Reconstruction or improvement	Additions

ACCOMPLISHMENT WITH HEALTH AND EDUCATION SERVICES

In addition, several millions of persons are reached each week by W. P. A. health, education, recreation, art, music, library, and related programs.

In the health program, it was found in a typical 2-week period that nearly a quarter of a million examinations and treatments were given in W. P. A. operated or staffed medical and dental clinics, and in schools and homes to children and adults who were unable to pay for such services. Nearly 82,500 tests for specific diseases, and more than 17,000 immunization treatments were reported.

Closely related in the effect on the Nation's physical welfare were more than 1,000,000 lunches served by W. P. A. workers on a single day to needy and undernourished children in more than 11,000 schools, the housekeeping assistance given 57,000 needy families in a single month, and manufacture of 218,000,000 garments for the destitute during four and a half years.

Educational services provided by W. P. A. are reaching adults in classes with an aggregate enrollment of more than 1,000,000, the Nation-wide report shows, and more than 300,000 are enrolled in literacy and naturalization classes alone.

On the basis of a special survey last year, when the rolls were larger, the public-recreation activities, supervised by trained W. P. A. workers, were found, in a typical week, to be equivalent to participation for 1 hour each by 15,000,000 persons. Nearly half of this was physical recreation, both indoors and out, and the rest was divided principally between social and cultural recreation. The benefits of such supervised leisure-time activity are readily apparent, particularly in communities with much unemployment, short working hours, and low income.

While the W. P. A. construction program has been building up the physical plant of the Nation, the professional and service projects have been contributing to its health and culture. Most of the millions of persons, who this report indicates are deriving benefits from the "white collar" projects, are in the lowest-income brackets and could not afford the important services and assistance our project workers have been able to provide. There are communities today in which the only public-health facilities are those provided by W. P. A., or where the only library is staffed by them, or the only opportunity for adults to study is afforded by W. P. A. teachers.

Typical periods were chosen for the inventory of professional and service accomplishments because of the impossibility of measuring cumulative results with the yardsticks applied to construction work in the two previous reports of this series.

These showed that, along with other work, W. P. A. constructed or improved more than 450,000 miles of highways, roads, and streets, and built more than 23,000 public buildings from the beginning of W. P. A., July 1, 1935, through last December. Health and education were advanced notably by these programs, also, through the addition and improvement of education, recreation, transportation, and sanitation facilities.

Additional construction covered in the final report issued today includes 4,650 miles of firebreaks and 3,000 miles of fire and forest trails. W. P. A. workers also rebuilt or improved an additional 2,000 miles of firebreaks and trails.

Accomplishments in the fields of flood and erosion control included 6,000 miles of stream-bed improvements, more than 3,000 miles of river bank and shore improvements and construction or improvement of 2,700 miles of such works as levees and retaining walls. More than 3,700 miles of irrigation ditches and canals were built and 3,700 repaired or improved.

On the professional and service side of the W. P. A. program, the report shows adult education to be an outstanding activity. In addition to 309,000 enrollees studying for citizenship or learning to read or write, vocational training classes claimed 195,000 students and correspondence work 48,000 in a 2-week period studied. Forums and lectures conducted by W. P. A. project employees had an aggregate attendance of 162,000.

W. P. A. also operated 1,550 nursery schools, providing scientific care and preschool training during the 2 weeks for 43,700 children of unemployed and destitute families, the report shows. Special instruction was given 4,200 institutionalized and handicapped children.

W. P. A. conducted art classes with an enrollment of 45,500 and music classes with 179,000, the inventory disclosed. More than 2,500 performances by units of the W. P. A. music program drew an aggregate attendance of more than 1,000,000 during the period.

Medical clinics operated by W. P. A. or staffed with W. P. A. assistants provided 119,000 examinations and treatments and dental clinics; 35,000 during the first 2 weeks in January, the report shows. Home visits by W. P. A. nurses and doctors provided 17,000 examinations and treatments. In the schools, 35,000 examinations and treatments of various kinds were given.

Public and school libraries operated wholly or partly by W. P. A. workers during December totaled nearly 10,000, of which 115 were "bookmobiles," or light trucks stocked with books for the people of remote sections. During the 4½ years, W. P. A. workers repaired 68,000,000 volumes of school and general library books. During that period nearly 4,000,000 pages of Braille were transcribed for the blind.

Sewing projects, up to January 1, had completed 48,000,000 men's garments, 59,000,000 women's garments, and 110,000,000 garments for children and infants. Other items, such as towels, sheets, and surgical dressings, aggregated 66,500,000. The articles produced by sewing projects, which comprise the largest single aspect of the W. P. A. nonconstruction program, were distributed by public relief agencies to needy persons.

The accomplishments cited do not include the work done with transferred W. P. A. funds by other Federal agencies, which have operated projects manned by needy unemployed on the same basis as W. P. A.

The tabular summary is as follows:

Projects of the Division of Professional and Service Projects

ART INSTRUCTION EDUCATION AND MUSIC INSTRUCTION DURING A 2-WEEK PERIOD IN JANUARY 1940

Activity	Unit of measurement	Number
Education:		
Adult education:		
Literacy and naturalization	Number of enrollees	308,860
Vocational training	Number of enrollees	195,469
Correspondence work	Number of enrollees	47,812
Other adult education	Number of enrollees	543,306

Activity	Unit of measurement	Number
Education—Continued.		
Lectures and forums	Total attendance	161,710
Nursery schools	Number of schools	1,554
	Number of enrollees	43,731
Special instruction for institutionalized and handicapped children.	Number of enrollees	4,168
Art instruction	Number of enrollees	45,527
Music:		
Instruction	Number of enrollees	178,854
Performances	Number of performances	2,576
	Total attendance	1,101,293

LIBRARY AND BOOK REPAIR ACTIVITY

Item	Unit of measurement	Number of units
Libraries operated or assisted (December 1939), total.	Number of libraries	9,918
General public library units	Number of libraries	3,441
Public school library units	Number of libraries	5,016
Other library units	Number of libraries	1,037
Bookmobiles	Number of bookmobiles.	115
Book renovation (cumulative through Dec. 31, 1939), total.	Number of volumes	68,389,000
General public-library volumes	Number of volumes	33,462,000
Public-school-library volumes	Number of volumes	27,386,000
Other library volumes	Number of volumes	7,541,000
Braille (cumulative through Dec. 31, 1939)	Number of pages transcribed.	3,909,000
	Number of maps transcribed.	13,760

Projects of the Division of Professional and Service Projects—Con.

PUBLIC HEALTH AND HOSPITAL ACTIVITIES

Activity	Unit of measurement	Total	Persons receiving service	
			Children	Adults
Clinic and other health service during a 2-week period in January 1940:				
Dental clinics	Number of examinations and treatments.	35,107	27,301	7,806
Medical clinics	Number of examinations and treatments.	119,341	21,725	97,616
	Number of tests	20,964	4,354	16,610
	Number of immunizations.	10,694	7,434	3,260
Home visits	Number of examinations and treatments.	16,994	11,130	5,864
	Number of tests	1,299	1,048	251
	Number of immunizations.	1,676	626	1,050
School services	Number of examinations and treatments.	36,567	36,567	
	Number of tests	33,061	33,061	
	Number of immunizations.	3,129	3,129	
Other services	Number of examinations and treatments.	34,749	25,584	9,165
	Number of tests	27,197	10,868	16,329
	Number of immunizations.	1,714	1,590	124
Institutions, other than clinics, operated.	Number	33		
Hospitals assisted	Number	659		
Other institutions assisted	Number	1,175		
Housekeeping aid services:				
During month of December 1939.	Number of families assisted.	57,116		
Cumulative through Dec. 31, 1939.	Number of visits made.	17,169,000		

Activity	Unit of measurement	Total	Persons receiving service	
			Children	Adults
School lunches served:				
On Jan. 17, 1940	Number of schools	11,190		
	Number of lunches.	1,129,420		
Cumulative through Dec. 31, 1939.	Number of lunches.	386,197,000		

SEWING, MATTRESS MAKING, AND FOOD PRESERVING—CUMULATIVE FROM BEGINNING OF PROGRAM

Article	Unit of measurement	Number
Garments, total	Units completed	218,204,000
Men's garments	Units completed	47,810,000
Women's garments	Units completed	59,177,000
Boys' garments	Units completed	41,160,000
Girls' garments	Units completed	47,806,000
Infants' garments [1]	Units completed	22,231,000
Articles other than garments	Units completed	66,525,000
Food canned and dried	Quarts canned	43,333,000
	Pounds dried	1,680,000

[1] Excluding layettes.

COMMUNITY PARTICIPATION IN RECREATIONAL ACTIVITIES, WEEK ENDED FEBRUARY 18, 1939

Activity	Number of participant hours
All recreational activities	15,680,000
Physical recreation	7,016,000
Snow and ice sports	1,439,000
Basketball	1,893,000
Gymnastics	658,000
Other physical recreation	3,026,000
Social recreation (indoor games, folk dancing, etc.)	4,798,000
Cultural recreation (arts crafts, drama, music, etc.)	3,337,000
Children's play centers	334,000
Therapeutic recreation	23,000
Other recreation	172,000

Accomplishment on projects of the Division of Operations through Dec. 31, 1939

FLOOD AND EROSION CONTROL—IRRIGATION—CONSERVATION

Item	Unit of measurement	Number or amount		
		New construction	Reconstruction or improvement	Additions
Fish hatcheries	Number	147	129	74
Firebreaks	Miles	4,648	826	
Fire and forest trails	Miles	3,007	1,171	
Reforestation	Acres		411,394	
Planting oysters	Thousands of bushels planted.	5,820		
Levees and embankments	Miles	404	836	
Jetties and breakwaters	Miles	57	2	
Bulkheads	Miles	112	36	
Retaining walls and revetments.	Miles	1,232	105	
Riprap	Thousands of square yards of surface.	11,706	1,703	
River bank and shore improvements.	Miles		3,153	
Streambed improvement	Miles		6,007	
Irrigation systems	Thousands of acres.	235	2,904	
	Miles of ditch, canal pipe, or flume.	768	3,718

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

STATEMENT OF HON. WESLEY E. DISNEY, OF OKLAHOMA

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Subcommittee on Petroleum of the Committee on Interstate and Foreign Commerce of the House of Representatives, February 27, 1940:

Mr. Chairman, the philosophy of this bill seems to stem from the doctrine of conservation of crude petroleum, among other things, for the prevention of waste. Other theories are involved, but, taking the bill by its four corners, it can be fairly said, from the instrument itself and from the showing made by the Department that proposes it, that the prevention of waste is the prime objective.

Think of this philosophy coming from the Federal Government—waste! The Federal Frankenstein is the very essence of waste—but more about that later.

For the sake of argument, conceding the claim merely as an argument, is the waste of petroleum products growing or lessening? This subcommittee, 5 years ago, recommended legislation for the prevention of waste. Is there new proof that waste is accelerated in the oil business? Has the Department of the Interior made a showing that waste has been accelerated in the last 5 years? I am not sufficiently familiar with the record of the testimony to state dogmatically that no such showing has been made, but I do know that witnesses have emphatically declared that no such showing has been made, but rather that the Department of the Interior filed its bill of complaint, and afterward started looking for proof—and did not find much proof—at least, rather incidental proof.

I think I am sufficiently familiar with the oil industry, although I do not claim to be an expert, to say that enlightened self-interest, genuine competition, regard for fair and right thinking, and great mechanical, chemical, and technological improvements have lessened waste to a tremendous degree in the last 5 years. It is said that the packers get everything out of the pig but the squeal, and my observation in recent years is that we are getting more petroleum from the ground and more petroleum products from the crude than ever before. Why, then, this claim of waste? This claim of waste is an argument for the further centralization of Federal authority, whether consciously or not.

I shall conclude at the end of this statement that I am against this legislation. Some member of the committee may properly ask why I am against this legislation when I was joint author of the Disney-Thomas bill in 1935. Well, the Disney-Thomas bill did some good, because it fixed attention on the oil business in such a manner as it had not been before for some years. And if you will pardon the personal reference, without being egotistical I think I can say it led to the formation of this committee which, with two exceptions, is of the same personnel as then. It led to the formation of this committee in 1935, which has done a tremendous amount of good work. The report that this committee made is still in great demand, even though it is out of print. I might say, in passing, that this committee has most justly earned the utmost respect of those who have observed its workings.

If I happen to be inconsistent in supporting the Disney-Thomas bill, and not supporting this legislation, I plead guilty to the abstract charge. I am not trying to be consistent. There is such a thing as being consistently wrong. I am trying to be right this time. Then, too, a man ought to grow wiser in 5 years as he grows older; wiser in observation and experience; yet observing the improvement in the oil business—an infant business when you compare it with the industry of the whole Nation—and its methods, and in contemplating the tremendous trend toward centralization of the Federal Government, of which this legislation would be merely another bit of evidence.

Close observers of the trends of Government in the last few years cannot have failed to know that there is a school of thought, followed in many instances by those in powerful positions, which believes that the States have lost their usefulness for service to the people, which believes in a strong centralized form of Federal Government, with the States decadent and the substitution of economic zones for the States. This school believes in the total obsolescence of the Federal system of States, with a central head at Washington, from which all human activities may be directed. This is an actual statement of fact that is going on here. That statement was made before the Ways and Means Committee in the discussion of tax-exempt securities and was not denied. It is forthright in this belief, and its expressions are also. It believes that the complexities of our modern civilization render the States substantially useless for the welfare of the people. This school, either willfully or in good faith, believes that democracy can be sacrificed to expediency, and that is going on every day, under the guise and claim of the general welfare.

Now I know if democracy is worth while this must be evil masquerading under the guise of good. If the American system, the American way, as we have been taught to believe in it, is the correct one, then this school of thought is wholly in error, when it would sacrifice permanent principles of government, based on democratic rights of the individual, to the current benefit of a group system.

This is not a drift toward collectivism. This is a radical step, with our eyes open, in that direction.

We paid dearly for this centralization at a terrible cost. In 1916 we spent $1,034,000,000 for the Federal Government. In 1927 the total grew to $2,700,000,000. In 1938 the Federal Government spent $7,691,000,000. The State governments followed suit, and in 1938 spent $4,358,000,000, and the local governments spent $6,150,000,000—a grand total of $18,300,000,000 for government in the United States in 1938, in which year we had a total national income of $64,000,000,000. In other words, 28½ percent for taxes.

Is it any wonder that since centralization and bureaucracy run riot, that we have a million people on the Federal pay roll?

It is not a partisan issue. Both parties are equally guilty. This is no tirade against either party or against any system, except the system of extending centralization. If it sounds like an impassioned tirade, you will have to forgive me for my earnestness.

But these billions are bagatelle, a straw in the wind compared with the loss to democratic government that has covered us like a shroud. The National Labor Relations Board is acting as judge, jury, prosecutor, witness, and executioner, without trial, in a land that boasted of the Boston Tea Party as a historical landmark. The House of Representatives last month passed an antilynching bill, another nail in the coffin of local self-government. The Department of Justice is bold in using strategic values in its prosecution.

The Census Bureau, originally set out to number the people, now delves into every private secret and social notion of the individual, with fine and imprisonment as a penalty for refusal—all in the guise of social reform.

The Securities and Exchange Commission is actually talking about becoming a receiver for a corporation in a Federal court. Andrew Johnson bore the cross of impeachment for contending that the States had the right to fix the suffrage status of its citizens, and now two cases are on the way to the Supreme Court of the United States, with zealots hell bent on having a judicial decision to the effect that the States do not have the right to fix a poll-tax qualification for suffrage. The Federal Bureau of Investigation, with a tremendous organization, is investigating all manner of local crime conditions, relieving the local authorities of the responsibility and, in effect, depriving them of their jurisdiction. The United States district attorneys are, with impunity, investigating State and local primary elections all over the land, where not a vestige of Federal propriety is involved. We are hearing proposals for Federal life insurance. That Wagner political medicine bill would cost a billion to the States and a billion to the Federal Government after 8 years, and make every doctor a Government clerk.

Here are some more financial figures. This statement will be brief. In 1928 the Congress expended $900,000 in the use of the franking privilege. The executive departments spent $6,000,000. In 1938 the Congress spent $700,000 and the departments $35,000,000. I have in my possession a pamphlet of 13 mimeographed pages, listing the various departmental units which engage in publicity under the guise of disseminating information to the people.

Bureaus, boards, and commissions have been inveighed against by our statesmen during the last half century. It is conceded that many of them have conflicting jurisdictions and overlapping functions. No one who currently views the situation will for a moment claim that the rights of the individual are not being gradually circumscribed, to the destruction of his individual rights, and in violation of the rules of the game of democracy as we believe in it in America.

I took this occasion to see what the books use for synonyms for "waste," and I could not but think, when I read these significant words, how they apply to the recklessness with which we have turned from local self-government to centralized bureaucracy: Prodigality, diminution, loss, dissipation, destruction, devastation, havoc, desolation, ravage.

These words are past as well as prophetic. A strong centralized government of brigandage, with 1 percent of the people in power and one man driving the juggernaut, is making war upon a little, defenseless democracy, and loss, dissipation, destruction, devastation, havoc, desolation, and ravage, those synonyms of

waste, feebly describe the conflict, a conflict not desired by the people of the Russian monster, who are serfs and slaves to a Frankenstein of centralized bureaucracy. I am not going to attempt, Mr. Chairman and gentlemen of the committee, to discuss the merits or demerits of this specific legislation, except to suggest that it is my considered, profound belief that it would be another step in the direction to which we are headed—in my judgment to the detriment of the life of the Republic for the long pull. I think the time has come to stop, look, and listen. I would not presume to advise the wise gentlemen who compose this committee, except to say that unless the proof shows that there is a clear, positive, unimpeachable, overwhelming necessity for this legislation, a necessity based upon our actual, immediate, national peril, that it would be unwise to consider this resolution favorably, except as the very last resort of absolute necessity, for it would inevitably lead in the direction which I have indicated. It plainly plays into the hands of those who believe that the States are and ought to be obsolescent, and that the good of the people demands that all power be centralized in Washington, to the detriment and final extinction of local self-government. With this theory, this philosophy, born, as I believe it is, of the disorganized workings of many confused minds of European dissension, I do not agree. As I said, I am not remotely attempting to be consistent. I hope I have grown wiser as I hope that this small contribution, pointing out some of the definite evidences of this trend, may be useful in the committee.

The St. Lawrence Project an Unneutral and Dangerous International Venture

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

Mr. HARTER of New York. Mr. Speaker, in the House today I spoke in regard to the St. Lawrence project and urged favorable action on House Concurrent Resolution 48. Under leave to extend my remarks in the RECORD I include the following letter addressed by me to the Honorable Cordell Hull under date of March 18, 1940, his reply being set forth in my remarks to the House:

MARCH 18, 1940.

The Honorable CORDELL HULL,
Secretary of State, State Department,
Washington, D. C.

MY DEAR MR. SECRETARY: I have hesitated for some time to write you concerning your reported letter of March 6 last, addressed to the Honorable CLARENCE E. KILBURN, Member of Congress from New York State, concerning the St. Lawrence project and our neutrality.

Recognizing that it is the primary duty of the executive branch of the Government to safeguard the neutrality of the United States, I am prompted to write this letter.

My understanding of the proposed treaty or agreement with Canada concerning the St. Lawrence project is that it would contemplate the joint construction and maintenance of canals, locks, and other water construction from which claimed additional transportation facilities would be available and from which additional power would be generated.

I am convinced that it is the sincere effort of all Americans to completely maintain the neutrality of the United States during wars in which we are not involved. It is my further understanding that being neutral requires the neutral country to refrain from joint acts with a belligerent when such acts can be construed as being done for the purpose of making that belligerent the better able to prosecute the war in which it is involved. It is also my understanding that in maintaining neutrality, benefits cannot be advanced by the neutral country which are not available for use by the belligerents on both sides, at least in theory.

If we help to finance, construct, and maintain a waterway to facilitate the production and the transportation of war materials and soldiers of one of the belligerents, when its enemy cannot avail itself of such facilities, can such acts be construed as best directed at completely preserving neutrality?

The property of a belligerent state is probably more open to sabotage than is the property of a neutral. How would the neutral position of the United States be furthered if it jointly constructs and maintains with Canada the improvements contemplated in the St. Lawrence project? Where would the point of freedom from possible sabotage end? Would it terminate directly at the point of the international border, or would there be a bare possibility that the so-called neutral's side of the project might be more open to sabotage than would be the case if it were not involved in a joint venture?

The above constitute only a very few of the many complications which come to my mind, and I am sure can be contemplated by you in time of war when two nations are in partnership on such an international project, one of them being at war and the other attempting to maintain its friendly relations with its partner in the international venture and its partner's enemy at the same time.

I am seriously mindful of what I think would result in international complications. That feeling and your letter of March 6, herein referred to, prompts my request for your courteous attention and advice on this most momentous subject.

Believe me,

Respectfully yours.

Also by such leave I include a statement made by Mr. Christy A. Buscaglia before a mass meeting of railroad workers in Buffalo, N. Y., February 19, 1940, as well as a resolution adopted at that meeting:

Ladies and gentlemen, very soon an attempt will be made to visit upon the public in general and the railroad worker in particular a fantastic and preposterous scheme known as the St. Lawrence seaway plan. The proponents of this gigantic hoax have been flooding the country with propaganda for years.

The legislatures of many States, including our own, have appropriated public funds which have been used to delude and to deceive the public. In this way the overburdened taxpayer's money is spent to convince him to spend some more.

The theme song of the proponents is "Bananas will be cheaper, power will be cheaper." In some very mysterious way, which cannot be explained, they tell us that if we spend $500,000,000, we will get the benefit of cheaper food and cheaper power. In fact they claim everything will be cheaper. It is an established fact that it costs more to ship by water than by rail. I repeat, that it costs more to ship by water than by rail. The advocates of bigger and better waterways never include in the cost of shipping by water the enormous share borne by the taxpayer such as the capital outlay to build the waterway, interest during construction, interest on bonds, and cost of maintenance. Thus when you buy bananas you may pay a little less for them at the time of purchase, if they came by water route, but you have not paid the full bill. Later on in the form of taxation the cost of the waterway as well as the maintenance cost will have to be paid. When the proponents cite shipping costs they very cleverly cite the immediate cost. The taxpayer is beginning to consider future and total costs. The proponents have been using the old something-for-nothing argument. That has been overworked and as far as taxpayers are concerned it won't work. They will have to dig up something more original. Every time the taxpayer is asked to spend money he is told that he is going to get something for nothing or at least that something or other will be cheaper.

Years ago when the State of New York built grain elevators at Oswego in competition with privately owned grain elevators they said it would mean cheaper bread. The State-owned elevators have not meant cheaper bread. The St. Lawrence plan will not mean cheaper power, cheaper transportation, or cheaper anything else. It is asinine to spend $500,000,000 on a project which will compete with existing taxpaying transportation facilities. These facilities are more than adequate for present or future needs. The St. Lawrence seaway will mean the loss of thousands of railroad jobs right in Buffalo. Finally, let us consider the threat to our neutrality.

Canada is at war. The power and the waterway will be used to manufacture and to ship food, munitions, airplanes, and war supplies to England. The present plan is to make Canada the arsenal of the British Empire. Munition plants, plane factories, and flying fields will be built and developed in Canada. It is much safer to do these things in Canada than in England, because enemy planes can reach England very easily. Why should our country enter into this plan now when we know that both the power and transportation facilities of the St. Lawrence plan will be used for war purposes. If the letter of the Neutrality Act is not violated, surely the spirit of the act is. By such use of the seaway, England's and Canada's enemies could easily become our enemies. We are practically certain that the seaway will be used for war purposes. It would then be legitimate prey for enemy bombs and sabotage. Such a situation is fraught with danger and must be avoided. The whole seaway scheme smacks of an entangling alliance against which we were warned many years ago.

The mass meeting unanimously adopted the following resolution:

Resolved, That the Railroad Workers' Protective League of Western New York representing approximately 26,000 railroad workers on the Niagara frontier go on record as being emphatically opposed to the St. Lawrence seaway plan, and it is further

Resolved, That our Representatives in Congress be urged to do everything in their power to defeat the plan.

The Buffalo Courier Express of April 2, 1940, in the following editorial, which I herewith include, aptly shows the position of New York State legislators on this project:

NEW YORK IS AGAINST IT

Maybe propagandists for the St. Lawrence seaway power scheme can draw a little comfort from the fact that lack of a senate quorum prevented adoption of the Canney resolution by both houses of the legislature. If they can be comforted by a vote of 97 to 33 against the seaway in the assembly, and one of 19 to 5 against it in the senate, they are welcome to the comfort. If 26 senators, instead of 24, has stayed on the floor in the last-minute rush before adjournment, President Roosevelt's own State of New York would be officially on record against his chimerical St. Lawrence plan.

To all practical purposes, however, the State is on record against the scheme. If a senate quorum had been available, Congress now could be formally notified of the legislature's opposition to the seaway. As matters stand, Congress is informally, but equally emphatically, notified. A 3-to-1 vote in the assembly and a 4-to-1 vote in the senate give fair warning of the overwhelming sentiment of New York State citizens against the St. Lawrence scheme. Members of Congress read the papers.

As Chauncey J. Hamlin, chairman of the Niagara Frontier Planning Board, has pointed out, those two votes in the legislature have exploded St. Lawrence propagandists' oft-repeated contention that, through a carefully concealed joker in legislation creating the State power authority, New York was committed to support of the federally devised seaway power scheme. New York State is against this scheme, and the legislature finally has said so. The technical point of a State senate quorum will not make Members of Congress deaf to the legislature's warning.

The Ontario attorney general indicates definitely the danger of the St. Lawrence project to our neutrality. I include a news item from the Washington Post of April 4, 1940, concerning his speech, indicating quotations therefrom:

ALLIES NEED UNITED STATES AID TO WIN, CANADA TOLD—OFFICIAL SAYS NATION MUST DO ALL IN POWER TO ENLIST SUPPORT

CANNINGTON, ONTARIO, April 3.—The Ontario attorney general, Gordon Conant, today told an audience of farmers and businessmen that it is Canada's duty to "do everything within our power to enlist the active support of the United States in the cause of the Allies."

Saying the success of the Allied cause "may be very doubtful" unless active participation of the United States is made effective at an early date, Conant declared:

"If the United States wants to build the St. Lawrence waterway, by all means let us join them. If they want access to Alaska over Canadian soil, there should be no hesitation in settling the matter. In fact, nothing short of impairment of our status as a sovereign nation would be too much for Canada to offer as a sacrifice on the altar of liberty and freedom.

"The Allies need America. * * * They need even more—the moral and particularly the material resources of our great neighboring republic to the south. * * *

"Every day the United States delays in joining the Allies will only prolong the war and increase the effort and the sacrifice that the United States may yet be called upon to make to save herself from the fate that now threatens all the democracies of the world.

"In the last war their entry undoubtedly turned the scales and resulted in victory which materialized in November 1918. * * *

"A clear declaration of policy at this time, supporting the Allies and declaring it to be the intention of the United States to enter the contest in their behalf, would materially affect the whole situation, probably to the extent of bringing an end to hostilities.

"Surely Germany would see the futility of her mad project. * * * I am confident she would seek an early peace rather than risk the ultimate extermination that would be her fate."

These matters should give sufficient reason why the Foreign Affairs Committee should hold public hearings on House Concurrent Resolution 48. If those hearings are held, I am confident the evidence will be abundant and convincing that this international adventure is not only economically unsound but most dangerous to our neutrality. I include House Concurrent Resolution 48 and urge Congress that its adoption will go far in staying neutral and keeping Uncle Sam's nose out of dangerous conflict.

Whereas the President of the United States has instituted official action directed at consummating a treaty or other agreement between the Dominion of Canada and the United States of America to provide a seaway route from the Atlantic Ocean through the St. Lawrence River, various canals, and the Great Lakes, and to make possible the use of such international waters to provide electricity or other power for the two nations; and

Whereas the President of the United States did on September 5, 1939, duly issue a general proclamation concerning the neutrality of the United States, which said proclamation was extended by a further duly issued proclamation dated September 10, 1939, extending the proclamation of September 5, 1939, to include the Dominion of Canada by reason of that country being unfortunately at war; and

Whereas further proclamations were duly issued by the President of the United States under date of November 4, 1939, carrying into effect, as far as Canada and certain other countries named therein are concerned, the resolution of the second session of the Seventy-sixth Congress known as Public Resolution No. 54 thereof, chapter 2, and described as a joint resolution "to preserve the neutrality and the peace of the United States and to secure the safety of its citizens and their interests"; and

Whereas many business, labor, and governmental leaders of both countries are opposed to the consummation of the treaty or other agreement first above referred to as being inimical to the best interests of such countries and their transportation, labor, and industrial problems; and

Whereas the carrying out of the terms of the proposed treaty or agreement contemplates estimated large joint expenditures of money by the said countries for completing the so-called seaway route and power project in international waters, of which the Treasury of the United States would be obligated for huge expenditures, with credits allowed to the respective countries for canals and other links in the project nationally contemplated; and

Whereas such joint completion would tend to involve financial transactions prohibited under the aforesaid Public Resolution No. 54 and might tend to involve aiding the Canadian Government the better to carry on the war in which it is involved in violation of said public resolution, and the precepts of international law; and

Whereas the relationship between Canada and the United States is most friendly and business is being carried on between the said countries in accordance with such relationship and in conformity with the neutral position assumed by the United States: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Senate and House of Representatives of the United States that the Neutrality Act of the United Etates would be violated by the making of a treaty, or other agreement, between the Governments of Canada and the United States to effectuate the bringing into being of an international seaway route between the Great Lakes and the Atlantic Ocean by means of the St. Lawrence River or otherwise, or the development of electric or other power from any international waters dividing the two said countries as a result of, or as an incident to, any such international treaty or agreement. Such would be opposed to the best interests of the two nations and their respective transportation, labor, and industrial problems and in direct contravention to the expressed terms and intent of Public Resolution No. 54, above referred to, in that such project would tend to involve prohibited financial transactions between the Governments of Canada and the United States and would tend to involve aiding the said Canadian Government the better to carry on its status as a belligerent, so duly proclaimed by the President of the United States. The Congress will refuse to appropriate any moneys to aid in the consummation of the plan or project referred to in this concurrent resolution, and it is the sense of Congress that all negotiations and activities for the furtherance of such plan or project shall be terminated forthwith.

The Poll Tax as a Prerequisite for Voting

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

CHART SHOWING POLL-TAX REQUIREMENTS IN EIGHT SOUTHERN STATES

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I have inserted in the RECORD a chart showing the poll-tax requirements for voting in eight Southern States. These States are Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia.

This chart was entered into the record of the hearings before the subcommittee of the Judiciary Committee in session yesterday by Dr. C. Vann Woodward, of Georgia, visiting professor of history at the University of Virginia.

Poll-tax requirements for voting in 8 Southern States

States*	Percent adults voting in Presidential elections, 1928–32	Payment				Collection		Liability		Illegal payment	Proof of payment at election	Prequisite for public office permits, etc.[2]
		Amount	Cumulative	Highest possible payment	Penalties for delinquency and nonpayment[1]	Due date (for voting)	Enforcement[1]	Period	Exemptions			
Alabama	18.4	$1.50	For entire period of liability (women, 1920).	$36.00	None	Oct. 1 through Feb. 1.	Payment voluntary. Not enforceable.	21–45 years (to be exempt after 45, all taxes for previous period of liability must be paid up).	World War veterans, active members of National Guard and Naval Militia permanently disabled whose taxable property does not exceed $500.	Payment or advance of money to pay in order to influence another's vote is bribery, punishable by 1 to 5 years imprisonment and disfranchisement.	Name on voter's list.	Public office: ces elective offi pri- (for which id); maries h eap- civil-service pointments.
Arkansas	21.7	1.00	No	[3] 2.00	$1 fine for failure to assess before Apr. 10	Oct. 1	Payment necessary to secure license or permit of any kind and receive remuneration from public funds.	21 or over	Women, not voting.	Unlawful to pay another person's tax to influence his vote and to give or vote on tax receipt not paid for by voter.	Evidence required; i. e., receipt or name on tax collector's certified list.	Public office: Justice of peace; grand jury service; license or permit of any kind; remuneration of any kind from public funds.
Georgia	16.2	1.00	For entire period of liability.	128.87	$1 fine for failure to declare tax before Apr. 20; 7 percent interest after Dec. 20; $1 collection fee for each year delinquent.	6 months before election.	No special enforcement provisions.	21 to 60 years (women from time of first registration).	Blind persons: women, not registered for voting.	----------	Name on tax collector's list.	Public office: All county offices.
Mississippi	14.5	[4] 2.00	2 years	6.00	None	Before Feb. 1 of election year.[5]	Payment voluntary; cannot be enforced by criminal procedure.	21 to 60 years	Deaf, dumb, and blind persons; persons maimed by loss of hand or foot.	----------	Satisfactory evidence (receipt or certificate of exemption required at primaries).	Public office: All elective offices, local and State; jury service.
South Carolina	10.6	[6] 1.00	No	1.05	1 percent (January) 5 percent (March) interest; nonpayment is misdemeanor punishable by $10 costs or 20 days' hard labor.	30 days before election.	Nonpayment is misdemeanor punishable by $10 and costs or 20 days hard labor.	21 to 60 years	Confederate soldiers over 50; women, not voting; persons incapable of earning a living.	----------	Proof must be given; i. e., receipt is conclusive.	Public office: Members of legislature; jury service.
Tennessee	26.7	{ [7] 1.00 [8] 1.00	No	2.58	58 cents collection fee and interest after May 1.	60 days before election.	Must be paid before property tax received; part of property tax may be worked out on roads; distress and sale of personal property and garnishment plus fees involved.	21 to 50 years	Deaf, dumb, and blind persons; persons incapable of earning a living; National Guard men, above 50 cents.	Misdemeanor to pay another persons' tax.	Satisfactory evidence; i. e., receipt, affidavit, or name on certified list.	
Texas	27.3	{ [7] 1.50 .25	No	1.75	8 percent fine and 6 percent interest after Feb. 1; delinquents subject to 3 additional days of road work, or $3 fine.	Oct. 1 through Feb. 1.	Distress and sale of real and personal property; delinquents subject to 3 additional days of road work or $3 fine.	21 to 60 years	Insane, blind, deaf, or dumb, persons; Indians not taxed; permanently disabled and persons who lost hand or foot; active militia men, above $1.	Unlawful to pay another person's tax; unlawful to issue poll-tax receipts in blank.	Tax receipt must be shown; i. e., or affidavit or certificate of exemption.	Public office: Members of legislature.
Virginia	23.3	1.50	3 years	5.01	5 percent fine and 6 percent interest after Dec. 5.	6 months before election.	Not enforceable for 3 years.	21 or over	Civil War veterans' wives and widows; persons pensioned by State for military services.	Personal payment required; issuance of block receipts unlawful.	Name on county treasurer's list.	Public office: All elective offices.

*See following table:
Average:
38 non-poll-tax States (Louisiana and Florida omitted. These States required poll tax in 1928 and 1932 elections. This requirement has since been abolished. Corresponding figures: For Louisiana, 21.7 percent; Florida, 31.5 percent)..... 68.4
8 poll-tax States..... 19.8

[1] These data were obtained from State law codes and from questionnaires filled out by State officials. They may contain minor ommissions or inaccuracies because administrative practice varies from State to State and county to county and because in some instances the meaning is not clear.

[2] Data incomplete.

[3] This figure represents the $1 tax plus the $1 fine for failure to assess by Apr. 10. Furthermore, in order to vote in both the primary and general elections in any one year, poll tax for 2 years would have to be paid as the tax qualification for voting extends for 1 year only beginning Oct. 1. Payment of as much as $4 might therefore be required in order to vote in both elections in any year.

[4] Additional county levy of $1 permitted. Two or three counties levy it.

[5] To vote in primary, poll tax must be paid annually before Feb. 1 for the previous 2 years.

[6] Not required in primary.

[7] State.

[8] County.

Irish-American Day Address

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

ADDRESS BY HON. JOSEPH P. TUMULTY

Mr. HART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. Joseph P. Tumulty at the Irish-American Day dinner in Scranton, Pa., last night. Mr. Tumulty is a native of my own city of Jersey City. Though more than three decades have passed since he was a member of the New Jersey Legislature, the high character of his service there is still remembered and discussed by the people of that State. The battle for progressive legislation, which he and a few other brave souls initiated and maintained while members of that body, made possible the election of Woodrow Wilson as Governor of New Jersey. The record Governor Wilson made in that office led to his nomination for the Presidency in 1912. During his service both as Governor and President, Mr. Tumulty served him as secretary. The magnificent service which he rendered the greatest man of our times cannot be discussed here in detail. Suffice it to say that up to this hour no competent critic or unprejudiced voice has denied the intense loyalty or high effectiveness of Mr. Tumulty's service to his chief and to his country.

The address follows:

I don't know why I was extracted from the limbo of utterly forgotten people to address you tonight. Only a good Samaritan like my dear friend, Frank Walker, who, pouring healing balm upon my old limbs, would have brought me to your notice. Your toastmaster's reference to my political past, while flattering to my vanity, calls to mind an association that existed for nearly 13 years between Woodrow Wilson, President of the United States, a Presbyterian, and myself, an Irishman's son.

May I be allowed for a brief moment to raise the curtain of the past, to describe in simple language the reactions that came to me, a young man from the fifth ward of Jersey City, whose father was a Union soldier, when I was invited to be the associate of a man who, in time, became the great war leader and the spokesman for Democracy throughout the civilized world. As the secretary to the President of the United States, I was to act as a sort of a trustee of my people, the Irish-Americans, in the councils of a President. Recognizing my own limitations, fearing the responsibility of the job, and realizing that mistakes of the head would be made, I determined that never would I do or allow anything to be done that would cause a single Irish lad to be disappointed because one of his race stood by the side of a President in the White House. Constantly, I kept this thought in mind until, erected into a principle of action, it became a passion of my life. When I speak of this personal relationship, please don't think of me as an exhibitionist, as one who immodestly points with pride. I merely speak of this to make the point that when one of our race is selected for important office, he becomes a sort of trustee, a precious trustee, the most precious in all the world, a trustee of the hopes, the dreams, the aspirations and the integrity of every Irishman in America. And so when the Irish-American enters Government, he has a solemn duty to perform—never to betray, never to surrender principle to suit the expediencies of the hour, and to stand uncompromisingly for honesty, for sympathy for the less fortunate, and for that high conception of the public ministry that will make him, once he is touched by the spirit of his mission, "a pearl without price as a public servant."

Incidentally may I say that in the selection of one of my race as secretary Woodrow Wilson followed an honorable precedent established by George Washington, Father of his Country, who selected as his secretary an Irish gossoon by the name of Fitzgerald. And then coming to your own State, William Penn, who came to Philadelphia, the cradle of liberty, in the company of Irish refugees, the William Penn who had been jailed in Ireland, and who had promised the right of free religious worship, selected James Logan, an Irishman, as his secretary, who ably governed the colony for 2 years after William Penn's death.

History also tells us that at one time your great State had as its Governor, Patrick Gordon.

Need we be reminded that the most famous corps in the Revolutionary Army was the Pennsylvania Line, and it was so predominantly Irish that it was renamed the "Line of Ireland." Among the blood-stained feet at Valley Forge with Washington were the Irish who, with the beloved Washington, were the victims of want and suffering. In that great crisis of our national life 34 members of the Friendly Sons of St. Patrick of Philadelphia came to the rescue of Washington and contributed over half a million dollars to Washington's already empty treasury.

The Irish served in the Revolutionary Army and served with such valor that Lord Mountjoy, in a speech to the English Parliament at the time of Cornwallis' surrender, said: "England has lost America through the exertions of Irish emigrants."

When General Lee entered Pennsylvania he was turned back at Gettysburg by General Meade, whose grandfather was a Philadelphia merchant and one of the original founders of the society of the Friendly Sons of St. Patrick. In the battle of Gettysburg the Irish Brigade, commanded by Colonel Kelly, stood the brunt of Pickett's charge, and today a monument stands at the Bloody Angle, on which the flag of this Nation and Erin's banner are sculptured.

The following tribute by Meredith Nicholson sums up in a few words the story of Pennsylvania:

"The iron bones of the ponderable earth shook mightily when Pennsylvania was born. No light day's business, the bringing forth of this empire, mountains to rear and valleys to cut; broad rivers to set flowing in generous channels * * * Scratch the crust and you may kindle the world's hearth; scatter seed, and the fields were never so green. Fortunate Nation this to have so secure a keystone in the arch of States. The spirit of pioneers gaze down in pride on the teeming valleys. You, sober ones of the broad brims * * * and you in whose blood the Scottish pipes skirl, and in whose heads is the wit of Irish mothers, no land has ever received sounder or saner pilgrims. And you, too, plodding Dutchmen, you are not so dull or slow after all, but wise in your sowing and reaping. And call the roll of names dear to the Welsh stock, and mark the lusty response. The soundest race stocks in the world are planted here."

Irishmen have hated the chains of slavery through the centuries so much that the soil of many lands is incarnadined with their blood in the magnificent efforts they made to strike the chains of slavery from the limbs of the oppressed of every land. The thing they coveted most—liberty—they were unable through cruelty to secure for themselves, but their sacrifices in blood and sorrow made it possible for them to assure liberty to others.

Why, there is not a nook or cranny in all the world where there is not some evidence of the beating of an Irishman's heart for freedom. An Irishman will travel anywhere for a fight. While America has had its Kellys and its Burkes and its Sheas, other countries, too, have felt the sympathies of Irish heroes. The Irish have fought and won the battles of every country but their own. Three million sons of Erin are buried on the battlefields of foreign lands, while 500,000 Irishmen fell in France during the Great War.

All the heroes of South America seem to be Irish. McKenna, O'Higgins are sacred names in Chile. O'Connell is the hero of Venezuela and lies by the side of Bolivar in the Pantoon Nacional in Caracas. O'Leary is Columbia's hero. Cubans name their streets after O'Reilly, and one of the finest Presidents of Mexico was Obregon, which is the Mexican way of spelling O'Brien; and the greatest President France ever had was an Irishman—Patrick McMahon.

There is plenty of evidence to show that the man who first discovered America was an Irish monk by the name of Brendan. It is recorded in the archives of Ireland that he sailed from Kerry with 60 men in the year 585 and landed here 900 years before Columbus. He landed on the shore of Newfoundland and called it New Found Land, the land of promise.

Even in faraway Annem, in Indo-China, there is a temple erected to "The Fighting Irishmen." On the banks of the "River of a Thousand Names" there is a huge pagoda erected in honor of Pat McCarthy, an adventurous soul from Dublin. He became such a hero in the Orient that Emperor Kian Long, of Annam, adopted him as his own son, and when McCarthy died he was made a saint.

The mother of President James Madison, Nelly Conway, was born in Ireland. The father of President Andrew Jackson was an immigrant from Ireland, a native of Carrickfergus, County Antrim. Vice President John C. Calhoun's father was an Irishman and his mother of Irish descent. Vice President George Clinton, first Governor of New York, was the son of an Irishman, Charles Clinton. Commodore Oliver Hazard Perry, hero of Lake Erie, got his inbred zeal for the profession of arms from his mother, Sarah W. Alexander, native of Newry, Ireland, who fitted him "to command others by teaching him early to obey." He received his early education from the famous old master, Kelly, an Irish schoolmaster in Rhode Island. Most of Washington's generals in the Revolution were of Irish descent, and some of the best were native-born Irishmen. Christopher Colles, a famous engineer from Ireland, taught the Continental Army how to shoot. There were a number of Irish descent in the Continental Congress, and some of the most prominent were born in Ireland. Gen. William Irvine, a native of Enniakillen, Ireland, was a brilliant leader in the Revolution, a Member of the Continental Congress, and of Congress. Col. Charles Stewart, born in County Donegal, Ireland, served on Washington's staff and was a Member of the Continental Congress.

In the Life of Peter the Great, by John Lothrop Motley, I found the following:

"Upon his return through Vienna, where he was entertained with great pomp, he received news of an insurrection which had broken out in Moscow, but which had already been suppressed by the energy of Gen. Patrick Gordon."

The very songs they sing and the very music they play somehow contains the heartbeats, the sobs, and the story of Ireland's struggle for liberty:

"She sings the wild songs of her dear native land,
Every note which he loved awaking;
Ah! Little they think who delight in her strains,
How the heart of the minstrel is breaking."

The beatings that they have received through the centuries seem but to open up their hearts to an understanding of and sympathy for the trials and tribulations of others. Indeed, oppression merely brought forth from their poor hearts the deep harmony of melody and mirth.

And yet they can smile. Indeed, one of the distinguishing characteristics of the Irishman is his ability to smile through his tears. I wonder what is the reason. I think I know. He lives in the present but his faith reaches out to the future, to the far distances. He sees off there the everlasting hill, Mount Shasta, Eternity, snow-capped, in the distance.

Kathleen Norris in an article, Why I Love the Irish, says:

"Emotional, generous, affectionate, eloquent—the Irish have something to contribute to the great melting pot that is our country. Without them America might be a slightly more orderly and silent place, but what a dull place it might be, too. A race that teaches love of God and home and mother has its work to do in today's America. Children, home, prayer, struggles—however stumbling, however ineffectual—toward goodness, character, and family unity, these are Irish ideals."

The real Irishman exemplifies in his life this noble ideal: "Give to every other human being every right you claim for yourself." There is nothing so abhorrent to an Irishman as intolerance. This noxious seed planted in the soil of his own land, denied him liberty and freedom for generations. Being its victim, the sons of Ireland loathe, hate, and despise it.

Indeed, there is only one thing that an Irishman is intolerant of, and that is intolerance. I remember my father saying that he never inquired of the race or religion of the man fighting with him in the trenches. All he wanted to feel was the warmth of his shoulder alongside of his. And, so, in this country, we must never make a point of a man's religion. In my own State of New Jersey, with a preponderant Catholic population, we have never had an Irish-Catholic Governor, nor have the Irish voters there insisted upon that as a sine qua non, nor have they ever complained.

One of the greatest gifts of the Irish to America is something that cannot be measured by the coldly logical standards of the times in which we live. Poor though he was, a member of the torn and tattered battalion which fights for liberty until he dies, his contribution to this country was nothing material, nothing that smacks of money, wealth, or power. No; he brought not wealth to America but something more precious. He brought that fine imponderable, mysterious, incalculable, altogether lovely thing—his faith in God—and forever clad in the shining armor of that faith, he has retained it throughout all the years until that faith has blossomed, bringing forth saints and scholars who fill the land with renown and learning and sanctity.

With threats of communism and socialism, the bitter fruitage of paganism, about us, we must never forget that Ireland was a pagan nation when St. Patrick came to it and before his eyes were closed in death, he saw the transformation completed from paganism to Christianity. Historians say that St. Patrick's work was easy, his victory was complete, that at the gentle touch of St. Patrick, Ireland, from end to end, bowed to the Cross, accepting the message of the Gospel.

Someone has said that what is easy to learn is easy to forget, but it is the contradiction of this which makes the history of Ireland all the more remarkable.

Sometimes it is said by the critics that Ireland is a nation of dreamers—inconstant, incapable, impossible; that they are impractical. Yes, they were dreamers but they were dreamers who went forth to plant the cross and build the schools on the plains of Brittany and on the banks of the Rhine and on the slopes of the southern Alps. Let us never forget that we are the inheritors of dreams and the faith of those who went before, and that we followed the Greatest Dreamer of all, the Man who went to Calvary, and there was crucified by those whom he sought to save. These dreamers did not fear the hatred of England. They are dreamers still and their dream is for the survival of justice and the survival of Christianity.

We congratulate ourselves that the race of Ireland is not yet run; that its history has not yet been fully written, for strong in the strength of its 1,500 years of civilization, in its constant battle for freedom, the Irish race is ready for the contest that lies before it—that conflict between the forces of paganism and the forces of Christianity. When paganism threatens the ramparts of American freedom, then these dreamers will arise to strike again and challenge materialism by lifting again the cross above our hearts and homes.

I think the Irishman's answer to the things of life can be found in the following lines:

"To sing, to laugh, to dream,
To walk in my own way and be alone,
Free, with an eye to see things as they are,
A voice that means manhood—to cock my hat
Where I choose—at a word, a yes, a no,
To fight—or write. To travel any road
Under the sun, under the stars, nor doubt
If fame or fortune lie beyond the bourne—
Never to make a line I have not heard
In my own heart; yet, with all modesty
To say, 'My soul, be satisfied with flowers,
With fruit, with weeds even; but gather them
In the one garden you may call your own.'
So when I win some triumph, by some chance,
Render no share to Caesar—in a word,
I am too proud to be a parasite,
And if my nature wants the germ that grows
Towering to heaven like the mountain pine,
Or like the oak, sheltering multitudes—
I stand, not high it may be—but alone, yet free."

Prohibition of Subversive Political Parties on the American Ballot

EXTENSION OF REMARKS

OF

HON. CLARENCE J. McLEOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

Mr. McLEOD. Mr. Speaker, I wish at this time to call attention to House Concurrent Resolution 55 which I introduced March 19 this year, and which recommends to the States the enactment of specific legislation prohibiting the names on the American ballot of "any political party or organization which advocates the overthrow by force of the form of government of the United States established by the Constitution."

Thus, for the first time, the Congress of the United States has before it an instrument that strikes vitally at what, in my opinion, is the greatest menace that has confronted this Republic since that day when the founding fathers declared America to be the home of liberty.

But what crimes are committed in the name of liberty! For, under the very slogan of liberty, closely knit, highly disciplined, tirelessly malicious organizations, protected by our system of suffrage, have the right to stealthily scheme against those institutions which are the guardians of the beloved liberties of us all. Years ago, in a great crisis, when anarchy threatened a whole community, that wise, taciturn, patriotic American, Calvin Coolidge, declared, "No man has the right to strike against the public safety anywhere, any time."

I now solemnly declare in this crisis that no man, through the ballot or by any other means, should have the legal right to strike against the American form of government, which is the common, cherished property of all of us.

I yield to no man in my love of human liberty. I glory in that broad tolerance which permits in this great land of ours that freedom of religious and political thought which has made America the one great haven of freemen of many faiths and of many moods of thought.

However, liberty is not license. The enjoyment of liberty incurs obligations. And I believe the Congress of the United States will shirk its obligations if it does not right now face the realities of this menace which today undermines our free institutions. Shall we sit here supinely while these villainous sappers plant their explosive propaganda under the very foundation of our Government?

Under the guise of liberalism, I should say ultra-liberalism, many of my colleagues, I fear, have failed in the stern duty that the oaths of our office place upon each and every one of us. Can we say that we are upholding the Constitution

of the United States if we stand idly by while an organized party openly holds nominating conventions, brazenly electioneers, and legally moves to the ballot box with the avowed purpose of destroying that Constitution?

Can we claim to be the gallant protectors of the fair form of Liberty if we close our eyes while gangs of depraved political perverts basely defile her?

The open, seditious action of the communistic organization, claiming to operate as a political party, its utter disregard for American laws and institutions; its undeniably close affiliation with the Stalinist regime in Red Russia, which frankly declares its purpose is the overthrow of all capitalist governments, calls for immediate and concerted action.

The distinction between the right to advocate in an open and academic manner the doctrines in which we believe, and the right, which is not a right under any reasonable interpretation of our Constitution, to preach and plan the abolition of our republican system of government by sword and fire, is sharply defined in the minds of every right-thinking American.

While the Communists and their fellow-traveler organizations label themselves a party, they are not political entities in the American sense of the word. They seek not the approval of the majority by parliamentary or constitutional means. They seek only to make the citizen a slave of the state through bloodshed and political extortion.

Communism teaches that the world must be forcibly reformed by a revolutionary leveling process. Instead of striving to advance or permit the individual to advance through progressive thought and action, the Communist would pull civilization down to his own subterranean level.

In cognizance of this political disease which threatens to spread throughout the life-giving tissues of this Nation's body-politic, I have introduced House Concurrent Resolution 55. This measure, the first of its kind, should also be the first step in a Nation-wide program to keep political renegades from furthering their base theories through the use of the American ballot. It should be the keystone of a campaign to keep America's institutions safe for Americans.

Every day, heinous organizations are springing up under a cloak of secrecy whose ideologies are in direct contrast to our constitutional government. It is not enough that we take pride in this country of ours. It is the common fate of the indolent to see their rights become a prey to the active. We can unknowingly surrender our rights to these offensive malcontents until the day arrives when we awake to realize, too late, that liberty is gone and we are no longer the masters of our destiny.

When William Z. Foster was a communistic candidate for the Presidency of the United States, he declared:

> Our party creates no illusion amongst the workers that they can vote their way to emancipation. * * * On the contrary, we must utilize this campaign to carry on widespread and energetic propaganda to teach the workers that the capitalist class would never allow the working class peacefully to take control of the state. It must build a new state, a new government * * * the soviet government in the United States. When a Communist heads a government in the United States—and that day will come just as surely as the sun rises—that government will not be a capitalistic government, but a soviet government, and behind this government will stand the "red" army to enforce the dictatorship of the proletariat.

When we read these combative lines, it becomes only too evident that my call for positive action against these revolutionists must be answered with equally aggressive proceedings. Communism is a philosophy of destruction—a doctrine of discontent. It is a political Frankenstein which tramples human rights beneath the foot of despotism. We must meet its animalistic tactics with specific action.

There is, my colleagues, a time when a bold operation upon a malignant tumor will save life. There is a time when the faintest flicker of flame, if noted and acted upon, can be traced to its source and safely extinguished. Unheeded, there comes in a few swift moments the time when the conflagration is unquenchable. Often there is the opportune moment when the first small trickle in a threatened dike can be effectively dammed. This moment ignored and a devastating flood inundates the land.

Too long have we temporized and talked and talked and temporized. Let us pass this resolution and face elections knowing full well that this Nation's elective offices will be filled with true Americans and not agents of destruction. Let us act on this resolution now. Tomorrow may be too late!

Polish Relief

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

RESOLUTIONS OF THE UNITED POLISH RELIEF COMMITTEE OF NORTHAMPTON, MASS.

Mr. CLASON. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolutions of the United Polish Relief Committee of Northampton, Mass., as follows:

Resolved, That we, assembled here this Wednesday evening, March 27, 1940, in Northampton, Mass., as American citizens, in accordance with American ideals and traditions, hereby petition our President, the Honorable Franklin Delano Roosevelt, the Congress of the United States, both Senate and House of Representatives, to support and have Congress make the necessary appropriations for Polish relief and to take steps officially to answer the cry of distress and pleas for help of millions of suffering people of Poland now temporarily in the toils and grip of the German Nazi and Russian Soviet invaders; and

Resolved, That our United States Government hasten in bringing aid and relief to the suffering innocent people in Poland and to the refugees and exiles therefrom in other countries in order to save the lives of men, women, and children in accordance with the traditions of America and the soul of the American Nation, with the dictates of humanity, civilization, and the law of God; and

Resolved, That the aid and relief from our American Government, as well as all other aid and relief of the various humanitarian agencies of America, be distributed by Americans, and that it be carried on under American supervision in accordance with precedents and justice; and

Resolved, That we hereby further petition our Government to see to it that all aid and relief from America for the suffering and needy people of Poland is carried on, distributed, and supervised by Americans for the benefit of Poland and not their enemies and invaders; and

Resolved further, That we hereby solemnly pledge our continued aid and support to the cause of giving aid and relief to the suffering, needy, and distressed people of Poland until they are again free and independent, and are, with other free and civilized people of the world, permitted to carry on their mission for the benefit of freedom, humanity, civilization, and peace.

The demonstration at which the foregoing resolutions were presented and adopted was under the auspices of the United Polish Relief Committees permits 1 and 95 of Northampton, Mass., which represent the now combined large organizations of Americans of Polish ancestry, Polish National Church, its organizations, Polish National Alliance group 1168, Polish-American Citizens Club, Polish Veterans Post 91, Casimir Pulaski Society, and others in the work of raising funds for helping the cause of Polish relief.

Ignace Kuczynski, chairman of the Relief Committee, presided, and Attorney Charles Kulikowski, Rev. J. Zielinski, Martin Paddock, and W. Szewczynski, president of National Alliance District, delivered addresses at the demonstration. Upon motion made and seconded without a dissenting vote, the foregoing resolutions were presented and read, adopted unanimously by the whole assemblage.

Respectfully submitted for your kind consideration and action, by direction of the mass meeting and by order of various Polish-American organizations for them and in their name.

IGNACE KUCZYNSKI,
Polish National Alliance.
MARTIN A. PADDOCK,
Polish-American Citizens Club.
JOSEF ROZIKY,
Polish Veterans Post.
KONSTANTY KROWCZYNSKI,
Casimir Pulaski Society.
ANTONI TOMASZENSKI,
Polish National Church.

Roads and the National Economy

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

SCRIPT OF RADIO DISCUSSION OF HIGHWAY LEGISLATION

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the RECORD the script of a discussion of pending road legislation, participated in by Hon. JESSE P. WOLCOTT, of Michigan, ranking minority member of the House Roads Committee; Mr. Charles M. Upham, of Washington, D. C., engineer-director of the American Road Builders' Association, and myself, broadcast over the red network of the National Broadcasting Co., on the evening of March 22, 1940.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

MAN. I am an American highway user.

WOMAN. I also use the roads and streets of the Nation.

MAN. In common with 30,000,000 Americans, I own and drive an automobile.

WOMAN. Like other highway taxpayers, I own the greatest road system of all time.

MAN. One-third of the world's total.

WOMAN. Over 3,000,000 miles of primary and secondary roads.

MAN. Worth $30,000,000,000.

WOMAN. Providing employment for 6,000,000 Americans.

MAN. The news by radio and press constantly refers to the master roads and interregional highways planned for an early American tomorrow. But I am authoritatively informed that more than 100,000 miles of our primary highway system are obsolete, that traffic is daily increasing on our already congested roads, that 10,000,000 more motor vehicles will be added to the 30,000,000 already on the roads within the next 10 years.

WOMAN. What are the road builders of America doing to solve this vital problem?

MAN. How are our Federal, State, and local governmental road agencies planning to improve this deplorable condition?

ANNOUNCER. Tonight this national economic problem will be considered—solutions will be suggested. Here in the studios of the National Broadcasting Co. at Radio Center in Washington, D. C., are three of the Nation's top-ranking highway authorities. They represent the United States House of Representatives and the American road-building industry and profession. They are Congressman WILBURN CARTWRIGHT, Oklahoma Democrat, and chairman of the House Roads Committee, which formulates Federal-aid highway legislation; Congressman JESSE P. WOLCOTT, Republican of Michigan and ranking minority member of the Roads Committee, and Charles M. Upham, engineer-director of the American Road Builders' Association, the Nation's largest organization of highway planners, builders, administrators, and educators. Mr. Upham will interview Congressmen CARTWRIGHT and WOLCOTT on the subject of roads and the national economy.

Mr. UPHAM. The watchword of this session of Congress seems to be "economy." Reduced authorizations for certain Federal expenditures are under consideration. Congressman CARTWRIGHT, you're chairman of the House Roads Committee and an authority on highway legislation. Do you think Federal-aid authorizations for continuing our highway program will be affected? Will there be reductions?

Mr. CARTWRIGHT. No. Mr. Upham, I don't think so. I certainly hope not. The House Roads Committee—before which you appeared in behalf of the American Road Builders' Association—recently completed 3 weeks of public hearings on a bill that I introduced on January 15. This bill will soon be reported to the House of Representatives. If it is enacted, it will authorize the continuation of Federal aid for highways for the fiscal years 1942 and 1943. Many of the Nation's outstanding highway engineers and officials testified during the committee hearings. I expect my committee to tender a favorable report to Congress.

Mr. UPHAM. I understand that the amounts the committee will recommend to be authorized haven't as yet been definitely determined.

Mr. CARTWRIGHT. No; they haven't, Mr. Upham. But they will probably be about the same as those authorized for the fiscal years 1938 and 1939.

Mr. UPHAM. Will you review those amounts?

Mr. CARTWRIGHT. For each fiscal year they totaled $238,000,000.

Mr. UPHAM. For what types of highway projects, Congressman?

Mr. CARTWRIGHT. For primary roads, farm-to-market roads, highway-railroad grade-crossing elimination and protection, forest roads, and roads through public lands, national parks, and Indian reservations.

Mr. WOLCOTT. Pardon my interruption, gentlemen, but we may be hitching the cart before the horse.

Mr. UPHAM. In what way, Congressman WOLCOTT?

Mr. WOLCOTT. It is possible that some of our listeners are not familiar with the term "Federal aid for highways." Would not it be a good idea to offer a definition of our subject before we analyze it?

Mr. UPHAM. I agree, Congressman WOLCOTT. Would you undertake that definition for us?

Mr. WOLCOTT. Gladly. It is simple enough. Federal aid for highways means that the Federal Government will match, dollar for dollar, the money that the respective States expend for highway construction on the Federal-aid systems. The Federal Government pays half; the State pays half. These Federal funds are administered by the State highway departments, under the supervision of the United States Public Roads Administration. In this relation, I want to point out a fact that is apparently unknown to many of our people. Although Congress appropriates Federal aid for highways, we have no say-so whatsoever as to where, or when, the States and counties build roads. We cannot say a road will be built here or there or anywhere. And the only obligation that the States have to the Public Roads Administration, in order to receive matching Federal funds, is that they route their primary highways as parts of a national system, for the benefit of the entire Nation. These highways must, of course, be planned in accordance with the high standards of modern engineering design specified by the Public Roads Administration.

Mr. UPHAM. In other words, neither you nor Congressman CARTWRIGHT have any jurisdiction over highway location and construction projects—even in your own districts?

Mr. WOLCOTT. Road building is entirely a matter of State and local administration. Federal politics have absolutely no bearing on the building of roads. Now, returning to the explanation of Federal aid for highways, these laws have been called the Hayden-Cartwright Road Acts since 1934. They are named for their coauthors, Congressman CARTWRIGHT, who is with us this evening, and Senator CARL HAYDEN, of Arizona.

Mr. CARTWRIGHT. The first Federal-aid-for-highways act was, however, passed in 1916. The Nation then had only three and one-half million motor vehicles. Today, more than 30,000,000 roll the roads. Automobile registration has increased at an average rate of more than a million vehicles a year. In 1916, the United States Congress had the vision to anticipate the terrific demand that was to be placed on the American highway system.

Mr. WOLCOTT. The Hayden-Cartwright Acts are a continuation of the original act passed in 1916—a continuation and a revision to meet America's ever-changing road problems.

Mr. UPHAM. And the pending road bill, Congressman CARTWRIGHT—the present bill soon to be reported to Congress—will you please describe it for our audience?

Mr. CARTWRIGHT. Provisions of the bill are similar to those of the Hayden-Cartwright Act of 1938, which authorized appropriations for eight regular road-building programs for the fiscal years 1940 and 1941. The bill, if passed, will authorize appropriations of Federal funds to be matched by the States and to be expended on primary and farm-to-market roads. These farm-to-market roads include rural-free-delivery routes and public school-bus roads.

Mr. UPHAM. Over 60 percent of America's 30,000,000 farm folk live on unimproved dirt roads. Many of these dirt roads are impassable in bad weather. That is correct, is it not, Congressman WOLCOTT?

Mr. WOLCOTT. It is, to the best of my knowledge, Mr. UPHAM.

Mr. CARTWRIGHT. There is strong sentiment for an increase in appropriations for farm-to-market roads. This matter is yet to be settled. I base my conclusions on conditions in my own State of Oklahoma. When I am at home, I travel a great deal. I know what roads mean to my people who live in the country. They depend on roads for their livelihood. Roads enable them to transport their farm products to market. Their children depend on good roads to get an education at urban public schools.

Mr. UPHAM. You believe, then, that the secondary roads in Oklahoma could stand improvement?

Mr. CARTWRIGHT. A lot of improvement. There are 91,000 miles of officially designated county roads in my State. Only 238 miles of these country roads have been improved to a high standard. And 20,000 miles of county roads in Oklahoma are classified as unimproved. They are not even earth graded. I use my State as an example because I see conditions there at first hand. But I know that there are a million miles of county and township roads in the Nation as a whole that are unimproved. Another million miles are badly in need of further improvement.

Mr. WOLCOTT. It is not only a question of rural roads. Our vast system of primary highways is in need of modernization. Mr. Upham, you've been chief engineer for several State highway departments. You supervised construction of the Pan-American Highway in Mexico, which will eventually link North and South America. You represented the United States Government at the International Road Congress at The Hague before the outbreak of the war. What is your opinion of our primary highway system?

Mr. UPHAM. Well, Congressman WOLCOTT, we have the world's greatest. I know that. But the record shows the inescapable fact that over 100,000 miles of our main highways are obsolete. The record proves that motor-vehicle output is rapidly outpacing highway construction. Automotive statisticians have released figures that prove that American highway traffic will double in the next 20 years. The majority of today's roads were built for the traffic of 15 and 20 years ago. They do not adequately accommodate the traffic of 1940. Automobile speeds have increased from 20 and 30 to 60 and 70 miles an hour. Engines are high-powered; bodies streamlined. Most roads were not designed for such speeds.

It is urgent that our highway system be modernized—that our roads be reconstructed in keeping with modern standards of design to meet the heavy demands of present-day high-speed traffic. As a highway engineer, I estimate that a properly designed, up-to-date, adequate highway system will result in a 50-percent decrease in traffic-accident fatalities. The vital importance of this estimate is testified to by the enormous American highway-accident toll. Each year accidents involving motor vehicles account for 35,000 deaths, 90,000 permanent disabilities, and 1,200,000 personal injuries. To sum up, the most expert of the Nation's highway engineers know that road building has lagged behind traffic requirements.

Mr. WOLCOTT. This was brought out in testimony presented before the House Roads Committee by national highway and traffic authorities such as yourself, Mr. Upham.

Mr. CARTWRIGHT. We also have facts gathered by the various State highway departments and the Public Roads Administration.

Mr. UPHAM. You refer to the State highway planning surveys, Congressman CARTWRIGHT?

Mr. CARTWRIGHT. Yes, Mr. Upham. The surveys made by the Public Roads Administration in cooperation with the 48 States and the Territories. Preliminary results of the surveys were assembled in a report called Toll Roads and Free Roads. This report was transmitted to Congress last spring by the President of the United States. It demonstrated that the facts you just presented are true. A system of interregional highways, linking centers of industry and population, is proposed as a partial solution. These highways will eliminate traffic congestion in and near large cities. The interregional system will represent only 1 percent of the Nation's total road mileage, but it will carry 12.5 percent of our traffic.

Mr. UPHAM. Getting back to the pending road bill, what other provisions are made, Congressman WOLCOTT? Federal aid for primary and farm-to-market roads has been mentioned.

Mr. WOLCOTT. The bill also calls for appropriations for the construction and improvement of roads in national forests and parks, Indian reservations, and roads through public lands owned by the United States Government. A section of the bill provides for the continued elimination and protection of highway-railroad grade crossings, focal points of many horrible accidents. Funds for grade-crossing elimination and protection, as you know, do not have to be matched by the States.

Mr. CARTWRIGHT. There is one important new provision in this bill as introduced. I refer to title II, which is designed to aid the States and municipalities to acquire needed highway rights-of-way.

Mr. UPHAM. I can readily understand the great need for Federal help with this problem if it can be satisfactorily worked out, Congressman CARTWRIGHT. The acquisition of rights-of-way is perhaps the most serious handicap that many States and cities face in the execution of their road-building programs. The cost of rights-of-way for some urgently needed highway projects exceeds the cost of construction.

Mr. CARTWRIGHT. Title II gives a special authorization to the Reconstruction Finance Corporation to make loans to States, municipalities, and other public bodies for the purchase of highway rights-of-way. These loans would be repaid with interest over a period of years. They could only be made at the request of a State highway department and with the approval of the Commissioner of Public Roads.

Mr. UPHAM. I think, gentlemen, that your necessarily brief explanation of Federal-aid highway legislation has clarified the subject for many of our listeners. Congressman CARTWRIGHT, you expressed the belief and hope that Federal aid for highways will be continued. Would you mind telling us your reasons?

Mr. CARTWRIGHT. Not at all, Mr. Upham. For one thing, the Federal Government collects over $300,000,000 a year in highway-user taxes, such as the Federal gasoline tax of 1 cent a gallon. It is only logical for the highway user to receive a return on his investment. It is only reasonable that the money he pays be used to keep the highways up to date and safe.

Mr. WOLCOTT. Another element to consider, Mr. Upham, as a reason for not curtailing our highway program, is unemployment. Government experts tell us that nearly 10,000,000 Americans are out of work. Now, we know that 1 out of every 7 persons in this country are employed in the business and industry of highway transportation. We know that no other single enterprise provides as many jobs as the business of administering, surveying, building, repairing, and maintaining highways. Then, too, many large industries and many small businesses depend, directly or indirectly, upon road building. The money spent on American highways, in large parts, flows back into the channels of American trade.

Mr. UPHAM. A speaker at the recent Chicago Road Show-Convention of the American Road Builders' Association was General Stanley H. Ford. More than 40,000 road builders from all over the world attended this exposition and many heard General Ford say, "Roads rank in importance with the soldier and his weapons as elements in the national defense." General Ford was an official spokesman of the United States War Department.

Mr. CARTWRIGHT. That is just another reason for continuing Federal aid for highways, Mr. Upham. Our Army, as armies go today, is small. But to increase its size to compare with the armies of some nations of Europe would be tremendously expensive. The answer to adequate preparedness lies in swift mobility and rapid concentration of fire power. So the Army is becoming more and more mechanized and motorized. It is mounting rubber-tired wheels. The importance of good roads to the United States Army and to the success of national defense is obvious. However—and I wish to strongly emphasize this fact—there are no military roads, as such, in the United States. War Department officials have repeatedly told State and Federal road officials that the highways which must be constructed for commerce and national development will, in general, be identical with those required for military purposes. Army officers tell us that a general network of good roads connecting important depots and mobilization and industrial centers has more strategic value than transcontinental roads that merely cross the country from coast to coast or from north to south. This is in line with the interregional system recommended by the Public Roads Administration. I want to say again that highways built for peacetime purposes will serve the needs of our national defense.

Mr. UPHAM. Thank you, gentlemen, for your very interesting views on Federal highway legislation. I also want to thank the National Broadcasting Co. and the many cooperating stations of the Nation-wide N. B. C. red network for time graciously allotted to us on the air.

ANNOUNCER. Charles M. Upham, engineer-director of the American Road Builders' Association, Washington, D. C., has interviewed Congressman WILBURN CARTWRIGHT of Oklahoma, chairman of the United States House Roads Committee, and Congressman JESSE P. WOLCOTT of Michigan, ranking minority member of the Roads Committee. Their subject was Roads and the National Economy. Free copies of Roads and the National Economy may be obtained by writing to the American Road Builders' Association, Washington, D. C.

Bishop Corrigan

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

EDITORIAL FROM THE PHILADELPHIA PUBLIC LEDGER

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Public Ledger of Philadelphia for April 3:

[From the Philadelphia Public Ledger of April 3, 1940]

BISHOP CORRIGAN

Consecrated Titular Bishop of Bilta, which first appears in Catholic Church records in 256 A. D., the Most Reverend Joseph M. Corrigan, rector of the Catholic University of America, remains typically Philadelphian. He has a sense of American history.

Amid the impressive ceremonies in the National Shrine at Washington yesterday American history played a role.

Placed beside the main altar was a simple wooden altar used for many years by the Most Reverend John Carroll, D. D., first Catholic Bishop in the United States.

Bishop Carroll was responsible for the area now comprising the Archdiocese of Philadelphia, but Bishop Corrigan was conscious of a much more direct link. Bishop Carroll, a cousin of Charles Carroll, of Carrollton, the signer, played a part in the Revolution.

Benjamin Franklin selected the then Father Carroll to join him on the diplomatic mission to Canada. This mission failed, but Father Carroll was able to provide much more direct assistance when Franklin went to France to play a fateful role in the Revolution.

Thus, Bishop Corrigan, once a student in Rome, and now an educator in Washington, remains a Philadelphian in his appreciation of America and democracy. In constant demand as an orator because of his crisp and witty style, Bishop Corrigan campaigns effectively for "God in Government."

His compaign is obviously arrayed against foreign isms which strike alike at the basis of all religion and the essential American liberties. Americans of all creeds share his views on this vital point and Philadelphians will feel his is an honor well placed.

A Clear-Cut American Program for Domestic and International Conduct

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

Mr. SCHIFFLER. Mr. Speaker, every American from past experience knows the horrible suffering, loss of life, and terrific cost of war. Every sensible American is determined that we shall not again participate in such a useless holocaust. This determination has been thoroughly expressed throughout the length and breadth of our Nation by all of our people, irrespective of lineage, religion, or class. It is the firm resolution and devout prayer of the vast majority of the American people that we do everything possible to fortify ourselves against war again involving our Nation. The people are firm and determined that their leaders shall do everything possible to protect our constitutional Government and our political system as well as to bulwark our economic system against the repercussions that are now, or hereafter will, come from war from other parts of the world. There is also a constant demand that we intensify our military preparedness and do so solely for defensive purposes. If the leaders in charge of our Government are sincere in their wishes to carry out the will of the people, and it is unreasonable to assume that they can successfully do otherwise, their efforts will be directed toward:

First. An intensification of the study of American political principles, and a firm determination to preserve and perpetuate the Constitution of the United States, and a sound and progressive Government administered strictly in accordance with the fair interpretation of that Constitution.

Second. An immediate and consistent effort to secure a prompt solution of our domestic economic problems and the wholehearted efforts toward eliminating unemployment, providing for the distressed farmers, and by earnest efforts to economize and eliminate waste in Government, thereby affording necessary and urgent relief to the taxpayers of our Nation and encouraging industry to move forward and cooperate in obviating unemployment and in aiding the distressed farmer.

Third. By taking adequate protective steps against the repercussions that are now coming from a new world-wide condition caused by the war, and by protecting America against world-wide cutthroat competition that will certainly follow at the conclusion of the war.

Fourth. By the immediate building of a strong, well disciplined, and efficient Navy, Army, and Air Force, as well as their necessary auxiliaries solely for defense purposes.

Fifth. By the immediate disengagement from all foreign engagements and agreements that now tend to disturb and disrupt our national life, violate our strict neutrality, and will inevitably involve us in a disastrous war.

In this connection, it is appropriate to suggest that there should be immediately instituted a prompt and searching investigation conducted by the executive department, into the activities of the diplomats and representatives of this Government in all foreign countries; that those found guilty of serious breach of duty be promptly recalled.

It is imperative that the duties and the responsibilities of our representatives abroad be accurately defined to them and strict adherence to such be required of each of such representatives. Utterances intending to inaccurately reflect the true sentiment of this Government or to convey erroneous impression as to the will of the people of this Nation are absolutely inexcusable and warrant immediate dismissal from service. The United States is not a participant in any war and is resolved that it shall not be except upon actual and threatened invasion. It has statutes defining and outlining its neutrality, and it is a solemn obligation of each of its representatives abroad to clearly and fairly interpret and execute such statutes in the discharge of their official duties. This is a Government of the people, by the people, and for the people, and no clique or group, notwithstanding what their private opinions may be nor what high position they may occupy, have a right to contravene the will of the people. It is a sacred obligation to execute the will of the people.

It is time for a stringent policy to be inaugurated—a policy clearly defining our attitude and inclinations on matters abroad and one that shall be rigidly enforced, typically and wholly American, not selfish nor short-sighted, but in righteous preservation of Americanism and of the American Republic.

We as leaders have this obligation to our people and to posterity. None can avoid it. We must all courageously meet it, bear our responsibility, and give of our best service in pursuit of the fundamentals of American justice and political and economic principles.

W. P. A. Wage Scale Working Hardships

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

PETITION OF THE UNEMPLOYED BROTHERHOOD OF PENNSYLVANIA

Mr. VAN ZANDT. Mr. Speaker, 1,714 citizens of central Pennsylvania have petitioned this Congress through my office protesting the existing W. P. A. wage scale and the 18-month, 30-day furlough provisions of the present W. P. A. law.

The decreased wage scale and the furlough system have worked hardships on the many signers of this petition, and I am hopeful that my colleagues, who are members of the House Committee on Appropriations, will take notice of this protest in their consideration of next year's relief bill now before them.

The spokesmen for this group, Unemployed Brotherhood of Pennsylvania, Inc., was chartered by the Commonwealth of Pennsylvania on October 14, 1935, with the Grand Lodge headquarters at Altoona, Pa., and subordinate lodges throughout the State of Pennsylvania.

The Unemployed Brotherhood of Pennsylvania is in no way connected with any other organization, and should not be confused with organizations or societies having similar aims and purposes and operating on a national scale.

The petition referred to above, signed by President Lawrence Schrenk, Altoona, Pa., and Walter J. Taylor, secretary, Altoona, Pa., is as follows:

UNEMPLOYED BROTHERHOOD OF PENNSYLVANIA, INC.,
GRAND LODGE,
March 29, 1940.

To the Congress of the United States, Washington, D. C.

GENTLEMEN: In behalf of the many thousands of American citizens who have been forced out of private employment through no fault of their own, and forced to go on W. P. A. and relief as a means of existence for them and their dependents, and who by acts of Congress in the passage of the 1939 relief law, were subjected to a drastic reduction in wages of all W. P. A. workers in certain geographical districts in the United States, and, which reduction in wages worked a further hardship on the W. P. A. worker and his family, and, whereas the work-rotation provision of the law which requires a 30-day furlough after 18 months' continuous service on W. P. A. worked a further hardship on the unemployed or W. P. A. worker, and, as many W. P. A. workers are members of the Unemployed Brotherhood of Pennsylvania, Inc., and have voiced their protest against the reduction in W. P. A. wages, and the work-

rotation system, the grand lodge of the Unemployed Brotherhood of Pennsylvania, Inc., passed a resolution to petition Congress for the restoration of the wages of W. P. A. workers, with a substantial increase in wages over the prior rate to compensate for the ever-increasing cost of living, and, for the elimination of the 30-day lay-off after 18 months.

We feel free in exercising our constitutional rights in presenting these petitions to your honorable body through our Representative of the Twenty-third District of Pennsylvania, Hon. JAMES E. VAN ZANDT, and trust you will give this petition your earnest consideration and favorable action in passing the 1940 relief law.

The object of this brotherhood is to unite the unemployed workers; to promote their general welfare and advance their interests, social, moral, and intellectual; and to promote and assist in securing the enactment of legislation for a "health" and "decency" relief standard for the unemployed workers and their dependents, and to establish mutual confidence and create and maintain harmonious relations between the administration of State, county, city, work or relief.

The Unemployed Brotherhood of Pennsylvania is in no way connected with any other order, or organization, and does not use radical means, or threats of force in the adjustment of differences, but works with the officials and administration in seeking ways and means of providing work and bettering conditions to the advantage of all interested. Such are the aims and purpose of the Unemployed Brotherhood of Pennsylvania, and in the presenting of these petitions to Congress.

Very truly yours,

LAWRENCE SCHRENK,
President, Grand Lodge.

[SEAL]

WALTER J. TAYLOR,
Secretary, Grand Lodge.

John Philip Sousa

EXTENSION OF REMARKS
OF
HON. LUTHER PATRICK
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1940

ADDRESS BY LAWRENCE J. BACH

Mr. PATRICK. Mr. Speaker and fellow Members of Congress, John Philip Sousa was born on November 6, 1854, and is buried in the Congressional Cemetery, Washington, D. C. No man who ever breathed the free air of Americanism more powerfully exhibited the full measure of his appreciation than this great man. The inspiring notes of his soul-stirring patriotic approaches are as secure as if they were inscriptions graven on the face of the most imposing stone of each mountain in this broad land.

On the anniversary of Sousa's death, March 6, 1940, a band of his loyal admirers—some were even his blood kin—went to the mound under which reposes his dust and conducted an impressive ceremony. This group included Boy Scout troop 10, of Washington, D. C.; troop 2, of Detroit, Mich.; Sea Scouts of the National Capital area; Metropolitan Police Boys' Band; Mr. Osmund Varella, who represented the Sousa family; and hundreds of others. I give you here the speech of Mr. Lawrence J. Bach, which was delivered as a part of the ceremony:

It is eminently befitting that we, the friends and admirers of John Philip Sousa, gather for the fifth time to honor this great man and at the same time honor ourselves as humble agents of the vast throng that would fain be present here today. We prove, let us believe, that despite memorial bridges and works of stones and art, qualities of character are ultimately basic and attractive, and that so long as true character and upright endeavor for the public weal still have an abiding place in the affections of our people, all will be well with America, which was ever the object of the fervent love of our dear friend. Dead, he yet speaketh through his art, and he speaketh louder through those qualities of mind and heart which we value so highly and which we try to emulate.

Small men are provincial, mediocre men are cosmopolitan, but great men are universal. John Philip Sousa was universal. He knew that nobody is useless in this world who lightened its burdens for somebody else. He was continuously lightening the burden of some meek soul. He recognized the fact that talk which does not end in any kind of action is better suppressed. In other words, he ever squared hand with mouth. In the test of any gentleman—his respect for those who can be of no possible assistance to him—our honored dead did not suffer. He accurately measured the distance between his ambition and the success that would crown it, but he did not fill the gap with heartaches of friends or foes. He relied upon the reward given to men who do not flinch from the cries of the multitude and who do not seek their fortunes in the success of a moment. He walked straight before him in what he thought was the right path of a good citizen of the United States.

Standing at the grave of our honored dead, may we come more deeply than ever into the intimacies of God; and even while we continue to drink the bitter cup, have power and grace given us to say, "The Lord hath given; the Lord hath taken away. Blessed be the name of the Lord."

H. R. 3649 and S. 487, To Establish a System of Longevity Pay for Postal Employees

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1940

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE JOINT SENATE AND HOUSE COMMITTEE ON POST OFFICES AND POST ROADS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me today before the Joint Senate and House Committee on Post Offices and Post Roads:

STATEMENT BY HON. MARTIN F. SMITH, REPRESENTATIVE IN CONGRESS FROM STATE OF WASHINGTON

Mr. Chairman and gentlemen of the committee, I appreciate this opportunity to go on record in favor of H. R. 3649 and S. 487, to establish a system of longevity pay for postal employees.

As I understand these bills, as a reward for continuous service, they will grant $100 per annum in addition to the base pay, upon completing 10 years' service, and an additional $100 per annum upon completion of every 5-year period thereafter until 30 years' continuous service have been rendered and in computing the period of service, credit to be given for substitute service. These benefits would apply to the following deserving groups of postal employees: assistant postmasters, supervisory employees, special clerks, clerks, and watchmen, messengers, and laborers in first- and second-class post offices, employees in the custodial service of the Post Office Department rendering not less than 5 hours' service per day, employees of the motor-vehicle service, letter carriers in the city-delivery service and village-delivery service, rural-letter carriers, employees of the Railway Mail Service, employees of the sea-post service, clerks at division headquarters of post-office inspectors, and postal employees at the United States Stamped Envelope Agency.

I consider this just meritorious legislation and urge your committee to report same favorably so that the House and Senate can act before adjournment of this Congress. For the information of the committee, I append communications received by me:

NATIONAL FEDERATION OF POST OFFICE CLERKS,
Spokane, Wash., April 1, 1940.

Hon. MARTIN F. SMITH, M. C.,
Washington, D. C.

MY DEAR CONGRESSMAN: Joint hearings will be held on longevity pay bills by subcommittees of Senate and House Post Office Committees, Thursday afternoon, April 4, at 2 o'clock.

We request that you appear before this committee in behalf of this legislation.

Respectfully yours,

J. H. MITCHAM,
First Vice President.

SEATTLE, WASH., *April 4, 1940.*

Hon. MARTIN T. SMITH,
House of Representatives, Washington, D. C.:

Joint Post Office and Post Roads Subcommittees holding hearings Thursday 2 p. m. on longevity bills. Local 28 appreciates any steps you may take to get favorable report for S. 487 and H. R. 3649.

CARSON F. WARDEN,
Chairman, Legislative Committee, Local 28, N. F. P. O. C.

Thank you, Mr. Chairman and gentlemen, for your courtesy and kind attention.

American Ambassadors Are Not Carrier Pigeons in Foreign-Propaganda Campaigns, Mister M. P.

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

STATEMENT BY BEVERLEY BAXTER, M. P.

Mr. CRAWFORD. Mr. Speaker, in asking permission to extend my remarks and to include therein a statement by Mr. Beverley Baxter, M. P., I desired, first, to say to the English gentleman that our American ambassadors are not carrier pigeons in foreign-propaganda campaigns. Secondly, I want our people to know how cleverly Mr. Baxter and others—who would have us enter this European war with all the power at our command—can tell us what it is all about. I know that the British, the French, the Canadians, and all others who are now and who will eventually become the Allies of England and France, want the United States to get into the conflict. About this we shall learn more later. If we once enter this war, we shall then very rapidly learn what it is about. Some day it may become very necessary for England to establish, on North American soil, the headquarters for the British Empire. It may be to the interest of the British and also the Canadians, in the long run, for the United States to remain out of this war and not become any more involved than we are at the present time. Surely Mr. Baxter will admit that we have furnished to England several billions of dollars of exchange during the last few years with which England is now able to prosecute the war. We still have to settle for that contribution. As England desires, she can call on us to redeem the dollar exchange which we have released in her favor. When England calls, we must deliver the goods and redeem those dollars we have released in her favor. Without understanding the mechanics of the operation and with millions of our people uninformed, we have proceeded for years, just as we now proceed this very hour, to give this aid to the British Empire, and this Mr. Baxter knows very well. Our people and their affairs are now involved in this war, and every day our social and economic security becomes more involved in the present war. This Mr. Baxter also knows. I now submit for the RECORD the statement of Mr. Baxter which appeared in the Sunday Graphic, March 10, 1940.

[From the Sunday Graphic of March 10, 1940]

MY DEAR AMBASSADOR, WHY DIDN'T YOU TELL THEM?

Mr. Joseph Kennedy, America's Ambassador to London, is with us again.

London has missed him during the 3 months that he has been visiting his native country. In the Stygian gloom of our decadent winter we could have done with the sunshine of Joe Kennedy's smile.

The diplomatic picture in London is incomplete—especially in a period of crisis—without the presence of the United States Ambassador. However, he is back and I hope that he will not find us jaded or jaundiced by the weary months of war. If he does, he should remember the winter we have been through and be tolerant.

On Thursday, when Mr. Kennedy reached London, he gave a general interview to the press. He has always been most courteous and friendly in his relations with our newspapers, and it can be accepted that the reporters were absolutely meticulous in recording his statements.

Therefore I was the more puzzled by three sentences attributed to Mr. Kennedy. They were made in answer to a question on isolation:

"If you mean by isolation a desire to keep out of the war, I should say that it was even stronger than during the 2 months I was there. People understand it less and less. They don't understand what it is all about."

I have read and reread those words with a growing astonishment. With the greatest respect and even with some claims as a personal friend I feel constrained to ask:

"My dear Ambassador, why didn't you tell them?"

There is no living man in a better position to tell the people of the United States of America the truth about this war. Not only did you see the storm gather over here, not only did you witness the relentless attempts of the British Government to maintain peace, but every instinct in you rebelled against the brutality of the Nazi regime.

I am not giving away any secret in saying that.

One had only to look at your face in the Ambassadors' Gallery of the House of Commons in any of the crisis debates to know that you personally would have liked to see the entire Nazi regime boiled in oil.

Admittedly, ambassadors must observe discretion, but I never quite looked on you as an ordinary diplomat. It is not your profession, and, unless you have changed your mind, you do not intend to take any official post after you leave London.

Your warmest admirers over here thought that you would speak to your own people with the same engaging frankness that you have always shown on this side of the Atlantic.

We realized, of course, that Washington might well have urged on you a policy of restraint on the question of American intervention, but we felt absolutely certain that you would give to your countrymen a picture which would leave them no chance to say even in jest that they did not know what it is all about.

You might reply that you are the Ambassador of the United States, not an ambassador for England. You might go further and say that you see no reason why you should use a visit home to try to bring America into the war on our side.

My dear Joe, if I may use the usual greeting at our mutual golf club, we are not asking the United States of America to come into this war. We have every confidence that France and ourselves can bring the struggle to a successful conclusion and rid the world, including America, of the Nazi regime forever.

No doubt it will take a heavy toll of blood and treasure. But the young men of the British Empire do not shrink from that challenge which has come so cruelly to their generation.

Make no mistake about it. If America came into this war now, the Nazi regime would collapse before the summer is out, and the lives of hundreds of thousands of young men be saved. At any time in the last 10 years America could have saved the collapse of Europe by taking her place openly and unreservedly on the side of France and Britain.

I make those assertions for two reasons. First, because I profoundly believe them to be true, and secondly, because it is better to say what is in one's mind than indulge in reticences that neither impress nor deceive anyone.

The policy of America toward this war is the sole concern of President Roosevelt's administration. Quite rightly your people would fiercely resent any attempt on our part to influence your Government's attitude. But that does not mean that in our own country we cannot speak as frankly about America's responsibility toward humanity as you in the United States of America speak of ours.

But one thing puzzles me. There are no people more basically honest than Americans. Even if their national indoor game is poker and they enjoy deceiving each other for pastime, they do not deceive themselves. You have none of that self-hypnotism which permits a Hitler to bemuse an entire nation.

Then what has happened to the Americans that I have lived among and visited so many times? What do they mean when they say that they don't know what this war is about?

When a poor, demented Jewish youth killed Vom Rath in Paris and Hitler sent his incendiaries, robbers, and murderers into the streets of Germany for revenge, America knew what it was about. Your Ambassador to Berlin was recalled, and the fury of your people's anger leaped like a flame across the ocean.

When Germany, having reduced Czechoslovakia to helplessness, marched into Prague and ended the little republic's existence, your Nation had no difficulty in realizing what was going on.

When little Dollfuss lay gasping out his life with Nazi bullets in his throat, when Pastor Niemoller was acquitted by the courts and immediately rearrested and sent to a concentration camp, when refugees reached your shores with haunted eyes and broken bodies, when the Nazis attacked the church—and particularly your church, my dear Ambassador—and said that the German people must put away Christ and worship a German god, you saw very clearly the vile depths of the Nazi threat to civilization.

When the Nazis denied the rights of the individual, when they banned freedom of speech, freedom of thought, and freedom of worship, when they denied to small nations the right to exist, when they enslaved their own people in order to create the greatest war machine in history, when they denounced pity as cowardice, decency as weakness, idealism as poltroonery—and when they prepared to force their tyranny and paganism on western civilization—

Can it be true that your people did not understand?

The Poles understand. So did those hundreds of young Czech students as they faced the firing squad a few weeks ago. The Finns understand, too, as their gallant remnant fights on for an ideal which is as clear to them as it is apparently obscure to others.

Has the lamp gone out on the Statue of Liberty? Or has the statue been turned around so that she faces New York now instead of Europe?

Forgive me. I am jealous of the good name of America, for I know her so well. When your country quite rightly fought our stupid government for your independence the Editor Prudholme

cried in Paris: "I can hear the chains of tyranny breaking one by one." Your rebellion against Britain set the French aflame and, cruel and bloody as it was, the French Revolution was the beginning of liberty in Europe.

I cannot believe that when the chains of tyranny appear again the Americans do not understand why the democracies of France and Great Britain have taken up arms.

Please forgive me again if I indulge in a personal note. You have a large and young family. Your interest in their careers and your unaffected joy in their companionship won the hearts of all over here. We realize the loneliness you are feeling now at being separated from them.

I have a small and young family. Like all parents, our own children mean more to us than anything else in the world.

And why is this war being fought? In order that your children and my children and the children of every country may live in a world where there is decency and light instead of the darkness of war and scientific barbarism.

Because of the sacrifice of the young men of France and Britain our sons and daughters shall not see the Gestapo or the concentration camp, the fouling of the young mind, the setting of son against father, the enslavement of the soul, and the end of individual liberty.

They shall not see the night replace the day nor civilization turn back to the ages of cruelty and ignorance. They shall not see the denial of God, the lowering of womanhood to the level of cattle, nor the crushing of the spirit.

That is what this war is about.

A. BEVERLEY BAXTER.

Susquehanna River Floods

EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

EDITORIAL BY TOM R. HUTTON

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my remarks, I include therein a recent editorial by Mr. Tom R. Hutton, editor of the Binghamton Press, on the subject of the recent floods in my district.

[From the Binghamton (N. Y.) Press]

GONE DOWNSTREAM

The rivers have risen according to their springtime fashion in these valleys and, for the time being at least, the crest has passed—gone downstream in brown muddiness to make trouble for other communities farther down the Susquehanna. A week end of excitement, apprehension, and some unnecessarily alarmist psychosis has passed with the present crest. Again the short fan of the Susquehanna has written a lesson plain as the law of gravity itself for all to read and observe. In consequence, for 2 or 3 months at least, flood control in these valleys will be more popular than ever and the work that the Army engineers have been pushing toward completion will get more sympathetic consideration and understanding from the average man on the street.

As it turned out, the damage hereabouts was slight. But that was only because of the balancing factors such as the termination of the rainfall about 1 o'clock Sunday morning, the almost complete miss of the so-called West Virginia storm that might have given us an inch or two on top of what we already had and a sharp drop in temperature Sunday night. If any one of these factors had gone the other way, the trouble might have been greater.

One may even go further back into possibilities than these immediate ones. For instance, supposing that instead of entering the fall with one of the greatest deficiencies in moisture recorded hereabouts, the southern tier had started the winter with the usual normal water table. Supposing that on top of that we had gotten the amount of snow and rain that we did get. The results would have been catastrophic.

One has to look no further than the question of increasing frequency of 21- and 22-foot crests to realize that at least the condition has not naturally improved in these valleys, and that the only way in which the residential and business and communications structure can be assured of safety is by just such a program as that which is being carried out by the United States Army Engineers. Some of the Pennsylvania cities now involved in difficulty constitute a good example of what happens when people would rather have the river look them in the eye at eye level now and then than to look at flood walls between themselves and the river with a sense of security.

Reports from the Army engineers' office show that the works already under way have sustained no material damage from the flood. One construction bridge was lost at the Whitney Point Dam, but none of the big hill that is being transported to fill that valley for the protection of Binghamton was carried away by the high water. One small unfinished levee at Corning was topped, but the Arkport Dam was uninjured, and there is nothing to prevent the resumption of flood-control work at an early date on the entire fan of the Susquehanna, barring run-off not now contemplated. Binghamton's water supply has been contaminated as a result of a broken suction pipe which was neither protected from rising river water pressure nor accessible for shut-off, so for the time being boiled water again becomes a necessity. Aside from that, the usual low places, still unprotected by flood walls for which contracts will be let this spring, are doing what those low places have always done in ordinary floods.

Today it is not necessary to convince anybody in Binghamton of the wisdom of flood control or of the necessity of the efforts 4 years ago which led to the actual authorization and appropriation of funds by the Federal Government and the beginning of a program by the Army engineers which is now well on its way toward completion. Everything being equal, this should be our last spasm of floodwater alarm.

America Calls for Sound Leadership

EXTENSION OF REMARKS

OF

HON. ALBERT E. AUSTIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS, MARCH 30, 1940, BEFORE THE McKINLEY ASSOCIATION OF CONNECTICUT

Mr. AUSTIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I ask unanimous consent to include therein an address by the Honorable JOSEPH W. MARTIN, Jr., of Massachusetts, on the occasion of the thirty-second annual banquet of the McKinley Association of Connecticut, on March 30, 1940, which address was broadcast over a national hook-up of the Mutual Broadcasting System.

The address is as follows:

As a neighbor, I feel very much as though I have come home in being present at this fine gathering of Connecticut Republicans.

It is always a great privilege to pay a tribute to that martyred Republican President, William McKinley. Not only was he a great and gentle spirit but he possessed in large measure the wisdom of gentleness. He was whole-heartedly, honestly, and courageously a believer in and an advocate of the protective tariff. It was the irony of fate that he should have been called upon during his term of office to lead the Nation through a war. McKinley was so typically a man of peace.

He was the kind of a President who believed that self-reliant Americanism is always to be preferred to political paternalism. William McKinley believed the people could best serve themselves if they were left free to do so, and that they were the best judges of the kind of government they wanted and the kind of government that was best for them.

We do credit to ourselves when we pay tribute to that great, gentle man who by the assassin's bullet gave his life in line of duty just as certainly as any soldier.

I said a moment ago that to be here with you tonight is for me much in the nature of a homecoming. My good friend of many years, Samuel Pryor, your able and energetic national committeeman, who has contributed much toward the rebuilding of the new Republican Party, told me of your tremendous interest in the impending campaign, and this turn-out tonight confirms his statements.

I cannot let this occasion pass without a word of praise and commendation for your brilliant and wise Governor, Raymond Baldwin. While others have talked, he has acted, with the result he has contributed materially in reducing the unemployment problem in his State. He has been responsible for many new industries being located in Connecticut, and that, of course, creates revenue for the cities and towns as well as jobs for the workers.

We all realize the Nation's need for a Republican President; but it is equally as important, if not more so, to elect a Republican Congress. It is upon the legislative branch of our Government the people must depend for the protection of constitutional government and sound Americanism.

In 1938 Connecticut elected Senator JOHN A. DANAHER, who, in less than 2 years, has become one of the forceful members of the Senate, and four able Members of the House: WILLIAM J. MILLER, B. J. MONKIEWICZ, ALBERT E. AUSTIN, and THOMAS R. BALL, who have all made material contributions to sound government. On their

records they should be returned by an overwhelming vote of confidence.

I want to talk to you tonight about what we must do to complete the job of recapturing control of the House of Representatives and the Presidency in 1940. There is no question that our accomplishments of 1938 give us every reason for optimism. I want, tonight, however, to impress upon you that we have a campaign ahead of us into which we must put our best efforts in order to win back the Presidency and control of the House of Representatives.

We all know there is a strong movement toward the Republican Party throughout the country. That was demonstrated in the 1938 elections. But I want to stress the fact that movements move faster and further if somebody pushes them.

The man, or the party, that lies down and goes to sleep on what seems to be the soft side of a political sure thing has a good chance of waking up just in time to find he's been licked by somebody who hustled because he feared defeat.

Of course, the Democrats are confused by the White House enigma. They can't tell who their candidate will be; until they know that they can't tell what their issue will be. The shiftiest campaigners who have ever handled a smudge pot have done their best, but they haven't yet smoked out the answer.

In the coming campaign we must not only work hard; we must use our heads as well as our feet.

As someone has said, there is a good deal more human nature than any other quality in the average citizen; and when you bill him on any other basis, you are liable to have a big shrinkage in the ballot boxes. The American voters have been through more than 7 years of broken promises, contradictions, and inconsistencies. Now they've got to be shown.

It has been well stated that:

"When the historians record the achievements of the New Deal, they will undoubtedly divide them into three main phases: The splurge, the purge, and the dirge."

The rank and file of the American people want a leadership in the Republican Party that will not try to infringe the New Deal copyright on fantastic and unworkable schemes.

If we substitute constructive moderation for reactionary radicalism; common sense for emotionalism; facts for fancies; calm logic for excited emergencies; cold reason for fine phrases; solid experience for impractical theories; good will for hatreds; candor and courage in high places for shifty opportunism, then the people will know that America has again started up the road to peace, progress, and prosperity.

The people are demanding—and they have a right to demand—drastic economies in governmental expenditures; a turn in the direction of a balanced Budget and debt reduction as needed stimulants for all business, large and small.

We started the return toward sound government with our victory in 1938 when we practically doubled our membership in the House of Representatives and made encouraging gains in the Senate as well.

The outstanding result of the 1938 elections was the reassertion by the Congress of its time-honored independence and its recapture of its constitutional rights which were being filched or assumed by New Deal bureaucrats.

From this new spirit of independence injected into the Congress by the '38 elections, important consequences flowed. An era of rash and reckless experimentation was definitely ended.

It was both our aim and our duty as the party of opposition to force a closer scrutiny of proposed legislation, to refuse to submit to the dictation of the White House. We lived up to our obligations as the minority party. The record shows we were never merely obstructionists.

The demand by the voters today is for public officials who will operate the people's Government instead of trying to operate each individual's business. As someone said not long ago, if the army of unemployed is to be converted into regiments of breadwinners, the Government must encourage business, not persecute it; regulate business, not try to dominate it. Reasonable, necessary regulation is consistent with a republican form of government and with the principles of the Republican Party. Domination of business by the Government, competition with private business by the Government, throttling regimentation, punitive policies, and a hostile attitude toward business lead to political tyranny.

After the 1938 elections the Republicans presented to the Congress a concrete program for recovery and called upon all the Members of the House and Senate, regardless of party, to join in a sincere and earnest effort to guide the country back to economic recovery and to restore our millions of unemployed to jobs in private industry at decent American wages.

The Republican Party has functioned in the Congress on the conviction that democracy could neither be saved nor perpetuated by giving congressional power to the Chief Executive.

We are certain we cannot preserve our essential liberties by handing them over to a little self-appointed board of bureaucrats over whom the people have no control because they never submit themselves to the verdict of a popular election.

We cannot help the poor by raising the price of everything they have to buy. We cannot protect the farmer by reducing his operations so drastically that food he should be supplying has to be imported instead. We cannot help the small-business man or the citizen by taxing them to death.

We cannot cultivate even elementary thrift in the people if government continues parading before them as a prodigal spendthrift operating on the basis of tax and spend, squander, and elect.

We have realized, moreover, that we could never have that close cooperation between business and government so vital to the national welfare, as long as government asked business to do something one week and then censured business the next week for doing that very thing. It is not possible for us to continue under conditions whereby the Government pats private enterprise on the back with one hand and stabs it in the back with the other.

The American people want to stay out of war. There may be danger that the interests of the United States may become involved in European entanglements. Our economic, and perhaps social and political conditions as well, may be more or less affected by foreign wars.

We must be on the alert to guard ourselves against a war boom. Such a boom would be followed by a series of post-war depressions.

We do not want a war boom in the United States. Nor do we want another post-war depression in the United States. Superimpose another post-war depression upon the hard times that still rest like a pall over this Nation and the resulting condition will afford a fine opportunity for those who would strangle constitutional government in this country and substitute a dictatorship for the Bill of Rights.

If our Nation stays out of war it is apt to have more friends and more influence in the world and is likely to be stronger in its ability and capacity to aid others, wounded and weakened and devastated by war than by getting into war itself.

We Republicans are for an adequate national defense, but we want it to be a national defense and not a tool of offense to be used against any foreign nation by those whose lust for leadership in world power politics exceeds their prudent consideration for the welfare of their own Nation.

We told the American people in the campaign of 1938 that if the Republican Party was returned to power we would put an end as soon as possible to New Deal debts and dabbling. We doubled our membership in the House. We made our gains in the Senate. And we did not lose a day after the Congress convened in beginning to fulfill our promise to the people. I wish I had the time tonight to detail to you the many ways in which we, as a strong, well-knit, aggressive minority, have, time after time, called to account the bureaucrats and the spendocrats, and forced revisions or prevented the passage of legislation which would have been harmful to the country.

Now, fellow Republicans, we believe in the promises we have made to the people. We are honest in the criticisms we make of the New Deal. We are sincere in the suggestions we offer for what we believe to be necessary changes. We are going to be honest and sincere in keeping our promises to the people. Therefore, we intend to be careful not to make too many promises; to make only promises we are sure we can fulfill. We must then recapture the House of Representatives and the White House so we will be in position to translate both our criticisms and our promises into constructive legislation to put this Nation back on the high road to prosperity.

You can't win a national election on a negative platform. Neither can you save a nation by a negative performance.

But it is a fact, nevertheless, that the most constructive thing to do first when your house is burning down is to put out the fire. Having done that, you then turn to, survey the damage, and proceed with your repairs or rebuilding.

Therefore, as I say, the first necessity for the Republican Party, if it is to translate its policies into benefits for the Nation, is to get back in power.

Don't imagine we have an easy job ahead of us. The greatest technique developed by the New Deal masters of strategy has been to keep the American people in such a state of confusion they couldn't find out the truth about anything until it was too late to prevent or remedy it. We must clarify the issues.

The favorite political trick of the New Deal is to keep so many balls in the air at once that the people can't watch them all, and, like the magician on the stage, while the eye is confused and the attention is diverted, get away with something the people don't see.

Think of it. In 7 years we have had 65 "emergencies" and "crises." The American people have lived for so long in an atmosphere of political alarms that to go back to normal peace, security, and prosperity will seem like having moved away from the neighborhood of a boiler factory.

I think it is not too much to say the New Deal administration has as its major policy followed the practice of keeping the Nation in a state of synthetic fears. You will recall that famous phrase which at the time seemed to touch the heart of the country, "The only thing we have to fear is fear itself." Ponder that, my fellow citizens, in the light of 65 "crises" and "emergencies" in 7 years. And don't forget that this Nation is at this hour operating under a "national emergency." We do not know what the emergency is. We do not know what caused it. We do not know when it will end. We do not know what is being done to relieve it. We only know that once more from the White House has gone out to the Nation the alarming cry, "Another national emergency."

Let us not make the mistakes that have been made by the New Deal administration. Too many promises, and not enough performance; too many inconsistencies, too many contradictions, and a disregard—not to say a contempt—for the intelligence of the American voters.

Too many broken promises, did I say? Fifty-seven major promises made and broken in 7 years. Solemn promises. Promises which in 1932 the gentleman who was then the candidate for the Presidency said:

"I regard as a sacred covenant with the people."

Let us Republicans determine carefully what we intend to promise; and let us determine in advance that we can do what we say we will; and then, when we are in power, let us proceed to do what we have promised.

We have kept our pledge of 1938. We have fought for economy and sanity and integrity in government. We have struggled to keep the Nation out of any involvement which would lead to war. We have labored for honest money. We have tried to restore to the Congress the powers belonging to it under the Constitution. We have not hesitated to support every sound measure which has been brought before the Congress. But we have believed there ought to be a definite and specific program instead of aimless experimentation and nebulous theories; we have believed any plan of recovering prosperity in this country ought to be on a basis of patriotism and unity and not on a basis of partisanship and sectionalism.

The greatest reforms needed now are to get our jobless citizens back to work in private industry at decent wages and for the Nation to get back to a basis of old-fashioned American thrift, individual self-reliance, individual initiative, and an unimpeded flow of free enterprise. We need more fair dealing and square dealing instead of so much new dealing and queer dealing.

Now, fellow Republicans, we can win the 1940 elections. Not only can you win here in the State of Connecticut but we can win throughout the Nation on the basis of past performance and experience.

In 1936 Connecticut's vote for Governor showed a Democratic majority of 96,000. In 1938 the vote for Governor showed a Republican majority of 3,000.

In 1936 you had only 9 Republican State senators. In 1938 there were 16 Republican State senators.

In 1936 there were 165 Republican representatives in your State legislature, while in 1938 the number was increased to 201.

These figures are significant.

I also wish to remind you that in the 1938 congressional elections the Republican Party became the majority party in the 38 States outside of the deep South.

In the Republican sweep of 1938 we elected Governors in 18 out of 27 States in which there were contests.

An analysis will show you that Republican workers are in actual majority in 3 out of every 5 counties in the 38 States outside the deep South.

If we had worked a little harder to increase the total Republican vote by 5 percent we would have won 57 more congressional seats 2 years ago.

Since the 1938 elections we have had two more New Deal Budgets, two more great deficits, and 2 years more of debts and dabbling.

The people do not approve of New Deal meddling in foreign affairs, meddling which is apt to involve us in European wars.

The people do not approve of the communistic groups who congregate about the White House to be defended and dined and honored.

It has been said, "Genius and ambition laugh at precedent." But it does not necessarily follow that breaking precedents constitutes genius; insistence on doing so may result from an unwholesome ambition for power.

Now, in conclusion let me suggest to you, my fellow Republicans, that politics is like baseball. The hits we made yesterday won't win the game today. The triumphs of 1938 won't win the elections in 1940. We've got to work.

Our job is to think it over, talk it over, and then put it over.

That we can do, and when we are back in power the country will take new hope; business will have new confidence; we will turn to in the good old American way to recover our lost ground, to regain prosperity, and again to repair the shattered finances of the Nation. We will put America back to work. We will lift from the backs of the people the burden of taxes placed there by the squanderbund of the last 7 years; we will restore the flow of free enterprise, and by those measures we will put this Nation back on the high road to recovery.

Water-Transportation Regulation

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

EDITORIAL FROM THE BROOKINGS (S. DAK.) REGISTER OF JULY 27, 1939

Mr. VAN ZANDT. Mr. Speaker, day by day the American people raise the question of the wisdom of the Government developing and maintaining, at the expense of the taxpayers, unregulated inland waterway transportation.

The American public are also beginning to realize that if the consumer is to obtain a real benefit from the vast expenditures of his tax money, the inland waterways must be placed under the control of the I. C. C. or, in other words, share the responsibility of other forms of transportation by standing on their own feet.

The editor of the Brookings, S. Dak., Register, on July 27, 1939, expressed the view of a great majority in the following editorial:

[From the Brookings (S. D.) Register of July 27, 1939]

WATER TRANSPORTATION REGULATION

Those who are opposing the proposition to place water transportation under the Interstate Commerce Commission, which Commission has to do with railroad transportation, seem to believe that the members are servants of the railroads rather than the public.

There would appear to be a considerable measure of justice in the position which the railroads take when they urge that the same regulations which surround them should apply to water transportation. The railroads have suffered many and varied hardships during recent years. Constantly expanding regulations which have been imposed by the Government, onerous union rules, the diversion of business to trucks and busses, airplanes, pipe lines, and many another thing has contributed to the situation in which the railroads find themselves. If the Government furnishes all the money with which to develop water transportation it would appear to be simple justice to see to it that water carriers operate under the same rules as railroad transportation.

Blocking Navigation

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

EDITORIAL FROM THE DAILY OKLAHOMAN

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Oklahoman:

[From the Daily Oklahoman]

BLOCKING NAVIGATION

In his automatic diatribe against our Oklahoma Governor, Congressman JOHN RANKIN charges that the Governor's love for the utilities has caused him to block navigation on our pearly and purling Oklahoma rivers. And that ought to cure the headaches of many a suffering Oklahoman.

Many of us, if not all of us, have been laboring under the hallucination that the lack of navigation on our matchless Oklahoma rivers has been due to an inadequate water supply. We have taken it for granted that it is simply impossible to drive barges and other river freighters up a sand bar that is as dry as one of JOHN RANKIN'S speeches. But the gentleman frees us from such an error. Every river bed in this land of the mistletoe would be fairly bristling with freight-laden bottoms if Governor Phillips were not such a loyal friend to the utilities.

Now we know what is wrong and what is necessary. It is Governor Phillips and not a lack of channel depth that keeps the *Queen Mary* from climbing the North Canadian and docking at our community camp. It is the Governor rather than a lack of water that is keeping the merchantmen of the nations out of the Cimarron and the Cottonwood. Let Governor "Red" reverse his views and his position with reference to the utilities, and Alva will be converted into a second Liverpool overnight, Wewoka will possess a greater harborage than Hong Kong, and the Washita will supplant the Thames as the river of the 10,000 masts.

How ignorant we have been, and how heathenish, too, to think that the withholding of the rains by an all-wise Creator has dried up our river beds and rendered the average river incapable of floating a gum-tree canoe. It is the fault of Governor "Red." He has shooed back the rain clouds and dried up the rivers, and he has turned back all of the freighters from the seven seas. And he has done it all, plague him, because of his friendship for the utilities. JOHN RANKIN has made it all as clear as delta mud.

And RANKIN hits the bull's-eye again when he says commiseratingly that most Oklahomans are comparatively poor, and that all of us are overtaxed. Of course, we are overtaxed. And a part of the tax we pay is gouged from our pockets to help supply less-than-

cost electric juice to the hotels and banks and business houses and filling stations and honky-tonks of Tupelo, Miss. If all the denizens of the persimmon belt had to pay for their own electric current (even as we less-subsidized Oklahomans pay for ours) our tax burden would not be quite so heavy. Those pesky ginseng diggers of the upper Tombigbee will please us a lot better if they will only stop shedding tears at our tax plight and quit taking our money to help pay for their own light bills.

American Culture and Destiny in World Affairs

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, April 5 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. MURRAY. Mr. President, I wish to call the attention of the Senate to a very able editorial in the March 25 issue of the Saturday Evening Post, dwelling on our distinctive American culture and separate destiny in world affairs.

I ask unanimous consent that this editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post of March 23, 1940]

THAT OF OUR OWN

We could wish that a neglected book entitled "The Contrast," by Hilaire Belloc, might be made required American reading. It was written between the World War and this one, when there was time to think. The author's qualifications rest upon three possessions—namely, one of the very fine minds in England, courageous wisdom, and a long, intuitive acquaintance with America. His thesis is that although American culture did descend from European culture, American destiny is separate forever; and that although the United States may belong to Christendom, nevertheless,

"* * * they are a part of it, subject to a cultural schism, the intensity of which it is my whole object to declare. The United States are not merely an enlargement of our European culture, still less a mere branch of it; they create a division of that culture into two—themselves and the rest. The line of cleavage does not lie between them and any other subgroup, such as France or England or Italy; it lies between them and all Europe."

And if this truth be forgotten on either side, or if it be overcome by emotions leading America to take part again in Europe's affairs, or Europe to wish it, then, he thinks, "European and American culture are both doomed to receive wounds which may prove mortal."

First and last, Belloc is European. He knows better than to break with the ancestry of his native environment. Only an American ever thinks of doing that. He says—and it is at the end—

"We of Europe shall solve our own problems. * * * Things return to their origin, and our Roman unity should revive. But the process whereby that peace shall be accomplished is not one which could be understood from the standpoint of the United States; it is our own affair; we alone understand it. And let me add this: Every public man from Europe, especially every professional politician, who approaches the people of the United States, begging them to interfere in our affairs, is a liar * * * and the fine phrases about peace and justice and humanity and civilization, and the rest of it, are hypocrisy and a poison."

When shall we learn again that Europe is Europe, America is America, and these are two worlds?

When shall we believe again that our destiny is unique, parallel to nothing?

Once we knew it. Living by it, we came to be the most powerful people in the earth and made certain great contributions to the thought and life of the world. First was an idea of government. It was our own. We did not send it abroad. Yet it was as if we had released the winds of freedom, dangerously, and what we had done was written in foreign tongues on many banners we never saw or heard of.

There was our idea of neutrality; we were willing to fight for it, and did—for freedom of the seas and for neutral rights above belligerent rights.

We evolved our own economic philosophy, not out of Europe's books but out of our experience and from our own ways of thinking. We made the astonishing discovery, and formulated the thought, that wages are paid, not out of profits, as the Old World supposed, but out of production; which means that wages and profits may rise together, if only you will increase production. That was a new kind of liberation.

There was an American standard of living, the highest that had ever been known in the earth. There was an American philosophy of labor, regarding the employee-employer relationship as economic purely. Politician, let it be!

There were many American evils, too; we were increasingly conscious of them. But as the good was our own, so was the evil, unlike any other. And the curious fact was that when the envious and marveling world began to send economic experts and labor commissions to inquire how we did it, they saw much more of the good than of the inseparable evil, knowing that evil, after all, is a relative thing, and that if a society, on the whole, has progressed in material well-being to a new level in human history, it can be trusted to absorb a great deal of evil.

Some time after the turn of the century, a change began to take place. You cannot mark it precisely. It became fashionable to plant Old World seeds. They grew in soft warm places, often in the gardens of the leisure rich, and flourished in academic soil generally. There appeared in the East an intellectual cult of disaffection, with a sneer in its mind for what it named 100-percent Americanism and a pose of contempt for the wealth that supported it. Everything American was vulgar. Happy the expatriate who could live abroad with his dollars and forget where they came from.

It was not only Europe's culture that was preferred; her solutions also began to be admired. What followed was a new kind of exchange. Europe went on taking economic ideas from us while we, for the first time, were taking political and social ideas from her.

The first wedge was the idea of political labor unionism. We got that from England. It was alien here. Then the doctrine of paternal government with the responsibility to administer human welfare; and the saying that we were 25 years behind Europe in social legislation. A country sending its wage earners to work in motorcars might, indeed, be doing less for labor by law than countries where only the highest-paid workers could afford bicycles.

All of that was happening when the World War came. That chapter in world history will sometime bear this caption: "America's Return to Europe."

What we lost at that time cannot be computed. Not the cost of our war exertions. Not the illusions that went in our slogans. Our own center—that is what we lost. That sense of separate destiny on which we had been building departed from us, and we have never since recovered it.

After the war we accepted the role of rich prodigal repentant, with a duty to restore Europe. It was false. We were romantic about it; Europe was cynical. It was a strange balance of trade. During the 1920's we poured billions of material wealth into Europe. What did we receive in exchange? All those Old World ideas, ideologies, and hatreds for which the unrugged American intellectual and an envious classroom mentality had been preparing the soil.

Marxism, Leninism, Stalinism, nazi-ism, collectivism, revolutionary dialectic, the class struggle, youth movements, ideas of a state all-powerful and all-doing, planned economy, status for the individual, anticapitalism, hatred of the profit motive, redistribution of wealth among economic classes by law, contempt for the parliamentary principle, government by propaganda, deficit spending, manipulation of the currency for political and social ends, repudiation of government obligations—of such is the harvest. Old World harvest in New World soil.

As we reap it, Europe goes to war again. This happens in spite of the doctrines and solutions we had thought so well of as to borrow them. Or do you suppose it might have been because of them?

However, as to that, and notwithstanding the resolve we intone to stay out of it if we can, our interest in the war is such that we cannot let it alone. We permit our emotions to become deeply involved. We see right and wrong. We sat in judgment on the preliminaries. We hissed Chamberlain for the Munich appeasement. Since then we have hated Hitler officially. On Mussolini we reserve opinion. We are so close to it all that a change of war ministers in England is news that runs under four-column headlines in the New York papers.

Russia's invasion of Finland produces many reactions here; one of them dangerous. Why dangerous? Because people begin saying to one another: "Could we bear to see Scandinavia trampled down by the powers of evil?"

For now beginning to make itself felt is what has been musically named: The Moral Urge Toward War. Out with business, the profiteer, and the munitions maker. This is a thing they cannot feel. In whom does the feeling rise? In "some of the best people," says the New Republic. "They really are among those who are most sensitive to values, those who live in the world of ideas, those whose consciences and honor are not blunted by too much prudence. * * * The impulse to fight is spontaneous and rises from what every one of us has heard and felt. That is the reason it could start a prairie fire. * * * The great peril lies within ourselves."

But the peril lies in being not ourselves.

Where are the Americans who were themselves and knew it? Alas, it seems they are not among the best people.

Where is the America that saw only the star of its singular destiny and pursued it? At this moment it would be the hope of the world.

America in the crusading spirit, entertaining the phantasy of descending upon Europe out of the sky to part right and wrong, to overthrow evil, to scatter its simple judgments about, is worse than a peril to itself. It is a peril to the whole world.

Is it war we abhor? We shall never abate war by taking part in the conflicts of Europe.

Is it the plight of small neutral nations that gives rise to the heroic impulse? Well, then, instead of thinking to save them by the sword, we had done much better to be willing to fight for a principle we have scuttled—namely, the principle of inviolable neutral rights in time of war. This was the only nation powerful enough to defend that principle against the belligerents. If we had been willing to defend it, by force, if necessary—the world knowing for sure that we would—there would be now less terror of the aggressor in the hearts of small neutrals.

Or is peace the matter of our ultimate anxiety? If that is it, then, instead of indulging the moral urge toward war, we should be putting all the intelligence and imagination we possess to the problem of peace, and how, when the war ends, to assume and discharge the responsibilities of world leadership.

Rules and Regulations Governing Television

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 5 (legislative day of Monday, March 4), 1940

LETTER FROM COMMISSIONER T. A. M. CRAVEN

Mr. LUNDEEN. Mr. President, I ask unanimous consent to insert in the RECORD the very able analysis and letter of T. A. M. Craven. The Commissioner is well versed in radio and television, and I ask the attention of the American public to his conclusions.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C, April 4, 1940.

Hon. ERNEST LUNDEEN,
United States Senate, Washington, D. C.

DEAR SENATOR LUNDEEN: In response to your letter of April 3, 1940, requesting me to give you my reasons for my dissent with respect to the suspension of certain rules and regulations concerning television, I beg to inform you that hitherto I have not made public the reasons for my dissent. Furthermore, I wish to assure you that the differences of opinion between myself and the majority of the Commission are honest differences of opinion, with mutual respect on both sides. I feel that the majority action so speaks for itself that no dissenting opinion is required. I hesitate to add fuel to fires already burning, and I prefer not to disturb the present friendly relations within the Commission by engaging directly or indirectly in any public controversy with my colleagues over this or any other issue.

However, since you have requested my reasons for dissenting, I wish first to call attention to certain facts.

On February 29, 1940, the Federal Communications Commission, in its unanimous report concerning the new television rules and regulations, after explaining fully the fluid state of development, with the consequent dangers of premature standardization and obsolescence of receivers, concluded:

"It is important that nothing said by the Commission herein be construed as an expression of a lack of confidence in the future of television. It is a mighty achievement. The pioneers in the field have made great advances. We feel that potentially television is of tremendous value to the public generally. Even now there is no reason apparent why those members of the public to whom regular television programs are available, who are conscious of the fluid state of the art, and who are willing to assume the financial risks involved for the obvious benefits of current programs, should not acquire receivers. Nor is it suggested that television broadcasters should be barred from going forward in program production and sponsorship. The progress made by the industry is worthy of recognition, and the present state of the art renders appropriate the further steps permitted by the rules being established."

Less than a month later, on March 23, 1940, in a press release prepared by the majority of the Commission, explaining its order of March 22, to which I dissented, it was stated among other things:

"Television promotional activities on the part of the Radio Corporation of America have prompted the Federal Communications Commission to order a further hearing, beginning April 8, to determine whether research and experimentation and the achievement of higher standards of television transmission are being unduly retarded by this company, its subsidiaries, or other licensees, and whether the effective date for the beginning of limited commercial operation should be changed from September 1 to some subsequent date. Meanwhile, that section of the new rules permitting restricted commercialization is suspended pending further order.

"The current marketing campaign of the Radio Corporation of America is held to be at variance with the intent of the Commission's television report of February 29. Such action is construed as a disregard of the Commission's findings and recommendations for further improvement in the technique and quality of television transmission before sets are widely sold to the public.

* * * * * * *

"Promotional activities directed to the sale of receivers not only intensifies the danger of these instruments being left on the hands of the public but may react in the crystallizing of transmission standards at present levels. Moreover, the possibility of one manufacturer gaining an unfair advantage over competitors may cause them to abandon the further research and experimentation which is in the public interest and may result in crowding them into the market with apparatus at present efficiency levels. Rapid advance is desirable—but television is of great and permanent significance to the public. It is therefore of greater importance that the task be done thoroughly and with an eye to television's potential usefulness to the public. These are the goals which the Commission deems the public interest to require."

In its order of March 22, to which I dissented, the majority of the Commission stated, among other things:

"Whereas since the issuance of said report and rules, certain promotional activities in connection with the sale of television transmission and receiving equipment have been engaged in by the Radio Corporation of America in collaboration with, for, or on behalf of a subsidiary or subsidiaries of said corporation which are licensees of experimental television broadcast stations; and

"Whereas said promotional activities may be detrimental to the public interest by unduly retarding research and experimentation and the achievement of higher standards for television transmission."

On April 2, 1940, the Chairman of the Federal Communications Commission, in a Nation-wide broadcast in which he warned the public concerning the obsolescence of receivers and premature standardization of transmissions, and in which he very clearly explained the relation between transmission standards and receiver design, stated, among other things:

"While television is still in the experimental stage it is moving out of the laboratory. We know that it is a practical thing, and that it has great potentialities for development into a permanent instrument of entertainment, of information, and of education.

* * * * * * *

"Now let me be perfectly plain in stating the position of the Federal Communications Commission on the question of public participation in the future development of television. Does the Commission wish to discourage members of the public from purchasing television-receiving sets today? The answer is emphatically 'No.' As a matter of fact, it is only by having receiving sets in the homes of members of the public that experimentation in program techniques can be successfully carried on. But it is important that the general public know that when they buy television sets they are definitely partaking in a program of experimentation. If the public knows the facts about the limited number of stations which are now operating, the few hours of programs that are on the air, the experimental character of their operation, and finally that new standards of television transmission may convert the sets of today from instruments of enjoyment to articles of furniture of doubtful usefulness, then there can be no danger in public participation.

* * * * * * *

"I do not believe that persons in a position to afford television entertainment at this time will be unduly deterred by that knowledge from getting the immediate benefits which are now available in areas served by television transmitters. I certainly hope they will not be deterred, as the Commission is counting upon public participation in television experimentation in order that the television of the future may be molded to reflect the desires of the American public."

In the same broadcast of April 2 the Chairman further stated:

"Let me make it clear that we neither have, nor desire, any regulatory power over the sale of receivers or over advertising. But any action we take under our duty to license experimental operations and to encourage advances in radio must, of course, be taken in the light of actualities. Our course can be influenced, for example, by the rare case where a licensee might engage in extravagant promotion of sales to people of modest incomes while failing to inform the public of the limited and experimental character of the service now available, and of the mobility of the science, where it appears that such activities threaten to make his system dominant among both transmitting stations and the public. For the result would be that his competitors—continuing their research—might find themselves with an improved system of broadcasting television which cannot be given to the public."

It appears to me that these actions of the majority are inconsistent and confusing not only to the public, but also to a new industry which needs encouragement from the Government. The originial February 29 report concerning the new rules, which were adopted by the unanimous action of the Commission, evidently encouraged the promotion of television and its participation by the

public. The March 22 majority action of the Commission, suspending the original rules, discourages the sale of receivers. On the other hand, the broadcast address of the Chairman of the Commission on April 2 is consistent with the original order of the Commission adopted unanimously on February 29, 1940, and again encourages public participation through the purchase of receivers. The question now arises as to the logic of the action by the majority of the Commission in repudiating the adoption of the original order.

At this point, let me make it clear that I do not disagree with the majority insofar as their actions are limited to keeping the public informed of the facts. Neither, in dissenting, am I concerned with the sale of receivers by the Radio Corporation of America. My full concern is the general public and the industry as a whole. I am in entire sympathy with the Commission in its desire that television research be continued, and that standardization be deferred until the art progresses further.

Nevertheless, the principal reasons for my dissent from the majority action of March 22 may be summarized briefly as follows:

(1) The majority concludes that recent promotional activities of a television-receiver manufacturer will effectively stop research and freeze technical development in television.

In my opinion, such a contention is absurd on its face, and is not justified by either facts or experience. Nothing can stop scientific research and technical progress in a free democracy if incentive is not discouraged by Government. The Commission itself, by order of suspension, such as in the instant case, can create such confusion as to retard the development of television and discourage the incentive and initiative of private enterprise.

In my opinion, the technique of television has advanced to the stage where an initial public trial is entirely justified. Such a trial would spur television onward, not only more rapidly, but also more effectively than any other method. I agree with the majority that technical improvements are required in television and I agree that the Commission should not approve standards at this time. However, no one can foretell accurately how these technical improvements will be secured and what public reaction will be. It is already obvious that some of the technical methods suggested by the Commission in its previous report may not be the best. This is not surprising, since the Commission has had no practical experience in technical research for television nor is it equipped to undertake such problems.

There is no need, in the present state of development of television, for a commission in Washington to substitute its judgment for that of the public. The public is the wisest judge of scientific achievement and will be most effective in securing the technical improvements it desires.

In this case, the Commission would have been on more logical grounds had it merely made public the facts concerning obsolescence of television receivers, rather than taking action which prevents the public from exercising its own judgment. The Commission will have performed its duty to the public, insofar as obsolescence of receivers is concerned, when it has informed the public of the facts.

The present prices of television receivers automatically restrict their use to those who can afford replacements as technical progress requires. The burden of experiment falls on wealthy people, as it should, to pave the way for ultimate inexpensive television to all.

(2) The action of the majority on March 22, coming less than a month after the encouragement given by the entire Commission to television-receiver sales, is inconsistent and creates confusion, resulting in a retardation of technical development as well as delays in creating a new industry with added employment.

(3) There is no way in which to secure a public trial of television without selling receivers to the public. While I concede that receiver design is inextricably interwoven with television transmitter performance and is closely related to any transmission standards which may be approved by the Commission at some future date, this is no logical reason why the Commission should at this time add confusion to the development of television. The Commission can grant licenses for different types of transmission, and in so doing it can keep the public informed of the fact that it will grant licenses for any good television transmission and that ultimately it may change the standards. Those engaged in research need not be prevented from attempting to demonstrate to the public the latest television systems available in their laboratories. Everyone, including the Commission, should benefit from experience secured as a result of these early trials of television as a service to the public.

(4) I am very much concerned in the instant case as to the significance of a recent decision of the Supreme Court of the United States, which states that the Communications Act "does not assay to regulate the business of the licensee. The Commission is given no supervisory control of the programs, of business management, or of policy."

I attach hereto the report and action of the Commission on February 29, 1940, the order of the majority on March 22, their press release of March 23, 1940, and also the mimeographed copy furnished me of the address by the Chairman of the Federal Communications Commission on April 2.

Very respectfully yours,

T. A. M. CRAVEN, *Commissioner.*

Senator Bankhead's Work in Behalf of the Tenant Farmer

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, April 5 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE DECATUR (ALA.) DAILY

Mr. LEE. Mr. President, in the Decatur (Ala.) Daily of April 3, 1940, appeared an editorial which is a well-deserved tribute to the Senator from Alabama [Mr. BANKHEAD], who has pioneered in an effort to help the tenant farmers to buy farms of their own and thus to rehabilitate themselves. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Decatur (Ala.) Daily of April 3, 1940]

SINCERE SERVICE

This week we have had forcefully brought home to us just what it is that Senator JOHN HOLLIS BANKHEAD is trying to accomplish in Washington in behalf of the tenant farmer.

Our interest was renewed upon reading a news item from Washington which told anew of the efforts of Senator BANKHEAD to help young farmers, tenant farmers, to own their own farms, of his plea for farm lands to be paid for over a period of 40 years at an interest rate of 3 percent.

Then we saw the drab picture Grapes of Wrath, from the book by the same name, a study in realism. We have seen those people, in fact we do see those people every day, and we realize fully that unless there is some alleviation of sufferings through which these people plod that there is not much hope of solving the problems of the South.

Then we were talking to a landowner and he spoke of having talked with another landowner whom he encouraged to get rid of worthless, trifling people and to substitute modern farming methods for his own good. These men are modern in their views, they cannot be blamed for keeping up with progress.

Combining these three incidents, we marvel at the courage of JOHN BANKHEAD who is up against the problem of bringing the Congress of the United States and the more fortunate people of this Nation to seeing that at the basis of most of the economic faults in the South, and in all agricultural sections of the country for that matter, is the farm-tenant problem.

What to do with these people who are constantly moving, constantly forced from one failure to another, constantly hoping that tomorrow will bring them something of earthly worth. These people are Americans, they have a right to live, they have a right to think, a right to work, and to education, and to worship. They are as human as anyone in a more fortunate strata of life. Their problem has been growing increasingly larger, there has been very little to encourage them toward better citizenship, a better standard of living.

It is toward this problem that JOHN BANKHEAD has devoted and will continue to devote much of his time, energies, and brain. Is it any wonder that the farmers of Alabama, of the South, of the Nation regard the senior Senator from Alabama as their champion? It is any wonder that they go and cast their votes for him in Alabama? In JOHN BANKHEAD they see hope living again. In JOHN BANKHEAD they know they have a representative who is not afraid to fight for them and to admit the faults of a system under which some have done well, but many have suffered.

The Government of this United States will do well, in our humble judgment, to devote more time and more money toward permanency in relieving unemployment. Just a few days ago we noted in another newspaper article that employment on the farms was at a low figure for several years. That being true, then what has become of these people, these tenants, these farm hands? They're in the towns and in the cities, good friends, making a living as best they can before moving on to another town or city, searching for the greener field that somehow turns brown when they arrive.

Yes, the Daily thanks JOHN BANKHEAD for sincere service in behalf of these people, who are a link in our economic chain. Yes; for a United States Senator who has more time to give to these people and to this problem than he has for worrying over the intrigues and politics of Europe or the wishes of Wall Street. JOHN BANKHEAD is fighting sincerely and soundly for the farmer of Alabama, the South, and the Nation. How fortunate is this State in having such a son.

The Hatch Act and Political Activity in Educational Institutions

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, April 5 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE BOZEMAN (MONT.) DAILY CHRONICLE

Mr. BROWN. Mr. President, I ask to have printed in the Appendix an editorial published in the Bozeman (Mont.) Daily Chronicle entitled "Political Tragedy Averted," dealing with the Hatch Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Bozeman (Mont.) Daily Chronicle of March 29, 1940]

POLITICAL TRAGEDY AVERTED?

A bill was recently before the United States Senate for extending the scope of the Hatch Act, which forbids political activity to Federal employees. The new bill forbade political activity also to all State employees paid wholly or in part out of Federal funds. Before the bill passed an amendment was suggested by Senator BROWN (Democrat, Michigan) "to exempt employees of educational, religious, eleemosynary (charitable), philanthropic, and cultural institutions from the curb of political activities." (Quotation from Associated Press, Washington dispatch of March 27, in Chronicle of March 28). Apparently this proposed amendment looked innocent enough to the Senators, and they passed it.

But the Senate failed to consider the fine political purity and the keen eye of Representative DEMPSEY, Democrat, of New Mexico, and perhaps others of the subcommittee of the Judiciary Committee of the House which is now considering the Senate bill. Representative DEMPSEY in his shining armor, like St. George against the dragon, immediately set forth to slay the monster of political impurity which Senator BROWN's amendment had turned loose. That persons representing educational, religious, charitable, philanthropic, and cultural institutions should be permitted political activities was obviously too dreadful for Representative DEMPSEY and the other members of the committee to contemplate. The amendment was knocked out in a hurry and the obstreperous educational and religious elements in our national life were promptly sent back to the limbo of utter silence, where they belong. According to the same Associated Press dispatch quoted above, Representative DEMPSEY was elated.

Some readers of the Chronicle may be able to recall, in some of the dark ages of the past, expressions of regret on the part of thoughtless and ill-informed persons, that representatives of educational, charitable, religious, philanthropic, and cultural institutions did not take an active part in political matters. It was then set forth that if some of these so-called better elements of the community would do their full duty in the way of political activity, we might have a higher standard of political life in the community. These people were even reproached for not being willing to make great sacrifices for the sake of open participation in political activities.

We in our day clearly are fortunate in our statesmanlike leadership, and in having someone like Representative DEMPSEY who can set us right with promptitude and elation. According to the dispatch, Representative DEMPSEY said: "The Brown amendment was an invitation to educational employees to get into politics." One does not have to be a Representative from New Mexico in order to see the enormity of such an invitation.

But to speak seriously, the newspaper report just referred to illustrates pretty well the insincerity and political trickery which has got mixed into the Hatch Act discussion. However the Hatch bill may have started and still be viewed by some of its supporters as a measure for political purity, it has now become a device by which each side is trying to put its opponents in the hole, apparently, regardless of how their actions must strike outsiders. The whole proposal is being made so ridiculous and probably so tangled up that Congress will never pass it, or it is being made so absurd that no one will think of enforcing it.

Meanwhile, when Representative DEMPSEY stops to reflect that every corrupting influence from the costly lobbies in Washington down the line to the pettier commercial organizations that use politics to further their selfish purposes, and so on still further down the line to our gangsters, our bootleggers, our narcotic rings, and white-slave rings—when all these influences are free to utilize our political system, with every open and secret activity they can employ—he may feel a little less elated over his project to gag the employees of educational, religious, charitable, philanthropic, and cultural institutions because they may suffer from the taint of being paid wholly or in part by the Federal Government, from which same tainted source, we understand, Representative DEMPSEY derives his salary.

T. V. A. for Susquehanna River—Tax Argument Answered

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. RANKIN. Mr. Speaker, the devastating floods now raging on the Susquehanna River in Pennsylvania and Maryland emphasize the necessity for a T. V. A. on that stream. These periodical floods drown people and destroy property along that river, costing the people in that section hundreds of millions of dollars while the vast wealth of water power goes to waste.

By the creation of a Susquehanna River Authority we could control those floods, improve navigation, conserve the soil, preserve the timber supply for coming generations, and supply electricity to the people of Pennsylvania at rates that would reduce their overcharges by more than $70,000,000 a year.

We have done this on the Tennessee River, and the Tennessee Valley Authority is self-sustaining. It is paying for itself out of its own revenues, and at the same time it has furnished a yardstick for the rest of the Nation that has already helped to reduce light and power rates throughout the country by more than $600,000,000 a year. By the development of a Susquehanna River Valley Authority we can do the same thing for the now unfortunate people of Pennsylvania.

The people of Williamsport, Pa., are preparing to tax themselves to try to control these floods in that area, but that is too big a problem for any one community to cope with. It is a national problem, and one that should be dealt with by the Federal Government, since the Susquehanna is a navigable stream. Besides, an authority such as we now have on the Tennessee River would pay for itself out of the revenues and not be a burden on the taxpayers of the rest of the country; nor would it burden the taxpayers of Pennsylvania and Maryland.

This would not injure the coal industry in Pennsylvania, as some people seem to fear it would. Electricity can be generated with coal anywhere in Pennsylvania at from 1½ to 2½ mills a kilowatt-hour and can be distributed to the ultimate consumers anywhere in the State at the T. V. A. yardstick rates with adequate profit to legitimate investors. This would increase the use of coal in that area, just as has been done in the T. V. A. area.

So much has been said about the loss of taxes to the State of Tennessee and other States in that area that I am inserting here a statement which I made on that subject before the House Military Affairs Committee.

The matter referred to follows:

STATEMENT OF HON. JOHN E. RANKIN, REPRESENTATIVE IN CONGRESS FROM MISSISSIPPI, MADE BEFORE THE HOUSE MILITARY AFFAIRS COMMITTEE ON TUESDAY, FEBRUARY 20, 1940

Mr. RANKIN. Mr. Chairman, as you will recall, I was coauthor of the bill creating the Tennessee Valley Authority. Senator NORRIS introduced the bill in the Senate and I introduced it in the House, and we got it enacted by striking out all after the enacting clause of the bill passed by the House, and substituting therefor the Norris-Rankin measure.

That was in 1933. When the measure came back from conference there was a fight waged on this provision for paying to the States of Alabama and Tennessee 5 percent of the gross revenues in lieu of taxes. In order to save the measure, I had to defend that provision on the floor of the House. I stated then that if it were a new proposition I would not favor it. But we had to accept it or lose the whole bill. It had been inserted as a result of a threatened filibuster in the Senate.

I am here this morning supporting the Norris-Sparkman bill which provides that that amount be raised. I believe, to 10 percent and then gradually cushioned down to 5 percent in a few years.

The CHAIRMAN. Will my colleague pardon me for a question at this point?

Mr. RANKIN. Certainly.

The CHAIRMAN. What was the basis of the threatened filibuster in the Senate? In other words, what were they contending? That has slipped my memory.

Mr. RANKIN. Contending for this 5 percent.

The CHAIRMAN. Contending for it?

Mr. RANKIN. Yes; that was on the part of the Senators from the States involved.

I would not be here at all if it were not for the fact that I introduced a bill asking that this 5 percent be redistributed to take care of the counties in the area whose lands were flooded. One of those counties is in my district—Tishomingo County, named after a Chickasaw chief. If you will follow its course on the map you will see that the Tennessee River flows in a southwesterly direction until it gets to Guntersville, and then it flows almost due west to the Mississippi State line, then turns north, cuts the corner of Mississippi for 10 or 15 miles, and then flows north into the Ohio River.

The Tennessee River was discovered by Hernando de Soto. He followed it from somewhere near its source down to the present site of Guntersville and then turned south to Mobile.

De Soto left a map which was published in 1543, showing the Tennessee River as being the upper stretch of the Mississippi. He later struck the Mississippi River about where Memphis is now situated and thought it was the same stream, as this map indicates.

Tishomingo County has several streams in it that flow into the Tennessee River, particularly Yellow Creek and Bear Creek, which empty into the Tennessee on the line between the States of Alabama and Mississippi. A good deal of the land along Yellow Creek and Bear Creek and other streams tributary to them, and the Tennessee River in Tishomingo County, is flooded by the backwaters from Pickwick Dam.

The CHAIRMAN. By what dam?

Mr. RANKIN. Pickwick.

If the T. V. A. is going to continue to pay out a portion of its gross revenues in lieu of taxes, certainly Tishomingo County is entitled to her pro rata share to remunerate the county for the lands that have been flooded and taken off the tax rolls.

As I understand it, this Norris-Sparkman bill provides that they start with 10 percent and gradually scale down to the original 5 percent, as provided in the original act. So far as I am concerned, I would not care if they scaled it on down to zero within, we will say, 10 or 15 or to 20 years, giving those counties time to rehabilitate themselves.

I want it understood in the beginning that I do not think the State of Tennessee or the State of Mississippi or the States of Georgia or Alabama is entitled to a nickel of this money. I think it should go to those counties whose lands have been flooded and whose property has thus been taken off of the tax rolls.

All of those States have derived a great deal more benefit from the T. V. A. than they will ever lose in taxes. I understand that one of the questions agitating this committee is the question of taxing Government property.

I would be unalterably opposed to giving a State the right to tax Government property. I think when you start out on that program you will wind up with the States taxing all Government property, from post offices to navy yards, and will end in hopeless confusion.

This money has already been collected. You don't have to levy taxes or raise the price of electricity here at all. The fact is the T. V. A. is already collecting this amount in the overcharge for electricity that is sold to the municipalities and cooperative associations within its distribution radius.

The main trouble we have had in this country is finding out just what electricity is worth, so I am going to point out to you today the reasons why I say that we are paying all this electricity is worth, and enough and more to make up this 10 percent the bill would use to remunerate these counties.

I would like to cite the town of Amory, Miss. I'll give you my reasons for selecting Amory as an example later.

I have before me a report from the T. V. A. showing that Amory in the month of December paid 6.19 mills per kilowatt-hour for electricity which she distributed at the T. V. A. yardstick rates. If all electric energy in the United States were distributed at the rates Amory distributes it, the electric consumers of this country would save about $1,000,000,000 a year on their electric light and power bills.

Now, to show you that we are not going off half-cocked, so to speak, on this proposition, I will go back and refer you to the report of the Army engineers, signed by the Honorable Patrick J. Hurley, then Secretary of War, on March 24, 1930, in which he points out what this electricity will be worth at Muscle Shoals.

Until the Pickwick Dam was completed, we got all our electric power from Muscle Shoals. At the dam it was worth, according to the report of Army engineers to which I have just referred, wholesale, of course, 1.352 mills a kilowatt-hour. That is what it should be sold for at the dam. Amory is situated about 100 miles from Muscle Shoals or from the Wilson Dam. It could be laid down 100 miles from the dam, according to this Army engineers' report, at 1.993 mills a kilowatt-hour—a little less than 2 mills a kilowatt-hour. Two hundred miles away it could be laid down at 2.31 mills a kilowatt-hour; at 250 miles away, 2.467 mills per kilowatt-hour; 300 miles, 2.625 mills per kilowatt-hour; and at 350 miles away at 2.725 mills per kilowatt-hour. This report said that 350 miles was the limit, or about the limit, of the distribution radius, and pointed out that it would reach cities like St. Louis, Cincinnati, and New Orleans.

This report also says that these prices are based largely upon known costs, and that an error in the items estimated would affect the sales prices but little. According to this statement of the Army engineers, those are the sales prices necessary for Wilson Dam power "in order to pay 4 percent on the investment in plant and transmission lines, and to cover the cost of operation and maintenance indefinitely."

"These are based upon the known cost of the hydro plant today, a careful estimate of additional installations, at cost of the present installation, and upon estimates of the cost of transmission lines, and operation and depreciation, etc.," says this report.

Now, according to the Army engineers, this power laid down at Amory should have been sold at 1.99 mills a kilowatt-hour, or a little less than 2 mills a kilowatt-hour, whereas Amory is paying 6.19 mills per kilowatt-hour. We are not kicking nor are other municipalities and cooperatives in that area. We are doing that in order to amortize this investment, and if all this power is sold at this rate, wholesale, this investment will never cost the Federal Government a dollar. It will amortize all of its costs within a period of 25 or 30 years and pay back every nickel the Government has invested in the T. V. A. And in 50 years, the time Congress gave for amortization of Boulder Dam, it will pay for all its investments of all kinds, including flood control and navigation—and more too.

Now, remember you gave 50 years for amortizing Boulder Dam, and it is paying for itself. Power is generated at Boulder Dam at 1.63 mills per kilowatt-hour and it is laid down wholesale at Los Angeles, 268 miles away, for less than 4 mills a kilowatt-hour—about two-thirds of what the city of Amory pays, and Amory is within 100 miles of the dam. Other towns and cooperative associations in that area are paying in proportion. Tupelo pays a little less, because Tupelo buys several times as much power as Amory does. While Amory purchased 2,200,400 kilowatt-hours last year, Tupelo purchased 8,938,700 kilowatt-hours. Tupelo paid 4.92 mills per kilowatt-hour, or 2 mills per kilowatt-hour more than the Army engineers said was necessary.

That extra 2 mills goes to make up this fund that we are asking to have paid to these flooded counties in lieu of taxes.

Let us go a little further. Based on that Army engineers' report, the Hoover administration made a contract with the Alabama Power Co. to sell them Muscle Shoals power for 5 years. That power sold at an average of 1.56 mills per kilowatt-hour at the dam, just a little more than the Army engineers said they ought to get for it. The Army engineers said they ought to get 1.35 mills, but the last year they operated under that contract the power company bought it for 1.56 mills a kilowatt-hour.

The CHAIRMAN. Do you have statistics showing what the total bill for any one of those years was?

Mr. RANKIN. No; but you can get that from the Army engineers.

The CHAIRMAN. I have those figures in my files somewhere.

Mr. RANKIN. And I do, too, but I don't have them with me now.

I am taking the town of Amory because Amory is in Monroe County, a county that was served by the Mississippi Power Co., which is a subsidiary of the Commonwealth & Southern.

The Mississippi Power Co. buys her power from the Alabama Power Co. This power is generated at the Gorgus plant and is generated with coal. Farther down in the State they are buying power at the same price generated on the Coosa River. This power is laid down on the border line between Monroe County, Miss., and Lamar County, Ala. In 1938 the Alabama Power Co. sold to the Mississippi Power Co. 156,926,542 kilowatt-hours of electricity, and laid a large part of it down at Sullivan, just over on the Alabama side from Monroe County, at an average cost of 4.1 mills a kilowatt-hour, or about two-thirds the price Amory was paying the T. V. A. 15 miles away.

Now, the Alabama Power Co. is selling power for profit. They don't pretend to be selling it at cost. Yet they laid down power in Monroe County at 4.1 mills per kilowatt-hour wholesale, when Amory, 15 miles away, was buying power at 6.19 mills a kilowatt-hour wholesale. The difference was going to make these payments to take care of these people in the flooded areas.

The Mississippi Power & Light Co., which covered the rest of the State, in 1938 bought 216,596,738 kilowatt-hours of electricity, laid down near Jackson, Miss., at 5.41 mills a kilowatt-hour, which is less than Amory is paying for T. V. A. power.

They bought this power from the Louisiana Power & Light Co. It is generated around New Orleans or in the Caddo fields. The Louisiana Power & Light Co. is selling it at a profit and to show you how generous they are, they sell for just whatever they can wring from the helpless subsidiary. This same Louisiana Power & Light Co. the same year transmitted 152,817,000 kilowatt-hours up into Arkansas, a greater distance than it is to Jackson, Miss., and sold it to the Arkansas Power & Light Co. wholesale for 2.2 mills a kilowatt-hour. They transmitted this power a greater distance than Amory brings it from Muscle Shoals or Pickwick Dam, and sold it to the Arkansas Power & Light Co. for a little more than one-third of what Amory is paying.

This same Alabama Power Co. bought 43,957,311 kilowatt-hours in 1938 for which it paid 3.4 mills a kilowatt-hour, which is a little less than the rate at which it was selling it to the Mississippi Power Co.

Several days ago I pointed out the fact that the power generated at the Conowingo Dam on the Susquehanna River is sold wholesale at 3.34 mills a kilowatt-hour, by a private concern that is producing and selling it for profit. It can be produced with coal anywhere in Pennsylvania at this price.

I bring you these facts and figures to show you that, contrary to the propaganda that has been spread, every municipality, every cooperative association that is buying power from the T. V. A. is not only paying all the electricity is worth but is paying enough

in excess of its real value to take up the cost of this 5 percent or this 10 percent provided for in the Norris-Sparkman bill.

I know some people are saying we are getting power for less than its real value. I am prepared to answer any man on earth on that question. But I just thought that I would call your attention to a few cases, and in order to get entirely out of my area I am taking first the city of Cleveland, Ohio.

Cleveland has a municipal plant that is competitive. It has to compete with a private company. It does not have a monopoly. If it did it could sell power at a good deal less. It has a plant there that is valued at $18,367,356 on which it owes $2,138,806. Last year it produced, sold, and distributed 201,417,000 kilowatt-hours of electricity which it sold for $3,597,000. I mean for the year 1938. The $3,597,000 figure was the retail price paid for the electricity. It had operating expenses of $1,972,735, and made a gross profit of $1,624,862.

Tupelo bought her power at the rates I gave you awhile ago and distributed it to all classes of consumers at an average of 1.4 cents a kilowatt-hour.

If Cleveland, which, by the way, has the cheapest rates I have found in Ohio anywhere, if Cleveland had done what Tupelo does, given back to the consumer this overcharge, their average retail rate to all classes of consumers would have been 1.3 cents a kilowatt-hour or less than the T. V. A. yardstick rates in Tupelo.

Take the city of Jacksonville, Fla. Jacksonville buys her fuel and hauls it a long distance from Texas, California, Louisiana, Arkansas, or Pennsylvania. Jacksonville has a plant valued at $13,876,890, on which she owes $4,539,500. In 1938 she generated 38,415,000 kilowatt-hours of electricity which she sold to the ultimate consumers for $3,494,608. Her operating expenses were $1,266,-527. Out of that $3,494,608 she made a gross annual profit of $2,228,081, or more than 50 percent. Her average retail rates to all consumers of all classes was 2.5. If she had given those consumers back these overcharges she could have sold them power below the T. V. A. yardstick rates.

Mr. THOMAS. Mr. Chairman, may I ask a question?

The CHAIRMAN. Yes.

Mr. THOMAS. I notice in the case of Cleveland and Jacksonville you mentioned the gross profit. What was the net profit in the case of Jacksonville? Do you have those figures?

Mr. RANKIN. Yes. This answers your question, I am sure. Jacksonville paid taxes in the amount of $48,489 and gave to the city a cash donation of $1,866,692.

Last year the municipal system at Tupelo, Miss., my home town, bought its power from T. V. A. at an average of about 5 mills per kilowatt—I mean for the year 1938—sold it at an average, as I said, of 1.4 cents per kilowatt-hour to consumers of all classes. Paid the amount due on its sinking fund, paid all overhead expenses; paid the interest on the outstanding bonds, of which I believe there was $77,000, paid the city 6 percent on all the investments on the distribution system, then gave the city $10,000 in lieu of taxes, which is more ad valorem taxes than I have found paid by any private power company, in a city of that size, or a greater percentage of the gross revenues, and still had a surplus of $40,000.

Mr. THOMAS. What is the population of Tupelo?

Mr. RANKIN. About 7,000.

Tupelo wanted to know what to do with this money. Under her contract there was only three ways they could dispose of it. One was to extend the service. We could not extend the service; every chicken coop in my town has electricity. And contrary to the propaganda you hear, there isn't a Negro house in Tupelo that doesn't have electricity.

We have 1,720 subscribers, and those 1,720 subscribers have 1,920 electric irons. We have 200 more electric irons than we have domestic consumers. And 90 percent of the residential consumers have electric refrigerators, whereas in New York and throughout that area it is only about 48 percent.

There were two other ways in which this money could be expended. One of them was to pay it on the debt. The bondholders would not have that, because, they said: "We are getting a greater rate of interest than we would get on our money if we put it into anything else. It is perfectly safe, and we don't want the money."

So the only thing we could do then was to reduce the rates. We reduced the rates to both the commercial and residential consumers and in the month of December 1939 the average consumption of electricity by residential consumers in Tupelo was 193 kilowatt-hours a month, and in January 1940 it was 227 kilowatt-hours a month, whereas the national average is less than 60 kilowatt-hours a month.

The CHAIRMAN. Will my colleague pardon an interruption?

Mr. RANKIN. Yes.

The CHAIRMAN. We want to extend to the gentleman every possible courtesy we can. In view of your statement, and I don't doubt the correctness of it in any respect, particularly with reference to your own city of Tupelo, your statement shows such a condition of prosperity resulting from the distribution of this electricity that it seems to me that we will have to agree it doesn't need any tax replacement.

Mr. RANKIN. I was coming to that.

The CHAIRMAN. But we have here under consideration a question which apparently involves cross currents of varying interests. We have the problem of those citizens in the rural sections who don't use much electricity, but upon whose shoulders this burden of taxation is going to fall. The cities are prosperous. What is your suggestion as to how the plight of the rural people and the problem they present to us might be taken care of?

Mr. RANKIN. I was coming to that very proposition. But before I do so I want to answer one statement I hear made frequently to the effect that the Tupelo system was subsidized by the Federal Government. The Federal Government never put a nickel in the Tupelo system. The T. V. A. never put a nickel in the Tupelo system; and when it was destroyed by the cyclone in 1936 we rebuilt it ourselves and repaid every dollar borrowed from anybody for that purpose.

Now, I want to get to the point made by the distinguished chairman of the committee. The people in the district that I represent will save about $2,000,000 on their light and power bills this year, 1940, compared with what they would have paid under the rates prevailing 7 years ago—before the T. V. A. was created. So those counties whose lands were not flooded are not kicking. They have no kick coming.

But there are a few small counties in this area whose lands have been flooded, that are not getting corresponding benefits, and there is no way for them to get remuneration except through the passage of a measure of this kind.

Take Tishomingo County. That is one of the smaller counties in the area, right up on the river, and it is one of the worst sufferers from flooded lands by this backwater. That land has been taken off the tax rolls. I am asking that they be treated on a parity with people in other sections where the lands were flooded.

Mr. THOMASON. Will the gentleman please say how?

Mr. RANKIN. Yes; I think I can.

Mr. THOMASON. Give us a practical set-up as to what you would do in a case like that.

Mr. RANKIN. The original bill, Mr. THOMASON, provided that this 5 percent collected should be paid to the States of Tennessee and Alabama. Well, that was unfair to begin with. In the first place, it wasn't the State of Alabama that was flooded, or the State of Tennessee, but it was the local property; and instead of being paid to the States it ought to have been paid to those counties in lieu of the taxes that they lost on the lands that were flooded.

Mr. THOMASON. But it all went to the State. Didn't the States pass it on to the counties?

Mr. RANKIN. They did not pass but very little, if any of it, on to the counties.

Mr. THOMASON. Is it the obligation of Congress to make the State break it down to the very last unit of government or is it the obligation of the States to pass it on to the smaller units of government? Isn't that a responsibility of the State to deal fairly and justly with its political subdivisions and the people therein?

Now, it is a complex problem confronting us.

Mr. RANKIN. Suppose we take the county of Tishomingo in the State of Mississippi, and give the amount of money formerly collected for taxes on lands now flooded, give that amount of money to the State of Mississippi. The people in Tishomingo County who are paying the taxes in lieu of the taxes this land formerly paid wouldn't get enough of it to know anything had ever been done.

Mr. THOMASON. Can't you depend upon your State government to deal fairly with those counties?

Mr. RANKIN. In collecting taxes in Mississippi we assess property at a certain amount, and we levy so many mills per dollar, and that is collected by the county and is called a State and county tax.

Out of it a certain percentage is paid over to the State. The original T. V. A. Act turned it all over to the States of Alabama and Tennessee. I want to ask you just what business Walker County, Ala., what business is it of theirs to be collecting this money that those people up in Lauderdale County, for instance, should have? Take Nashville, in Tennessee. Why should you take this money and pour it into the general coffers at Nashville, knowing that those people back up there on the river are going to get but very little of it, if any at all.

Mr. THOMASON. How do you propose to see it percolate down to the little fellows?

Mr. RANKIN. Pay it to the counties where the land is flooded.

The CHAIRMAN. Now, will the gentleman answer this question?

Mr. RANKIN. I am not going to ask you to pay anything to the counties where lines have been built to serve the public and no lands flooded. Those people get the benefit of it, but I do think that these people in areas where lands have been flooded should be reimbursed, at least until they can absorb those losses.

The CHAIRMAN. I have a question I would like to ask the gentleman. It has been made to appear, and I think uncontradicted, by the T. V. A. witnesses, that there is a saving in the State of Tennessee alone of $7,700,000.

Mr. RANKIN. That is correct.

The CHAIRMAN. And the tax bill is a little more than $1,000,000 to the counties and municipalities in the State of Tennessee. The entire tax, as shown by the committee appointed by the Governor, is $3,000,000 and something.

We are told by lawyers who are Representatives in Congress from the State of Tennessee, and I understand it is a fact, that if this money is paid over to the State that it cannot be distributed except on a uniform basis, and they figure out by percentage that these counties that are in distress cannot get much of it.

Now, is your State in the same condition? Do you have a law in Mississippi which requires if the money is paid to the State of Mississippi that it cannot distribute it to the various counties?

Mr. RANKIN. If this money is paid to the State of Mississippi, Tishomingo County will get practically nothing out of it, and if this

money is paid to the State of Tennessee, those little counties along the Tennessee River will get practically nothing out of it.

We have the example before us of money having been paid to the State of Alabama, and those little counties along the river whose lands have been flooded got practically nothing out of it.

Mr. THOMASON. I have read this bill several times, and every time another witness shows up I get confused again about it. Do you understand that this bill provides for a direct payment to a specific county?

Mr. RANKIN. Well, that was in my bill, and if it isn't in this bill, I would certainly like to have it amended to that effect.

Mr. THOMASON. Well, through what agency is it your idea, Mr. RANKIN, that any tax-replacement money from the proceeds of the T. V. A. shall be paid to the government of that State for distribution to the counties? In other words, what is the machinery of the thing? That is what is confusing me.

Mr. RANKIN. The machinery in operation in that State now is when a State collects money it just proceeds to spend it.

Mr. THOMASON. And these poor little counties get nothing?

Mr. RANKIN. That is about right; and if this bill doesn't provide that, Mr. THOMASON, it ought to be amended to that effect.

Mr. THOMASON. I, for one, and I imagine I speak for others, want to see to it if there is going to be any legislation concerning this money, we want to see it gets to the people who need it and deserve it.

Mr. KILDAY. You will find, starting at line 22 on page 3, that which you have in mind.

Mr. THOMASON (reading):

"Payments above provided shall in each case be made to the State not later than July 31 of each year, and it is the intention of Congress that each State shall redistribute said payments or portion thereof to the counties and other local taxing divisions."

Mr. KILDAY. That seems to be permissive rather than mandatory.

Mr. THOMASON. As it says, that is the intention. I still don't know what the machinery is to see to it that it percolates down to the poor little counties and the people in them.

Mr. RUTHERFORD. The only way for that would be for the T. V. A. to pay it to the counties direct, and not to the State.

Mr. RANKIN. That is right. If you will pay it in just as taxes were paid beforehand, it will go to the counties. The State will get its small pro rata share, but the county will be taken care of.

Mr. FADDIS. Will the gentleman yield?

Mr. RANKIN. If anything is going to be paid for the land that is taken I want it paid to that county. Yes; I will yield.

Mr. FADDIS. Now, contrary to the gentleman's opinion, I am very sympathetic with the small counties.

Mr. RANKIN. I understood the gentleman fairly radiates sympathy.

Mr. FADDIS. I am genuinely sympathetic with the small counties. Now, I have a bill. I don't know whether the gentleman ever read it or not, but in my bill I wanted to provide that this money should be paid to the locality to which it was honestly and properly due, and the wording of my bill is this:

"Shall be distributed to the various States, counties, or municipalities annually in proportion to the relation which the land, water, or corporation property removed from taxation by the operation of the Authority in such States, county, or municipality bears to that removed from taxation in the entire area in which the Authority operates."

I tried to cover that in accordance with the gentleman's idea, and I believe that to be the gentleman's idea.

Mr. RANKIN. But the gentleman has some other provision in there that offsets all that beneficence.

Mr. FADDIS. This is one occasion where great minds do not run in the same channel.

Mr. RANKIN. Probably so. Now, talk about loss of privilege taxes and other imaginary losses to a State, it comes with poor grace for any State to come here and ask for any such remuneration at the expense of the Federal Government or the T. V. A. or the electric consumers of that area. But I think that these small counties, or whether small ones or not, these counties whose lands are taken to provide these reservoirs, are amply justified in coming here and asking that you at least allocate the 5 percent now collected to them and not pay it to a State way off yonder to be used in counties that are not affected by T. V. A. and that really have no interest in the Tennessee Valley Authority.

So I submit that I should rather see you pass out this Norris-Sparkman bill as it is written and take care of counties such as I have mentioned. If it does not provide that this money shall be paid to these counties, then add such a provision, and where the money was paid to a school district, as in some instances, that should be taken care of also.

For instance, here is a school district in a rich strip of land that it had been drawing its resources from. They had bonds floated and had collected taxes from that land to support the school, paid them into that school district's fund. What good does it do to give it to the State of Tennessee or the States of Alabama or Mississippi? That little school district might never get a cent of it; and, as I said before, those local units that have really been punished from a standpoint of taxes by having their lands flooded and taken off the tax rolls are the ones that should receive this money.

Mr. HARTER. Mr. Rankin, wouldn't this be the more fair and more equitable way of handling this whole situation: Take away from the corporations the duty to make any payment to any of the States in that particular territory. That would mean that the burden would be put back on the people of your particular States. You could adjust your rates in such a manner, up them to the extent that would be necessary to make up for this tax loss, and then through your own local machinery, both county and State, distribute to these communities that have suffered the most and in proportion to their injury by reason of this great improvement.

Mr. RANKIN. Well, of course, that would be to our benefit. Take my district as a whole. I have a district in which the people of every county get T. V. A. power at T. V. A. rates.

The CHAIRMAN. How many counties in your district?

Mr. RANKIN. Ten. But you never would get the State to distribute that money. Did you ever try to get one county to do anything for another county? Why, it is all but impossible. The only way these poor people who paid these taxes and who lost this revenue are going to get anything out of it is through a law brought out through this committee and passed by Congress to have this money paid to them.

Mr. SCHAEFER. Will the gentleman yield?

Mr. RANKIN. Yes.

Mr. SCHAEFER. I am very much interested in that. We have in the State of Illinois a 3-percent retailers' tax. That law was passed in 1934. For the year 1939 that tax yielded $86,359,094.45. The tax on electricity, and that is the 3-percent tax I am referring to, amounted to $5,085,450.35 that the retailer had to pay over and above the regular rate for all electricity consumed.

Mr. RANKIN. Three percent?

Mr. SCHAEFER. Yes. We have had that 3-percent tax in Illinois for 5 years.

Mr. RANKIN. Well, does that go into your State treasury?

Mr. SCHAEFER. That goes into the counties.

Mr. RANKIN. The county where it is collected?

Mr. SCHAEFER. Yes.

Mr. RANKIN. All right. Suppose now that you said we are going to follow that policy. If you will take the record, and I will show you just what I am driving at in just a minute, you will find that the county of Tishomingo, the one that is flooded, uses a very small amount of electricity—only about 1,803,000 kilowatt-hours a year, while my county uses over 10,000,000. You will find that very little electricity sold is in these counties, and the revenue from it would be very small. Besides, they are already paying it to the T. V. A. in their wholesale rate. Tishomingo County, which is within 25 miles of two of these dams, Wilson or Muscle Shoals, and Pickwick, paid T. V. A. 6.92 mills a kilowatt-hour for its power, wholesale, during the month of December. The overcharge went into this fund.

I certainly would not ask you to give a dollar of it to the State of Mississippi. I would rather see you give it to this small county; and if there is a school district or road district in there that has lost taxes, then they should be taken care of in this way, through the county—not through the State.

Paying this money to the State will do the counties along the river very little good.

Mr. SCHAEFER. The point I was raising, Mr. RANKIN, is, we pay a high rate in Illinois.

Mr. RANKIN. You certainly do.

Mr. SCHAEFER. And, in addition to that, we have to pay each month a 3-percent retailer tax.

Mr. RANKIN. And there is a national tax of, I believe, 3 percent, and they put that on the consumer instead of the producer. I fought that. I tried to keep them from doing that when the tax was put on.

Now, you are paying an overcharge in Illinois of about, I believe, $69,000,000 a year, according to these T. V. A. rates.

But I want to call your attention to one thing. Your State capital city, Springfield, owns a municipal plant which cost $4,392,000 and owes $1,385,000 on it. In 1938 they sold 60,000,000 kilowatt-hours of electricity for $925,294. They paid operating expenses of $546,279 and made a gross annual profit of $379,000, and yet they sold their power on an average of 1.5 cents per kilowatt-hour, or about one-third of what the rest of you in Illinois are paying. And if they had given those people the benefit of this overcharge, Springfield would have been selling her power below the T. V. A. yardstick rates or cheaper than we are selling it to the ultimate consumers in Tupelo, Miss., or Amory, or any of the cities, towns, or communities in that area.

So if you could get at this overcharge, if you had some way to tax the overcharge in Illinois you would pay nearly all your taxes out of it; and your State isn't any worse than the average.

Mr. SCHAEFER. Several witnesses testified this was not done anywhere in the United States and I just wanted to correct the record.

Mr. RANKIN. I do not know about the advisability of taxing electric power. I think it is the wrong policy. You are imposing a burden on the use of one of the world's greatest commodities. Electricity is not a service, it is a commodity, just as is wheat or corn. It makes no difference whether you generate it with coal, corncobs, gas, oil, or water power, it is all alike. You cannot pollute or corrupt it. It is a good thing you can't. Whatever you use to make it with it is still worth so much a kilowatt-hour. That is its measure. The kilowatt-hour is the inch, the gallon, the pound, the bushel, the ton; that is the unit of measurement of electricity. It contains approximately 3,412 B. t. u. of heat per kilowatt-hour. So the question is, What is it worth?

If I sell you corn and I say I want $5 a bushel for corn I raised on a city lot which cost me $10,000, how would that sound in Illinois where a farmer can come in and sell you corn at 60 cents a bushel which was raised on land that cost $40 an acre?

You are dealing with a commodity; you are not dealing with a service. And all these inflated valuations on which the American people are paying dividends and this system to which they are paying tribute, is infinitely more important to the people of the country than a small amount in a bill of this kind.

Mr. SCHAEFER. We pay 3 percent on everything—gas, water, telephone, telegraph, and everything—corn, wheat, and everything else. We pay 3 percent.

Mr. RANKIN. I am not surprised.

Mr. SCHAEFER. And it brings in $80,000,000 a year.

Mr. RANKIN. But if your State commission will squeeze the water out of the power stocks in Illinois and wring the ruthless hands of the holding companies loose from the people of your State, they can reduce rates in that State by $69,000,000 a year, and when they do it consumption will grow by leaps and bounds. In Tupelo domestic consumption has gone from an average of 40 kilowatts an hour per month in 1934 to an average of 193 kilowatt-hours a month, in December 1939, and 227 kilowatt-hours a month in January 1940.

Mr. SMITH. Mr. Chairman.

The CHAIRMAN. Yes, Mr. Smith.

Mr. SMITH. With reference to the tax question. I may have misunderstood you in the beginning, but I understood it was your opinion that if we were starting fresh it would be better not to lay any tax on these Government-owned properties producing electricity.

Mr. RANKIN. This is not a tax. I said it would be better not to allocate any part of the funds collected for the sale of power to remunerate the States.

Mr. SMITH. And as far as the local taxing bodies are concerned, while they have a much more difficult position than the States, if I understood you correctly, if we could take care of a transition period to enable them to seek other sources of revenue or other combinations with other taxing body groups—that is my statement and not yours——

Mr. RANKIN. Yes.

Mr. SMITH. That we should not even though we cushioned it for a period of time, which might be quite a long period, to allow for that transition, that we should not, as a general principle in the long run, add an amount to our electric rates to replace those taxes.

Mr. RANKIN. Oh, no. It is already paid. This 10 percent is already paid.

Mr. SMITH. I mean we should not, for instance, continue the charge which is intended to be a replacement of taxes.

Mr. RANKIN. That is right. For instance, Mr. Smith, we will say here is a school district that virtually two-thirds of its land has been taken. They have bonds outstanding. The rest of the land has to pay those bonds. If this were cushioned down until those bonds are paid off the school could probably take care of itself, but you should not leave the burden of paying that debt on the few landholders of the adjacent property.

Mr. SMITH. If you fixed a period of 1, 10, or 15 years and provided tax replacements during that period of time, that would give ample notice to the local taxing bodies that the replacement was limited and eventually would be withdrawn.

Mr. RANKIN. That is right.

Mr. SMITH. It would be a matter of general principle preferable to a continuing permanent arrangement.

Mr. RANKIN. That is right.

Mr. SMITH. Or a permanent addition to power rates to pay tax loss.

Mr. RANKIN. I would not make it permanent. I would cushion it down to where it will ultimately play out, because if you don't do it, I am afraid you will gradually go into a policy of taxing Federal property and I don't like to see that done.

The CHAIRMAN. Mr. COSTELLO.

Mr. COSTELLO. Mr. RANKIN, don't you think if we put a provision in this bill similar to what Mr. FADDIS suggested, namely, that the money be paid to the State and then the State pay it to the districts that have been affected by tax loss that that would be sufficient to offset the provisions in the constitutions of those States that prohibit them from distributing money except equally according to population?

Mr. RANKIN. It is not always the written constitution that keeps the States from helping the local communities; it is the "unwritten" constitution. The States are run by politicians selected from the various counties and they don't like to pay anything to these local communities in which they are not directly interested.

If we pay it to the States, so far as Tishomingo County is concerned, she will get practically nothing out of it, and neither will these little counties in Tennessee and Alabama.

The CHAIRMAN. Down in my State the local politicians want to get it away from the State and give it to the county.

Mr. RANKIN. You understand there are only a few of these counties that touch the Tennessee River, but look at the vast number of counties in the rest of these States. We have 82 counties in my State and only one of them is really involved. There might be a few acres in other sections, but I have heard no complaint from them. We have 82 counties, 81 of which do not have their lands flooded by these dams.

Mr. COSTELLO. It seems if we put the provision in the law that the money paid to the States must be repaid to the taxing districts and that that would be the only basis on which that money would be paid to the State, it seems that would take care of the situation.

Mr. RANKIN. But Mr. COSTELLO, you have had that experience for a good many years. Money has been paid to the State of Tennessee and it has not been returned to the counties.

The CHAIRMAN. The original law did not have such a proviso in it.

Mr. RANKIN. And if it did, you could not enforce it. If you are going to put it in the bill, why do it that way? Why not pay it to the counties to begin with?

Mr. ELSTON. Mr. RANKIN, you said you were very much opposed to taxation of Federal property by the States.

Mr. RANKIN. Yes.

Mr. ELSTON. And I am also, but you favor legislation which will reimburse the counties whose lands have been inundated. Now, if that is true, why wouldn't counties up in Ohio, for example, whose lands have been submerged by flood dams be entitled to collect back taxes that they have lost?

Mr. RANKIN. Mr. Elston, you remember I said as an original proposition I would not be in favor of this policy, but that if they are going to distribute this 5 percent, or 10 percent, it should be distributed to the counties whose lands are taken off the tax roll.

Mr. ELSTON. Well, we have lost up in Ohio for the same reason, and we will lose a great deal more when they build some of the dams that are contemplated. Now, where are they going to get the money?

Mr. RANKIN. What dams are you speaking about?

Mr. ELSTON. They are going to build dams on the tributaries of the Ohio River for the purpose of holding back water and preventing floods.

Mr. RANKIN. That is exclusively for the benefit of the people who are flooded along the stream.

Mr. ELSTON. But it is not for the benefit of the people in those counties, because they are not flooded. It is for the benefit of those further down the river.

Mr. RANKIN. That is the very trouble, Mr. ELSTON, that I think we are getting into; and as I said, when this bill came back on the conference report in the House I defended this proposition to keep them from killing the whole measure that created the T. V. A. But I stated then that if it were an original proposition, I would oppose it. My bill does not ask for increasing this to 10 percent but merely for a reallocation.

I think you are pointing out a danger, Mr. ELSTON, that you are going to run into if you ever start levying taxes on Federal property.

Mr. ELSTON. And wouldn't this be a dangerous precedent to reimburse these counties whose lands have been flooded? Won't every State in the Union ask for the same thing?

Mr. RANKIN. Yes; if you reimburse the States. If you are going to reimburse anybody, it ought to go to the counties.

Mr. ELSTON. That does not make any difference. If you reimburse the county or State you are establishing a bad precedent.

Mr. RANKIN. That is virtually what I said when the conference report was before the House in 1933, but we either had to accept it with that provision in it or kill the bill, and I did not propose to burn the house down to kill a mouse, so to speak; but I realize the danger you are speaking of, and I recognized it at the time, and I said then if it were an original proposition I would not be in favor of it. But whatever is done in this respect, since this money is being collected from the power consumers that purchase the electricity from the T. V. A., whatever is thus collected ought to be redistributed to the people who have suffered as a result of this land having been taken off the tax roll.

Mr. SCHAEFER. I think the record indicates back in 1934—that is when they passed this act, wasn't it?

Mr. RANKIN. No; 1933.

Mr. SCHAEFER. 1933. The original act as reported out by the committee and passed by the House did not contain any provision for payment to Tennessee or Alabama; that was put in over in the Senate?

Mr. RANKIN. It was not in the original Norris-Rankin bills. But the distinguished Senator from Tennessee, Mr. *McKELLAR*, threatened to filibuster against the bill, and if I remember correctly he carried on one for a time, to get this provision in the bill.

The CHAIRMAN. And was joined in by Justice Black.

Mr. RANKIN. I don't know, but he was not joined in by your humble servant here.

The CHAIRMAN. I know there was a lot of dissatisfaction when the bill came back from the Senate with that provision in it.

Mr. RANKIN. We either had to accept it at that time or kill the bill. I said I did not like it, but I would accept it rather than kill the whole legislation.

I thank the committee for its indulgence.

The CHAIRMAN. I want to ask you one question. I have a statement here of the Tennessee Valley Authority that shows they paid two-hundred-and-some-odd thousands of dollars, as I understood under that 5-percent feature, to the States of Alabama and Tennessee. I cannot find in any of their records anywhere where actual taxes have been paid which they say represents the 12½ percent other than the two-hundred-thousand-odd dollars that I mentioned a moment ago.

Mr. RANKIN. Yes; they collected it in their wholesale rates. I just showed you they are paying 6.19 mills for electricity in Amory, Miss., when the Army engineers said that we should pay at that distance from the dam only about 2 mills.

The CHAIRMAN. I remember you went into considerable detail about that, but let me ask you this question and then I am through: If as a matter of fact they did add 12½ percent onto the rate and

thereby providing a measure or yardstick at what electricity should sell for, and now if by legislation that amount is to be paid back to them what becomes of the yardstick?

Mr. RANKIN. The yardstick, I will say to the gentleman from Kentucky, is the retail rate that the ultimate consumer pays. That would not have the slightest effect on the yardstick because we are already paying this money. This money is already being paid in through the wholesale rate. The yardstick is the retail rate. The yardstick is the rate the ultimate consumer pays.

I notice every once in a while some fellow gets up and talks about the yardstick as if it were a wholesale rate. It is not a wholesale rate. What we mean by "yardstick" is the rates the ultimate consumer has to pay.

The CHAIRMAN. Thank you very much.

Mr. RANKIN. And they are the rates we are trying to spread throughout the country and if we can do that we will have benefited immeasurably every electric consumer in America.

Mr. THOMASON. I want to be certain of one thing. Is Tupelo in your district?

Mr. RANKIN. Yes, sir; it is my home town, and was the first one to get T. V. A. power.

National Youth Administration Program Is an Investment in Good Citizenship

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. MICHAEL J. KENNEDY. Mr. Speaker, I cannot allow the occasion of the consideration of the appropriation of the National Youth Administration for this fiscal year to pass without stating my reasons for urging an increase in the appropriation recommended by the committee.

This program has been one of the most constructive and commendable projects fostered by this administration, and one of which we may all be proud now and in the years to come. It has provided part-time work for approximately 500,000 students in our schools, colleges, and universities, enabling them to remain in school, thereby keeping them out of the labor market. Those who are compelled to go into the labor market are given the advantage of vocational education and guidance with which to equip themselves with a trade to mold their future life's work. We are a nation of pioneers and our progress has been unexcelled by that of any other nation in the history of the world. Our frontiers of science and knowledge each year produce keener competition and simultaneously greater need for extensive preparation with each succeeding generation; and so today I feel that the very least we owe our youth is to provide nearly free the minimum educational advantages to as large a number as possible.

I commend the facilities of this program to the people of my district for whose benefit I have been happy to work and vote for an increase in this program to $100,000,000, rather than the sum of $85,000,000 recommended by the committee. My heart goes out to every mother and father of every boy and girl in my district who longs to properly educate their children but who cannot find a way. The Federal Government, through this National Youth Administration program, is trying to help them find a way by providing jobs through high schools and colleges which enable them to continue their education. It is designed to help our youth obtain an essential education. Those who find it impossible to continue their higher education should avail themselves of the opportunities for vocational guidance provided under the program in order to equip themselves with a trade for their future work.

I am proud to have had a part in the enactment of this bill to provide increased funds for the National Youth Administration and the Civilian Conservation Corps as a foundation for the future of our youth which will pay dividends in security for themselves and their families in later years and make them a credit to society. The road of the dictatorships is paved with the inertia of their peoples brought about by the shackles of their low intellectual levels. What function of our Government could be more commendable than raising the intellectual level of our youth, so that they may assure themselves and their children of a stronger mentality and sounder heritage for their future life and the life of their country?

I hope that the appropriation of $100,000,000 for which I have been happy to vote will more nearly meet the need on the part of our youth that has developed. The fruits of their labor on these various projects will benefit society; in addition, they become better and finer men and women.

American Airplane Industry

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 5 (legislative day of Monday, March 4), 1940

ARTICLE BY HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article by Gen. Hugh S. Johnson in reference to speeding up our airplane production.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

ONE MAN'S OPINION

(By Hugh S. Johnson)

The policy of the President to permit the Allies to buy our most advanced type of military and naval planes is 100 percent correct. A principal problem in our preparation for defense is productive capacity. Time is "of the essence" in war. Napoleon used to say: "I may lose a battle but I will never lose a minute—and hence few wars." We have the best industrial plant in the world. But in our modern system of manufacture the best plant in the world can't get into production without first going through a slow and complicated effort called tooling-up.

This means the arrangement of buildings and machine tools to provide a continuous flow from one operation to another without back tracking or lost motion. It means the making of the working points of those tools to insure absolute uniformity in all the thousands of separate parts that go into the assembly of any such complex and wonderful thing as a modern war plane. It means the making of patterns and gages to insure accuracy beyond the split fraction of a mouse hair—microscopic accuracy in some cases.

This requires the highest mechanical skill that is demanded of any workman. The scarcity, due to the depression, of sufficiently skilled pattern and tool makers is one of the great bottlenecks retarding production. Once the original tooling is done, fewer of those experts are needed.

Everybody who is old enough will remember that preparation to build the radically different successor to the old model T "tin lizzie" paralyzed the production of even the great Ford plants for the better part of 2 years. It is believed in the motor industry that a single last-minute change in arrangement and design cost the Ford company millions of dollars and months of time. When this great preparation work is done, increase in speed and reduction in cost are very great.

To put the American airplane industry on this kind of mass-production basis would give us something that hasn't existed, and, under conservative plans for our own equipment, might never have been completely attained. But a billion dollars' worth of allied business, coupled with our own requirements, on basic designs identical with our own, will do exactly that. This result of giving the Allies our most advanced designs is the most fortunate thing that could happen to us from the angle of our own defense.

As for military secrets, we have some gadgets that lead the world—for example, our pursuit plane supercharger that has increased speed of one model by 40 miles an hour. But how long will they remain secret? As the automotive industry learned long ago about standard equipment in common use, constantly superior research and invention are the only dependable methods of beating competition, and neither secrecy nor even patent protection will serve.

For undisclosable reasons our marvelously accurate bomb sight is in a slightly different class, but, as to standard plane and engine types, we would be short-sighted not to give the Allies the best we have for quantity production, even if it somewhat delays our own

program. If war threatens us, we will take all this newly developed factory capacity for our own use—exactly as we did in 1917. The President's policy will speed our essential production, put us in the vanguard of invention and design, and greatly lower our costs.

Trial of the Issue of Good Behavior in the Case of Certain Federal Judges

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

Mr. SUMNERS of Texas. Mr. Speaker, the following will be offered as an amendment of, or as a substitute for, H. R. 5939, which it is expected will be considered under a rule tomorrow, April 9:

A bill to provide for trials of and judgments upon the issue of good behavior in the case of certain Federal judges

Be it enacted, etc., That whenever a resolution of the House of Representatives is directed to the Chief Justice of the United States, stating that in the opinion of the House of Representatives there is reasonable ground for believing that the behavior of a judge to whom this act applies, as provided in section 5, has been other than good behavior within the meaning of that term as used in section 1 of article III of the Constitution, the Chief Justice shall convene, or cause to be convened, the circuit court of appeals of the circuit in which the judge resides in special term for the trial of the issue of good behavior and the right of such judge to remain in office. The Chief Justice shall designate three circuit judges (one of whom he shall designate as presiding judge) to serve on such court. Any one or more of such judges may be circuit judges of circuit courts of appeals of circuits other than the one convened in special term, but, if the judge whose good behavior is in question is a circuit judge, no judge from the same circuit shall serve. Such designation shall be made only after the Chief Justice has notified the judge whose good behavior is in question of the names of the judges whom he intends to designate to serve on the court and has given the judge notified an opportunity to present to the Chief Justice a statement of reasons why any such judge should not serve. If such reasons appear adequate to the Chief Justice, he shall notify the judge of another intended designee and the foregoing procedure shall be repeated until three judges can be designated to serve on the court.

SEC. 2. Thereupon, it shall be the duty of the Attorney General to cause to be instituted, on behalf of the United States, a civil action in such court to determine the right of such judge to remain in office. In any such action, the United States shall be a party to such controversy, and shall have all the rights and duties of a plaintiff in a civil action in the Federal courts and the judge shall have all the rights and duties of a defendant in such an action. In any such action, the Attorney General is authorized to avail himself of the services of such Members of the House of Representatives as may be designated by resolution of the House of Representatives to aid in the prosecution of the action. All matters of procedure in any such action shall be governed by rules prescribed by the Supreme Court, but the trial shall be without a jury.

SEC. 3. If the court determines that the behavior of the judge has been other than good behavior within the meaning of that term as used in section 1 of article III of the Constitution, the judgment of the court shall be that of removal from office, but no other penalty shall be imposed by the court. Upon rendition of such judgment and until such judgment is reversed on appeal as provided in section 4, the defendant shall cease to have any power, authority, or right to act as judge, but his salary shall be paid him until the expiration of the 30-day period allowed for an appeal under section 4 if no appeal is taken, or until the determination of such appeal, if appeal is taken.

SEC. 4. From the judgment of any such court, either the United States or the defendant may, within 30 days after its rendition, but not later, appeal to the Supreme Court of the United States on the law and the facts. Notice in writing of the taking of such appeal must be filed in the office of the clerk of the trial court and also of the Clerk of the Supreme Court of the United States, and a copy thereof must be served on opposing counsel. Such appeals shall be subject to and governed by the rules of practice and procedure now regulating appeals to the Supreme Court of the United States, or such rules as may hereafter be adopted by the Supreme Court of the United States.

SEC. 5 (a) This act shall apply to all judges of courts of the United States, the District of Columbia, and the Territories and possessions, who hold their offices during good behavior, except the Justices of the Supreme Court of the United States.

(b) For the purposes of this act, the term "circuit court of appeals" shall include the United States Court of Appeals for the District of Columbia, and the District of Columbia shall be deemed a judicial circuit.

Democratic Rally, West Chester, Pa.

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address delivered by the distinguished majority leader, the Senator from Kentucky [Mr. BARKLEY], at a Democratic rally held in West Chester, Pa., on the evening of April 5, 1940.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

My friends, I am glad to be able to come here tonight to give you a sort of bird's-eye view of the problems which the Democratic Party and the administration of Franklin D. Roosevelt have faced and have dealt with during the past 7 years.

I have always been interested in the democracy of Pennsylvania. My interest has been, from time to time, rekindled by the knowledge that for years the Democratic Party in this State has been compelled to combat the forces of reaction as exemplified by the attitude of many former Republican leaders, and some who are still active. I have no doubt in Pennsylvania, as throughout the Nation, the great majority of the people desire not only honest government, but desire a liberal and progressive government, and desire that their Government be kept sufficiently flexible and up to date as to enable it to aid the people through its experience and organized power in the solution of their political, social, and economic problems.

I am especially happy to be here tonight because of my admiration and long friendship for your junior Senator, JOSEPH F. GUFFEY. I have known JOE GUFFEY for a couple of decades. I knew him first when he was battling these same reactionary forces in his efforts to bring about the nomination of the great Woodrow Wilson for the Presidency of the United States.

I have known since in 1931, and probably even earlier, that JOE GUFFEY threw his experience and his influence into the scales for the nomination of Franklin D. Roosevelt, the great leader of the Democratic Party and of American liberalism, who is now the President of the United States.

Senator GUFFEY and President Roosevelt have been warm, intimate, personal, and political friends since 1911, and I am sure I do not exaggerate when I say that same friendship and respect still exists between them, and for the best interest of Pennsylvania and the country I know that the President wants that friendship and association to continue.

The policies of the Roosevelt administration have come to be known among the people as the New Deal. It has been my privilege and duty for the past 3 years to help guide these policies through the processes of legislation, and before I undertook this task, Senator Joseph T. Robinson, of Arkansas, one of the great Senators of our times, assumed the role of leader in the Senate.

From the day when JOE GUFFEY took the oath of office in the Senate until this hour, neither Senator Robinson nor I have had any cause to doubt the loyalty or the devotion of Senator GUFFEY to the policies of the Roosevelt administration. On many occasions his counsel and advice and his assistance have materially aided when the fight was hard and the vote was close. It is not an easy task to guide legislation through the Senate of the United States, where opinions frequently differ and where interests of communities and States and political parties may clash.

My task as majority leader has been frequently made more easy because I could always depend upon Senator GUFFEY's unwavering loyalty in the advancement of the great program which has brought such benefits to the people of his own State and to the United States.

Our Army Aims

EXTENSION OF REMARKS
OF
HON. PRENTISS M. BROWN
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1940

RADIO ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH

Mr. BROWN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the address delivered by the junior Senator from Utah [Mr. THOMAS] at the Army Day luncheon under the auspices of the Council of National Defense, Detroit Board of Commerce, Detroit, Mich., on April 5, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Army day in a world struggling with war and war's problems must be an occasion for earnest thought. Try as we would we could not, with conditions as they are, make it otherwise. If we become ultraphilosophical about war, about all-embracing war as it now confronts nations, we are forced to challenge the old deduction about man, namely, that man's greatest glory is his ability to destroy himself and that his not doing so makes him the creature of restraint he is. It is sad to reflect that such a finding may have to be revised into a statement that man's greatest glory is his ability to destroy himself, that this preoccupation seems about to become his all-engrossing passion, and that ultimately he may succeed. Sad, indeed, I repeat, but where on earth may we turn to discover the worth of man, measured in terms of his constructive accomplishments, when nations strive to destroy the best manhood of their neighbors, with whom they soon expect to be friends, and offer as a sacrifice the flower of the leadership of their own next generation, for some muddled reason which if accomplished would leave no problem solved?

There are contradictions to this gloomy outlook, for in Europe now, with millions of men under arms, the possible destroying force of those men is evidently so great that neither side seems willing to dare gear the machinery of destruction to its fullest, and loss of life has been comparatively very light. On the other hand, though, we have seen in China, Poland, Finland, willful and needless loss of life and property because of false interpretation and a poor understanding by some military thinker with respect to the modern fashion of speedy wars wherein potentialities are accepted as actualities and destruction becomes the only aim. It seems therefore to be the irony of history that war as an activity, despite its having been with man so long, still is in the experimental stage, and that we find ourselves holding fast to theories and institutions based upon peace, yet wondering if in this world of strife we dare trust ourselves to the weaknesses inherent in a government whose fundamentals rest upon freedom of the individual and whose social and political activities depend upon a rule of restraint.

Some cynics slur a great phrase which we made a war slogan out of President's Wilson's announcement that we were fighting to make the world safe for democracy. If I have read history correctly, wherever democracy has existed and wherever theories and institutions advancing and protecting the freedom of the individual, and self-restrained liberty have flourished, those who have accepted those theories have had to fight for their existence. For, I ask, whenever has democracy been safe in this world? The advantage-taker among men and nations has ever been present. He is with us today both within and without. It is therefore for us not only to be thoughtful but also to plan and to act, that our America, in very deed the long-hoped-for desire of nations, may be made stronger and kept more secure.

There, of course, have been times in the history of our Army when mistakes have been made, when judgments concerning government have been left with Army men who have not always measured up to American ideals; but these mistakes are few and far between compared with the onward and upward growth of ideals which have made it possible for us to see a democracy actually at work even when the nation was under arms. I need not cite major incidents because they are rare, but we do know of the day when our Constitutional Convention was meeting and armed veterans of the Revolutionary War assembled in front of Independence Hall to demand some pay in such vigorous terms that Hamilton, sent out to talk to them, returned and suggested to the founding fathers that they had better prepare to die. It must not be forgotten that the Order of Cincinnati offered a crown to Washington, and it must also not be forgotten that he refused. We remember the spirit that got into our Army during its demobilization after the late war—a spirit which I do not condemn necessarily because our soldiers had been trained for action and when inaction came many lost patience.

Foreigners have always said that there is a special providence that looks over little children, drunken men, and the United States; and the good luck which has always been with our armed forces confirms that idea. Far be it from me ever to belittle sacrifice, but useless sacrifice as a result of ignorance, lack of planning, or inaction is worthy of condemnation and may be even criminal. I condone the misspent energy incident to the confusion of turning this Nation from a peacetime to a wartime basis on the mighty scale of the last war. But are we going to make the same mistakes if we have the misfortune to find ourselves under arms again? Cannot nations, as well as men, learn from experience? I think we have learned much, and I thank goodness that the men who are now in charge of our Army and that those who are planning that our Army may be ever greater and finer are conscious of the fact that in 1917 we probably lost more men attempting to learn how to go to war than we lost facing bullets.

One simply cannot, in reviewing Army history, ever belittle the citizen Army of our Nation. The march of Donaphan's Missourians during the Mexican War stands out as an event in the history of military activity—an expedition which may even be likened to the Anabasis of the Greek Ten Thousand. The long march of the Mormon Battalion, the pioneers of the Kearney expedition, had lasting results, the equal of which few armies have produced. Think of it! An infantry march from the Missouri River to San Diego, Calif., and then up to Monterey! This march cut the Mexican empire in two and made it impossible for California, Arizona, New Mexico, Utah, Wyoming, Nevada, and parts of Colorado ever to be reunited with Mexico again. Some of these Mormon Battalion men, mustered out as they were at Monterey and forced to find their way to newly settled Salt Lake City where their families had gone, discovered gold in California. What other single event in American history has ever meant so much? An almost up-to-the-minute march of a National Guard regiment attracted world-wide attention when a completely mechanized regiment of Field Artillery, the One Hundred and Forty-fifth, completed a forced march from Salt Lake City to San Diego, then on to Monterey and return, all under orders, without injury to a single man or machine, or ever missing the time schedule. The citizen soldier remains the Nation's ideal.

A nation in arms united in a righteous cause, where each individual of that nation does his or her part, offers his or her all on the altar of the country's good, is still civilization's most glorious picture. Yet, can we not unite a nation in such a way for the cause of peace and the general welfare? The wail of the Greek dramatist, Oh, why do men unite so well for war and destruction but separate when the aim is peace and constructive endeavor? That, ladies and gentlemen, has been the world's historic outcry since the Greek actor uttered his words. May that wail cease to be a wail in vain as America goes forward to a better day.

But now, since I trust that we have become thoughtful about the problem, and since I know that you, with me, want to be confirmed in the belief that our Government and its Army leaders are still thinking in terms of democracy's well-being and the country's security, under the banner of liberty, let me turn to the Army aims of 1940 as we see them in present activities going on from coast to coast and from border to gulf in an attempt to make the Army's well-being reflect the determination of the Nation that mistakes made in the past shall not be made again.

First, let me discuss today's American Army organization. In a letter to the President of the Continental Congress, Washington wrote "What we need is a good army, not a large one," expressing, in one sentence, what has been and is our national policy. By tradition we are unalterably opposed to large, permanent military forces, and as a result we keep our Regular Army at the smallest strength consistent with the missions assigned to it. However, the Regular Army forms the keystone of our land defense and must supply the training standards and skeleton units for the development of a citizen army in the event that we are confronted with a national emergency. It must also provide a mobile land and air force available to meet any sudden threat against our national interests, particularly those involving the Panama Canal and Hawaii, and to protect the continental United States and our overseas possessions against any attack or raid from the outside. While our favorable geographic position simplifies this task and permits us to entrust the national defense to a comparatively small standing Army, supported by an organized National Guard, and a corps of Reserve officers and key enlisted men, the strength of the permanent force must be adequate for these basic considerations. This force, too, must reflect the complex nature of a modern army in wartime. The National Guard, the Reserve Corps, and the R. O. T. C. must also bespeak this complexity.

The increase last September of 17,000 men in the authorized strength of the Regular Army has meant the assembly of 5 complete infantry divisions, 1 cavalry division, and the organization of a mechanized brigade with supporting units necessary for one Army corps. We have likewise increased the strength of the National Guard to a total of 235,000 men, providing an efficient citizen force prepared to reinforce the Regular Army for the first phase of the defense of the country. This year also a large number of

Reserve officers are serving for extended periods as platoon and company commanders with Regular Army units in the field; and the combat planes of the great General Headquarters Air Force, which constitutes such a potent factor in our system of national defense, are piloted to the surprising figure of 80 percent by Reserve officers.

The intent is to provide a thoroughly efficient and balanced force under experienced leaders and capable of rapid expansion. This force must be organized into combat teams—divisions and corps—highly trained and completely equipped. This intent will be accomplished.

The War Department is giving much thought to training. Committed by policy to a small army, we must and can have the best army of its size in the world. This means modern equipment and a high state of training. In all our wars our higher commanders and their staffs have had to gain on the battlefield the practical knowledge of handling large units. The price of this knowledge has been paid in lives, and we have escaped disaster in the past only because we have never been brought suddenly face to face with a well-organized and efficient opponent. In the War with Mexico our adversary was handicapped by incompetent leadership. Our Civil War opened with both sides unorganized and untrained. When we fought Spain we confronted a weakened opponent worn out through years of exhaustive struggle against insurgent forces, and we entered the World War with time for preparation and training behind the protective barrier of the allied army. We should not continue always to trust to fortune.

Until last fall our Regular Army, well developed in the efficiency of its individuals and smaller units, has been an Army of battalions and regiments. Even regiments were seldom complete or united. Brigades were a rarity. We possessed no complete divisions, and the Army Corps, which is the great battle team, existed only on paper. The training of officers in handling larger units had been carried on only in a theoretical way. This year we have placed five divisions in the field, and they are maneuvering, training, and preparing in every practical way to develop combat efficiency and teamwork. The National Guard likewise undertook field training for an additional period last fall. Field training this year will culminate in a general maneuver in May, in which about 65,000 troops will participate. We are doing everything in our power to assure ourselves that our officers are thoroughly capable of leading American soldiers in combat if this unfortunate necessity is ever thrust upon us.

The third and final consideration is equipment. The World War left us with a large reserve of military equipment, but during the 20 years that have elapsed much of it has become obsolete, and technical advances have necessitated the development of many entirely new weapons. The oceans that guard us from sudden attack may afford us the time necessary to train manpower for defense but will not give us time to manufacture the munitions necessary for our tremendous manpower. Our present military organization constitutes an adequate defense for the Nation only if we have on hand a reserve of modern arms and ammunition and equipment sufficient to provide for the larger force we might have need of in an emergency. The quality of the military equipment developed in this country is of the best. Our new semiautomatic shoulder rifle is the finest individual arm in the world, and there are no better antitank and antiaircraft guns in existence than those which have recently been designed and produced by our Ordnance Department. American-made airplanes are of a world-accepted standard of excellence. Our difficulties lie in the matter of quantity rather than in the quality of the matériel which we are producing. There is a 2-year lapse between the placing of orders and the delivery date of many of the more complex items of equipment.

It is this time factor which demands that our reserve supply of these critical items should be adequate. Like gold stored in a vault against a financial crisis, this reserve will constitute a safety factor contributing to confidence and security, at a cost of only 1 percent for maintenance. Its establishment is a prime objective.

The training of industrial plants to adjust quickly from a peacetime to a wartime state is not forgotten. This is part of the plan that the training of men may go hand in hand with the development and production of arms they are trained to use. The early-war stages in 1917 of too many men without equipment or proper leaders, and the after-war stages of oversupply and inability to readjust to peace must be avoided. The bulge and the hump are not good for the Army or the country. Their effect upon the morale of men is damning. Why break the spirit of men by showing them that that which they were told to do was useless? Modern war machinery cannot be overcome by gun fodder or organized mobs. Teamwork, brain, and skill are the keys to victory. In these characteristics the citizen soldier in our democracy, based as it is upon a trained citizenry, should make America excel.

As author of the act known now as the Thomas-May Strategic Materials Act, I cannot refrain from using the purpose of this legislation to illustrate the Army's or rather the Nation's long-range plan to keep our country prepared for any unhappy eventuality that may be thrust upon us. The Thomas-May Act provides for the development, production, purchase, and storage of strategic materials. The act came into existence only after years of study. The act is even more important to our country for an economic, commercial, and developmental purpose than for a military one. This is as it should be, for the Army's aim in a democracy must ever be the general welfare. The peacful activities of our Army far outweigh the war activities and even in wartimes comparatively few soldiers ever fight. If this comparison is reduced to man-hour figures the peaceful hours startlingly outweigh the fighting ones.

To sum up, our need today is exactly what Washington said we needed in his day: A good Army, not necessarily a large one. This country should in very deed have the model army of the world. It has 130,000,000 people, most of them offered the opportunities of a free life and a free education. From these citizens we draw both our officers and our men; and excepting for duties and responsibilities they stand on equal footing, both trained, both understanding, both able to fight as a member of a team or as an individual, according to circumstance.

The whole fundamental notion behind the theory of democracy is that men and women in that democracy shall be free to do many things and in a sense to be many things. When once we accept the theory that man has a right to think as he wishes, the inevitable result is that thought in society will be complex and different. Whenever we accept the theory that man has a right to worship as he sees fit, it follows that our society will be one not only where there is religious freedom, but where religions themselves are free. This means diverse and differing ideas about heaven, the hereafter, and the reasons for man's earth life. We in America even have a complex citizenship, for, by our Constitution, we are citizens of the United States and of the State wherein we reside. Our Army in its organization recognizes this complexity. A National Guard officer recognizes two authorities, his State and his Nation. Man, therefore, in a democracy is complex in his nature; he must have varied hopes, and he must have many ideals. Those men who give some of their time to the study of the science of war and to the practice of arms reflect good citizenship in our complex society. They are bigger men for their efforts. They are worthy of our honor. Surely the glories of past sacrifices and achievements of our Army need not be made less bright because we today have been more thoughful of the present and the future than of the past. No sacrifice of our dead heroes, no service of any living veteran need be dimmed by giving honor today to those who give their time, their talents, and their energies in planning and learning, so that there shall be less sacrifice in the future and no service which will leave the sting of dulling and vain uselessness. Mankind needs men. Men who can stand alone, devoting themselves to the building and training of citizens worthy of doing their best whenever duty calls, wherever need arises, and whatever task may come. Such men are truly American.

Television

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

RADIO ADDRESS BY HON. ERNEST LUNDEEN, OF MINNESOTA

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the junior Senator from Minnesota [Mr. LUNDEEN] entitled "Let Television Advance."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Permit me to thank Mutual Broadcasting Co. and the National Broadcasting Co. for this opportunity to discuss the current confusion over the development of television. A Member of the Interstate Commerce Committee of the United States Senate, to which all radio legislation is referred for detailed study and consideration, must keep abreast of radio developments. The seriousness of the television crisis of the moment is impressed upon me by the current disturbed feeling in advertising circles.

During a session of Congress we find it physically impossible to engage in much research on economic trends, and yet we must be informed. We must work out some satisfactory system to keep reasonably well informed on what the "feel" is in business circles.

Keeping in touch with the advertising world gives a quick and reliable insight into what the future may hold by way of business improvement or retrenchment. Trends up or down in advertising constitute an excellent barometer of the thinking among men who guide American industry, the men who really determine the size of pay rolls. There never was or never can be a substitute for jobs in private industry as the key to national prosperity. The simplest way for me to keep in touch with advertising is to read advertising trade papers.

Here is the heading from the leading story in the last issue of Advertising Age, a national newspaper of advertising:

"F. C. C.'s drastic stand on television stuns trade—R. C. A. cancels advertising; dealers utter lamentations."

Listen to the first paragraph of that story:

"Television, the lusty infant that was being groomed to discard its swaddling clothes, this week appeared destined to continue in diapers, at least until settlement of the industry row caused by

the Federal Communications Commission's order rescinding a previous order that would have permitted limited commercial sponsorship beginning September 1."

On reading that pessimistic report from an advertising paper, I decided it was a duty to look into the situation. Securing copies of orders and press releases on television from the Federal Communications Commission, here is what we found:

After extensive hearings, the Commission, on February 29 of this year, issued an order permitting limited commercial operation of television after September 1. This was immediately followed by a step-up in manufacturing operations of companies producing television receiving sets, accompanied by advertising and sales campaigns. Then, on March 22, less than a month later, and when the manufacturing and sales efforts were really getting under way, the Commission—without a hearing of any sort—suddenly rescinded its order of February 29 and stopped television development in its tracks pending more hearings, to begin April 8. According to Broadcasting, national radio magazine, this action jeopardizes the jobs of some 1,000 employees of one company alone, one that has spent $10,000,000 on television. The Commission did not claim that unexpected technical developments justified these new hearings, with the attendant delay and confusion. Its only explanation, as given in a press release, was some criticism certain members of the Commission had of the marketing campaign of one of the manufacturers of television sets.

Having had a hand in passing the law under which the Federal Communications Commission operates, I knew of no authority Congress had given the Commission to regulate, control, or supervise the marketing of radio or television receiving sets. On the contrary, authority to cope with misleading advertising rests in the Federal Trade Commission. In fact, just a week earlier the Supreme Court of the United States handed down a decision in which the Court stated that the Communications Act does not essay to regulate the business of the licensee.

A new industry is being throttled by a Government bureau exercising power never granted by Congress. My feeling in this regard was strengthened when I read an editorial in the Washington News, a Scripps-Howard newspaper, which observed as follows on this action by the Federal Communication Commission:

"In this the Bureau designed to allocate wave lengths—an obviously necessary job, since wave lengths are limited—arrogates to itself the authority to forbid merchandising of receiving sets on the contention that in this new art the sets might too soon become obsolete. Under that sort of Government philosophy the automobile, the electric light, aviation, and radio would never have got started."

I have offered a resolution in the Senate asking the Interstate Commerce Committee to make an immediate investigation of the Commission's actions on television and ascertain in particular whether the Commission had exceeded its authority and whether it has interfered with the freedom of the public and of private enterprise. Senator BURTON K. WHEELER, of Montana, is chairman of that committee. Perhaps we may be able to stop this bureaucratic seizure of power there.

Apparently Chairman James Lawrence Fly of the Federal Communications Commission realized that this action of the Commission had created widespread protest, for on Tuesday evening of this week, over an N. B. C. and Mutual hook-up, the Chairman discussed television.

He said:

"Now let me be perfectly plain in stating the position of the Federal Communications Commission on the question of public participation in the future development of television. Does the Commission wish to discourage members of the public from purchasing television receiving sets today? The answer is emphatically 'No.' As a matter of fact, it is only by having receiving sets in the homes of members of the public that experimentation in program techniques can be successfully carried on. But it is important that the general public know that when they buy television sets they are definitely partaking in a program of experimentation."

All I can say to that is that if the Chairman had issued a statement along similar lines, instead of having the Commission revoke its order of February 29, there would be no such apprehension as has now been created.

I noticed in the press that Commissioner T. A. M. Craven, who is recognized in and out of radio circles as the one technically informed man on the Commission, dissented from the unusual action of the Commission on March 22. Inasmuch as I had heard Chairman Fly's views at length over the radio and I wanted all angles of the story, I wrote to Commissioner Craven asking his reasons for dissenting. He has written me a letter and because of his preeminence in radio development, I want to quote from this expert as to whether any situation, which might stop research and "freeze" technical development of television, existed between the Commission's first action in February and its second order in March.

While explaining that his dissenting vote reflected an honest difference of opinion and insisting that he prefers not to disturb the present friendly relations within the membership of the Commission by engaging in any public controversy over this or any other issue with other commissioners, Mr. Craven writes:

"The majority concludes that recent promotional activities of a television-receiver manufacturer will effectively stop research and 'freeze' technical development in television.

"In my opinion, such a contention is absurd on its face, and is not justified by either facts or experience. Nothing can stop scientific research and technical progress in a free democracy if incentive is not discouraged by Government. The Commission itself, by order of suspension, such as in the instant case, can create such confusion as to retard the development of television and discourage the incentive and initiative of private enterprise.

"In my opinion, the technique of television has advanced to the stage where an initial public trial is entirely justified. Such a trial would spur television onward, not only more rapidly but also more effectively than any other method. I agree with the majority that technical improvements are required in television, and I agree that the Commission should not approve standards at this time. However, no one can foretell accurately how these technical improvements will be secured and what public reaction will be. It is already obvious that some of the technical methods suggested by the Commission in its previous report may not be the best. This is not surprising, since the Commission has had no practical experience in technical research for television nor is it equipped to undertake such problems.

"There is no need, in the present state of development of television, for a commission in Washington to substitute its judgment for that of the public. The public is the wisest judge of scientific achievement and will be most effective in securing the technical improvements it desires.

"In this case the Commission would have been on more logical grounds had it merely made public the facts concerning obsolescence of television receivers rather than taking action which prevents the public from exercising its own judgment. The Commission will have performed its duty to the public, insofar as obsolescence of receivers is concerned, when it has informed the public of the facts.

"The present prices of television receivers automatically restrict its use to those who can afford replacements as technical progress requires. The burden of experiment falls on wealthy people, as it should, to pave the way for ultimate inexpensive television to all."

That concludes Commissioner Craven's observations on this subject of "freezing" television development.

My studied opinion is that the Federal Communications Commission was in error when it rescinded its permission for limited commercial television. Accordingly, I believe the best interest of television development calls for abandoning the new and unnecessary hearings which are scheduled to start on Monday and a return to the status quo of before its unfortunate action of March 22. I believe the F. C. C. should stay within the authority granted it by Congress and defined so recently by the United States Supreme Court. I believe it and every other bureau or Government agency should use common sense and encourage, not block, the development of television or any other industrial activity that will put unemployed men and women back on private pay rolls and speed up the return of a prosperous United States.

Television

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

RADIO ADDRESS BY HON. JAMES LAWRENCE FLY, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix a radio address on television, delivered by James Lawrence Fly, Chairman, Federal Communications Commission, on April 2, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

During the past several weeks much has been said, and even more written, about television. It is altogether appropriate that, as Chairman of the Federal Communications Commission, I should make this report to the radio public on the present status of this great invention.

In view of international conditions, American industry has the opportunity to lead the world in the development of the art of visual broadcast. Where television was advancing with youthful faltering steps in Europe, darkness has descended. Research has been stopped while all energies are devoted to war. Foreign television for the time being is paralyzed. It is singularly fortunate that in our own country neither war nor any other ruthless force can lay a heavy hand upon the youthful television industry and impede its normal progress.

In the present state of radio, broadcasting of sound has progressed to the point where reliable service can be received in nearly every home. Receiving sets are within the means of almost every family. In the meanwhile, television has been gradually approaching the threshold of the American home.

Most of us have witnessed radio grow from its laboratory stages. All of use will have the thrill of seeing television ripen into a reality for everybody to enjoy. While television is still in the experimental stage it is moving out of the laboratory. We know that it is a practical thing, and that it has great potentialities for development into a permanent instrument of entertainment, of information, and of education. Our generation has been entrusted with the responsibility of carrying forward this advance. There may be differences of opinion as to what is best for television, but no one would favor other than its orderly and healthy growth into an instrument of permanent public good.

Why is the Federal Government interested in television? And why am I impelled to make this report to you tonight?

The Federal Communications Commission was created by Congress to regulate among other things the use of radio-transmitting equipment. Unless such Federal regulation existed, the public could not use the radio for either sound or vision. For it is a unique characteristic of radio that its indiscriminate use by all makes it impossible for benefits to be derived by anyone.

The only way a few may broadcast effectively is to exclude the many. The responsibility for allocating radio frequencies which shall be used for broadcasting, for the aviation services, for police radio stations, for the preservation of life and property at sea, for television, and for a multitude of other purposes, places a grave responsibility on the Commission.

But to meet the point more specifically, what are the other functions of the Federal Communications Commission relating directly to television? Let me quote from the Communications Act:

"The Commission, from time to time as public interest requires, shall

"Study new uses for radio, provide for experimental uses of frequencies, and generally encourage the larger and more effective use of radio in the public interest; * * *

"Regulate the kind of apparatus to be used with respect to its external effects and the purity and sharpness of the emissions from each station and from the apparatus therein; * * *

"Make such regulations not inconsistent with law as it may deem necessary to carry out the provisions of this act."

In other words, the Congress has placed upon the Commission the duty to issue licenses for experimental operations; the duty to foster research and development, and to encourage the achievement of high standards, and, ultimately, to recognize those high standards—once they have been achieved by the industry's engineers.

It is likewise under a clear mandate to regulate the kind of apparatus to be used in radio broadcasting, including television, and to promulgate appropriate regulations. We should be derelict in our duty to the public if we should disregard this mandate of the Congress, or if we should permit any business interest to render it ineffective.

We should also be avoiding our obligation if, in the regulation of the experimentation, and of the transmitting apparatus, and its methods of operation, we ignored the current state of the science. As most of you know, television has been developing for several years. For more than 10 years the Commission has issued licenses to enable the engineers of the industry to carry on experimental operations. Under the authority of the Commission, actual television programs have been broadcast for a number of years. Commission members and the staff, during the last 2 years, have made an extensive study of the engineering developments, potentialities, and problems.

Recently the Commission undertook a study to ascertain the present situation of television as a basis for proposed rules for the licensing and operation of stations. We scheduled hearings in Washington and invited every broadcaster and every manufacturer interested in television to participate.

Scientists were invited to give the Commission their views on the status of the art. Extensive public hearings were held. The Commission made personal inspection trips to obtain first-hand information of television in actual operation. The Commission issued its report on February 29 of this year. It also issued new rules and regulations for this service. I should like to read a significant portion of the Commission's unanimous television report:

"That research should not halt and that scientific methods should not be frozen in the present state of the art is fairly to be deduced from the engineering testimony of representatives of the companies represented at the hearing. Actual demonstrations to members of the Commission indicate the need for further improvement in the technical quality of television. The evidence before the Commission reveals a substantial possibility that the art may be on the threshold of significant advances. Research in fact does and should continue in significant phases of the field."

We pointed out that television engineering is in a state of flux and added:

"The issuance or acceptance of transmission standards by the Commission, especially in combination with the more extensive experimental program service which will in all probability develop under these rules, would have a tendency to stimulate activity on the part of manufacturers and the public in the sale and purchase of receivers for home use. It is inescapable that this commercial activity inspired and then reinforced by the existence of Commission standards would cause an abatement of research. To a greater or less extent the art would tend to be frozen at that point."

"Even more important," we warned, "nothing should be done which will encourage a large public investment in receivers which, by reason of technical advances when ultimately introduced, may become obsolete in a relatively short time. The Commission has not overlooked the significant sums invested by pioneers in making possible our present knowledge of television, and it is not unsympathetic with their desire to recoup their investment in the process of bringing television's benefits to the public. It will be realized, however, that the loss to the public by premature purchase in a rapidly advancing field might in a relatively short period exceed many times the present total cost of research. Such an economic loss in the long run can rebound only to the harm of the industry. In view of the apparent proximity of improvements and of the resolution of disputed technical questions, these risks should not be taken. The Commission is therefore reserving the matter of issuing standards for consideration at some future time."

These words would seem to have made the Commission's attitude perfectly clear.

However, it might be helpful to explain the term "transmission standards." As I have already indicated, the Commission is charged with the duty of regulating the kind of transmitting apparatus used with respect to its external effects. Such regulation is done by the issuance of engineering transmission standards. "Transmission standards," then, are the engineering rules laid down by the Commission to govern the types of radio transmitters and their operation. The problem of formulating such standards in the case of television is fraught with peculiar difficulties during this developmental stage.

Let me explain why this is so. There is at present in the television industry a very wholesome state of competition between rival manufacturers to develop their transmitting apparatus to a point where the quality of reception of their telecast pictures will be superior to those of any other manufacturer. It was the Commission's considered judgment and, in this judgment I might say there has been the universal concurrence of the engineering profession, that no one manufacturer of transmitting equipment has yet perfected his apparatus to a point where it should be accepted as the standard for universal application. On the contrary, no voice has dissented from the proposition that further research and experimentation is needed. The recently adopted rules and regulations of the Commission governing television broadcasting recognize this engineering fact. The Commission, therefore, deliberately refused to place its final approval upon any present type of transmitting equipment as the type which all must use. This attitude is merely a reflection of the engineering opinion in the television industry that there were still too many improvements in sight to warrant standardization at this time. It seems clear that the research should continue, and that order and caution should be the keynote to foster that improvement.

What a great tragedy it would be if today some heedless power, for the sake of an immediate short-sighted interest, should obstruct television's progress and leave it dwarflike in the shadow of its own great potentialities. But, you may readily ask, "How can this happen to television? It didn't happen to motion pictures; it didn't happen with automobiles; it didn't happen with the advance of ordinary broadcasting itself." Why, then, the special solicitude for the future advance of television?"

The answer is not readily obvious, but it is fundamental and, I think, thoroughly understandable.

The fact is that television is not like ordinary broadcasting, not like the automobile, not like motion pictures.

First, let us consider the case of the broadcast of sound alone. Such broadcasting in the United States is, roughly, 20 years old. As you all know, during these years there has been vast improvement in the technique of radio transmission and reception. There has, however, been no change in the fundamental standards for transmission and reception during that entire period. A receiver built to receive a broadcast station operating in 1920 will receive a broadcast station that operates in 1940. A transmitter built in 1920 can be received by radios in use today. Better transmitters are being built now than were being built in 1920, and the same is true of receivers, but they all operate on the same principle or, more technically, on the same basic standards. Improvements have been gradual. Obsolescence has taken only a normal toll.

The automobile may be similarly characterized. Our streamlined cars of today bear no resemblance either in appearance or performance to the wheezing, coughing, horseless carriage of 35 years ago. But that ancient jalopy will still run.

Television is different—uniquely so.

In the case of television, a receiving set is so synchronized with the transmitter that the two are inseparable in operation. The receiving set is, in effect, the key which unlocks the transmitter in order to receive the broadcast. A substantial change in the lock renders the key useless. The necessary dependence of the television receiver upon the operation of a television transmitter in the vicinity, and conversely, the dependence of a television transmitter upon the existence of television receivers capable of receiving it, if it is to have any public value, is the vital difference between television receivers and automobiles, for example. It is the Commission's clear duty to license television transmitters to supply programs for television receivers in the hands of the public. With the science of the transmitter locked to the science of the receiver, the Commission cannot ignore what an uninformed public does with respect to the purchase of television receivers in large quantity.

Then, too, there are today different methods of transmitting television signals.

A television receiving set capable of receiving the signal of one type of transmitter may not accept the signal of a different type of transmitter in existence today. The receiving set must be con-

structed to operate on the same principle as the particular transmitter. If the American people should buy television receivers in great numbers as they have bought ordinary radios, and if at a later date transmission standards are adopted which contemplate an alternative or improved transmission system over that on which the particular receivers can operate, we should, in effect, be changing the locks and leaving you with a bunch of highly expensive keys rendered utterly useless. Athwart the path of new and improved broadcasting standards would stand that heavy public investment in receivers of a rejected system of broadcasting.

Some of the finest inventive and scientific brains in this country are at work on this problem. No one can successfully assert, and no single person has asserted, that now is the time to lay down the principles which shall govern all future development of television. But television is on the march. Its future is assured. We venture to hope that soon a set of standards will prove itself as meriting adoption. We know there can never be absolute assurance that future discoveries will not demonstrate their inadequacy. I do believe, however, that the American public would deem the Commission unfaithful to its trust if it adopted or, standing by, permitted at this time the crystallization of any set of standards for television contrary to the engineering opinion of the industry and without adequate trial or that did not give promise of reasonably satisfactory public service over a reasonable period of time.

In conscience all must agree that nothing should be done which would shackle the ability of television to move forward.

The Commission's rules governing television broadcasting recognize the admitted need for further experimentation and the fact of its continuance. The rules provide for the licensing of two types of experimental television stations. One type of station is for the purpose of carrying on a program of laboratory experimentation in the technique of telecasting. From these experiments the public ultimately will derive vast benefits. In the meantime the work will go on for the most part unknown to the public.

These pioneers in science deserve our unstinted praise. Their industry, inventive genius, and financial resources are being expended not for any immediate private gain but to pave the way for future advances. That success may mean to them opportunities for personal gain, financially or from the standpoint of prestige in the science or the industry, does not alter the fact that they are performing a distinct public service.

The second type of experimental broadcast station is for experimentation in the technique of programing. Here the American public is in a position to play an important role.

There is much to be learned about the techniques of building and producing television programs. Their cost is high and as yet sponsors are not plentiful. The Commission's new rules will soon permit what has been termed "limited commercialization," which will enable the owners of television stations to charge for the cost of programs as distinguished from other operating charges.

Naturally no programs are on anything like a full-time basis. Most television stations, for a while at least, will of necessity be able to operate only a few hours during the day. Undoubtedly when commercialization is permitted and program techniques are better worked out the public will be offered a wider program selection. At the present time three stations in New York City, Los Angeles, and Chicago offer such a limited-program service with some degree of regularity. There are about 20 applications for additional stations from these and several other cities on file with the Commission. All present licenses are experimental in character. Some additional stations will be constructed in the near future. The operations will move on to a commercial basis not immediately but when the engineers of the industry itself find it ready for such broad service.

Now let me be perfectly plain in stating the position of the Federal Communications Commission on the question of public participation in the future development of television. Does the Commission wish to discourage members of the public from purchasing television receiving sets today? The answer is emphatically "No." As a matter of fact, it is only by having receiving sets in the homes that experimentation in program techniques can be successfully carried on. But it is important that the general public know that when they buy television sets they are definitely partaking in a program of experimentation. If the public knows the facts about the limited number of stations which are now operating, the few hours of programs that are on the air, the experimental character of their operation, and finally that new standards of television transmission may convert the sets of today from instruments of enjoyment to articles of furniture of doubtful usefulness, then there can be no danger in public participation. A man who buys an automobile today knows, of course, that he will have an increasingly insistent pressure to replace it with a new one as the years pass, because everyone knows that the automobile of tomorrow will be superior to the automobile of today. No one, however, purchasing an automobile today need have any fear that in a year or two his car will be completely useless. That possibility, however, should be in the mind of the purchaser of a television receiver.

I do not believe that persons in a position to afford television entertainment at this time will be unduly deterred by that knowledge from getting the immediate benefits which are now available in areas served by television transmitters. I certainly hope they will not be deterred, as the Commission is counting upon public participation in television experimentation in order that the television of the future may be molded to reflect the desires of the American public. However, even had I less confidence in this prediction, I would still feel that the relation of trust in which the Commission stands to the public would require it in good faith and common decency to lay the facts before you.

Let me make it clear that we neither have nor desire any regulatory power over the sale of receivers or over advertising. But any action we take under our duty to license experimental operations and to encourage advances in radio must, of course, be taken in the light of actualities. Our course can be influenced, for example, by the rare case where a licensee might engage in extravagant promotion of sales to people of modest incomes while failing to inform the public of the limited and experimental character of the service now available, and of the mobility of the science, where it appears that such activities threaten to make his system dominant among both transmitting stations and the public. For the result would be that his competitors—continuing their research—might find themselves with an improved system of broadcasting television which cannot be given to the public.

By this sales activity alone the standards of the broadcasting science might be locked against their improvements. Under such circumstances it is rather more likely that the competitors, too, would be crowded into production and sales promotion. This would make it even more probable that television would be shackled at its present state and future progress obstructed. These are the unanimous views the Commission has clearly and repeatedly expressed in recent months.

The American people, I am certain, do not want to stop short of improvements which the industry's engineers assure us may be just over the horizon. The Commission must not lose sight of the long-range interest of the public. We shall not. This, I might add, is the only ax we have to grind.

Television then is ready to go forward. It is going forward toward maturity. But its own sponsors tell us it has not yet come of age—in that opinion they are practically unanimous. Once the opinion of the industry shifts in the other direction, I can promise every assistance governmental regulation can give to aid in enlarging its activities, in spreadng its service, in converting its potentialities into realities. We are and always have been eager to advance with television. Indeed, persons interested in other types of radio have suggested that we unduly favor it. As the industry has long known, when the engineering opinion of the television industry itself is in substantial accord on a foundation for lasting progress, the Commission will cooperate in every possible way and prompt steps will be taken to lift television out of the experimental stage.

I do not think that knowledge of the facts will deter you any more than it will deter me from being eager to participate in the exciting adventure of television experimentation. Many of you undoubtedly will do so. I sincerely hope so. Today television is entertaining. If unimpeded, the television of tomorrow will be a great public service.

Meanwhile, I am certain that you will agree that the true facts about the new science should be reported to you. I firmly believe, with all deference to those who may hold the contrary view, that a full statement of all the facts is the surest way to promote television.

Gold Shipments

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

EDITORIAL FROM THE PHILADELPHIA RECORD

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial from the Philadelphia Record of Saturday, April 6, 1940, on the subject of gold shipments into the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Record of April 6, 1940]

ONE THOUSAND DOLLARS AN HOUR

Dispatches from Washington announce that for the week ending March 27 gold shipments into the United States were double those of the week before, and the $321,237,068 was the largest weekly amount since gold compilations were begun in 1934.

Recently we figured that if Uncle Sam began giving away $1,000 of gold every hour on the hour, 365 days a year, it would take him 2,053 years to give away his $18,000,000,000 worth. With this new shipment it would take 36.6 years more to give it away.

That is, at $1,000 an hour, it would take 36.6 years to give away the gold we got in just 1 week.

Why give it away?

Well, has anybody a better idea what to do with it?

The Wheeler-Lea Transportation Bill—S. 2009

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

Mr. MANSFIELD. Mr. Speaker, the conference report on the Wheeler-Lea transportation bill will doubtless be ready for consideration at an early day. The general public has no conception of what is embraced in this complicated scheme of transportation. In fact, I believe it can be truthfully said that only a very small minority of the Members of Congress fully understand it.

The bill was drafted under the direction of a committee of six, all representing railroad interests. The general public, the shippers, farmers, and others who have all the bills to pay, were never consulted, but completely ignored. Under the greatest lobby that has ever invaded the halls of Congress the bill has been whipped and spurred through both Senate and House.

I have only heard two reasons advanced in favor of this legislation. First, that the railroads are in financial distress and should have increased compensation for transporting the commerce of the country. Second, that the railroads are regulated under the Interstate Commerce Commission, and therefore, all other methods of transportation, including not only that upon the rivers, but also our ships upon the oceans and Gulf of Mexico should be regulated in the same manner, and by the same railroad commission.

The first of these reasons is absolutely without foundation in truth. It is true that the depression of the past 10 years has borne heavily upon every industry, but the record shows that the railroads have been among those that have been the least affected by it. Table 19, page 87, Report of the President's Committee of Six—the committee that drafted this bill—shows that even during the depression years 1930 to 1937 the railroads paid dividends aggregating $1,612,688,416. Agriculture, even with the hundreds of millions of Government aid, was not half so prosperous. During the past year the railroads have been more prosperous than for many years and made tremendous profits.

The contention that because the railroads are under regulation by the Railway Commission, therefore all our ships upon the ocean and Gulf of Mexico should be placed under the same Commission and regulated in the same manner, is without any reason whatever. In addition to our coastwise and intercoastal trade, our ships go to the ports of all countries, and must compete with the ships of other nations. We pay our seamen higher wages than are paid by other countries and have adopted other measures for their protection. Any additional and unnecessary burdens to be placed upon our ships would place them at a great disadvantage in their competition with the ships of England, France, Germany, Japan, and other maritime nations.

At tremendous cost we are building the greatest Navy of any country in the world. All authorities agree that our Navy, without an adequate merchant marine to support it, will be absolutely helpless and of no value. A few decades ago only 9 percent of our foreign trade was carried in American bottoms. By wise legislation we have increased that to about 34 percent. We are yet behind England and one or two other maritime nations which carry 50 percent of their foreign commerce in their own ships.

Now, by this transportation bill a bevy of New York bankers who do not own but who control the railroads and play with them as so many pawns upon the transportation chessboard, are seeking to upset our whole merchant-marine program and subject our ocean ships to railroad domination.

The only reason that railroad propaganda advances for this revolutionary proposal is, that rail and water transportation should be under the same head and subjected to to the same rates of transportation charges. If our coastwise shipping is to be placed under railroad rates, then our merchant marine will soon cease to exist. It should be plain to all, that if forced to give to the railroads a large proportion of the coastwise and intercoastal trade as contemplated by this bill, while approximately two-thirds of our foreign trade will continue to be carried in foreign bottoms, then the Government will be required to pay enormous ship subsidies in order to utilize our great Navy, and maintain the American flag upon the high seas.

In all the railroad discussions, a studied effort has been put forth to draw public attention away from that feature of the bill pertaining to water transportation in the coastwise and intercoastal trade, and especially that portion of it in the Gulf of Mexico. They knew that the country had been covered with the railroad propaganda in opposition to river improvement and navigation, and that many thousands of people had been misled and prejudiced against that type of transportation. Their effort has been to play upon that prejudice.

They have magnified the Ohio and Mississippi River transportation in an effort to make the public believe that it is the cause of all the railroad ills. Yet, we find that only 5 percent of the traffic on this river system was moved by common carriers. More than 90 percent was by contract or private carriers, the great preponderance being the shippers' own materials, handled in their own boats. As this bill can only apply to common and contract carriers, by far the major portion of this river tonnage will not be subject to it, but will continue as heretofore.

The tonnage carried by the Government barge line has been represented as a destroyer of railroads. Yet, the record shows that the Government barge line in 1939 carried only 2,175,198 tons of freight, while the ports of Texas alone had 66,561,030 tons of coastwise trade. The barge-line traffic on the Mississippi is not a proverbial "drop in the bucket" as compared to the enormous coastwise traffic the railroads are expecting to take from our merchant marine, and which would be at a tremendous additional transportation cost to the farmers of Texas and of other States. There was also 9,909,380 tons of freight carried in American ships through the Panama Canal, which the railroads are after.

The fact should further be borne in mind that the 2,175,698 tons carried by the Mississippi barge line, while but an atom in the transportation field of more than 2,000,000,000 tons, actually dwindles into insignificance under the further contention of the railroads. I have in my files, and in hearings before committees of Congress the contentions of some seven or eight different railroads, each seeking to show that it alone was the loser of this entire amount of traffic carried by the barge line.

If the little more than 2,000,000 tons carried by the barge line has come from approximately seven or eight different railroads, then no one railroad has been seriously crippled on account of the loss it sustained. It is not the volume of freight carried by the barge line that the railroads are objecting to. It is the yardstick they want to get rid of.

Transportation on the Gulf of Mexico has been in operation from the earliest settlement of the country—even before the first railroad tie was laid in Baltimore. It has provided a saving of many billions of dollars to the people in transportation costs. Hereafter no commercial boat can use the Gulf without a permit in the form of a "certificate of convenience and necessity," from the railroad commission. If the boat proposes to carry freights that might be contended for by the railroads, then, of course, this permit will be refused.

If the Gulf of Mexico with its more than 100,000,000 tons of traffic is to be taken away from the free use of the people and given to the railroads as authorized by the Wheeler-Lea

bill, then I desire to call attention to the effect it will have on only a few of our leading items of commerce.

I have heretofore called attention to the fact that only a very small proportion of the cotton grown in the Southwest is milled there. It must seek either a foreign market or be shipped to eastern spindles. Our foreign market is uncertain and much of the cotton grown there must hereafter seek a market in the East. The water rate on cotton from Galveston and other Texas ports to the mills of New England is 40 cents per hundred, or $2 per bale. The rail rate is $1.44 cents per hundred, or $7.20 per bale. The railroads have contended that their rates are as low as the cost of transportation will permit, and cannot be reduced. In this, they have the approval of the railroad commission. Therefore, to equalize the rail-and-water rates the rates by ship must be very materially increased. This would cost the cotton farmers of the Southwest several dollars per bale additional freight cost, and greatly cripple the business of the Texas ports.

So much for cotton from the coast region. Let us see how it would affect the cotton farmers of the interior. The rail rate from Dallas to Lowell—via Vicksburg—is $1.53 per 100. The rail-Gulf rate is only 75¼ cents.

The rail rate from Durant, Okla., to Lowell is 96 cents. The rail-Gulf rate is 89¼ cents.

The rail rate on grain from Altus, Okla., to New York is 71 cents. The rail-Gulf rate is only 60 cents.

The rail rate on flour from Altus to New York is 71¼ cents. The rail-Gulf rate is 67 cents.

The rail rate on iron and steel from Baltimore to Dallas is $1.12. The rail-Gulf rate is only 83 cents.

The rail rate on canned goods from Boston to San Antonio is $1.16. The rail-Gulf rate is only 69 cents.

The rail rate on canned goods from Boston to Fort Worth is $1.08. The rail-Gulf rate is only 83 cents.

The rail rate on cotton piece goods from New York to Fort Worth is $2.52. The rail-Gulf rate is only $1.80½.

The rail rate on green coffee from New York to Fort Worth is $1.27. The rail-Gulf rate is only 97 cents.

The rail rate on grain from Amarillo, Tex., to New York is 76 cents. The rail-Gulf rate is only 60 cents.

The rail rate on grain from Lubbock, Tex., to New York is 82 cents. The rail-Gulf rate is only 60 cents.

The rail rate on cotton from Amarillo, Tex., to Lowell, Mass., is $1.73. The rail-Gulf rate is only $1.09¼.

The rail rate on cotton from Lubbock, Tex., to Lowell, Mass., is $1.76. The rail-Gulf rate is only 93¼ cents.

All these rates are fully shown by the following table:

Statement showing comparison of all-rail rates with rail-water-rail or rail-water rates on selected commodities of heavy volume movement between Texas and Oklahoma points on one hand, and North Atlantic ports and interior New England cities, on the other

From—	To—	Minimum carload weight	All-rail rate	Rail-water-rail or rail-water rate	Tariff reference

Do	do	36,000			

[1] Any quantity (no carload rates).

This table of rates is an illustration as to the effect of this bill when put into operation. The effect upon our Texas ports will also be very material. Freights from the interior that now pass through our ports seeking the cheaper rates will no longer be continued. Eastern freights for points inland, to a great extent, will no longer pass through our Texas ports but will go direct by rail, to the detriment of our ports and at greater cost to the people.

It is shown by Document No. 264 of the Seventy-fifth Congress, first session, page 13, that railroad freight rates in the southwestern zone, which includes the whole of the State of Texas, are slightly more than 75 percent higher than for the northeastern zone. These zone freight structures have been built up under the approval of the Interstate Commerce Commission and they are an admonition to us as to what we may expect of that body if it is given the same power over our ocean and Gulf shipping it now exercises over inland shipping.

The land grants of the Federal and State Governments that have been made to the railroads were equal in extent to the combined areas of the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, and the District of Columbia. By this Wheeler-Lea bill we are now giving to them all our rivers and canals, and with them a quitclaim deed to the Gulf of Mexico and the Atlantic and Pacific Oceans. It is to be hoped that the railroad lobby will not demand more of Congress at this time.

Poor Little Rich Uncle Sam

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

ARTICLE BY CHARLES BENEDICT

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an extremely interesting article by the pen of Mr. Charles Benedict entitled "Poor Little Rich Uncle Sam."

I was particularly interested in this article as a result of one paragraph thereof reading, in part, as follows:

> Next we hear that England finds it expedient for political reasons to place her orders for tobacco with Turkey rather than the United States—to stimulate her trade she proposes to buy her cotton in Brazil.

I was naturally interested in this paragraph in view of the fact that North Carolina's real money crops are tobacco and cotton.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AS I SEE IT

POOR LITTLE RICH UNCLE SAM

(By Charles Benedict)

Gray hairs are sprouting rapidly wherever there is any hair on the heads of serious thinkers these days. The cause of this particular anxiety has to do with what will happen to the United States if we continue to pile up gold. Yet the big problem facing this country at present is the price we are paying for gold rather than the quantity of the precious metal we have on hand.

In the first place, only if the gold mines in Africa and Canada are rapidly being depleted do we have any reason to worry that we will be left holding the bag. According to authoritative reports, these gold deposits are still enormous. Under such circumstances it is inconceivable that England, who controls these supplies, will advocate the dethroning of gold from its important position as a monetary base and thus deal a deathblow to Africa and a crippling one to Canada.

The facts are that today the United States possesses the largest amount of gold above ground, while Britain possesses the largest amount of gold below ground. But, by speeding up production England could in a short space of time produce five to ten billion dollars' worth of gold for her own purpose if need be, outstripping us as a holder of gold in a couple of years, and still retain her source of supply.

Today her advantages are: (1) That she can sell to the United States at $35 an ounce gold which costs her only a few dollars to produce, the profit from which helps greatly to finance her war; (2) that it is helping her as well to avoid a devastating inflation internally with its resulting political implications and its menace to her world financial position. The Bank of England still carries its gold at the old price in sterling which equals $20.67 per ounce in dollars. There has been nothing to gain in accepting the book profit available.

Tomorrow her profit on gold would enable her to subsidize British industry on such a vast scale that it would give us something to think about as far as foreign markets and even our domestic markets are concerned.

We are already feeling the effects of cheapened sterling which gives the English exporter an advantage over his American competitors. While, for some time now, we have been adversely affected by British control of low-cost gold which has enabled her to keep the price of commodities she buys at a low level; while, at the same time, the prices of English controlled raw materials, like rubber and tin, have risen artificially due to the combination of manipulated quotas imposed on producers by cartels operating from London, and the shortage of "bottoms" in which to carry these goods.

It can be plainly seen that if England pays us in low-cost gold for goods which she purchases from us, and charges us in sterling based on a $35 an ounce dollar for goods we buy from her, she is getting us "coming and going."

To add to this situation, Britain's attempt to control the seas and the air is greatly interfering with normal American trade as well as that of the other neutrals.

It is now evident to the world that British interests struggling to maintain their financial and commercial dominance will fight to the last ditch, and let the blows fall where they may.

Now, as heretofore, a feudal British business controls the Government. The objectives are trade and sterling supremacy. The weapons are low prices and low-cost gold.

If the war continues England is bound to intensify her trade program. Canada is even now in the throes of an incipient boom—while restrictions of one kind or another are hampering our foreign trade.

Just as in 1926 English progaganda sold the world the idea that she should retain the position as money center of the world because of her experience, and the fact that the machinery for this control already existed in London, today we are being sold the idea that the world would be better off if England retained her "benevolent" economic control over the world as well.

In the battle for power between Britain and Germany, we are inclined to favor the English—but why should either one of them control? The markets of the world should be left free, and the United States should have her fair share.

Again, we have been affected by our sympathies in this crisis where it has seemed to us that we were witnessing the tragic decline of a great empire, and our inclinations were to be generous under the circumstances. To the more cynical there was the belief that the collapse of the power of Great Britain would adversely affect the whole world, as well as the United States, and that it was to our interest to stand by.

But, this situation has been altered considerably since the United States set a firm price of $35 an ounce at which it would purchase all gold offered. So that today England is no longer facing any danger of financial collapse, war or no war.

This explains the very queer struggle we have been witnessing. The war machines and the battlefronts are merely a facade, while the real combat is in the field of economics and finance, where the slogan is, "business must go on."

This low cost gold has given England the confidence to carry on a war of appeasement, rather than in the battlefield. Huge loans and trade advantages have been the keynote. There were loans to Austria and to Czechoslovakia—even after Munich—to Poland, to Rumania, to Turkey. No; there is no danger that England will lack for gold with which to carry on this fight.

And, if the war were over tomorrow, and Britain had won, what assurance have we that she would not launch a subsidized campaign that would make a great dent in the United States? If we are to judge by recent events, it is clear that we must begin to look after ourselves.

We accepted the decline in our exports of foodstuffs to England and excused it on the ground of being a legitimate war economy. At the same time we are confronted with a deluge of British-made foodstuffs that are undercutting our domestic prices.

Next we hear that England finds it expedient for political reasons to place her orders for tobacco with Turkey rather than the United States—to stimulate her trade she proposes to buy her cotton in Brazil—that the billion-dollar airplane order headlined a few weeks ago has been canceled—possibly to punish us because the Pan American Clipper has decided not to make a stop at Bermuda rather than have our mail tampered with, or to express annoyance because of Mr. Welles' much publicized mission.

Allied purchases in this country are being handled by Anglo-French nationals and bureaus to avoid the payment of any commissions to American middlemen. Foreign banking firms are opening in the United States to handle these transactions so all exchange profits will be retained as well. Then there is the threat of British-

owned American securities hanging over our markets. And all this at a time when we are supposed to be on terms of sympathetic friendship. Just now we need some evidence of good will on a mutual basis.

OUR WEAPONS

There are several things that we can do. First among which is to establish a free gold market—at least it would give us a basis for discussion and compromise at the moment with other nations. Insist that Britain supply us with the commodities requested instead of gold. That she buy cotton, tobacco, and such products as we find would dislocate our internal economy if sales abroad were to cease suddenly. Refuse to buy foreign silver and gold on the ground that we have enough. Make it possible for our citizens to hold gold again if they choose.

Then there is always the matter of the debts, which we now know England can afford to pay; that in part payment we take the American securities she is so anxious to sell.

There are other ways, but these two are enough for the moment.

Concentration of Gold at Fort Knox, Ky.

EDITORIAL FROM BUSINESS WEEK

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an editorial from Business Week of March 30, 1940, entitled "Our Old Kentucky Gold."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Business Week for March 30, 1940]

OUR OLD KENTUCKY GOLD

Almost any day, tucked away in a half inch of space in an obscure corner of the financial page of your daily paper, you can find an item that runs something like this:

GOLD FROM ABROAD

A consignment of 96 boxes of gold bullion has arrived from Capetown, South Africa, for the Federal Reserve Bank of New York.

The gold may have come from Ottawa, or Paris, or London. But regardless of the point of origin, the warning is the same: that the great gold problem still confronts us and it is going to be with us for a long time.

The growing concentration of gold bullion at Fort Knox in Kentucky is plainly the outward manifestation of persistent and perplexing world economic maladjustments that began in 1929. It was then that the gold problem, as we now have come to know it, had its specific beginnings.

With the depression of the thirties, prices of commodities dropped, wages declined, and the incentive to produce gold increased. For the Government continued to pay a flat price of $20.67 an ounce, regardless of the fact that mining costs were diminishing; accordingly profit margins of gold mines expanded, and many marginal mines went into production.

Then, in 1934, as the chart on page 18 shows, gold mining got another big push. The President boosted the price from $20.67 to $35 an ounce. Immediately, profit margins of gold mines soared anew and production boomed all over the world. Whereas back in 1929 output averaged 20,000,000 ounces a year, grossing producers some $400,000,000 at $20.67 an ounce, in 1939 nearly 40,000,000 ounces of the metal—$1,400,000,000 at $35 an ounce—were lifted from the earth.

These huge quantities of gold—and more—the United States has been accumulating in recent years. The metal comes to this country not only from the mines of South Africa, Canada, and Russia, and from our own deposits, but also from the ancient hoards of East Indian princes and from the vaults of central banks.

The world has been using gold very much as the nations of Europe and South America used bonds in the reconstruction period after the World War. Instead of selling bonds, they've been sending gold (1) to get American goods and services, (2) to buy American securities, and (3) to build up deposits in American banks—these deposits representing nothing more nor less than a future call on (a) goods and services and (b) securities or other assets.

Right there is the heart of the gold problem. The United States has become the nesting ground for foreign capital seeking safety; also it has become the principal source of supplies for the Allied Powers in this war. So more gold can be expected to flow over here, as an unnecessary addition to our already too large pile—$18,000,000,000—nearly 70 percent of the total world monetary supply.

Yet, for its own protection, the Treasury must keep right on buying gold. If it doesn't, then the market value of its holdings will drop, and it will lose the chance of redistributing those holdings at $35 an ounce when the war is over. For, if the Treasury doesn't make its price stick, other nations will be unwilling to buy back their gold—using good services, and, perhaps, securities to pay for it.

But it is to be realized that, for the time being, gold has been defunctionalized. When Britain, France, the United States, and other European nations joined in the tripartite accord and used stabilization funds to iron out fluctuations in their currencies, gold was replaced in one of its traditional functions. And when Germany resorted to trade by barter with South American and central European nations, gold again lost a function—settling international balances.

Thus, as a monetary agent, gold is losing out.

The Treasury cannot solve the gold problem by action. All it can do is support the $35-an-ounce price and hope (1) that all the world's bullion does not come over here; (2) that with peace, foreign citizens will repatriate their capital from this country; (3) that the balance of trade will move gold out of, instead of into, the United States; (4) that some form of gold standard may be reestablished after the war.

This last point may explain in part our Government's desire to have a hand in Europe's peace. It would help to have a gold clause in the treaty.

Building for Peace

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

ADDRESS BY HON. LOUIS JOHNSON, SECRETARY OF WAR

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on Building for Peace, delivered by the Honorable Louis Johnson, Assistant Secretary of War, at the Military Order of the World War Army Day banquet, Waldorf Astoria Hotel, New York City, on April 6, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow members of the Military Order of the World War, this afternoon we saw a parade. Up Manhattan Island came long columns of marching children and marching men. We heard the patter of small feet; the crackle of sharp commands; the clatter of cavalry; the rumbling of artillery; the sound of thousands of feet echoing in unison—all the pageantry which we have associated with parades since Bunker Hill, Gettysburg, San Juan Hill, and Chateau Thierry.

But there was something else in the parade which we saw today. There were long lines of floats bearing replicas of airplanes with their engines and accessories, antiaircraft fire-control equipment, and many other munitions—the matériel of warfare. More significant still, other floats emphasized the part which American industry contributes to the cause of national defense—the transportation-equipment group; the machine-tool industry; the electrical group; the metalworking industry; the building industry; business-machines companies; the printing-equipment group; the textile manufacturer. These additions to New York's Army Day parade today recognize changes which have come to warfare. I know of no better time than the calm of late evening on Army Day to reflect on some phases of our national security and to review some of these new aspects in national defense.

One outstanding fact to remember about modern war is that it concerns every citizen. There can be no slackers in warfare today, for every man, woman, and child may be on the battlefield. A nation at war is a nation under bombs. It has been made clear by events overseas that the men who make munitions and war supplies, the men who feed armies and haul their rations forward, are just as likely to be under fire as front-line soldiers. It therefore was appropriate that the children should march in your preparedness parade today.

A few years ago a small, weak nation was attacked. Its government, as the governments of all nations do when war comes, issued a mobilization order. It reads as follows: "Everyone will now be mobilized, and all boys old enough to carry a spear will be sent. Married men will take their wives to carry food and equipment. Men without wives will take any women without husbands. Women with small babies need not go. The blind, those who cannot walk, or who for any reason cannot carry a spear are exempt. Anyone found at home after receipt of this order will be hanged."

I have not quoted this call to arms to ridicule any nation or any people. On the other hand, I have read it to make a point and

draw some lessons. Crude as this mobilization was, it had one virtue. It recognized clearly that modern warfare demands the best that the Nation possesses.

A second important fact bearing on national defense is that the mobilization of manpower among leading nations is no longer the critical factor in warfare. It has been superseded by munitions capacity as the criterion of a nation's ability to defend itself. The long thin line—the battle line—has been supplemented by an industrial front as wide and as deep as the Nation itself. We have clear evidence from Europe that war today is being won—or lost—on the economic front, in the factories, and in the workshops of the nations at war.

Not long before the last World War a great American, in minimizing the necessity for national preparedness, boasted that if this Nation were attacked a million men would spring to arms overnight. We now know that it would be chaotic to have a million men spring to arms overnight. As a matter of fact, they might spring but not to arms. There are not enough guns and bullets and powder in this whole country today adequately to equip a million men. The mobilization of manpower is relatively simple. As a result of our own experience and the many historical examples, the methods are well known and the principles are established. In the last war it took us about 9 months to mobilize 2,000,000 men and train them for front-line action in France. This 9-month period was broken down into three successive steps—6 months of training in the United States, 2 months of training in the rear areas of France, and 1 month of training in quiet sectors on the western front.

There is no reason to believe that we could not duplicate that last World War experience. We could raise two or three million men if national defense should so require and train them in 9 months, but we could not furnish them weapons and supplies in less than 2 years. Had it not been for the genius of Bernard Baruch and other leading industrial minds it would have taken even longer. In the last Great War our Allies made good that deficit by supplying us the weapons and munitions we required. But no sane American will now advocate that we rely on the possibility of better-equipped Allies making good our shortage in another national emergency. If we ever face another war—and God grant that we shall not—our most important problem, and our most effective weapon of defense will be the ability of American industry to supply munitions and equipment. This is a subject which merits the sober consideration of every citizen. It concerns every citizen not alone because he will be a participant but because he will pay for it. He will pay dearly for mistakes and confusion which delay effective mobilization. For in every study of mobilization for defense, the student inevitably reaches the conclusion that the vital factor is time.

Napoleon, in addressing one of his staff officers, once said: "Go, sir, gallop, and don't forget that the world was made in 6 days. You can ask me for anything you like—except time." Someone else well said that time is the most precious thing in the world, for it is the only thing God measures out second by second.

The time phase in War Department plans for the mobilization of manpower allows 4 months in which to expand our Army to 1,000,000 men. The Regular Army today is composed of about 230,000 men; there are 235,000 men in the National Guard immediately ready for service, or a total of 465,000 men—an aggregate Army slightly greater than that of Finland and about one-fourth that of Poland when war came to those two nations.

The protective mobilization plan under which our manpower is mobilized and trained is adequate and well worked out. The mobilization plans for industry, however, due to our historic lack of a national-defense policy and our traditional practice of waiting until war is upon us before we do anything about it, are, even at this time, despite our efforts during the past several months, in a much less complete and satisfactory state.

I have long known that while in warfare the heartaches will be on the firing line, the headaches will be on the production line.

It is the legal and executive responsibility of The Assistant Secretary of War to assure the provision of adequate supplies and munitions for our Army. It has been my continuous concern, therefore, to raise our munitions power to match our manpower. Potentially, this country of ours has the greatest productive capacity of any nation in the world. Our job is to plan and organize the elements of our vast resources, to raise potentiality into actuality, in the belief that here lies the essence of preparedness for peace.

As a first step we should have an adequate war reserve stock of munitions. Funds during recent years have not been adequate to provide any considerable reserve of ammunition, guns, tanks, airplanes, or many of the other machines and critical munitions required in modern war. With one striking exception, which I shall describe later, there is no munitions industry in this country. This means that we must have sufficient reserves until the factories designated to turn out implements of war can get into quantity production. They cannot get into full-scale operation until many months after mobilization day, for it takes a considerable time to convert an automobile factory into a tank factory or a chemical plant into a powder plant. Generally, there must not only be extensive retooling, but there must be a sufficient period for training skilled workers to new processes of manufacture.

Our industrial war plans have been pressed to the limit of our resources in recent months. We have surveyed the industrial plants of this country to determine what munitions each can best build, the ultimate capacity of each, and the time required to get into full-scale production. We have earmarked some 10,000 of these plants for possible war work.

Our program of educational orders is designed to give the more important of these plants an opportunity to produce in peacetime a small quantity of the items which they would be required to produce in wartime on a huge scale. These educational orders also serve the important purpose of training at least a limited number of the skilled employees necessary to fabricate the military product. So, also, our armament program and our planning program are being so administered as to contribute as much as possible to the training of industry.

A maximum military effort would extend to the utmost a large portion of our civil industries. It probably would involve a production of munitions considerably in excess of the last war, and, remember, the last war cost us at the rate of a million dollars an hour for more than 2 years. During the 25 months from April 1917 to April 1919 our governmental expenditures directly chargeable to war, totaled almost $14,000,000,000. Twelve billions of that money were expended for munitions. Four billions went for ordnance material alone. Any activity which cost the people of this country such staggering sums is worthy of the serious consideration of every clear-thinking American.

American industry has cooperated and is cooperating with us wholeheartedly in our industrial mobilization planning. The War Department has taken the initiative and our industrial leaders have responded. Patriotism is not the exclusive possession of the fighting man. The worker and the factory manager have shown that they, too, realize their responsibilities and the import of their possible wartime tasks.

The one happy augury in our gloomy picture of the giant task which may face us is the cooperative spirit that permeates all phases of American society.

A moment ago I stated that there is no peacetime counterpart to our war industries of any consequence save in one vital exception. That is in the field of aviation. Since air power has joined with land and sea power to form a triumvirate for national defense, it is fortunate, indeed, that our great civil aviation industry is readily adaptable to produce the military aircraft we require. In fact, it already has a vast military experience.

This fortunate development is due to several factors. Military aviation in this country has always been the best customer of our civil aviation industry. Our military services do not build their own fighting planes. They have bought them, always, from civil aeronautical manufacturing establishments. Our civil aviation industry has, therefore, had experience during all of its existence in the building of military aircraft. During the last great war it produced more than 23,000 planes and 30,000 engines. After that war, although reduced to its peacetime skeleton form, it continued to build, over a period of 20 years, from four to five hundred military planes annually.

Thanks to the President's wise and timely air-expansion program, inaugurated about 12 months ago, orders were given for more than 3,000 military planes. That, supplemented by the present demand for our airplanes and engines in the war now gripping Europe, we are confident will aid materially in developing and preparing an aircraft industry adequate for our own national needs. Present indications are that foreign missions now in this country are prepared to order more than $1,000,000,000 worth of aviation products.

A year ago we had 30,000 employees in our airplane and engine factories. We now have more than 75,000 skilled artisans so employed, and we have just begun to work. The aviation industry now estimates that it has a capacity of more than 17,500 planes per year. Of the 43 airplane plants in this country, 23 are now working on military orders. The airplane-engine industry has received the same impetus and its capacity, according to its reports, is now 16,000 engines per year. Next year it promises to have an annual capacity of not less than 25,000 engines per year—engines of more than 1,000 horsepower each.

The public press has discussed at length, and the public mind has studied thoughtfully during the past few weeks, the problem of whether we should sell our advanced military airplanes abroad. We are the last people in the world to wish to profit by misfortunes in Europe, but we would be unwise, indeed, if we failed to realize that the war in Europe is a full-scale laboratory in which our fighting planes can be service tested under war conditions at no cost to us. The people of these United States have been saved a great burden by reason of the fact that national requirements abroad have sent foreigners hurrying to our shores for the procurement of aircraft, engines, and equipment. This has permitted our aviation industry to begin mobilization—hold a preview for possible war.

Our people need not be alarmed by critics who charge that we are selling our military secrets abroad; that we are weakening our own defensive structure when we provide foreign buyers with our latest production types. The War Department will never permit the sale of one single vital military secret abroad.

An adequate productive capacity for our aviation industry is essential. It is an effective expression of this country's ability to wage war under the conditions existing today. Our own expansion program, which will not be interfered with by these foreign sales, plus the plane deliveries to the warring nations abroad, will give us the vital aviation production capacity we require.

Our release policy with respect to aircraft is this: We will permit our manufacturers to sell to foreign buyers our late production models of aircraft and engines and they will receive in return not only an adequate monetary compensation but we will get improved planes for our own air force and an aviation industry capable of producing them in quantities required. In addition, we shall receive promptly the latest information from foreign proving grounds—technical and tactical information vital to our own war plans.

There will be no delay in the delivery of sufficient military aircraft to equip our own air force adequately, to arm all of our squadrons. We shall permit a reasonable delay in the delivery of some of our reserve airplanes in order to incorporate in them the necessary changes to make them superior fighting aircraft. It is a fair exchange—one of those fortunate bargains where both sides gain their desired ends. Our foreign customers get the planes they desire when they need them, our industry is built with foreign capital to the proper size, and our air force is equipped with superior combat planes.

I wish that I might leave you with the optimistic note which I have just sounded. But the facts are otherwise. However promising our prospects of being adequately supplied with aircraft in an emergency, we must realize that other items equally important are not so provided for. Ordnance material, for example—guns, ammunition, antiaircraft and antitank weapons; chemical-defense items, such as gas masks, protective clothing; signal equipment, such as field telephones and special radios—all of these and others cannot, under existing conditions, be made available for many months after troops are mobilized and trained. It is here that our defensive armor is weak. I regret to report that, in spite of all measures now available, some 15 months would elapse before even a million-man army could be adequately supplied with the more critical items of ordnance equipment. You may be assured, however, that we shall continue to direct our best efforts toward improving this situation.

I have spoken at length tonight on the subject of preparedness, and in this connection I want to leave one last thought. A wise nation does not prepare for war. It prepares for peace. The provision of adequate defensive measures is not in preparation for war but as insurance for continued peace. It has been demonstrated time and again and emphasized in recent times that war does not come to the peace-loving nation which is prepared to defend itself. War selects for its battlegrounds the unfortunate nation unable to resist an invader.

Your War Department, in recognition of these principles, has progressively urged a sound policy of national defense—preparedness for peace—and is now straining every nerve and sinew to build the dike high and thick and strong so that no foreign waves may roll over our shores. Our program of industrial preparedness is the very essence of that policy.

May we all remember, as we build defensively for peace and against war, that there are two phases of adequate defense—manpower and munitions capacity. There are two vital lines—the production line and the firing line. Of these, the production line may well be the life line of national security.

Census Questions

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

RADIO ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, AND LETTER FROM DIRECTOR OF THE CENSUS

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a radio speech delivered by me in debate with the Senator from New Hampshire [Mr. TOBEY] on controversial matters with reference to the census questions. The debate was broadcast by the Mutual Broadcasting System and took place on March 31, 1940. In the same connection I also ask unanimous consent to have printed in the RECORD a letter addressed to me by Hon. W. L. Austin, Director of the Census.

There being no objection, the speech and letter were ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR PEPPER

There have been two very gratifying aspects of Senator TOBEY'S attack upon the census. The first is the good sense which the American people have exhibited in not being swept off their feet by the agitation even of a Senator of the United States, able Senator that he is. The second is the assurances we have of the good health which our friend Senator TOBEY enjoys, for there have been times when Senator TOBEY'S acute disturbances over the census inquiries has made those of us who are his friends very much concerned as to whether his constitution was able to stand the severe agitation which this matter has caused him.

It was neither a Democratic nor Republican administration which provided for the taking of the census. It was the framers of our Constitution who provided in the Constitution for the taking of the census in the year 1790 and every 10 years thereafter. The primary reason for the taking of the census is to determine the representation of the several States in the National Congress. The secondary reason is, of course, the accumulation of knowledge about the country, its people, its resources, its conditions, so that both the Government and the people might know what our progress has been and what our problems are.

The 1940 census will therefore be the sixteenth which has been taken in our country, and these censuses tell the history of the United States and its people. They tell a thrilling story of unparalleled growth of this Nation, of how it has grown from a total population of 3,929,214 in 17 States in 1790 to a population which in 1940 will probably exceed 130,000,000 in 48 States and the District of Columbia, the mastery of a continent. They tell the story of how the area of our country has grown from 892,135 square miles in 1790 to 3,738,395 square miles in continental United States alone and 711,606 square miles in our possessions. Our density of population in 1790 was 4½ persons per square mile. In 1940 it is probably 44 persons per square mile.

That century and a half of our history which is graphically told in the census records have seen great cities spring up, a great railroad system of 240,000 miles of tracks, 93,000,000 miles of telegraph and telephone wires, the electric light, the radio, the automobiles, 4,000,000 miles of highways. If you were to go down to the Census Bureau you would find 8,000,000 pages occupying a mile of shelves that tell this vital story of America in 15 previous censuses. In those records you would find that every President, beginning with George Washington, has been included. You would see their signatures and their willing responses to the census questions.

What a country we have. One hundred and thirty-two million people; $320,000,000,000 of wealth, nearly 7,000,000 farms producing annually almost $10,000,000,000 worth of products; nearly 200,000 factories, employing more than 10,000,000 men and women, making goods worth over $60,000,000,000; 3,000,000 retailers, wholesalers, and other dealers, serving the people of America; 33,000,000 home units; over 50,000,000 gainful workers. All this story is told in the censuses of our country.

The first census of manufacturers taken in 1810 lay the foundation for the measures of the industrial growth of America. The first census of agriculture was taken in 1840, and with the completion of the census of this year, there will be 100 years' record of the fundamental industries of America—the farm, which has made America "the bread-basket of the world."

The specific law under which the 1940 census is being taken was not a Democratic law. It was passed and approved in 1929 under the Republican administration of President Hoover. That law authorized the taking of the census and authorized inquiries relating to population, to agriculture, to irregation, to drainage, to distribution, to unemployment, and to mines." The law provided "the number, form, and subdivision of inquiries in the schedules used to take the census shall be determined by the Director of the Census with approval of the Secretary of Commerce."

As has always been done, therefore, the Director of the Census, who, by the way, is Mr. W. L. Austin, who has been in the Census Bureau for 40 years, coming in under President Theodore Roosevelt as a civil-service employee, having been Assistant Director of the Census under President Hoover and appointed by President Roosevelt as Director of the Census for 1940 because of his long experience in this work. The Director of the Census, as has always been the practice for a long time, called in various people representative of business, labor, and the public, and consulted with them about what type of inquiry would be most appropriate for the census. Among those called in and who served, as others have served in the past, utterly without compensation, were Dr. Louis Dublin, of the Metropolitan Life Insurance Co.; Dr. David R. Craig, president of the American Retail Federation; Mr. Noel Sargent, secretary of the National Association of Manufacturers; Gen. Robert E. Wood, chairman of Sears, Roebuck & Co.; Sidney R. Katz, of the C. I. O.; Miss Margaret Scattergood, of the A. F. of L.; and Dr. Stacey May, of the Rockefeller Foundation. After consulting with these and many other advisors, and after a thorough study of the previous censuses, the Director of the Bureau finally approved the form of inquiries for the 1940 census, which was duly approved by Hon. Harry Hopkins, Secretary of Commerce, as the law requires.

All the machinery for taking the census, according to the habit and traditions of the past, was arranged, and the blanks were printed, the President's proclamation issued, and both the Government and the people were ready for the taking of the 1940 census, just as they had taken 15 other censuses in the past, when suddenly a bombshell burst with shattering violence in the ears of the American people.

Senator TOBEY, of New Hampshire, who happens to belong to our friendly rival, the Republican Party, launched a bitter attack upon two questions which were carried in the census schedule. The first question reads "Amount of money wages or salary received (including commissions)" for the year 1939.

The second question, "Did this person receive an income of $50 or more from sources other than money wages or salary" in 1939. The regulations of the Census Bureau containing instructions to the census takers, which were published and a matter of public knowledge at the time Senator TOBEY made his attack, provided that the first question mentioned should be asked only of those receiving less than $5,000 per year, and that if anyone, to the knowledge of the census taker, received more than $5,000 there was no specific inquiry to be made, but that fact was to be noted by the numerator as a special answer to the question.

The answer to the second question of whether the person questioned received income of $50 or more from sources other than

money wages or salary required only a "yes" or "no" answer, and not the amount of the income.

It is to be borne in mind that there is no comma between money and wages. The question is not how much money or wages or salary the person received but how much money in wages or salary less than $5,000 did the person receive. It is further to be kept in mind that the enumerator was not interested in any money that the citizen made from any source other than wages or salary. If you made an income from stocks or bonds or from rents or from any other source, which was not actually wages or salary, the question was not applicable at all.

Now, it was these two questions that provoked all of my friend, Senator TOBEY'S, agitation, and which, unfortunately, Senator TOBEY misinterpreted, although, I am sure, unintentionally, to the American people.

Among those requesting the Bureau of the Census to include those questions pertaining to income of the people receiving less than $5,000 a year from wages or salary was a fair cross-section of the American people. For example, the American Home Economic Association, the National Industrial Conference Board, the Actuarial Society of America, the Population Association of America, many ministers and church councils, Y. M. C. A.'s, insurance companies, automobile manufacturers, public utilities, labor unions, advertising agencies, market analysis, publishers of magazines and newspapers, publishers of farm papers, the National Bureau of Economic Research, etc., etc. All these agencies, for one reason or another, actually wanted to know what were the facts about the incomes of the people of America in the lower income brackets, and since 97 percent of our families of America have an annual income of less than $500, those inquiries sought information about practically the whole population of our country. These people did not think the questions were violating the privacies and infringing upon the rights of the American people, nor did a special advisory committee of nongovernmental people, appointed by the American Statistical Association, which is nonpartisan and, I dare say, mostly Republican, including Dr. Robert E. Chaddock, of Columbia University; Dr. J. Frederick Dewhurst, of the Twentieth Century Fund; Mr. Paul T. Cherington, market analyst; Dr. William P. Ogburn, of the University of Chicago; Dr. Murray R. Benedict, of the University of California; and Dr. Willard B. Thorp, of Dun & Bradstreet.

Nor did the labor leaders, practically all of whose membership would be called upon to respond to these two questions, object to it.

On the contrary, Mr. Hetzel, counsel for the C. I. O., said "The basis of our support of these questions is our conviction that the information which would be elicited by having these questions, these two questions on the schedule, are essential to the consideration of legislation which we feel to be the first order of business of the country."

Mr. William Green has given these questions his hearty approval.

Remember that the law authorizes inquiries relating to employment. I believe all of us would agree that one could not get very accurate information about employment unless one knew the wages or salary received in a year by the person being considered. You might easily be employed but only at such wages as amounted actually to unemployment. When we think of employment we surely think about employment at wages or salary which allow a decent standard of living, so these questions relative to income were simply for the purpose of actually finding out the facts about the people who really do the work of America, for the purpose of making it possible for the Government and all others interested to be able to be helpful to those people in any way proper and possible.

It is said, for example, from the best information we have, that 14 percent of America's 29,000,000 families have an annual income of less than $500 and that nearly half of America's families make for a whole year, for the whole family, less than $1,000.

All of us, both in public and private life, including Senator TOBEY, ought to want to know whether or not that report, based upon the best voluntary information available, is or is not a tragic fact.

After Senator TOBEY had spoken upon the radio many times and agitated this matter in the country and in the Congress, including urging people openly to form societies to resist the census and violate the law, finally the Director of the Census, with the approval of the Secretary of Commerce and the President, made a concession to Senator TOBEY of altering the method of collecting information on this subject of income, and as now provided, the citizen who objects to answering these questions to the enumerator may write down the answer in private, upon a blank sheet of paper and give it, in a sealed envelope which he will be provided, to the census enumerator to be mailed, at Government expense, directly to the Census Bureau in Washington.

The enumerator of the census, you will remember, is subject to a penalty up to $2,000 or 5 years in prison, or both, for revealing any information that comes to his or her knowledge without lawful authority. In addition to that, such enumerator would be guilty of an additional Federal offense of interfering with the mails if he tampered with the sealed envelope containing such answer of the citizen.

It seems to me, therefore, that the Bureau of the Census has done everything that anyone could reasonably expect in trying to protect the citizen, even in an extreme case.

So this seems to me to settle the matter. It seems that Senator TOBEY would be satisfied. According to his point of view, he has rendered the people a great service. I am sure everyone is willing to accord the Senator whatever honor and credit he may be entitled to receive.

But we find that Senator TOBEY now does not confine his attack to the two income questions. He now attacks all sorts of questions in the census—housing, unemployment, marital status, and others, and apparently Senator TOBEY has not confined himself to the Senate in making his attack. In addition to having been on the radio a number of times, speaking to the whole country—the last radio speech of Senator TOBEY was issued by the publicity department of the Republican National Committee upon the stationery of the Republican National Committee.

I wonder if that indicates that the Senator is trying to serve the Republican Party primarily in making this attack, since it happens to be a Democratic administration this time which is taking the census.

Speaking about the privacy of the American people, the Senator must have forgotten the census of 1850 under Zachary Taylor, which inquired of each person the value of the real estate owned by him or her, when they were married, whether they could read and write, whether they were deaf, dumb, blind, insane, idiotic, pauper, or convict. The same questions were asked in the 1860 census, and, I may add, Abraham Lincoln was asked and answered without protest and without organizing any resistance to the census every one of those questions and actually gave the value of real estate and personal property which he owned.

It was the same in the census of 1870 in the administration of Grant, also a Republican President, when those same questions were asked, and neither President Grant nor the people organized groups to resist the census questions because those questions were too personal.

In the census of 1880, under Republican President Rutherford B. Hayes, the people were asked, along with many other questions, the number of months each person had been employed during the year, whether the person were sick or temporarily disabled so as to be unable to attend to ordinary business or duties, and if so what was the sickness or disability; whether they were blind, deaf, dumb, idiotic, insane, maimed, crippled, or bedridden; and they did not think the questions were an invasion of privacy, and neither did Hayes nor any Republican Senators, to my knowledge, organize to resist that census.

In 1890, under another Republican President, Harrison, the census asked all women of how many children they were the mother. They asked all persons of the months they were unemployed during the year; the time they were in school; their ability to read and write; whether suffering from acute or chronic disease, with the name of the disease and the length of time afflicted; whether defective in mind, sight, hearing, and speech; whether crippled, maimed, or deformed, with the name of the defect; whether prisoner, convict, homeless child, or pauper; whether home was owned or rented, and, if owned, whether free of mortgage.

Incidentally, it might be added that these censuses instructed the enumerators to talk to local doctors and other people in the communities who might have special information about the conditions of the people which the 1940 census does not do.

Likewise, in the census of 1900, under Republican President McKinley, the Census asked, in addition to usual questions, other questions about marital status, the number of years married, the mother of how many children, months in employment, home ownership, and the like.

Again, in 1910, under a Republican President, Taft, the census asked, in addition to the usual questions, the number of weeks out of work during the year; the ability to read and write; home ownership; home encumbrances, if any; whether blind, deaf, or dumb; neither President Taft, nor any Republican Senator to my knowledge, counseled the people to refuse to answer the census and organize them to resist it.

In the census of 1930, under another Republican President, Hoover, in addition to the usual questions, there were the further questions of home ownership, the value of the home, the monthly rental received, the number of radio sets, schooling, the ability to read and write, whether a veteran of military or naval forces, and certain special questions on a further schedule relating to unemployment and neither did Hoover, nor any Republican Senators to my knowledge, try to organize the people to resist that census.

So, my friends, I am exceedingly sorry that Senator TOBEY has felt as he does about this matter. I know that every one of us must realize the seriousness of this attack upon the integrity of the census, made by a United States Senator. Upon the integrity of this census will depend the number of Representatives that the States have in the House of Representatives for the next 10 years. Upon its integrity will depend the reliability of our knowledge about our country and its people for the next decade. If the integrity of one census is destroyed, it weakens the integrity of all censuses.

Surely, there is room for party differences in this country. Surely, it is characteristic of America for us to disagree upon matters of policy and opinion, but surely there is a common ground of Americanism—a ground upon which all of us stand together as Americans, and surely factual knowledge about our country, about the condition of the men and women who do the work of our world, surely the kind of homes in which the families of America are housed, the hearthstone around which the children of America are nurtured and protected, surely this is American ground and not a realm for partisan strife.

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington.

HON. CLAUDE PEPPER,
United States Senate, Washington, D. C.

MY DEAR SENATOR PEPPER: In regard to the points which you requested me to clarify with official statements, I need only to

quote the following excerpts from a letter written by my assistant, Dr. Vergil D. Reed, to Senator TOBEY last Saturday:

"You stated on March 20 that census schedules were open to the inspection of individual business concerns and trade associations. That statement is either the result of your own gross ignorance or your desire to deliberately abuse the truth. The facts speak for themselves and are easily confirmed from an annual report, List of Funds Received by Bureau of the Census for Special Statistical Studies, lodged each year with the Committee on Expenditures of Executive Departments in the House. You inquired concerning that report yesterday, and I am led to the conclusion that you are intending to use misinterpretation of it as a basis for further attack along the same line. That report covers legitimate special tabulations and searches of census records made by census employees for the account of and at the expense of individuals and organizations. Most of the items are $3 each and cover searches of census-of-population records (with the written consent of the individual or his nearest relative) for the purpose of establishing age or other facts in the interest of the respondent. These searches are made for insurance companies, courts, Social Security, Railroad Retirement, genealogists, and the individual himself. Before any such search is made we must have written permission from the person or nearest relative involved. The certificates issued as a result of these searches are accepted by courts and insurance companies, and by Social Security and Railroad Retirement, as official evidence of age and other pertinent items of personal history. This is a legitimate service to the public which no one can question and in no sense does it violate the confidential protection of anyone.

"Special tabulations of census data are constantly being made for trade associations, chambers of commerce, business concerns, and other Government agencies at their expense and only in such form as will not disclose the identity of individual concerns or individuals. These tabulations are always made by sworn census employees. Any responsible trade-association executive will tell you that regular individual census reports are never made available to them or to individual concerns. The unsuccessful attempt to make such individual reports available to N. R. A. a few years ago is ample evidence of our honest protection of confidential census schedules. Mr. J. Edgar Hoover, of the Federal Bureau of Investigation, and officials of the Bureau of Internal Revenue will confirm the fact that they have never been able to see our census schedules. These special tabulations are an honest, helpful service, making available data which are not usually published, largely because of limited funds or restricted interest which would not justify tabulation at Government expense. They are tabulations and not reports of individuals or concerns.

"As to your accusation that T. N. E. C. officials had access to individual census schedules, I suggest that you talk to Senator O'Mahoney, Dr. Isador Lubin, or Dr. Willard Thorp—that is, if you really want the truth. Certain tabulations, not disclosing individual concerns in any case, were made by the Census Bureau for T. N. E. C. but none by T. N. E. C.

"We will not under any circumstances even give out a list of concerns or the name of individual concerns reporting to the Census Bureau.

"I find that you have been exploring the possibilities of an act of Congress (Public, No. 74, 74th Cong.) to bolster your untenable position. I presume you will even resort to citing that law as evidence that individual census reports are made available to those outside the Bureau of the Census. I save you the trouble. That act became law in 1935 and the legislation was secured mainly for the purpose of making it possible for the Department of Commerce to charge individuals and organizations for making various types of studies, tabulations, and compilations. The Bureau of the Census has for many years had the legal authority to make charges for special tabulations and the funds for such special tabulations are cleared through the United States Treasury. Our solicitor informs us that this act has no bearing whatever upon the confidential features of census reports as covered by various census acts, including the Fifteenth Decennial Census Act, under which the Sixteenth Decennial Census is being taken. Such possibilities were, of course, given careful consideration at the time Public, 74, was drawn."

Very truly yours,

W. L. AUSTIN, *Director.*

Stand by the F. B. I.

EXTENSION OF REMARKS

OF

HON. FRED A. HARTLEY, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

RADIO ADDRESS BY HON. FRED A. HARTLEY, JR., APRIL 2, 1940

Mr. HARTLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address I delivered over the National Broadcasting Co. network on April 2, 1940:

I am amazed at the malicious attacks that have recently been leveled at Director John Edgar Hoover and his associates in the Federal Bureau of Investigation. For what have they been criticized? My answer is: For doing their duty in the same efficient manner that has made the F. B. I. the greatest crime-detecting agency the world over. Let us examine the complaint and also its source.

The F. B. I. has been charged with violations of civil rights and the use of third-degree tactics and duress. The charge refers specifically to the cases of a number of individuals taken into custody at Detroit and Milwaukee recently for violation of a statute forbidding the enlistment of individuals for service in foreign wars—specifically, the Spanish civil war. It should be noted that the actions of the F. B. I. in this case were taken upon specific instructions. Two former Attorneys General instructed that the investigation be initiated. Indictments based upon the investigative work performed pursuant to these instructions were handed down by a Federal court. Warrants were issued in due legal form. The warrants were transmitted to the special agents of the F. B. I. for proper legal service. They were properly and legally served. The individuals were brought to the respective offices of the F. B. I. and accorded every possible courtesy and attention. They were permitted by the United States attorney to confer with counsel. They were given physical examinations. They were fed. Every attention was paid to their comfort.

And yet the F. B. I. was charged with having used third-degree tactics, for example, because the suspects were seized between 4 and 5 o'clock in the morning while in bed. I suppose Mr. Hoover's critics would have preferred to have had him call these suspects on the phone and say, "I have a nice, fresh warrant to serve on you. When will it be convenient for me to call?"

In the past 12 years alone over 52,000 convictions of dangerous and notorious criminals have been secured in cases investigated by special agents of the F. B. I. Furthermore, not one defendant in these cases has obtained a reversal upon allegation that F. B. I. special agents subjected him to a beating, maltreatment, bodily injury of any type, or other similar third-degree methods. Surely this could not have been accomplished through unethical and illegal tactics.

And who is it that complains of these alleged violations of civil rights? Well, the most vociferous is the Young Communist League. Imagine the audacity of these disciple of Stalin criticizing the protection of civil rights in the United States. Let them go to Russia, and like everyone else who has tried it, they will soon be glad to be back under the protection of the Constitution of the United States. However, the ranting of these Communists is more serious than appears on the surface. For it has given another group less noisy but more skillful an opportunity and excuse to join in the attack. This group has charged the F. B. I. with unlawful wire tapping. In answer to this let me say:

Mr. Hoover has always been opposed to wire tapping. The rules and regulations of the F. B. I. originally prohibited wire tapping of any kind or type by special agents of the F. B. I. Later, upon instructions of former Attorney General Mitchell, and in order to bring the policies of the F. B. I. in line with those existing in the Prohibition Bureau (then a part of the Department of Justice), the rule forbidding wire tapping was amended by direction of the Attorney General to permit it in certain cases upon the specific approval of the Director of the F. B. I. Under this procedure wire tapping has been done in certain types of heinous crimes, particularly kidnapings. It has been of great value in such cases. I doubt that any person would claim that a kidnaper is entitled to special consideration in administering the laws of the country. Bear in mind there has been at no time any illegal wire tapping by the special agents of the F. B. I. Bear in mind that never has there been any attempt to introduce such evidence in Federal court. Bear in mind also that on at least two specific occasions Mr. Hoover has expressed his sweeping opposition to proposed wire tapping legislation, designed to make possible the presentation in court of evidence of this kind. Of course, wire tapping of any kind and type has now been banned by the Attorney General.

The Persident of the United States has instructed the Federal Bureau of Investigation to take charge of all investigative work in matters involving espionage, sabotage, subversive activities, and violations of our neutrality regulations.

I assume that the order prohibiting wire tapping of any kind will now prevent the special agents of the F. B. I. from using this means of investigative defense against foreign agents, against spies, against those who would destroy by torch and incendiary bomb the country's industries, in the interests of foreign enemies.

I regret that any such advantage should be placed in the hands of these avowed enemies. I feel that the F. B. I., through its directing head, should be free at any time to invoke any possible reasonable method of investigative defense against this menace. I am extremely apprehensive that the hands of the F. B. I. have recently been tied in such a manner. This constitutes a serious situation. The pendulum may have swung altogether too far. It may be necessary to adjust our legislation to meet this national menace.

I believe some of those who have condemned Mr. Hoover and the F. B. I. have been misinformed. Some of these critics may possess no desire to be informed. I believe that the people of this country owe a debt of gratitude to the directing head of the F. B. I. and that every possible support should be afforded this great Bureau in the work it has so successfully performed to this day.

Please remember that John Edgar Hoover is not a politician. He does not permit political interference with his job. And as a result, the politicians don't like him and are constantly after his "scalp." However, no one can deny that he has established one of the most efficient bureaus of the Government—a bureau of government which has returned in recoveries over $6 for every dollar appropriated for it.

Since the passage of the Federal Extortion Act in 1932, the F. B. I. has secured 608 convictions as against 22 acquittals. There has been a decline of 80 percent in bank robberies, and most important to every parent in the United States is the fact that since the passage of the Federal kidnaping statute, of the 178 kidnapings, 176 have been solved, and the F. B. I. is still working on the remaining 2.

The present task of law enforcement—the battle against alien-minded spies and criminals—is of the same kind and type. A law-abiding nation is a peacful nation. Only a law-abiding nation can survive. The F. B. I. is receiving complaints of espionage, sabotage, and neutrality violations at the rate of approximately 214 a day. In addition, every 24 hours 4,000 major crimes are committed in these United States. Every 24 hours there are committed in our land an average of 33 murders, 160 robberies, 800 burglaries, 2,200 larcenies, and 120 aggravated assaults. This does not include the 36,000 lesser infractions that occur daily. An immense threat lies in America's crime army of 4,750,000 persons who have exhibited their lawlessness.

During the fiscal year ending June 30, 1939, 5,559 examinations were made in the crime laboratory of the F. B. I., involving 39,037 specimen items. During this period, assistance was rendered to other governmental agencies in 324 instances, and to local, State, and municipal agencies in 1,394 cases.

The facilities of the Identification Division of the F. B. I., with its 12,000,000 fingerprint cards, the facilities of the technical laboratory and the facilities of the National Police Academy are available to the benefit and assistance of local law enforcement throughout the United States. Cooperation is and has always been the motto of the F. B. I.

Its Director has been steadily, year after year, affording full cooperation with the view to assisting and raising the level of law enforcement throughout the Nation.

The efficiency of the Federal Bureau of Investigation can best be judged by its record of convictions. Ninety-six percent of all cases brought to trial resulted in convictions.

During the fiscal year 1939, there were secured 5,162 convictions and during the same fiscal year 1,890 F. B. I. fugitives were located and 7,933 fugitives from justice were located for State and local law-enforcement agencies through the operation of the Fingerprint Division.

There is nothing in the program and activities of the F. B. I. that gives the slightest support to the cry that has been raised by certain subversive forces that an Ogpu or a Gestapo is being formed in the United States. Instead of criticism, Director John Edgar Hoover and his associates are entitled to the respect and commendation of every self-respecting, law-abiding citizen in the United States. Every parent in America should be thankful that the F. B. I. has insured the safety of our children by stamping out the vicious crime of kidnaping. This is but one of the many instances in which the Federal Bureau of Investigation has proved that crime does not pay.

With their work greatly increased by the dangers engendered through the war abroad, instead of being hampered by carping critics, they should be encouraged by whole-hearted support.

My closing plea to all those who truly believe in law and order is to stand by Director John Edgar Hoover and the F. B. I.

Coal Division Ready To Establish Minimum Price in Bituminous Coal Industry

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

ADDRESS BY HOWARD A. GRAY, DIRECTOR, BITUMINOUS COAL DIVISION

Mr. LEAVY. Mr. Speaker, I have no particular personal interest, as an individual Member of this body, in the bituminous coal industry. My congressional district does not produce a single pound of coal; however, in my work as a member of the Appropriations Committee, having to do with appropriations for the Department of the Interior, I have during the past 4 years had a rather unusual opportunity to become familiar with the aims, objectives, and purposes of the laws enacted in recent years for the purpose of stabilizing this important national industry. I have insisted at all times that while it is our duty to hold appropriations at a minimum, that it is likewise our duty not to starve this regulatory governmental activity by denying it necessary funds to carry on its functions.

The law under which the Bituminous Coal Division was created taxes the industry in a sum more than sufficient to pay the costs incident to its work. I have felt and still feel that a serious mistake was made when a reduction of $1,000,000 was voted in the Committee of the Whole House on the state of the Union at the time we had this item under consideration. I am sure that if under the parliamentary situation it would have been possible to secure a record vote of the House of Representatives such a reduction would have been restored.

Howard A. Gray, who is the Director of the Bituminous Coal Division, in an able, masterly, fair, and impartial analysis a few days ago on a Nation-wide hook-up, told the American people of the importance of the bituminous-coal industry and of the great amount of work that has been done under the Bituminous Coal Act to make it effective. He told them that now we were just at the point where the objectives of this important legislation could be utilized, and he pointed out very clearly that if relief is to be brought to this greatly distressed and absolutely essential national industry, both to the men who are actually engaged in production as miners and those who are engaged in the work as producers, that we must be prepared to carry on during the next fiscal year.

His statement is as follows:

Within a few short weeks the whole soft-coal industry will have a foundation under its feet for about the first time in its existence. The minimum prices for coal will then be in effect.

A few days ago the trial examiners who conducted the final hearing on these prices began to file their recommendations with me. They have already filed their report and recommended prices for the Rocky Mountain and far Western States and general findings of facts for the entire country.

Tonight these examiners are working hard on the rest of the prices. These are the rates for the great eastern and midwestern coal fields, which supply the coal for the railroads, industries, and homes from the Atlantic seacoast to the prairies. The very wheels of our national industry depend mainly upon this coal for their power. Very soon now these railroads, industries, and home owners will know what minimum prices have been recommended for the coal they buy. The nature of the examiners' work makes it impossible for them to count the exact number of days it will take them to finish, but the best estimate they can make is that all of their recommendations should be out of their hands the end of next week.

There will be about 4,000 pages of these examiners' recommendations, which will include the reasons for them and the actual price tables. Of course, no one coal consumer will be concerned with all of these recommendations. He will be concerned with that section of the document which pertains to the mines from which he buys his coal. These prices will cover all of the different kinds of coal mined by 13,500 coal companies and sold to millions of consumers.

Before I make my decision as Director on these prices, and set the date upon which they will become effective, interested persons will have an opportunity to take exceptions to what the examiners have recommended and tell me what they want changed. When I have heard these arguments on exceptions, I shall make my decisions as quickly as possible, issue the prices, and announce the date upon which they will be effective. My determinations are subject to review by Secretary of the Interior Harold L. Ickes, and the interested persons who are not satisfied with any decision may appeal to him.

The day the minimum prices and marketing rules and regulations go into effect should mark an epoch in our industrial history. It means that for the first time the coal producers and miners of 26 States, representing an investment of over $3,000,000,000 and a half million workers, will have some protection from the devastation of bankruptcy. It means that the little men in industry and business will no longer be at a disadvantage against the big industrial companies when they buy coal. What the new levees and dams which we have been building at great expense are doing to protect the people who live along the Mississippi and its tributaries we are doing by the minimum prices to protect the small producers and miners in the coal industry and the small-business men of the whole Nation.

You remember that early in March part of the city of Shenandoah, in Pennsylvania, sank down because of old mine workings that had taken the solid props out from under the city. The whole soft-

coal industry, in a manner of speaking, has been going down like that every few years because of too many mine workings. And when it wasn't going down it was expecting to, which wasn't helpful to its confidence. Now it is taking the old biblical injunction to heart—not to build your house upon sands where winds and rain and floods can destroy it, but to build it upon the solid rock. They are going to have minimum prices for a solid-rock foundation. These are prices without profits for the average producer, but they will hold the industry safe from the devastation of future earthquakes and bankruptcies.

On the first of April many, many years in our recent history the coal miners have felt themselves forced to put a stop to Nation-wide wage cutting by going on a national strike. These strikes have been caused in large part by the recurrent bankruptcies of the industry, by the cutthroat competition which led to the sale of coal at starvation prices, way below cost. With these starvation prices came a pressure for starvation wages. Now that we are on the point of stopping the process of general bankruptcy of the industry the pressure for starvation wages will automatically be eased. We hope that there will be in later years no need for large national strikes to hold wages up above the starvation level. In place of the coal diggers bankrupting themselves in strikes, and in place of the coal producers bankrupting themselves in the costly and monotonous business of giving their undershirt away every time they make a sale, we hope to help create a coal era without these hardships. While we are not giving the average producer minimum prices which give him any profit at all, we are protecting him from disaster. We are throwing a life preserver to him, not a pot of gold. We are simply clearing the road for opportunity. When these prices are in effect it will be up to the coal industry, just as it is up to all other industries, to earn its way in the world. We are giving the able producers that opportunity; and that is, I believe, all they need to rehabilitate themselves.

This job of putting firm land under one of our major industries was entrusted to the Department of the Interior last July. I am proud to have been chosen by the Secretary of the Interior, Harold L. Ickes, to head up this work as Director of the Bituminous Coal Division. I have been a businessman all my life, and have had only a consumer's interest in coal. I approach this job from the businessman's point of view: Is it sensible? Is it reasonable? Will it accomplish the results expected of it?

This soft-coal industry puts out 400,000,000 tons a year. That's enough to fill 8,000,000 freight cars—enough to fill up all the freight cars in the entire country 5 times. Some of it goes by coastwise traffic up to New York and New England. Some of it goes from Lake Erie up to Lake Michigan and Lake Superior. Some of it goes by river. Most of it goes by rail. It is this industry which keeps the railroads going. The whole great industrial structure of America has been built up on the shoulders of this industry—on plentiful and cheap coal. It is the greatest source of energy in the country and will become even more important than it is today as other resources are exhausted. If we hadn't had that coal we would have stayed, and would be today, a big farming and ranching country like Brazil, and our standard of living would be no higher than it is in the countries which have to buy most of their manufactured goods elsewhere. It isn't an industry that should be a pauper in the country it has made great. It shouldn't be on relief. It shouldn't—but today there are coal operators in it who could break the American Athletic Union running broad-jump records from their training in always being one jump ahead of the sheriff, and there are other men in it, both owners and miners, working in the cold and the wet in bare feet. I have pictures in my files of both mine owners and miners working barefooted in the cold weather and cold water of the mines and tipples of last December. These are extreme cases, certainly, but they exist.

The consumers of coal of the whole country should be interested in this job we have been doing. I hope they are. We want them to understand what this is about. When the minimum prices are in effect coal purchasers will pay an average of 11 cents a ton more than they did before. Some consumers won't pay more—not a cent more. Those are the ones who have already been paying a comparatively fair price for their coal. For others, it will be a little more on some sizes, a little less on others. The small-business man who has found that he must pay much more for his coal than his big competitor—because of the power of the latter to force the coal industry to sell it for less than cost—will find that most of that difference has been wiped out. He will have a better chance to compete than he had before. This advantage to the small-business man who is a consumer of coal is a very real and definite one.

What do the other consumers get in return for this? They get, first, a better mine prop under their own jobs. When the mining industry is in chaos the 2,000,000 people depending on it stop buying clothing, and food, and cars, and everything else, and then the factories that make goods for the mine workers' families close down, and then their workers no longer buy much of anything, and it isn't long before every man in the country is affected, more or less. The collapse of the coal-mining industry was one of the contributing causes for the depression which began in 1929.

Another thing: For the first time in history the consumer has available to him a chemical analysis of all the coal in the country. His wholesaler or retailer no doubt will have a copy of it, lining up all the coals on the basis of the amount of heat they produce, and the amount of moisture and ash they contain. The consumer will be able to buy more wisely and intelligently from now on.

In addition, the consumer gets some relief from taxes which would otherwise be spent to take care of human needs in the distressed areas of the coal industry throughout 26 States.

You all know that other distressed industries have asked for Government help of one kind or another. Agriculture is the great example. It has asked one administration to take its surplus crops off the market, loan money on them, and hold them for better times. When that failed to produce normal conditions the agricultural industry asked for further and more direct Government help and received it. It was vital to the whole Nation that this great industry should be helped to stability. The coal industry has asked for no such help from Government funds. It has asked simply to be allowed to sell coal for what it costs to produce it and for no less than that.

These things which the consumer gets for his money seemed to Congress adequate reasons for preventing the coal industry from selling its product for less than it costs to produce it. It is a fair proposition. No citizen wants to live off another citizen's hardship. Everybody is willing to pay a price for necessities which covers cost without profit. They would not want to buy food on the bargain counter if they knew that would drive the farmer over the hills to the poorhouse. They would not want to buy clothes on the bargain counter if that would mean starvation for the workers who make the clothes. People should not be looking—and I don't think they are—to make a living out of other people's hard luck. They want to pay their way as independent citizens, not living on the relief and charity of other people or industries.

To help them to do this Congress authorized a plan of establishing minimum prices without profit. Congress did not act hastily. For over 15 years it studied and restudied the problems of the industry. Both parties have joined in agreeing that the industry needed some measure of governmental aid. In 1923 one of our most noted engineers, John Hays Hammond, was chairman of a coal commission. He was appointed by President Harding. He reported to Congress:

"The Government must go beyond continuous fact finding and publicity, important and elementary as these functions are * * *. The Government can act only through administrative agencies, and it is clear that if anything is to be done at all commensurate with the gravity of the problem an executive agency with sufficient funds, experience, and power at its disposal must be charged with the direct responsibility for such regulation and supervision as is necessary. Honest and efficient coal operators and dealers have nothing to fear from this. On the contrary they have reason to welcome it."

It took another great depression, however, before it became clear to a great majority of Congress that it was necessary to establish minimum prices.

The job of establishing these prices is being done in a democratic and judicial way. The producers play a large part. They elect district boards in every coal field. These have important duties and responsibilities under the law. They propose prices and try to coordinate them with the prices of other fields. Labor has a representative on each of these boards. The consumers of coal have a special attorney—he is called Director of the Consumers' Counsel Division, and with his staff devotes himself to their interests, and I might add that he has been quite active. The Government, in the form of the Coal Division, represents the interests of the Nation as a whole. The Government acts as a referee when the various district boards from the Atlantic to the Pacific coast cannot agree on the proper minimum price to propose to us. There have been many such disagreements, and the Government sees to it that the prices are fair and just and return no more than actual cost. The interests of all producers are not necessarily the same. They are in competition with each other, and after minimum prices are established they will stay in sharp competition. The various fields—East and West, North and South—are in competition, too.

Not only is the process of determining minimum prices democratically arranged by Congress so that all parties can take part in the final result, but it is carried out with careful respect for all the legal requirements imaginable. In the Coal Act, Congress tried out the idea of putting into effect all the administrative checks possible. No decision of any importance could be arrived at without holding hearings. So hearings were held, elaborate evidence was presented, all parties interested were given a full opportunity to present evidence, and to cross-examine all Government and other witnesses. After the hearings findings are made by trial examiners—men learned in the law and the industry—which have to be the subject of further hearings. Only then is a decision made. One result, of course, has been to delay the fixing of the minimum prices until the hearings have been completed and all the testimony has been studied. You can't have your cake and eat it, too. You can't have a careful, thorough, accurate job done with meticulous respect for every detailed legal obligation, such as we have exercised, and also have speedy Government action. We have gone slowly, painstakingly observing all the legal duties. Since July 24, 1939, alone, we have heard 200 witnesses and 88 attorneys. We have spent 1,000 hours of actual hearings since then. We have studied 1,800 exhibits of figures, as well as practically all the coal-freight schedules of all the railroads. The transcript of the record alone has over 25,000 pages. We are not to be blamed for lack of speed. In setting up a law calling for lengthy hearings Congress said, in effect, that it preferred thoroughness and fairness to speed. But now we are about through.

With these democratic and judicial approaches to the job, it has been hard for those critics who have no personal interests to serve to find any other fault than the delay which was due to our judicial observance of the mandates of Congress. Even critics who have an ax to grind in protest against having any minimum prices, who

think they can make more money without them because of their special situation, have been hard put to it to find fault. Faced with that difficulty they have invented a story—and I doubt whether they believe it themselves—that this act will lead to Government ownership of the mines. I have never heard anything quite so fantastic in my life. This is a bugaboo raised to frighten the uninformed businessman, in my opinion. There has never been any serious thought of Government ownership in the country since 1922, 18 years ago. Only if Government, industry, and labor fail to bring relief to this industry; only if it again hopelessly starves at bankruptcy prices will there ever be any danger that industry or labor or Government will revive this sort of talk. Barring this calamity, talk of Government ownership is out of the picture, and never was in it. I am against that and will always be against it. Nothing is in the picture except cementing a foundation under the industry so it doesn't go bankrupt again and repeat the process continuously. There will be nothing else in it until the minimum prices have been in effect long enough for Congress and the industry to decide whether or not the job of helping and saving the industry can be done in this way. I think the industry will never be content until this method of preventing hardship has been given a good, honest tryout. It will certainly never agree on anything else unless it has been proved by experience that this is not the best way to operate. I think practically all of the industry will be glad of the chance to see minimum prices work. Even those who do not for various reasons of their own want to see these prices work would be wise, I believe, to give the rest of the industry and the Nation an opportunity to watch and study the experience for a while.

I do want to add this word—Congress did not give us the job of doing anything about retail prices. So we have nothing to do about those. We see that the coal sells at a fair minimum price to the purchaser at the mine. We don't go beyond that. Congress did not order us to go beyond that point, nor did it allow us to do so even if we wanted to; nor did we ask to go beyond that point. We want you buyers of coal for your stoker, or furnace, or cook stove to remember that fact after these minimum prices go into effect. However, in case any retailer chooses to raise his uncontrolled prices inordinately and attempts to lay the blame on the Coal Division, we do not propose to stand silently by and take it. And the consumers counsel has informed me that he does not propose to stand silently by and take it, either. We have no authority to regulate retail prices, as I have said, but we can make the facts concerning inordinate increases by retailers known to the public, so that the responsibility will rest where it should. The Coal Act allows the Division to fix maximum prices at the mine when necessary to protect the public interest.

Because what we are doing seems so reasonable, so sound to me from my businessman's point of view, I feel proud of being part of this job of determining minimum prices for the coal industry. When I am asked, as I occasionally am, whether this law which involves so many hundreds of thousands of prices will work, I answer that not only do I believe it will work but I foresee as a result an era of stability for a large part of the United States which has needed it badly. I foresee an end to the conditions which have led to long, wasteful, and bloody labor disputes. I foresee a restoration of confidence on the part of the operators in the industry and the 500,000 mine workers and a new willingness and ability on their part to buy food from the farmers and supplies and manufactured goods from the people in the cities. I foresee a greater ability on the part of many producers to install better safety equipment to prevent catastrophes.

I would be exceedingly remiss if I did not at this moment express to a considerable number of men throughout the country who have worked hard to make this law a success our acknowledgment of their cooperative endeavor during the past long and weary months. Washington is not the only place in the country from which men have gone home from their offices after midnight, and done it again and again. In little mine offices from the Pacific to the Susquehanna men have been working in closer cooperation than ever before in order that this law might be a success. There has been a new era of teamwork; and teamwork, whether on the farm or in the mine or factory, produces splendid human characteristics. It brings forth unselfishness. I believe that the cooperative work of the coal industry for the past months has not only been a net gain but that it will be a long time before the men of the industry will again in desperation and self-defense sharpen their knives and go for each other's hides as savagely as they have done in the past.

But it is not only the men charged with the responsibility of management who have worked and waited long and patiently for us to meet all the exacting requirements of Congress and to produce the results that are now right ahead of us, within a few short weeks of completion. The men who mine the coal with drill or pick, who tamp and fire the shots, who load, who drive mules or motors along the underground railways, who are charged with screening it and preparing it—they have been waiting, too. They are expecting this act and these prices to stabilize the industry. For some that means protection against working for weeks without pay and finding out suddenly that they will never be paid. That is the extreme. For others of them it actually means that the management will be more able to protect their lives by purchasing and using safety equipment and materials.

If all of you could visit one of the thousands of coal mines of the country, go underground with an acetylene lamp on your miner's cap, or in gassy mines with an electric light, you would appreciate the quality of the men and the managers of whom I have just been speaking. You would appreciate some of the dangers, some of the rigors of mining the coal for your homes and factories. You would realize not only the labor always needed but the courage frequently called for on the part of both men and managers. They would speak to you on behalf of these prices far stronger words than I have used today.

To the persons who are eager or impatient to have minimum prices in effect, I want to say that the trial examiners are working overtime and at top speed to complete their recommendations. But they cannot cut corners to hasten the job and risk doing a poor one. There is too much at stake for that. But they now have very little left to do except the mechanical job of editing the report and making duplicate copies for distribution. They believe this will take until the end of next week. And let me repeat: When the examiners have filed their recommendations with me I shall do everything within my power to make minimum prices effective as soon as possible. But, of course, interested persons shall have full opportunity to show me where the examiners' recommendations should be changed and to show Secretary of the Interior Ickes where my determinations should be altered. And then the coal industry and the coal consumers must have time to familiarize themselves with these prices before they go into effect. But with all that it should not be more than a few weeks before they will become effective.

All I ask, as one public servant among others who have worked hard, is that when the minimum prices are put into effect shortly and the job of enforcing them begins, you give a sympathetic understanding to the job which Congress asked us to do for the Nation. It is not only a job for the good of the industry but a job for the good of the Nation.

Dr. Archibald MacLeish

EXTENSION OF REMARKS

OF

HON. KENT E. KELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

EDITORIALS FROM THE NEW YORK TIMES AND THE WASHINGTON STAR

Mr. KELLER. Mr. Speaker, as chairman of the Library Committee, I take pleasure in calling the attention of the House to the remarkable record of distinguished public service being made by the new Librarian of Congress, Dr. Archibald MacLeish. Evidence of public recognition of his services is found in the following editorials which are selected from many others equally laudatory.

[From the New York Times of March 30, 1940]

LIBRARIAN MACLEISH

When Archibald MacLeish was appointed Librarian of Congress last September some librarians and laymen objected on the ground that the post should have gone to a man trained in the profession rather than to one, however distinguished, who was known chiefly as a poet. It is the more pleasant on that account to learn from a report of the House Committee on Appropriations that Mr. MacLeish has made good use of expert advice, has demonstrated his businesslike capacity, and has impressed even skeptical Congressmen with his common sense and with his sense of responsibility in the use of public funds.

Mr. MacLeish didn't get all he asked for, or even all that was needed to keep one of the world's greatest libraries (it has 6,000,000 printed books and pamphlets and 3,500,000 "other items") in apple-pie order. He wasn't allowed the money required to pay living wages to all his staff or to hire all the new help needed. He did get about one-third of the money increases and about 40 percent of the personnel increases that were asked for.

He also got a testimonial from the committee that it had "faith in Mr. MacLeish as an administrator and as a cultured and scholarly man" and a generous apology from Congressman PLUMLEY, who had opposed his confirmation. The impression gains that if Mr. MacLeish was not a librarian last October, he is fast getting to be one.

[From the Washington (D. C.) Star of April 1, 1940]

ACHIEVEMENT

When President Roosevelt last summer named the poet, Archibald MacLeish, of Connecticut, to succeed Dr. Herbert Putnam as Librarian of Congress there was prompt and more or less violent objection to the nomination. It was argued that he was a radical amateur, altogether lacking in qualification for the post to which he had been designated.

But those who knew Mr. MacLeish personally were not disturbed. True enough, he had contributed to "left-wing" magazines and had attended no library school. But his friends realized that these

were unimportant faults as compared with the endowment of intelligence, sincerity, and earnestness which he possessed. They trusted his imagination and the vitality of his courageous spirit. Also they had the wit to understand that he had marvelous powers of adjustment. He could meet the opposition on equal terms—and triumph over it. Senators who questioned him came away from the encounter anxious to vote for his confirmation. Members of the Library staff who had trembled in their boots in fear of his coming emerged from his office ashamed of their panic. Within a few weeks his bitterest foes found themselves applauding him.

Now, after 6 months, it is plain to everybody that Mr. MacLeish has justified the President's confidence and merited the public's respect. Whether or not he remains on the job indefinitely may not matter. If he left the Library today his influence would remain a constructive force of durable value. He has set a pace which in itself is a fine achievement. The battle he has waged for necessary increased appropriations for the purchase of new books, repairing old volumes, bringing cataloging up to date, and especially for adequate salaries for scholars employed in the Library is but one incident in the story of his service. His success in persuading fellow idealists like Dr. Luther H. Evans and Arthur A. Houghton, Jr., to collaborate with him is further evidence of his genius for doing what needs to be done.

Save Agriculture to Save America

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

ADDRESS BY FRANK GANNETT

Mr. O'BRIEN. Mr. Speaker, under leave to extend my remarks, I include the following address by Frank Gannett delivered at Lincoln, Nebr., April 5, 1940:

Here in these agricultural States you are aware of what has happened to the American farmer. You and I know that we cannot have prosperous cities while we have impoverished farms. More of our city people are beginning to know this, too.

We must save agriculture to save America. We must stop farming the farmer and let the farmer farm.

The future of our country depends on its early restoration to economic health. We are in a race against time.

Continued unemployment destroyed self-help and self-government and enthroned dictators in Europe.

The plight of the farmer of America is reflected in the plight of millions of unemployed, in closed factories, in stagnant business, in economic diseases which reach from the farm into the home of every citizen in the country.

Since the problems of agriculture concern all of us, I am especially grateful to the National Broadcasting Co. for this chance to talk to city people and farmers alike. I shall try to throw some light on the causes of the farm problem and how city folks are affected and I shall give you what I know is its permanent solution. I have studied this problem both here and abroad and I know its cause and its cure.

"Why worry about the farmer?" some short-sighted people ask. They forget that the farmers' problem is everybody's problem; that his distress is everybody's distress. The farmer is the foundation of industry's market for finished goods. This great home market enabled American industry to achieve through mass production an efficiency which was the envy of the world.

We should worry about the farmer for still another reason. It is seldom mentioned.

The population of our cities does not reproduce itself. Ten city adults rear only seven children. The vitality of our industrial centers must be replenished by a continuing blood stream from the soil. The quality of that blood stream will make or unmake our Nation.

If our rural communities are impoverished, if they cannot afford good schools and churches and high social standards, if rural youth is uneducated and out of sympathy with American institutions and ideals, then the migration from country to city will tear down, not build up, the standards of city life.

Consider also these significant facts:

Our farmers feed, clothe, and educate 31 percent of the Nation's youth. Farmers and their hired help comprise 25 percent of all our gainfully employed. Farmers contribute the unpaid labor of 22,000,000 farm women and children, and they have, besides, a capital investment in land and equipment of $50,000,000,000.

What share of the national income do you think should go to this one-fourth of our population? As much as 25 percent? Or 15 percent? Do you think 10 percent is fair? That is what they are actually getting—barely one-tenth. Farmers, who are a quarter of our population, get less than one-tenth of the national income.

How can the agricultural one-fourth of America continue to carry its share of the national burden on one-tenth of the national income? How can it be a good market for industry's products? What will the future of America be if we continue to tolerate such economic injustice and condemn farm aid as a "hand-out"?

A "hand-out" is not what the farmer wants. He wants, needs, and should have average prices for his products high enough to cover his cost of production, a decent return on his capital, and fair payments for the work of himself and family. What business man or woman wants less?

Still another group is affected in the same way as agriculture. It includes the producers of metals, coal, petroleum, lumber, and similar raw or basic commodities. Farmers and these other producers of raw materials comprise nearly one-half of our population. All are affected by what we have come to call the farm problem. A more exact name for it would be the commodity-price problem. That is what it boils down to—a problem of price.

To get our bearings, let us recall briefly the start of this depression.

Our unemployment nightmare did not begin, as many people imagine, on the sleepless pillows of city workers and employers. It began on the farm. Country markets dried up almost overnight. The farmer's income dwindled. He no longer could buy from the city. Merchandise stocks piled up, factory orders were canceled, wage reductions and lay-offs in industry followed. Unemployment in industry had its roots in the earlier collapse of commodity prices.

The cycle of deflation was set in motion when commodity prices fell so low that the farmer couldn't get back his cost of production and have any money left to spend. Farm prices, falling first, dragged down wages and industrial prices later. This sequence is important to keep in mind.

Low prices caused American farmers' income to fall from a predepression average of $12,000,000,000 a year to five and one-third billions. Our other basic producers' income dropped from five billions to two billions. No other groups lost so large a proportion of their income and buying power.

What a hole that has made. Look at the total—$54,000,000,000. Nearly ten billions more than our staggering national debt.

Thirty-eight billions of that lost income came out of the pockets of agriculture and sixteen billions from other producers of basic commodities.

If farm income were restored to its predepression average of $12,000,000,000, the yearly increased purchasing power would give each farm family, on the average, $666 a year more than they receive today. Farm-benefit checks average only $133 per farm family.

Exclusive of Government payments, total farm income is now $8,000,000,000. The annual shortage is four billions. Government payments are around one billion. In other words, a $4,000,000,000 hole to be covered by a $1,000,000,000 patch. Or one life preserver where four are needed.

Of course, a life preserver looks good to anyone who has gone down a couple of times, as American agriculture has gone down. But no one wants to cling to a life preserver forever. He wants to get back into a safe ship or onto dry land.

A billion dollars a year for farm aid is a life preserver. I don't minimize its importance—as a life preserver.

But I want to see American agriculture back under its own steam in its own safe ship, which is a price level high enough to make the farmer prosperous and independent. I would still keep the life preserver for emergencies. But I would use our brains to forestall future emergencies.

There are countries where the collapse of commodity prices was stopped and reversed almost as soon as it started.

There are eight important agricultural countries whose farmers and basic commodity producers are receiving today, on the average, 54 percent higher prices than our producers are getting for the same products.

How did the farmers in those countries escape the depression that is still with us?

Their governments felt that prices within their countries were more important than the rates of their foreign exchange. As deflation spread over the world, they set up a quarantine against it. They adjusted their foreign-exchange rates just as Great Britain, France, Canada, and many other countries are doing again today. They preferred shifting their exchanges to bankrupting their producers and risking revolution or dictatorship.

Their policies were adopted after investigation showed that recovery from the world depression depended upon lifting basic commodity prices within their countries to the level of costs, taxes, and debts—and doing it before it was too late.

And what was the result? I went to Brazil and Argentina and also to Europe to see for myself. Argentina, Australia, and Brazil were first to take such defensive measures. While sheriffs were foreclosing 1,500,000 American farms and we in this country were curtailing production, Argentina was placarding its crossroads:

"Farmers, your day of opportunity is here. Grow more wheat, raise more cotton."

Brazil increased her cotton production 440 percent in 7 years. She had learned her lesson from the failure of her program of restriction and crop control on coffee.

With agriculture prosperous, due to governments protecting their internal price level for basic commodities, the big cities in Argentina and Brazil were prosperous. They didn't feel our depression at all. Today Argentina has a labor shortage. So it is investigating the mechanical cotton picker, because it is planning

to put 2,000,000 more acres in cotton. We, at the same time, continue to grow less cotton, throw more men out of work, and lose our world market.

The 21 nations which joined with Great Britain in the policy of restoring farm- and basic-commodity prices were referred to in London as a "partnership of prosperity."

Where such intelligent and effective steps were taken the depression was short-lived; unemployment was cured, or largely so; national budgets were balanced; democratic institutions were preserved.

I visited also the countries where the cause of the collapse in commodity prices was not recognized. Radicalism got the upper hand where steps were not taken to relieve the distress of farmers and commodity producers. Demagogues prospered and became dictators. People lost their liberties by trading them for promises of security.

We have paved the way for just such a cycle of events in the United States.

We have failed utterly to restore and maintain prices that would give our farmers and raw-material producers a chance to make a fair profit and pay their debts.

President Roosevelt started his administration with a program of restoring prices for farm products and other basic commodities. His consultants were men who knew agriculture and farm economics. During these first few months farm and other commodity prices rose 67 percent. Yet the cost of living advanced only 3 percent. We had the greatest rise in production and business activity in the Nation's history. Three and a half million men and women went back to work. The value of stocks and bonds increased $20,000,000,000. Then, for reasons never explained, the President turned away from efforts to stimulate private enterprise to theorists who wanted a planned economy, with policies of restriction, control, and centralizing power in Washington. He dropped recovery and turned to planned economy; and that was the New Deal's failure.

The nearest we came to prosperity was in the early months of 1937, when farm and basic commodity prices approached parity with industrial prices. Then came the President's loose and explosive references to prices getting too high. A chill went over business. Commodity prices fell. We were talked into a tailspin—into the Roosevelt depression.

Last September the European war started commodity prices up again, but the rise has not held. Some farm prices, as you know too well in the hog-raising country, have fallen disastrously—hogs from 9 cents to 5. The principal farm and basic commodities have lost on the average more than half of the advance.

The farm problem—the problem of all primary or raw material producers—is essentially a price problem. What the farmer wants is more income—more money to buy with and less need for borrowing.

Only fair prices for his products—fair in relation to his costs—can give the farmer more income and keep that greater income permanent. Dependence on political favor for farm aid introduces a factor as uncertain as the weather. The farmer must gamble on insects and weather and on his own misjudgment of markets. On top of that he can't stand a ruinous drop in price level which catapults him into bankruptcy.

Farmers bought land and built houses and barns with wheat at $1 and had to pay with wheat at 50 cents.

They built fences and silos with butter at 50 cents and had to pay with 20-cent butter.

Farm communities issued bonds for roads and schools on 12-cent hogs and defaulted when 4-cent hogs made tax collections impossible.

Instead of pursuing consistently the policies which restored commodity prices in other countries, the New Dealers said to American agriculture, "You have grown too much wheat, too much cotton, too much of everything."

Their statement that the world has been overproducing the things people need is unadulterated rot. The rate of production has not kept pace with the increase in population since the World War. Consumption, due to faulty distribution, has decreased. That is all. Reliable statistics prove it.

The New Deal has brought no permanent solution to the farm problem because it would not look facts in the face. Its policies have been makeshift, short-sighted, opportunistic. It has used the small bait of slightly increased income from the Federal Treasury to lead farmers into supporting an army of Washington bureaucrats. The bureaucrats have built a political machine which is leading us to a totalitarian state. Is that what the farmer wants? Is that what America wants? I know, and so do you, that it most emphatically is not.

I have had correspondence with 59,000 farm leaders in all corners of America. It convinces me that agriculture accepted destruction and restriction and the various good and bad schemes of the New Deal because it saw no immediate alternative. Farmers know now that parity is not going to be reached by subsidy; the Treasury can't stand forever an unbalanced Budget. Farmers are clinging to subsidy as a life preserver. It should not be taken away until a parity price level has been restored and that parity price level must be restored.

Day-to-day happenings in the foreign exchanges are reopening eyes that were closed. The Canadian dollar has dropped to around 80 United States cents. The British pound sterling has fallen from $5 to $3.50. This means when the Canadian farmer sells a bushel of wheat for a dollar in Chicago he has $1.23 when he goes back home—a 25-percent exchange advantage over his American competitor. It means that the British must of necessity buy less from the United States with its relatively high dollar and buy more from other countries which are keeping their exchanges in step with the British pound sterling. Already it has been announced that Britain will buy less American cotton and more Argentine and Brazilian cotton. So, too, will they buy less of our wheat.

This is not a new emergency. The world went through a long series of economic readjustments after the last World War, and more adjustments will inevitably follow this one. They will affect every country. Complete economic isolation is impossible. Protective measures are possible, but under the New Deal we are not taking them. We are "taking it on the chin," and needlessly so.

World experience in curing the depression—which we have failed to cure in America—points unmistakably to the commodity-price problem. The British led the sterling bloc of 22 nations to recovery. These nations adjusted their foreign-exchange rates to raise and stabilize commodity prices, and they are using the same instrument again today.

And what are we doing?

Under the Roosevelt administration we are deliberately permitting our export markets for both farm and industrial products to be dried up. Business, helpless under New Deal policies, is slowing down except in a few war-stimulated industries. Unemployment remains.

Unless the price level is restored we cannot compete in South America with agricultural or industrial products against the British pound at $3.50, and South America is the biggest potential market for American products. We cannot hold our domestic price level. Low exchange permits imported products to come into disastrous competition in our domestic markets and drive down our prices.

We might well pause and consider a statement of the Bank for International Settlements in respect to the exchange problem. It said:

"Monetary policy is a living, dynamic thing, and must be reexamined from time to time in the light of progressive experience and changing economic and world conditions."

There was never a truer statement than this.

An open-minded inquiry, such as Britain made through the MacMillan Commission in 1931, would disclose the fundamental cause of depressed agricultural prices in America. It would show the hopelessness of adequate or permanent relief for agriculture from present New Deal policies.

I believe we should profit by world experience. We certainly have as good brains in America as they have in Great Britain. We should use them to find out how they cured the depression when we failed. Our policy should be, first, to defend our own price level and the solvency of our own people.

Examination of the commodity price problem shows the impossibility of scaling down the prices of industrial products, which the farmer must buy, to the level of the prices he receives. Economy in government and reduced taxation would slightly lower industrial costs, but labor costs will not come down appreciably. Nor should they be reduced to the farmer's present low level. The farmer should be lifted up. Farm prices should be back where they were in the 1920's or higher. They are higher in other parts of the world.

There are, of course, long established, real services to agriculture which should be continued and strengthened. Emergency aid should not be withdrawn until prices are restored and agriculture is able to walk alone, independent and free. With prices restored, agriculture can do more for itself than government can do for it.

Soil-conservation payments should be continued and made voluntary, but the plan of payment should be greatly simplified. It should be decentralized and freed from political control. More of the practical farmers, both locally and nationally, should be brought into departments of agriculture. Theorists and dictatorial bureaucrats should be submerged to their proper level—and that may call for some deep plowing.

A sound credit system for agriculture must be maintained. It must not be degraded into a political machine. Here again the farmer's price level is more important than credit. If his prices do not return the cost of production, borrowing will only plunge him deeper in debt. Another pitfall of too-easy credit is its misuse to subsidize poor farming on marginal lands. This only makes Government-supported competition.

It isn't price fixing that farmers want. Price fixing is only a stopgap mechanism. What they want is fair prices. Fair prices mean as much to a farmer as fair wage rates mean to labor.

Agriculture's fundamental progress has been through education and cooperative organization. Short of interfering with farmers' independence, Government should do everything to promote agricultural education and cooperation.

Progress through the American way of education is not spectacular, it is not political, but it has in our own time revolutionized farming and farm life. Instead of pouring billions into futile schemes for agriculture, many of which have done more harm than good, I would increase appropriations where needed for more research, more teaching, more extension in every department of agriculture, every farm school and college, and every rural high school in the United States.

We have not begun to scratch the surface of the possibilities of using surplus production of many farm crops for new industrial purposes. The only way to find out what these possibilities are is to increase support for research.

I would greatly increase and study all marketing activities. Nevertheless, we should remember that a 5-percent saving by cooperative purchases, or a 5-percent gain through cooperative selling will not offset a price level 40 percent lower than it should be.

There are some fluctuations in prices that come because of short cyclical changes, seasonal surpluses, and speculative manipulation. These can be leveled out by coordinated efforts of Government and farm organizations. A step was made in this direction under the Federal Farm Board. Further steps have been taken by the Surplus Commodities Corporation and by other Federal agencies. Unfortunately these have been looked upon as instrumentalities for raising farm prices to parity. Their real function is to stabilize and prevent violent fluctuations.

The outlets for temporary surplus commodities should be expanded. The present diversion of these surpluses into relief and low-income groups is desirable. Some surpluses might well be diverted on a good-will basis to foreign nations short of food but only after our own relief problems are taken care of. It would be more blessed to give than to destroy food in a hungry world, as these New Dealers have done.

Perishable food crops present a problem distinct in character. The Federal marketing agreements are the best solution so far devised. They should be extended to cover all crops where similar problems arise, always, of course, with cooperation and approval of the producers of those crops.

The family-size farm should be encouraged. Our home markets should be reserved for our own farmers.

To sum up: The farmer should have the home market, low interest rates, soil conservation, the benefit of more cooperative buying and distribution, the cheapest possible shipping facilities, the advantage of more research, and more helpful handling of surpluses.

The way to end the farmer's distress is to restore fair prices for his products.

We can solve the farm problem. What other countries have done, we can do. We can restore to the farmer his normal income. We know how to make him prosperous. And the farmer's prosperity will make the whole Nation prosperous.

Retaining what is good of emergency measures so long as they are needed, we should set up a monetary authority under mandate of Congress to provide a dollar of stable purchasing power. A truly honest dollar will give to the farmer and other producers of basic commodities a just income; it will be fair to creditors and debtors; it will be a brake on both booms and depressions; it will give such stability that we can invest and build for the future.

The great national farm organizations such as the Grange, the Farm Bureau, the Farmer's Union, and the National Cooperative Council were united on this policy.

Continuing agriculture in its present distress means in the end regimentation under a top-heavy, inefficient, dictatorial bureaucracy. The farmer senses this danger. He wants his independence.

Let us give it back to him, insured by fair prices for his products—prices that will give him economic justice—not one-tenth of the national income for one-quarter of the Nation's useful work.

My call to farmers is: Use your political power to put through the program upon which the great national farm organizations—the Grange, the Farm Bureau, the National Cooperative Council—have united. Go to the leader of your party; tell him that two-thirds of your former normal income is not enough. Tell him that you want farm prices fully restored. Also that you will vote only for candidates and a platform which will give American agriculture its just income. Use your political power. Save agriculture to save America.

Activities of the Special Joint Congressional Forestry Committee

EXTENSION OF REMARKS
OF
HON. WALL DOXEY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1940

Mr. DOXEY. Mr. Speaker, on March 14, 1938, President Roosevelt sent a message to Congress recommending that a special joint committee of the Congress be appointed to study the forest-land problem of the United States.

In this message, the President specifically recommended that particular consideration be given in these studies to such matters as:

1. The adequacy and effectiveness of present activities in protecting public and private forest lands from fire, insects, and diseases, and of cooperative efforts between the Federal Government and the States.

2. Other measures, Federal and State, which may be necessary and advisable to insure that timber cropping on privately owned forest lands may be conducted as continuous operations, with the productivity of the lands built up against future requirements.

3. The need for extension of Federal, State, and community ownership of forest lands, and of planned public management of them.

4. The need for such public regulatory controls as will adequately protect private as well as the broad public interests in all forest lands.

5. Methods and possibilities of employment in forestry work on private and public forest lands, and possibilities of liquidating such public expenditures as are or may be involved.

In accordance with that message, Senate Concurrent Resolution 31 was passed in the Seventy-fifth Congress, establishing a joint congressional committee to be known as the Joint Committee on Forestry, and to be composed of five Senators, appointed by the President of the Senate, and five Members of the House of Representatives, appointed by the Speaker of the House of Representatives, the chairman of the joint committee to be appointed by the members of the joint committee.

Pursuant to that concurrent resolution, the Vice President on June 14, 1938, appointed Senator McAdoo from California, Senator Smith from South Carolina, Senator Bankhead from Alabama, Senator Pope from Idaho, and Senator McNary from Oregon as members on the part of the Senate of the Joint Committee on Forestry.

Also, pursuant to that concurrent resolution, the Speaker of the House appointed on June 14, 1938, the gentleman from South Carolina, Mr. FULMER; the gentleman from Mississippi, Mr. DOXEY; the gentleman from Oregon, Mr. PIERCE; the gentleman from New York, Mr. REED; and the gentleman from California, Mr. ENGLEBRIGHT as members on the part of the House of the Joint Committee on Forestry.

Senator McAdoo was selected chairman of the Joint Committee and Representative Fulmer was selected vice chairman.

As Senators McAdoo and Pope did not return to the Seventy-sixth Congress, Senator D. Worth Clark from Idaho and Senator William J. Bulow from South Dakota were appointed to the joint committee in January 1939.

Senator Bankhead was selected chairman of the Joint Committee to fill the vacancy caused by the resignation of Senator McAdoo, and Albert Boutwell was appointed clerk to the joint committee..

This joint committee has held public hearings in various parts of the United States, as follows:

Sun Valley, Idaho, September 2 and 3, 1938.
Jacksonville, Fla., November 29 and 30, 1938.
Washington, D. C. (Maryland, Virginia, and West Virginia areas), June 30 and July 1, 1939.
Syracuse, N. Y., November 9 and 10, 1939.
Mobile, Ala. (southern area), November 14 and 15, 1939.
San Francisco, Calif., December 6 and 7, 1939.
Portland, Oreg., December 12 and 13, 1939.
Madison, Wis., December 18 and 19, 1939.
Washington, D. C. (general), January 16, 17, 18, 19, 20, and February 16, 1940.
Washington, D. C. (New England), February 27, 1940.
Washington, D. C. (pulpwood investigation), March 2, 1940.

These hearings have been printed in 10 different parts, aggregating approximately 2,500 pages, and covering a wide range of subjects relating to forestry.

On completion of these hearings in Washington on March 2, 1940, the joint committee determined that the field of forestry was so broad and the problems so many it would be impossible to prepare a complete report and recommendations in connection therewith for submittal to Congress by April 1, 1940.

Therefore the committee requested and was granted by Congress on March 28, 1940, the privilege of continuing as a committee until April 1, 1941, for further study, report, and recommendations concerning our forestry problems from a national standpoint.

Speaking as one member of this Joint Committee on Forestry, I full well realize that different sections of this great country have entirely different forest problems which require varied methods to remedy.

I believe we all agree that certain fundamentals of forestry apply to the Nation as a whole, such as fire prevention and

protection, insect and disease control and eradication, research, and so forth.

In my judgment, the hearings held by our committee have developed that in order to protect, preserve, and properly manage and maintain the forest lands we now have and leave to generations yet unborn the priceless heritage of a well-balanced forestry program throughout these United States, our National Government will have to take the lead and provide money and enact legislation viewing the situation from a national standpoint.

Already many constructive laws relating to forestry have been enacted by Congress, and a great amount of money has been appropriated by Congress from the Federal Treasury to carry out these laws, which has been used to good advantage with far-reaching benefits.

The Forest Service of our Federal Government is doing a wonderful job. The various States are cooperating—some much more than others—and the people in general are becoming more and more forest-minded.

But with all our progress, in order to continue in the right direction, our Federal Government must take and keep the lead in the future as it has in the past if we expect to insure a well-balanced forestry program for this Nation.

As a member of the National Forest Reservation Commission, I am somewhat familiar with the fine work that has already been accomplished in our national forests. We have learned a lot by doing.

With regard to our forest lands, I personally feel that—

First. The Federal Government's land-acquisition program within our national forests should be continued and expanded.

Second. We must formulate and encourage closer and better cooperation between the State and the Federal Government.

Third. We must embark on a broad and constructive cooperative farm-forestry program dealing directly with the individual farmer.

Fourth. Congress should enact laws setting up a sound financial credit structure enabling the individual to finance a sound forest enterprise.

This necessarily would be a long-range program and should apply not only to individual owners of forest lands but also to cooperatives, associations, and districts formed for the purpose of developing, maintaining, and promoting real forestry and practicing sound forestry management over a period of years—at least during the life of the loan from the Government.

Fifth. Congress should enact a tax-reimbursement law for the benefit of the various counties and States in which forest lands owned by the Government are located, based either on a higher percentage of the gross receipts from the national forests or a fair tax rate based on a reasonable assessed value of the Government-owned lands or some other method whereby the counties and States would be the beneficiaries of a definite and specific income to be used by them in lieu of the loss of revenue resulting from lands purchased by the Federal Government being taken off the State and county tax rolls.

We have yet many complex and perplexing problems to satisfactorily solve in order to insure for this country as a whole a permanent general forestry program—properly managed, controlled, and functioning for the benefit and general welfare of the present as well as future generations.

Trees and their growth are fascinating. Every time I admire and thoughtfully contemplate one, I am reminded of Joyce Kilmer's beautiful and simple statement of an eternal fact—"Only God can make a tree." Certainly we should care for them and protect them.

Forestry is, and to my mind properly so, recognized and treated as an important part of agriculture.

In order to obtain a permanent solution of our forestry problems we must have understanding, cooperation, confidence, and mutual assistance exerted by the individual, the State, and the Federal Government.

We have made marked progress with our general forestry program in this country and I am confident through our united efforts we will go forward, even though slowly yet surely, to a satisfactory and constructive solution of our all-important general forestry problems.

Our Joint Committee on Forestry plans to continue its work and I hope we will be able to submit our report and recommendations to Congress when Congress convenes next year.

Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

Mr. KITCHENS. Mr. Speaker, April 5 the Congress extended the authority of the President, under section 350 of the Tariff Act of 1930, as amended, in pursuance of House Joint Resolution 407, authorizing the President to enter into further foreign trade agreements during a period of 3 years from June 12, 1940. The passage of that resolution by the Senate without emasculating and frustrating amendments marks a new milestone in behalf and for the benefit of American people. The American people are not yet ready to isolate themselves from the rest of the world by refusing to trade with them on a fair basis.

While the copper, oil, steel, and some manufacturing interests have enjoyed protection at the expense of the American people, it is the considered judgment of the people that such protection ought not to extend to the point of ruining our export trade. The Hawley-Smoot Tariff Act of 1930 disrupted all foreign trade and precipitated our depression, if not the world-wide depression, from which we are still suffering. In fact, strangulation of trade brings forth wars, and the troubles in Europe and most of them in Asia are due to trade troubles. The American laborer will no longer be deceived. The American farmer must not allow himself further to be deceived. The southern cotton farmer, for nearly a century, has been furnishing a favorable trade balance for the United States in the exportation of cotton, but under a law such as the Hawley-Smoot Tariff Act, foreigners accustomed to buy cotton from southern cotton farmers necessarily were forced to trade with foreign cotton raisers and other countries.

I believe in protection of the American farmer and his commodities against cheap labor of other countries and believe in protecting the American laborer against cheap labor and products of other countries, but the American farmer and laborer produce much more than we can consume in this country. What can be done about it? The solution is reached through the program initiated by Hon. Cordell Hull by reciprocal-trade treaties. During this program we have exported $2,000,000,000 more goods than we have imported into this country. If it were not for the disturbed conditions and wars in all other parts of the world, we would now have a healthy trade relation with most all the nations of the earth and genuine permanent prosperity. The Hull program is a program for prosperity of all the American people and peace among all the nations.

Mr. Speaker, I ask unanimous consent to include as part of my remarks an editorial of the Evening Star of April 6, 1940.

[Editorial from the Washington (D. C.) Evening Star of April 6, 1940]

HARD-WON VICTORY

The Senate vote to extend the Reciprocal Trade Agreements Act for 3 years marks a truly significant victory for the Roosevelt administration.

Coming in the midst of an election year, it was to be expected that the extension move would encounter stiff opposition. But this opposition was almost wholly partisan or sectional in its nature. The Republicans voted solidly against the measure, presumably in

the hope of using it as a source of ammunition in the November election campaign. Had the bill been defeated they would have sought to make political capital out of the resulting loss of prestige by the administration. And now that it has been passed it is a fair assumption that they will seek to capitalize the considerable, though groundless, discontent which the trade agreements have aroused in the Western States.

The Democratic opposition also was largely symptomatic of the dissatisfaction prevailing west of the Mississippi River. This viewpoint was a narrow and sectional one, however, while the supporters of the measure, granting that their own constituents may have benefited directly in some instances, were willing to look at the matter from the standpoint of national as against purely local interest. It is in this that the significance of the administration victory lies—namely, that a tariff measure designed primarily to promote the national interest has been approved in an election year in the face of vigorous sectional opposition.

In this connection it should be noted that the action of Congress is something of a personal triumph for Secretary of State Hull, who has been the outstanding exponent of the trade-agreements philosophy. The favorable vote was, in effect, a vote of confidence in him, and a tribute to the tact, skill, patience, and impartiality with which the agreements now in effect have been negotiated under his supervision.

With Europe plunged into war, it remains to be seen whether Mr. Hull's program will have any appreciable effect in bringing the world back to economic sanity. But this much can be said: If, after the war, there is to be anything approaching a real peace it must be based on a different system of conducting international commerce than prevailed in a large part of the world prior to the beginning of hostilities, and Mr. Hull's tariff-lowering trade agreements represent almost the only effort currently being made in that direction.

White House Sniping

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

EDITORIAL FROM THE WASHINGTON POST OF APRIL 7, 1940

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the appendix of the RECORD, I wish to call attention to an editorial appearing in the Washington Post, Sunday, April 7, 1940, in which the Walter-Logan bill is discussed. I hope this measure has opportunity of reaching the present session of Congress and of being promptly and favorably acted upon. The editorial to which I refer is as follows:

[From the Washington Post of April 7, 1940]

WHITE HOUSE SNIPING

President Roosevelt's sideswipes at the Walter-Logan bill were probably far less casual than he wished them to appear. That measure, designed to assure the citizen of fair play when he appears before any of the Government's numerous administrative agencies, is expected to be taken up by the House this week. Obviously the purpose behind the President's comment was to provide a cool reception for the bill.

It is entirely proper and desirable, of course, for the President to advise Congress on matters of great national concern. But when the Chief Executive expresses his views on legislation he should at least speak from a background of information. In this case Mr. Roosevelt admitted that he is not familiar with the terms of the Walter-Logan bill. So he recklessly adopted the device of condemning bills of the same general description.

The result was simply to demonstrate the President's lack of understanding of the measure and to confuse an issue of vital importance. His comment that the Government's business would be slowed up substantially if the departments and independent agencies had to operate according to the procedure and practice of the courts was particularly without point. There is nothing in the bill which would require administrative agencies to follow court procedure. It does not even require quasi-judicial bodies to adhere to the rules of evidence.

Sponsors of the bill claim, moreover, that it would accelerate the administrative process instead of delaying it. Many grievances against the Government would continue to be settled through informal negotiations as at present. But a written record would have to be built from the very beginning of every formal controversy over the acts of administrative agencies. That record would serve the purpose of both the quasi-judicial bodies and the courts in case of appeal. At present time and money are frequently wasted in making two or even three records in the same case.

The basic purpose of the Walter-Logan bill, however, is not to cut corners but to establish the principles of fair play in all the Government's dealings with citizens. At present there are no uniform requirements as to the making of administrative rules nor as to the review of administrative orders in the courts. In some cases safeguards against "administrative absolutism" are fairly well established by statute; in other cases they are utterly lacking. The House Judiciary Committee, in approving the Walter-Logan bill, described the situation as one of "indescribable confusion."

Mr. Roosevelt's comments suggest that he is willing to close his eyes to this lack of any reasonable check upon the administrative system as a whole. Instead of analyzing the entire problem and passing measured judgment upon a carefully devised bill, the President was content to snipe at the measure without troubling himself to find out what its specific provisions are.

Such loose comment is not the less irresponsible because it comes from the White House. The President's method in this instance is reminiscent of the way in which he handled his Supreme Court reorganization proposal. And that episode is pretty well established as the most serious mistake of his official career.

Our Real Frontiers

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

RADIO ADDRESS BY PHILIP T. RICH

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by Philip T. Rich, editor and publisher of the Midland (Mich.) Daily News, over radio station WJR, Detroit:

Two years ago when Dr. Hardy fired the shot heard round the world and picked off a bank robber a block and a half away, it became evident that the country was picturing the Midland dentist as a sort of Daniel Boone. A gent, if you please, living in a forest clearing, maybe rigged out in a 'coon-skin cap and poking his long-barreled rifle over a log stockade.

Let me hasten to say that Midland is no frontier town in the historic sense. Such pioneering was done by its grandfathers; now it is pioneering in the realm of ideas; its watchword: research.

Anything I say tonight about Midland, I say for a broad purpose. Midland knows why it is not at this minute a ghost town, as many another of its day and not far distant. Every town has something to say to every other town. Midland has this to say: That once, 50 years ago, she came so close to extinction when she ceased to be a world lumbering center that you couldn't give away property. That she avoided that fate only because she had a citizen with an inquiring and inventive mind and the education with which to make use of it. Make use of it to probe down under the sandy soil of that then dreary and despondent countryside and find a special type of brine, and to analyze it and experiment with it until ultimately he and his associates found out how to make over 300 different salable chemical products from it. And to learn gradually how to make them at lower and lower expense, and consequently for wider and wider markets.

That man was the late Dr. Herbert H. Dow. He taught Midland how to substitute planning for worrying; how to use what lay under its nose; he taught it the danger of sitting contentedly at its work while somebody else was gradually drawing its livelihood out from under it by a new process or a new discovery. He taught it this lesson: That while your hands are at work on your present basic supplies and with your present knowledge, your mind must be at work developing that new idea before somebody else does it.

He left a Midland imbued with his spirit of scientific research, a spirit given its first impetus when his discovery of the use of electricity in extracting bromine from brine revolutionized the chemical industry. What has Midland done with his basic idea since that time? It has brought about the perfection of the world's lightest structural metal. It has discovered and developed new plastic materials. It brought about the first commercial production of styrene (a glass substitute) which may prove revolutionary. It learned how to extract bromine and magnesium from ocean water. And Midland chemists stopped the foreign monopolies on iodine, dyes, and other products by learning how to make these products profitably at below monopoly prices.

The thing Midland has learned to do is not to follow the crowd unless there is a good sound reason for doing so. It looks around in its head first to see if it hasn't flitting around there somewhere an idea that points to a better way to do things. Result: Many a time the crowd is following Midland.

To illustrate I might cite such cases as that of Dr. Wm. J. Hale, who has been airing his theories on farm chemurgy. He has had

plenty of "razzing" from Midlanders. But while they may discount his "Amos and Andy" arithmetic, by and large they have a wholesome respect for the soundness of his basic idea in which he pioneered and which has now been taken up by the National Farm Chemurgic Council. In brief, that idea sees the production of needed industrial supplies from farm products as the solution to most of the problems that beset farmers. It will let them produce more crops in greater demand and hence make more money. Some day the politicians will catch up with Dr. Hale's idea and pour into real research some of the hundreds of millions now largely wasted. Better build farm factories on a subsidy basis than continue to pour out more millions with no solutions in view. Just as the chemist taught the farmer how to take sugar from beets, he can advise him on how to provide himself and the country with cheaper fuel for his motive equipment, cheaper building materials, or even clothing, or food for his livestock. Numerous chemicals may be by-products, all leading to new developments. As examples: Castor oil, which used to be largely imported, is, through the efforts of chemurgy, becoming an American industry; soluble starch, formerly imported to a great degree, is now being produced in the South from sweetpotatoes. What has helped southern farmers can be worked out equally well in some other crop for northern farmers.

I want to mention another Midlander whose advanced ideas have had international recognition. He is Alden B. Dow, architect, son of the founder of our great chemical plant, and brother of its present head, Dr. Willard H. Dow. Young Mr. Dow took plenty of panning when he first started building his organic houses in Midland, paying no attention to historically fixed building designs. He was told by many a Midlander and many a visitor that they looked like garages, sheds, factory buildings. A few were brave enough to risk the criticism and build. Some members of the State architects' association were loud in their criticism—others defended the modern house he conceived. What happened? Well, he began to get pages in national magazines like Architectural Forum and Life. In 1937 he won the grand prize at the Paris Exposition for his outstanding achievement in residence architecture. Hundreds from all over the country came to see his houses. More homes of his kind were built, and in addition, today many ideas used in his houses can be seen in other homes that follow less radical designs.

He has advanced ideas of possible colored plastic houses of the future which may admit warm sun rays in the winter and deflect them in the summer, with walls that absorb sunlight by day and give off a soft glow at night. Fantastic? Yes; if measured by known standards, but he is preparing to manufacture these plastic plates.

I might add that he has recently worked out what appears to be the first really new idea in church architecture in several hundred years. The Midland Latter Day Saints believe the radically different church he has recently designed for them is admirably suited to what they want, and they are building the first structure of its kind in the world. Dow believes the plan sufficiently fluid to apply to all denominations.

We, too, who publish the Midland Daily News, have caught something of this Midland spirit. Seven years ago we started our own engraving and photographic department, a move then considered a radical one for a nonmetropolitan newspaper; 5 years ago we changed our make-up and installed the first streamlined paper in Michigan and one of the first few in the country. Streamlining in automobiles, airplanes, and trains cut down air resistance and made greater speeds possible with less mechanical effort. The same idea when applied to a newspaper cut down reader resistance and simplified the mechanical work.

There are variations in streamlining. Ours takes the reader from the headline directly into the story, which always breaks at the right side of such a line. Purpose: to follow the logical sweep of the eye to the right. We went into a greater use of pictures because pictures tell a more graphic story than words. We abandoned balance and any artificial forms which made headlines more difficult to write and more confusing to read.

Simplification resulted in many one-line headings, few subheadings. Two-line headings were never more than two columns wide. All headings were set flush at the left and allowed to end naturally. The use of what is known by printers as sans serif type cut out the fancy fishhooks and gave a plain, straight letter easier to read. It also provided a cleaner page.

This all led to faster and easier production without sacrificing appearance. Did our readers like it? The answer is that an overwhelming majority approved. Of course, the final test is in our number of readers, which is now at an all-time peak.

The local acceptance proved that while we must remain a small-town newspaper just as long as Midland remains a small town, we are not prevented by that fact from making full use of new ideas within our scope, and that we are wise only when we follow the trend we see in our own community.

Midland has been described as a model city. There is no such thing short of that one the ministers speak of on Sundays. People being human, we have much to learn. We are trying to learn it from the other communities in the State and country as well as from the recesses of our own minds. It is a give-and-take proposition, just as our daily living is.

We ride in Detroit automobiles and airplanes and at the same time we teach manufacturers to use Midland light metal to improve them. We ride on Akron rubber and find ways to make better synthetic rubber for special purposes. We sell insecticides to Traverse City to enable it to grow grade A cherries, and we eat the cherries. We develop new refrigeration methods and eat Boyne City smelt preserved by them. We make basic materials for perfumes and buy them back in their finished form from manufacturers far away.

We learned from several Michigan cities to eye booms with caution, and, furthermore, we learned to beautify our city as it developed industrially. We know we have no Utopia, no rocking-chair jobs, no room for anything but a slow and cautious flow of labor into our city. We know that only on that basis have we developed to a town where 72 percent of our citizens own their own houses, and we rate fourth in the United States in per capita expenditure for home building.

In a sense, we operate as a laboratory for many of you other cities. That's why it's fun to live here. We listen to many a harebrained idea. Of the dozen ideas a day any one of our brilliant scientists may have, probably only one is found sound and practical. Most of the others die a natural death in a test tube. But some of them—both useful and "screw ball"—filter through our minds and get their try-outs there.

For what we get from you as other towns and cities in the State and as other men and women in those towns and cities we feel our most important return to you is the lesson we learned long ago. It is a lesson some of you learned, too, but many more must learn.

You don't dare gloat too long over some accomplishment. The big thing is, What are you going to do tomorrow? next week? next year?

It's a question every man and every community may well ask themselves. What is there lying under their noses that they aren't using and should be using? There are whole industries lying flat on their backs in Michigan today because they either didn't ask themselves this question soon enough or, if they did, failed to bring in the advance scouts in the field of thinking who could answer it. That is the question with which Midland is still nudging itself daily.

Your opportunity is probably lying under your nose. At least, 50 years of research and creative thinking have led Midland to believe that such is often the case.

Federal Food Stamp Plan

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

LETTER FROM EDWARD M. SYNAN

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MASSACHUSETTS RETAIL GROCERS' &
PROVISION DEALERS' ASSOCIATION,
Boston, Mass., March 28, 1940.

The Honorable JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

HONORABLE SIR: From information we have received, it would appear that there is a grave possibility that the present appropriation set up by the Senate Appropriations Committee for the continuation and extension of the Federal food-stamp plan would be drastically reduced.

May we request that you use your good influence in this matter in having this appropriation remain intact when it comes before the joint committee to prepare the farm appropriation.

The business of food distribution is the largest in the world. Nearly two-thirds of our national income is spent for food products. It, therefore, has been very gratifying for the large number of people engaged in food distribution to find that the Federal Government is placing back in the normal channels of distribution the so-called surplus commodities.

Our opinions in this matter are not selfish because it has been definitely established that this method of surplus distribution has more rapidly and reasonably reduced agricultural surpluses thereby firming the price of these commodities to the farmer and further, and most important, has given a more balanced diet to the relief of recipients.

The members of the Massachusetts Retail Grocers' & Provision Dealers' Association and the food distributors as a whole in the State of Massachusetts will be deeply grateful for any effort that you might make to see that the Federal Surplus Commodities Corporation appropriation, in its present status, is protected.

Respectfully yours,

EDWARD M. SYNAN,
President, Massachusetts Retail Grocers' & Provision Dealers' Association.

America's Voteless Millions

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

ARTICLE BY HELEN BURLIN

Mr. GEYER of California. Mr. Speaker, as a contribution toward assisting those disenfranchised people of the South to gain their democratic rights to express themselves at the ballot box, I extend in the RECORD an article written by Helen Burlin.

This appeared in the April issue of Equality. What Member of this House would pay the same percentage of his income for the privilege of voting as is expected of the Mississippi farmer? This would be $600. Would you pay it?

The article follows:

AMERICA'S VOTELESS MILLIONS

(By Helen Burlin)

Although the spectacle of a nation professing democracy without practicing it is common enough, it is never a pretty one.

In our country, despite the Constitution and the Bill of Rights, millions of citizens are robbed of their right to vote. These millions live in Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia. Many of them are Negroes, but the majority are white.

In these States, during the Presidential election of 1936, only 2,679,473 out of an adult population of 11,606,046 cast their ballots. A bare quarter of the population voted to elect their Chief Executive.

How was this accomplished? Very simply.

Each citizen has to buy a privilege which elsewhere is taken for granted—that of exercising his constitutional right to vote. The State sells the right by levying a poll tax. Those who register and pay may vote. Those who can't, don't.

The poll tax, reminiscent of the head tax of medieval England, was resurrected, not during the turbulent reconstruction era, as many think, but by white supremacy conventions in the 1890's and 1900's. Ostensibly to disfranchise the Negro, their real purpose was to break the back of the Populists. In the Populist movement, poor farmers, white and Negro, had found their voice and were threatening the political hold of the Democratic machines in various Southern States.

Together with disfranchisement of the bulk of Negroes through intimidation and various tests, and of many poor whites through residence requirements which operate against tenant farmers and migrant families, the poll tax is effective in keeping the percentage of the population which votes very small indeed, as the accompanying map shows.

An average farm family in Mississippi has three persons of voting age and an annual income of below $100. The right to vote would cost that family three times $2 or $6—6 percent of its income. How many households even in fortunate circumstances could afford an investment of these proportions for the sake of exercising the privilege of citizenship? In Alabama and Georgia, for example, the poll tax is cumulative. If a citizen hasn't registered for several years, or has lost his certificates, the cost of voting mounts into a tidy sum. It cost Arthur Grover Means of Birmingham, a Negro, $36 to vote ($1.50 for every year of his age past his twenty-first birthday), and his determination to pay the price was so unusual that he got his picture in the papers.

Sometimes counties levy an additional poll tax. Mississippi requires besides 2 years' cumulative poll tax, "satisfactory evidence of payment of [other] taxes." In Arkansas, without a poll tax receipt, one is not only barred from voting but from receiving any license, permit, or wages from public funds. The poll tax becomes a racket in certain localities, notably in Texas, with political machines buying up quantities of blank poll-tax receipts and passing them out to complaisant or venal voters (see Survey Graphic, January 1940). In some places, poll taxes must be paid as much as 6 to 10 months before election, at a season when cash is especially short in farm households.

This disfranchisement of two-thirds of the population in the poll-tax States of the South means in effect the suspension of democracy, as candid Bourbons freely admit. Said the Tuscaloosa News recently:

"This newspaper believes in white supremacy, and it believes that the poll tax is one of the essentials for the preservation of white supremacy. It does not believe in a democracy with a small 'd' * * * If it is 'undemocratic' to argue for white supremacy—as it certainly is—then we plead guilty to the charge."

Political and economic problems walk hand in hand. The political rule of a privileged minority over large sections of the South helps to make that part of the Nation America's economic problem No. 1. It guarantees one-party rule, hinders effective political action by masses of the population, and encourages politicians to remain indifferent to popular needs. Illiteracy, child labor, migration, wages 30 to 50 percent below the national average, hookworm and pellagra, wretched housing—these are some of the crying problems which, if not solely due to lack of the ballot, will hardly receive prime consideration from politicians until their constituencies get the vote.

But it is not the South alone that suffers from the blight of the poll tax. Only recently is recognition beginning to dawn of the degree of control exercised over Congress by poll-tax States. The seniority rule in the House and the Senate gives ranking places on important committees to Members consistently sure of reelection. This is the secret of why one good piece of legislation after another is throttled in committee and likewise explains the congressional support so easily won by bills that shock most of us as absurd and reactionary. Liberal America is taken aback by the flood of anti-alien bills now before Congress. The chief sponsors of these bills all come from poll-tax States. The National Emergency Conference for Democratic Rights has pointed out that all but two important committees in the House and Senate have southern Democrats for chairmen; and the chairman of a standing committee has enormous power. The poll-tax bloc has consistently opposed progressive social legislation through its control of the House Rules Committee, the Dies committee, the Smith committee to investigate the National Labor Relations Board, and other committees.

The fight against the poll tax is therefore a fight for democracy and the rights of minorities throughout the United States. This fight does not lack support in the heart of Dixie. In recent years three States—North Carolina, Louisiana, and Florida—have abolished the poll tax. They were able to do this by action of the legislature; elsewhere the poll tax is written into State constitutions and its removal requires more complicated procedure. In Tennessee, however, a campaign by the League of Women Voters, the parent-teacher association, and other groups threatens to bring the poll tax to an end.

In the deeper South, with its black belts, the resistance of entrenched political machines makes State action in the near future seem improbable. Hence the attack on the poll tax is following a different strategy. In Alabama the National Association for the Advancement of Colored People has filed several court actions in support of the right to register. In Tennessee, the Civil Rights Committee of the Southern Conference for Human Welfare has brought the case of Henry Pirtle into Federal court on the ground that States cannot lawfully prevent citizens from voting in Federal elections for nonpayment of a State poll tax. Crampton Harris, Pirtle's counsel and former partner of Supreme Court Justice Hugo L. Black, argues that "a State might just as well try to tax the United States mails as a United States election" and that "There can be no democracy unless every man and woman is free to vote."

Most important of all is the bill H. R. 7534, prepared by the Southern Conference for Human Welfare and introduced in Congress by Representative LEE E. GEYER of California. It makes unlawful the requirement of a poll tax for voting in any Federal election. Hearings took place March 6 before a subcommittee headed by Representative FRANCIS WALTER, of Pennsylvania, and the bill is so framed that if favorably reported out and passed, the Supreme Court probably will uphold it.

While economic and political freedom in the South are of prime importance to those who live there, the problem is more far-reaching than that. Our progress as a nation is indivisible and the only way to safeguard prosperity and freedom is to combat all and any manifestations of oppression and demagogic rule.

Wrangell Island

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1940

RESOLUTION AND ARTICLES RELATIVE TO OWNERSHIP

Mr. REYNOLDS. Mr. President, under the permission granted me during the course of my remarks, I ask to have printed in the Appendix of the RECORD the resolution (S. Res. 253) to which I referred; a statement which I have prepared with respect to Wrangell Island; an article from the Washington Post of February 26, 1939; and an article entitled "War of Propaganda May Be Already Won."

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

Senate Resolution 253

Resolved, That the Secretary of State is requested to make a report to the Senate at the earliest practicable date with respect to whether or not the United States has a valid claim to sovereignty over Wrangell Island.

STATEMENT BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Wrangell Island is, roughly, the size and shape of Jamaica, 80 miles long and 35 miles wide. It is rugged rather than rocky, with a maximum elevation of about 2,000 feet. So far as we know, there is no permanent ice or snow, with the snows of winter disappearing completely in summer. The minimum temperature in winter is only a little lower than that of Montreal, about the same as that of Winnipeg, and not nearly so low as that of some of the Russian cities. Because the island is small and surrounded by a small ocean, the warmest summers will not be far different from the month of May throughout some of the northwest sections of Canada and some of the northeast sections of the United States. Essentially it is a prairie land—no trees, and only small bushes. The beach is abundantly supplied with driftwood for fuel and for the building of log houses. It is probably the greatest polar bear country in the world. But bearskins have at present a small commercial value. There are no locations better for the trapping of white and blue foxes, and there are considerable quantities of the remains of the prehistoric elephants—mammoths of that fossil monster may be of some importance. It is an excellent station for the walrus and hair-seal industry. Nothing is known about the presence or absence of minerals. Great herds of reindeer are owned by natives and whites in Alaska and suitable breeding stock could be purchased at reasonable cost and landed in Wrangell Island.

Probably Wrangell Island could support some ten to twenty thousand herd equally in value to double that number of sheep.

Although the commercial value of Wrangell Island is small, it is not negligible. As a matter of fact I should not have been in the least interested in this island, however, but for my belief that within 25 years from now the Polar Ocean will be one of the chief theaters of air commerce. It is true that we of the United States have plenty of rich land to develop, both at home and in our Territories, particularly in Alaska; and in speaking of Alaska, may I say that I believe that we have come to need badly a supply station under our own flag somewhere on the northern frontier of Asia such as Wrangell Island, for remember that Asia, Russian territory, is located within a stone's throw of our American Territory of Alaska. Fact is, the Little Diamede Island, which we acquired from Russia together with Alaska and Pribilof in the Aleutian Islands for a consideration of $7,200,000, is only about one-half mile from the Big Diamede Island which belongs to Russia itself.

Every other island on this vast northern frontier of Asia is clearly the property of some other nation, either by discovery or by occupation, but I believe that this one spot, Wrangell Island, is clearly ours and the longer that we let it go and remain in the hands of Russia, as of now, the more difficult will be our chance of obtaining our legal rights.

From a purely commercial standpoint as of now, the island would not be worth anything to us, but as I have heretofore stated, within 25 years from now it would be a very valuable spot, so my chief design, that what I have said and done, shall rest entirely on the grounds of public interest and public spirit.

If one looks at the Polar Ocean on a globe, which is the only way of correctly realizing the situation, you will note that Wrangell Island lies straight across from New York and is almost directly in line between the metropolis of New York and Manila, the capital of the Philippine Commonwealth. Even though it is not strategically the most important island on the northern coast of Siberia, it is the only island to which the United States Government has a claim on that vast frontier.

A couple of years ago when I was in Alaska and at which time I visited Point Barrow, the northernmost point in the Western Hemisphere, as well as Deering, Wainwright, Nome, and Siberian waters, friends of mine there and others whom I have met from time to time and place to place who were familiar with Siberia, impressed upon me how the Japanese were penetrating northward into that great country. And, as a matter of fact, several years ago while in Russia I understood that the Soviet Government was encouraging the immigration of its nationals from the congested cities such as Odessa, Leningrad, and Moscow to Siberia and its northeastern portions on the mainland in the neighborhood of Wrangell Island.

At the present time I am informed that a number of Chuckhees, Russian nationals, are occupying the island as a result of our nationals having been forcibly taken from the island a number of years ago, concerning which incident I shall return to shortly. We have never asked submission of the question to some form of international court, in which case their occupation, coupled with our neglect, could have established ownership, so in this bill I am merely asking that our State Department inquire into the question of whether or not the United States has a valid claim to sovereignty over this island.

It is my information that in September of 1921 several Britishers, together with a small party of Eskimos, landed on Wrangell Island, where they raised the British flag, which they claimed was the third time that the British flag had been placed upon the soil of Wrangell Island. At that time there were some press stories in the United States to the effect that our Government had protested against Britain's occupation of this island, but as to whether or not these statements are authentic I have not been informed. At that time, however, it is my understanding that the Soviet Government of Russia did protest. This protest contained three reasons on account of which Wrangell Island was said to be Russian.

The first reason was discovery of the island by Baron Wrangell a little more than a hundred years ago. Close students of the baron's journey at the time that he was supposed to have discovered Wrangell Island will reveal that he was never anywhere near it. And in addition to that he states in his description definitely that he failed to discover land. Confirmation of this can be obtained easily.

The second Russian claims are on the basis of a landing between the years 1910 and 1915. As a matter of fact, any nation could have claimed Wrangell Island on the basis of a landing in 1910, 1915, or 1921, the latter of which was claimed by the British.

Thirdly, the Russians advance the claim that Wrangell Island is Russian by reason of its immediate proximity to Siberia. The distance from Siberia is about 100 miles, and as to this claim for ownership through proximity might possibly be agreed upon by some future international convention, but it certainly has not been agreed upon in the past.

In the year 1880 or 1881 the New York Herald fitted out a Polar expedition under the command of Lieutenant De Long, an officer on leave of absence from the United States Navy. This was the famous and tragic *Jeannette* expedition, so called after the ship which De Long took north through the Pacific and through the Bering Straits proceeding into the ice which he met northwest of Alaska, firm in the belief that just beyond were the shores of a great continent. Shortly thereafter, while the *Jeannette* expedition was found in the ices of the great Polar region, the American flag was planted on Wrangell Island either by a member of his expedition or by one of the crew of an expedition that went in search of the members of the *Jeannette* expedition.

I claim that Wrangell Island is originally the property of the United States through right of discovery, but it is a principle of international law that claims arising out of the discovery must be followed up within any reasonable time by exploration or occupancy or else it lapses into the territory of a no-man's land.

The British claim some sort of title as of 1854, by way of discovery or otherwise, and the Russians claim title for the same or similar reasons; but, after all, it is not disputed that the American flag was placed on Wrangell Island in 1881 or 1882, and it was actually occupied by the nationals of the United States when the Russian nationals, forcibly and against their will, removed the nationals of the United States from the island to Siberia, and I understand that since then the Russians have occupied the island.

I think it is pretty well conceded—at least, there is no information to the effect—that any human being ever landed on Wrangell Island before the Americans did in 1881, and we know pretty definitely that no landing was made upon the island thereafter for many, many years.

Those who claim to have a knowledge of aerial navigation say that conditions on the whole there are better than in any other area in the world, and, of course, for the time being, we are interested in the acquisition of this island for the reason that, as I have heretofore stated, within 25 years it will be a very valuable spot, as the condition of the island is such that, without great difficulty or excessive expense, airplane bases could be established. Some have ventured that a harbor at one end of the island is so enclosed that aquaplanes could make safe landings, and in the winter, with the airport covered with snow, great passenger and freight planes could land safely on skis. Not only are flying conditions over the polar area on the whole good, according to those who are familiar with this section, but it is much the smaller of the oceans and therefore the easiest ocean to cross. As the settlements creep northward along the great rivers of Siberia and Canada, the polar mediterranean will continually increase in importance through the airways above which connects the various lands.

In conclusion, may I say that Russia is now in the possession of Wrangell Island. I claim that that possession was obtained by force and not by discovery. Of course, on account of Wrangell Island's being in the immediately proximity of Russian territory, it would be easy for Russia to seize and difficult for us to defend, but surely it would be possible to establish the ownership of the island at an international conference. If Russia—or any other country for that matter—then acted contrary to the decision of the conference, the facts would at least be known and the blame would be laid where it was deserved; and again I wish to say that to use Wrangell Island as a base we would have there a short cut for airplanes flying over the top of the globe from New York to Manila instead of around the circumference by such routes as are taken by ships and trains.

Wrangel Island has an area of about 2,000 square miles. Its elevation rises to 2,500 feet, but there is much less land on the south and north. Shoals and sand spits project to sea on the north and southwest. The west and east coast are steep and lofty. The harbor is on the southeast. Tundra covers many parts.

In 1923 a party of Eskimos under an Alaskan trapper were established on Wrangel Island, but Russia, laying stress on the claim made around 1915, forcibly removed the colony in August of 1924 and shortly afterward brought 50 Chuckhees to form a settlement under Soviet officials, and I understand that the colony was visited by Russian airplanes in 1927. At that time these claims were not officially disputed by the United States, according to my information.

Last year I introduced a bill in Congress calling for the establishment of naval bases on Wrangell Island. This resolution was referred to the Naval Committee of the Senate, and no action to date has been taken thereupon. Fact of the matter is, I think that I was a little premature in the introduction of that resolution. I probably then should have introduced a bill such as I am introducing today, requesting the Secretary of State to make a report to the Senate at the earliest practical date with respect to whether or not the United States has a valid claim to sovereignty over Wrangel Island; and then, after the establishment of this claim, if an international congress awards the island to the United States, then would be the proper time for a bill calling for the establishment of naval bases there. At any rate, last year, when I introduced the aforementioned bill, which was referred to the Naval Affairs Committee of the Senate, there appeared in the Washington Post under date of February 26, 1939, an article entitled "United States Owns Wrangell Island, Not Soviet, Says Reynolds," and the subhead of that story reads, "Retired rear admiral, who planted American flag, revives controversy of Arctic possession." I wish to have this article at this juncture printed as a part of my remarks.

I ask that the resolution be referred to the Foreign Relations Committee, and I hope that we may shortly ascertain the rightful owner of this island, which in the future, I am confident, will prove to be a most valuable possession.

[From the Washington Post of February 26, 1939]

UNITED STATES OWNS WRANGELL ISLAND, NOT SOVIET, SAYS REYNOLDS—RETIRED ADMIRAL, WHO PLANTED AMERICAN FLAG THERE, REVIVES CONTROVERSY OVER ARCTIC POSSESSION

Because "first come first served" still is the law of the masterless lands, Rear Admiral William Edward Reynolds, retired, believes the Russians ought to get off Wrangell Island.

It is a matter of personal pride to him, for he "came first," in this case, he said, and planted the American flag on that ice-bound spot in the Arctic Sea one August morning in 1881.

There is a first-class international squabble ready to flare up over this disputed land, and it was another Reynolds who started it.

Last Friday Senator ROBERT R. REYNOLDS, of North Carolina, introduced a bill in the Senate to establish a naval air base on Wrangell Island, but there is small chance of doing that while the Russians are there.

It seems that in 1924, taking advantage of a claim they had made in 1916 that had never been officially disputed, the Russians abducted one Charles Wells, an American sailor from Seattle, and 12 Eskimos peacefully engaged in fishing and hunting and otherwise making good America's title to the spot, and replaced them with a colony of enthusiastic Communists.

RESTRAINS HIS PRIDE

This is a pretty intolerable situation for 79-year-old William Reynolds, who retired as rear admiral in the Coast Guard just when this was going on. But, mild-mannered and dignified, he restrained his outraged pride yesterday and spoke of the arrogant Bolsheviks with creditable courtesy.

"I don't know what right they had to take our island," he remarked, "but then I don't know much about international law. I took possession of Wrangell Island for the United States, and we were the first white men that ever landed there. Of course, it's named after a Russian, Baron Wrangell, but he never reached the island; he just saw it."

As a matter of fact, it was something of an accident that led to that historic landing party, the gray-haired seaman admitted. The steamship *Corwin*, on which he was a junior officer at the time, was not sailing about the Arctic looking for new lands for Uncle Sam. She was searching for survivors of the exploring ship *Jeannette* crushed by ice just before.

They didn't find any survivors, but they found a lot of polar bears and walrus, and a good plateau now useful as an airplane landing field, and they presented this chilly spot to the State Department to file away for the future.

FIFTEEN YEARS TOO LATE

Now Senator REYNOLDS has found a use for it, but he is 15 years too late. When, in 1924, Commander M. Davidoff came back in triumph to Vladivostock with Wells and his Eskimos he proudly boasted that once more the proletarian revolution had scored over the "imperialists," who were attempting to "seize the island" because it "would have made an ideal aerial base."

Poor Wells died before he ever got away from Siberia and as Rear Admiral Reynolds is the last survivor of the officers on that historic cruise of the *Corwin*, he is now the only principal of the drama of Wrangell still able to tell the tale.

But Wells' sponsor, Carl J. Lomen, is still very much alive, and so in his claim against the Russian Government for the 167 foxskins and 40 polar bear skins they relieved him of in 1924, not to mention damages against his firm, the Lomen Reindeer & Trading Corporation, which bought from an English firm the trading interests in the island just in time to have them seized behind their backs by the conquering Russian revolutionaries.

But after all, the whole thing rests with the State Department, and the State Department isn't interested now. Maybe if we build that air base Senator REYNOLDS wants there will be a showdown, and the Russians will be forced to admit the validity of Rear Admiral Reynolds' deed, and pay Lomen his damages. Such at least is the hope of Reynolds, Reynolds, and Lomen.

WAR OF PROPAGANDA MAY BE ALREADY WON—HUNGER IN JOBLESS HOME MORE PERILOUS THAN ANY FOREIGN SPY, IS VIEW

The little man, sitting in his little home, and wondering where he can get another pail of coal, will ultimately decide whether we get into war or stay out, asserts Samuel Grafton, writing in the New York Post. He adds:

"We are being told to watch out for propaganda. Good enough. But in the larger sense, this is a false steer. The propaganda fight has already been fought and won by the Allies. The United States now hates Hitler more than it hated the Kaiser in 1916. The toothiest of British lecturers can add only a drop to the brimming bucket of our hate. * * *

"History is made when the father of the family says he isn't hungry and slides his food down-table to his children, and the kids take it, trying not to think that's all there is, there isn't any more.

"History is made when the foreman at the plant tells John Smith, American worker, that he can't give him a job until the factory gets another war order, but that the factory isn't getting war orders because the Neutrality Act forbids lending money to the Allies. The muse of history really begins to smirk when John Smith walks down the factory street, feeling the stones through his shoes and wondering why the devil we shouldn't lend money to the Allies when it means a job a man can work at and feed his kids with.

"A decent peacetime job would keep John Smith from making this decision. * * *

"Tracing out the figures nationally, I find that the total of W. P. A. workers has been cut almost in half, from 3,043,367 in February to 1,661,970 in September. The rise in 'war boom' employment doesn't even remotely correspond to this wholesale slaughter of W. P. A. pay envelopes. The cut occurs at a time when a job is the best and most vital antiwar propaganda of all, because it talks to a man 7 days a week and 24 hours a day.

"I have a feeling that we are flunking our national test. We are depending on a Neutrality Act, a dike of words against a sea of need and blood. We are asking men to consult the national interest first, at a time when the interests of their children clamor in their ears. We are asking the little man to be big. That is the measure of the smallness of our approach.

"The stage for war, the stage for our participation, is being set. It is a bare stage and on it are a few kitchen chairs, an empty table, a congealing stove; in one of the chairs sits a man who fears the morning and who will accept any hope that comes. So far, we have been afraid to look at him."

Labor in the Canal Zone

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

LETTER FROM NATIONAL MARITIME UNION

Mr. GEYER of California. Mr. Speaker, last week on the floor of this House we heard one side of a question. Believing that it is unfair for one side only to be given, I am glad to insert a letter from those accused. The least we can do when charges are made under congressional immunity is to allow the accused their day in court. Here is the letter:

NATIONAL MARITIME UNION OF AMERICA,
New York, N. Y., April 6, 1940.

HONORABLE SIR: Representative FRANK B. KEEFE, of Wisconsin, last week on the floor of the House made certain unsupported charges against the National Maritime Union—charges which we emphatically deny.

He charged:

1. That one H. A. Stoudt had been sent to the Panama Canal Zone to organize workers in order to tie up the Canal in case of a war with the Soviet Union;

2. That the N. M. U. is partial to graduates of a "red" marine school over graduates of a Maritime Commission training school;

3. That members of the crew of the steamship *Panama* sent a telegram of praise to Earl Browder, Communist Party secretary; and

4. That the authors of a pamphlet, We Accuse, are real American seamen who were kicked out of the union because they were opposed to Joseph Stalin, a Soviet official.

Without discussing the motives behind this attack for the moment, let me take up each charge separately.

1. The Congress of Industrial Organizations received a request from Canal Zone workers for organizational help. A man named Stoudt, a steward on a ship which made the Canal regularly, was

authorized by the west coast to make a survey of conditions down there and report back on the need for organization, if any.

Stoudt found that hundreds of workers in the Canal Zone were living in a state of peonage. They were being paid wages as low as 10 cents an hour and were living like pigs. They had no organization and were discriminated against alike by private and public employers. It was disgraceful.

Stoudt helped those people set up an organizing committee but, because the C. I. O. did not feel that the time was ripe for an organizing drive, Stoudt did not set up an office down there. Today, to the best of my knowledge, he is working on a ship.

The N. M. U. in listening sympathetically to the woes of the Canal Zone workers had but one object in mind—to aid them in organizing a union for their own protection. As the survey showed, there is no other protection available to them. Even officials of the United States Government are content to see them oppressed, discriminated against, and starved.

2. The N. M. U. knows nothing about any "red marine school" and, to the best of our knowledge, we have no graduates of such a school working for us. If one exists, it is certainly kept dark on the water front. Our reasons for resisting the Maritime Commission training school have been stated over and over again. They are familiar to everyone—particularly to Representative KEEFE, a member of the House Committee on Merchant Marine and Fisheries. The training school was set up to help the operators break up the National Maritime Union. To protect our working conditions, we were forced to resist the school. If Representative KEEFE pretends not to know that he is being, in our opinion, somewhat less than frank.

We are unable to say whether members of the crew of the steamship *Panama* sent a telegram to Earl Browder or not. Our constitution forbids any discrimination against any member for his religious, social, or political beliefs.

4. The authors of the pamphlet We Accuse were expelled from the N. M. U. for labor-spying activities. They were expelled by the membership, not by the officials. The case against them was so clear that even their former partisans are convinced. We have told the story in a pamphlet called Labor Spies in the N. M. U. The shipowners were found to be financing a ring of spies—whose activities followed closely the activities of labor spies exposed by the La Follette Civil Liberties Committee. This ring tried in every way possible to break up the N. M. U. for the operators.

When a Member of the United States Congress allies himself with such a group it is about time that we look behind his position for the motives. At this moment we are unable to say what they are. Our experience, however, has shown that whenever the Medeiros-Carlucci gang of labor spies finds an apologist, something is brewing. The shipowners, it seems, have a mysterious influence over certain public officials.

We hope that Representative KEEFE is not subject to this mysterious influence. On the other hand, we find it hard to explain his defense of labor spies convicted by their own shipmates.

It is significant, we feel, that this attack comes at a time when amendments to the National Labor Relations Act are being considered.

Perhaps he is just one of those persons who sees Stalinist plots in all trade-union activity, in every improvement of conditions. Agents of labor-hating employers see these plots on every hand.

Very respectfully yours,

JOSEPH CURRAN, *President.*

Polish Relief

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

RESOLUTION BY A MASS MEETING OF AMERICAN CITIZENS OF POLISH ORIGIN OR DESCENT

Mr. HARTER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution, unanimously adopted at a mass meeting of American citizens of Polish origin or descent, in Buffalo yesterday, Sunday, April 7, 1940:

Resolutions adopted at a mass meeting held in the Broadway Auditorium, Buffalo, N. Y., April 7, 1940, on the occasion of the visit to our city of Gen. Joseph Haller, Minister and Emissary Extraordinary of the Government of Poland, temporarily transferred to Angers, France, and Count Jerzy Potocki, the Ambassador from Poland to the United States

Whereas we American citizens of Polish origin or descent, stand united in our condemnation of the merciless and brutal attacks on Poland, designed to exterminate the Polish Nation, and to rob the people of their historic territorial possession; and

Whereas mass murder and executions of civilians and noncombatants, especially of women and children, were committed systematically by air bombings upon the rural population, hospitals and orphanages, churches and synagogues; and

Whereas the arrest and placement in concentration camps for slow and untimely death of Polish scholars and professors from the Jagiellionian University of Cracow, as well as other institutions of learning and culture, further substantiate our belief that the goal of the barbaric invaders is the destruction of Poland by means of exterminating her leaders first; and

Whereas in furtherance of this aim, the Nazi Government is expropriating and evicting the Poles from their lands and settling thereon Germans brought from all parts of Europe and especially from the Baltic States; and

Whereas we base our action at this meeting on reliable and official documents compiled by his eminence august Cardinal Hlond, primate of Poland for His Holiness, Pope Pius XII, in which specific charges are made that almost all Catholic institutions in the archdioceses of Poznan and Gniezno have been seized, and that the priests and nuns have been subjected to unparalleled persecution and humiliation; and

Whereas the Governments of Nazi Germany and of Soviet Russia have repeatedly denied neutral countries and their humanitarian organizations the right to administer to the needs of the homeless, sick, and poor while stark hunger stares 70 percent of Poland's population in the face; and

Whereas this desperately stricken nation is looking across the ocean in its pressing and widespread need to us, Americans of Polish descent, the legitimate heirs of a highly cultured civilization, with ideas of liberty, democracy, and freedom of opportunity in common with those of these United States of America: Therefore be it

Resolved, That we express, first of all, our deepest gratitude to the Government of the United States, and especially to His Excellency, Franklin D. Roosevelt, the President, for granting recognition to the present Polish Government, located in France, thus proving to the world that the United States does not recognize the fourth partition of Poland, and that Poland continues in her position in the family of nations; and be it further

Resolved, That we earnestly petition the President of the United States, the Secretary of State, the Senate and the House of Representatives, and especially the members of the Committees on Foreign Affairs, to support and hasten a carefully planned and far-reaching humanitarian work to salvage the human wreckage caused by the starvation, disease, and exposure, with the view that our American initiative, generosity, and example may stimulate other nations of the world into similar action; and be it further

Resolved, That we most respectfully urge and implore the Honorable Cordell Hull, Secretary of State, to use all of the weight of his power and prestige in obtaining prompt favorable action by the House Foreign Affairs Committee on the humanitarian legislation for Polish relief favorably and unanimously recommended to that committee by a subcommittee thereof within the week closing April 6, so that Congress will have an opportunity to pass the legislation while the need is urgent; and be it further

Resolved, That in particular we appeal to all Congressmen to appropriate the sum of $20,000,000 for food, clothing and medical supplies for all destitute people of Poland; furthermore, we request the appointment by the President of the United States of a commission which will coordinate the work of various organizations endeavoring to bring aid to the suffering people of all creeds and races in the occupied areas of Poland; and be it further

Resolved, That we urge our Congressmen to sponsor humanitarian legislation such as the bill introduced in the Senate by our distinguished senior Senator, ROBERT F. WAGNER, of New York State, intended to take care of the orphan victims of persecution, limiting the number to be admitted to a maximum of 10,000 orphans per year; and be it further

Resolved, That we express our deepest gratitude and thanks to all humanitarian agencies, especially to the American Red Cross, the American Commission for Polish Relief, the Friends of Poland, the American Committee for the Polish Ambulance Fund, and to all American people helping hasten relief to the suffering people in occupied Polish territory, and the refugees in Rumania, Hungary, France, and Britain; and be it further

Resolved, That we all solemnly swear and reaffirm our wholehearted loyalty and adherence to the principles of democracy upon which this Nation was founded, and to the American way of life and government in keeping with the fundamental right to peace with justice for all mankind; and be it further

Resolved, That a copy of these resolutions be forwarded to the President of the United States, to the Secretary of State, to Vice-President JOHN N. GARNER, President of the Senate, to Representative WILLIAM B. BANKHEAD, Speaker of the House, and to the United States Senators and Representatives from the State of New York.

The Right Reverend Monsignor Alexander Pitass; the Right Reverend Monsignor Francis Kasprzak; the Right Reverend Monsignor Andrew S. Garstka; Dr. Stanislaus N. Borowiak; Dr. Ambrose Maciejewski; Mr. Stanislaus Turkiewicz; Rev. Cezary Krzyzan; Mr. Stanislaus Sielski; Dr. Francis E. Fronczak; Marta Mazurowska, Secretary Committee on Resolutions.

Defense Against Whom?

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

ADDRESS BY THE SECRETARY OF WAR

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Harry H. Woodring, the Secretary of War, at the Army Day banquet of the Military Order of the World War, at the Mayflower Hotel, Washington, D. C., broadcast over the red network of the National Broadcasting Co., April 6, 1940:

Today, under the sponsorship of the Military Order of the World War, American citizens and soldiers—here in the homeland and abroad in our overseas domains—are engaging in the annual observance of Army Day.

I employ the word "observance" advisedly. It was 23 years ago today that the United States entered the great armed conflict which held the world in its frightful grip from 1914 to 1918. Victory eventually rested upon our arms and those of the nations we were associated with in that universal conflict. However, I hardly believe that we should today celebrate—as distinguished from observe—the date of our embarkation upon a military effort of the magnitude of that which engaged our every national energy in 1917 and 1918. Too many were the lives lost, too many the bodies maimed and minds crushed, too many the homes that still suffer. And far too great was the cost—material, economic, and spiritual—to the people of this Republic of ours.

We, to my way of thinking, may appropriately observe or even commemorate Army Day, but never celebrate this occasion. Rather, this Army Day should be the occasion for further determination that the United States will avoid the pitfalls of military neglect which inevitably led to the momentous decision of April 6, 1917. This should be a day of review by all American citizens of our past failures to heed military portents—failures which, in the end, cost our Nation dear.

I repeat from a recent Army Day message to the Military Order of the World War that one major war now rages across the Atlantic Ocean; a second, though undeclared, across the Pacific. I expressed the opinion that no man can now foretell the eventual extent or degree of violence of those two conflicts. Who could have foretold in 1914 that an assassination in an obscure Bosnian town was to provide the spark that was to set the whole of the world aflame for 4 long and awful years?

Permit me to quote the following excerpt from that same message: "Certainly it behooves Americans at this time to consider our defensive requirements with most critical eyes. Army Day will afford opportunity for close scrutiny of the status of our protective measures. In view of prevailing international uncertainty—I might even state international chaos—the Army Day of 1940 will be one of the greatest significance to the citizens of the United States."

Manifestly this is an hour for critical examination of our military requirements. So rapid are the technical developments in the implements of warfare that defensive adequacy today is defensive inadequacy tomorrow. It was President Roosevelt himself who warned, months before the invasion of Poland and the coincident outbreak of the European war, that "the world has grown so small and weapons of attack so swift that no nation can be safe in its will to peace so long as any other single powerful nation refuses to settle its grievances at the council table." Truly the world grows small. From the military standpoint the oceans of yesterday are seas today and may be lakes tomorrow, though on the map they retain their oceanic nomenclature. What were the continents of yesteryears are no longer, in the military sense, continents today. Adequate defense on land, on the waters, and under the waters, and in the air is therefore a problem constantly requiring study, constantly necessitating new solutions, constantly demanding revision of manpower and matériel requirements.

These continuously changing factors of time and space, coupled with the extreme rapidity with which implements for waging war are developed—especially during a period of actual international combat—prompted my appearance only a few days ago before the members of the Military Affairs Committee of the House of Representatives. To those gentlemen I recommended a revision of policy with reference to the sale of military matériel, particularly of aircraft, to foreign governments. I pointed out that the land, sea, and air fronts of the wars now in progress—to the misfortune and misery of the peoples engaged—serve as proving grounds and experimental laboratories wherein all types of munitions are undergoing practical and exhaustive tests. Who would belie those facts? Who would insist that any nation, however peace-loving, should blind its eyes to changing conditions? Who could deny to his own protective forces—and with reference to the United States, I emphasize the word "protective"—the weapons demonstrated by battlefield usage to be the most effective?

I have iterated, and I reiterate, that the major problem involved in the assurance of an adequate national defense is not that of numbers—numbers of soldiers, numbers of guns, or numbers of planes. The major military problem imposed upon our Government is to meet effectively ever-changing military conditions by appropriate changes in organization and equipment.

The people of the United States are well aware that during the past several years our Government has placed a vigorous shoulder to the wheel of national defense in an effort to assure the adequacy of our protective installations, naval and military.

Let us survey, in general, the progress attained in promoting the effectiveness of the land forces of the Nation since the Army Day of 12 months ago. The personnel of the Regular Army and the National Guard have been modestly augmented, the better to enable those two components of the Army of the United States to meet organizational and training requirements. A reorganization of five Regular Army divisions has been effected, providing modernized units of high fire power and mobility. We have afforded those five Infantry divisions of the Regular forces opportunity for real training as coordinated combat units on adequate terrain under suitable climatic conditions. The professional elements of our Military Establishment—that is, our Regular Army—both within the continental United States and overseas, have undertaken intensive field training on a scale never before attempted in peacetime, As is well known, our Army Air Corps has undergone rapid—but not uneconomical—expansion in personnel and matériel.

The periods of armory and field training for the National Guard have been moderately extended, to the great enhancement of the value of that element of the Army of the United States to the national defense. Both the Regular Army and the National Guard have been progressively supplied with modern and effective weapons and with the motorized and mechanized vehicles required by an up-to-date combat force. The Officers' Reserve Corps has been brought more completely into the mobilization-day picture through the elucidation of policies which place members of that corps in positions of greater responsibility in our initial wartime set-up—if occasion arises to establish that set-up. The garrisons of our principal overseas outposts have been increased, the better to permit them to shoulder any wartime responsibilities which might abruptly be imposed upon them. We have made provision for the procurement of strategic raw materials. We have placed in motion the wheels for a really effective educational-order program which seeks the peacetime training of American industry to assume its potential and all-important wartime burdens.

This comprises but a brief résumé of the accomplishments of 1 short year in the promotion of our measures for national security, so far as pertains to the land forces.

But the voice of the critic is heard crying: "Why these military expenditures? What country are we going to fight? Defense against whom?" Questions are propounded as to what power or combination of powers do we fear?

I take it upon myself to answer those inquiries with questions of my own. Is the map of the world not changing overnight? Is there today in the hands of a single American schoolboy an up-to-date geography book? Is there any reasonable assurance that these 48 States of ours, because of the protective oceanic barriers to our east and west, will remain forever invulnerable to hostile aggression? Have the Americas never been invaded?

It is only a few hundred years ago that two mighty American empires—the Aztec and the Inca—fell before an outlander because of the inadequacy of their defenses. In numbers of their fighting men they were superior to their aggressors—vastly superior. But they were all but entirely lacking in what were then the modern implements of defense.

Right on this North American Continent of ours barely eight decades ago, by means of military force, there was established an empire which was European to all intents and purposes. The maintenance of that imperialistic regime in the neighboring republic to the south of the Rio Grande threatened not only the peace of our own reconstituted Union but the peace of the whole of the New World. That Maximilian enterprise collapsed. It collapsed only because of the fact that at the close of the War between the States the United States was in a position, through an "Army in being," to exercise armed force for the reestablishment of a republic in Mexico and the preservation of the principles of democracy on the North American Continent. Note that I state that we were in a position to exercise armed force. Fortunately, the necessity for that exercise did not arise. However, we were then in a position to speak with authority for peace. We spoke with authority for peace to the perpetual advantage of every republic of the Western Hemisphere.

Defense against whom, it is asked. Why does a municipality maintain a fire department—to guard against a specific conflagration in a specific building? Why does a city maintain a police department—to protect its citizenry against a specific criminal or a specific criminal element? Why do millions of Americans carry insurance on their automobiles—for protection against specific accidents at specific street corners? Those questions, I am sure, answer themselves.

One of my predecessors in the office of the Secretary of War once stated, "No one can foretell the future with accuracy with respect to anything in human life. Health, wealth, outbursts of nature, and human outbreaks—no one can surely foretell anything concerning them. If we should not prepare ourselves reasonably

with respect to these things because we cannot be sure that we have protected ourselves against all conceivable possibilities, we would be deliberately choosing the path of folly and not that of wisdom." That statement appeared in the annual report of the Honorable Lindley M. Garrison, in 1915, less than 2 years before the entrance of the United States into the World War. He was pleading for the establishment and maintenance of an army of sufficient size to circumvent any possibility that we might be embroiled in the conflict then raging across the Atlantic. His plea fell on unheeding ears.

There are those who hold that had the United States in 1917 possessed a well-trained, well-equipped, well-organized, and well-balanced Army of a half million men, this Nation would never have been drawn into the vortex of the World War. They maintain that the very existence of such an "Army in being" would have served as a positive deterrent to those across the Atlantic, who, holding in disdain our military potentialities, proceeded on the course which eventually forced our entry into the world conflict.

Defense against whom? I have publicly stated several times, and on this Army Day I emphasize that statement, we must not attempt to justify the maintenance of a small, perfect Army by participation in war. We must not attempt to justify the maintenance of our defensive forces by the actual publication of lists of battle casualties. I have contended that the maintenance of an effective military establishment is justified by the fact that through its existence in these tragic days of international turmoil we can speak for peace—can speak with authority for peace! Our every endeavor must be to provide for that protective power which should be sufficiently adequate to obviate the necessity for engaging in war. Our military preparations must be inspired by a will, nay, by a determination, to maintain peace, not by any inclination to engage in war.

No nation can speak with authority for peace unless that nation has in its possession the means to impose peace. And we Americans are determined to speak with authority for peace on the Western Hemisphere.

Regulating Television

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of April 6, 1940, entitled "Regulating the F. C. C.":

[From the New York Herald Tribune of April 6, 1940]

REGULATING THE F. C. C.

Once more the the Federal Communications Commission is in the news, and once more it is there because of its irrepressible tendency to act arbitrarily and high-handedly. This time the Chairman of the Commission demanded a Nation-wide hook-up in order to express his views about the controversy over television which he had precipitated by his earlier arbitrary action. The principal radio systems, fearing his power to injure them, canceled commercial programs and gave him the time he asked for—a privilege so far reserved only for the President of the United States. Thus, in addition to having abused his power by the ruling which he had made affecting television, he abused his position by virtually forcing the companies to give him free time in order to broadcast his views, which, after all, are only the views of a minor official and not of a major officer of the Government.

Last week we commented on the vicious absurdity of the Federal Communications Commission's ruling suspending the commercialization of television on the ground that technical developments might render present television sets obsolete in a short while. We pointed out that this doctrine of potential obsolescence, if applied 40 years ago in the development of the automobile industry, for example, would very probably have frozen that industry early in its infancy. So widespread was the criticism of its ruling that the F. C. C. showed signs of back-tracking and reconsidering the entire subject.

Since then the Supreme Court has handed down a decision affecting the functions of the F. C. C. which may force that body to reconsider its entire policy. The Court flatly reasserts the principle of free competition, and expressly states that the F. C. C. "is given no supervisory control of the programs, of business management, or of policy" of broadcasting companies.

This, however, is only incidental. What stands out like a sore thumb is that the F. C. C. itself is in need of regulation and that this regulation must come from Congress. True, the F. C. C. theoretically cleaned house 6 months ago. But the very fact that it issued such a regulation as that restricting television shows that in the house cleaning it did not get rid of its most dangerous mistaken notion—that its function is, in effect, to supervise, control, and direct the radio industry of the United States. It is true that it possesses the power of life and death through its right to withhold licenses. But it is also true that nowhere in the act establishing the F. C. C. is there anything which can be even remotely interpreted as giving it the powers of interference which it has from time to time asserted.

The charitable explanation of the grasping nature of the F. C. C. is that bureaucrats have an irrepressible desire to extend their personal influence and power and reach out to control much more than was originally intrusted to them. But more important than discovering the reason for the F. C. C.'s assumption of powers is the fact that these powers have been assumed when they should not have been so assumed. The regulation restricting television was of such a nature as to be entirely destructive of the system of free competition. It represented planned economy at its worst. The best way to avoid a repetition of this sort of paternalism is to overhaul the F. C. C. and so restrict its powers that it can be held to the strict duty of regulating and allotting frequencies, without stepping into questions of policy or exercising, however indirectly, a form of censorship.

Give the Railroads an Even Break and Watch Them Travel

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

EDITORIAL FROM THE JACKSON (MICH.) CITIZEN PATRIOT

Mr. VAN ZANDT. Mr. Speaker, editorially, S. 2009 is supported by the leading newspapermen of the country. These newspapermen recognize the necessity of placing all transportation on the same footing.

In the following editorial the editor of the Citizen Patriot, of Jackson, Mich., on January 31, 1940, intelligently approaches the real question when he expressed the following views:

[From the Jackson (Mich.) Citizen Patriot of January 31, 1940]

A SQUARE DEAL

Jackson, being a railroad center, has a large population of rail workers. Not only is there an unusually large number of operating workers here, but there are several hundred maintenance and shop men. Employment histories of a majority of them go back to the days when progress and prosperity traveled on steel rails, when the welfare of thousands of industries and businesses largely depended on railroads.

These workers also saw the railroad revenues severely cut by other competition. They saw trains withdrawn from operation, men laid off, shops working on part-time basis, and losses instead of profits recorded on operating reports.

Recently, through improved transportation facilities, railroads have had an awakening. The level of freight traffic has recently been at the highest point since 1936. Improvement in current earnings has been noted. The railroads are rising to meet the demands for their services. Thousands of freight cars have been repaired, new equipment has been purchased, road beds improved. Every section of the country has felt the lifeblood returning as cash has been pumped into communities through railroad expenditures.

But the red light is showing. Instead of having all clear track ahead as they should, the railroads are virtually on a siding waiting for the go sign. That can come with a modernized transportation policy to meet the immense changes that have taken place in the past few years. The existing transportation act serves as a block signal, an unnecessary obstacle to economic recovery in this country.

The need never was greater for a transportation policy that will place all carriers on an equal footing. The problem of how to keep progress growing lies squarely in the laps of those who shape our transportation policy. Let them give the railroads a clear track ahead, an even break with other transportation competition, and watch 'em travel.

Lewis Again "Bites the Hand" That Feeds Him and Kicks His Friends Around

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

Mr. HOFFMAN. Mr. Speaker, because he has a perverted idea of his own power and his own importance and is all puffed up with egotism, John L. Lewis has again given a demonstration by his ungrateful and unfair assault on the House Labor Committee; again shown that he prefers to kick his friends around rather than direct his energies against his opponents.

The chairman of the House Committee on Labor, Mrs. MARY T. NORTON, and several members of that committee made a strenuous fight in committee to assist Mr. Lewis in his plans, which would have resulted, had they been successful, in making it not only possible but probable for the C. I. O. to swallow the A. F. of L.

By their valiant efforts they prevented the adoption of several of the proposed Smith amendments and prevented the adoption of several amendments which I had offered and which would have aided in carrying out the purpose of the National Labor Relations Act. They secured for Lewis and the C. I. O. a compromise bill. In committee they saved Lewis' hide.

In return for their efforts, which have extended over more than a year, the gentlewoman from New Jersey, Chairman NORTON, and her assistants are charged with bringing out a bill which Lewis says "is the fruit of an unholy intrigue between antiunion manufacturers and American Federation of Labor craft leaders, blinded by partisan venom."

Lewis is like a spoiled child. If he cannot have his way in everything, he is mad; and, when he is mad, he is disagreeable and makes a show of himself.

The reaction to Lewis' fit of temper and to his gratuitous abuse should prod the House into giving him and his organization the kind of a spanking he and it have so long deserved. His unreasonableness, his narrow-mindedness, and his policy of attempting to rule or ruin should awaken the House to the real situation and give workingmen the country over a just and equitable labor law, which, while protecting them, will enable employers to assist in solving the unemployment problem.

For several years, Lewis, by the strong-arm process, has been compelling workingmen to contribute a part of their wages to a fund totaling millions of dollars, into which Lewis and his associates have dipped their hands for the purpose of making contributions to political parties which aided the advancement of their own personal and political interests.

Lewis' outright contribution of $470,000 from the funds of the United Mine Workers, his loan of $50,000 to promote the election of Roosevelt, is a notable instance of this. Lewis assumed that by that contribution and loan he had purchased a part of the New Deal administration. He did get ample repayment in the assistance given him by Murphy and Roosevelt in the sit-down strikes in Michigan at the beginning of 1937.

The Senate Civil Liberties Committee aided his organizing drives and pilloried businessmen unmercifully by its investigations, and that assistance was of inestimable value to Lewis, for that committee permitted employees to believe that the Government was behind Lewis and it frightened businessmen so they were afraid to assert their civil rights.

But Lewis was not content with what the White House and its aides gave him. He wanted unquestioned assistance and obedience from the National Government. When the President ventured to oppose some of his requests, he blurted out: It ill behooves one who has supped at labor's table and who has been sheltered in labor's house to curse with equal fervor and fine impartiality both labor and its adversaries when they become locked in a deadly embrace.

Remember when a certain bill was pending before the House and Lewis arrogantly walked into the private office of the Speaker of the House, seated himself, and began to give orders? Remember what happened? Out he went. Apparently he learned nothing from that experience.

More recently he threatened the Democratic Party that, if it did not get into the harness and pull his load, he would put a third party in the field.

From the day when, in 1922, Lewis' telegram to his miners at Herrin, Ill., was followed by the murder of 25 union men, right down to the present moment, Lewis has overestimated his own ability and the power of the C. I. O. and its communistic allies. He is like an inflated balloon. He does not represent organized labor. More properly, his efforts aid labor organizers and politicians who use labor's votes for their own advancement. If his own claims be true, he represents no more than 4,000,000 workers, and there are more than 40,000,000 workers in this country.

His false notions of his own importance will be as flat as the proverbial pancake, if Congress once regains its independence, takes a good look at him and his schemes, and gives him the spanking which he so richly deserves.

As stated, for years he has been collecting dues from workingmen, whose fate in being compelled to toil for what he terms "a starvation wage" he bemoans while himself drawing a $25,000-per-year salary and something like a thousand-dollar-a-month expense account. He has been using part of these dues for political purposes.

He now announces that he is going into every congressional district and defeat every Congressman who opposes his schemes. Evidently Mr. Lewis has reached the conclusion that he is "Mr. Big." According to his own statement, he is going to control the next Congress.

If Congress is really made up of independent, self-respecting Representatives of the people, they will, speaking figuratively, take Mr. Lewis by the seat of the pants and the collar of his coat and heave him out in the garbage dump, where he so deservedly belongs.

That some such notion is abroad in the House is shown by the fact that the gentleman from Virginia, Representative HOWARD SMITH, the chairman of the Special Committee Investigating the National Labor Relations Board, has introduced a bill for an amendment to the Corrupt Practices Act which would prohibit unions from making campaign contributions in Federal elections and which would prohibit unions, their officers, or political committees of which a union officer is a member, from soliciting or receiving campaign funds from union members.

Let that bill go through and Brother Lewis will find that he is just another citizen. All too long he has lived and prospered and grown great politically by shaving the pay checks of workers. Let him once be exposed for what he is; let his political ambitions be made clear, and Lewis, Pressman, and the rest of the crew will become acquainted with real constructive work.

Free Enterprise Is the Issue

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

RADIO ADDRESS BY HON. FREDERICK C. SMITH, OF OHIO

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio

address of the gentleman from Ohio, Hon. FREDERICK C. SMITH over the Columbia Broadcasting System on last Thursday evening; entitled "Free Enterprise Is the Issue:"

Ladies and gentlemen, the coming national election will, in my opinion, be the most crucial in our history. The important issue to be decided will be whether this Nation shall continue to be a nation of free men, able to engage freely in pursuits of their own choosing, subject only to such laws as shall keep them from aggressing upon each other, or whether this Nation shall become a regimented people under a totalitarian form of government. Shall the right of private ownership of property be abolished and be replaced by political ownership? This is the real issue before our country today.

Within the last few years there has developed in our country considerable sentiment against communism, which is continually finding increasing expression. The feeling has now become widespread that communism is definitely a menace and must be combatted. Congress has given this matter recognition and has enacted legislation to check it.

Peculiarly, nearly all the discussion relating to this question, and the efforts made to stop this cult, are based on the assumption that communism is something that is being imposed upon our Nation from the outside. The theory is that it is of alien origin, in the sense of being imported from other countries, particularly Russia.

This is, in my judgment, a false notion, which needs to be exposed, lest we remain ignorant of the facts, which cannot help but seriously hinder us from properly dealing with this serious menace.

It is perhaps true that some of the communistic schemes that are promoted in our country have their origin and stimulus in Russia. But it should be plain to anyone who gives the matter a little thought that this is a comparatively small part of the communistic movement now under way. It should not require much consideration to convince us that by far the greater part of this program is alien to us, not in the sense of being imported from some other land, but only in the sense of proceeding from forces outside of the American system of free enterprise. Those forces, as I shall endeavor to show, originate not only mainly within our own geographic boundaries, but they originate also within our own economy, and what are considered to be our duly constituted institutions and Government.

In my opinion the subversive elements to be feared in this country are not the Communist Party and its allied organizations parading under false names. Nor do the leaders of this cult live in obscure and dark subterranean haunts of illicit intrigue.

As I see it, their abode is right on top of the earth, in the sunshiny open view all about us, in respectable places.

We are blinded to these facts principally because we are apt to put too much faith in labels. This is one of man's great weaknesses. Too often we mistake a label for the thing labeled. Moreover, labels often remain the same, while the things they label change and become something else from what they were when originally labeled. This is especially true of political organizations and systems. A good example of this is the change in meaning that has taken place in the terms illiberal and liberal. When they first came into use in England in the seventeenth and eighteenth centuries the illiberal, or conservative as he was also called, advocated political control and ownership of industry, and high taxes. The liberal was against those things. He stood for private control and ownership of property, for lower taxes, for free enterprise.

See, now, how the meanings of these two terms have completely reversed themselves. Today the liberal stands for political control and ownership of property, for high taxes. The illiberal or reactionary, as he is also called, stands for private ownership, low taxes, free enterprise.

The Tory has become the liberal, and the liberal the Tory.

The great difficulty we have in recognizing the main source of communism is that most of us are woefully ignorant as to what communism really is. We therefore fail to recognize it when we see it.

"Communism," according to the Encyclopedia Britannica, is "the name loosely given to schemes of social organizations depending on the abolition of private property and its absorption into the property of a community as such." Marx defined it simply as "the abolition of private property."

The essential thing about communism is therefore the abolition of private property, and its political control and ownership. That is what communism is, regardless of the banner under which it sails or from whence it comes.

Let us forget labels, then, and search for the thing itself. Certainly we do not need to go far or greatly exert our energies to find plenty of it. Our material is plentiful in the many novel and revolutionary programs put in operation by the New Deal in the last 7 years.

So confused and numerous have been these schemes that it has been impossible for most of us to fully understand them and what they signify. However, just a little analysis of these schemes will greatly clarify this whole situation.

Just what is the New Deal?

What is the nature of the ostensible remedies it has been using to cure our sick economy?

How have they worked?

Examine all the New Deal recovery measures and you will find each sets up a board or bureau and a multitude of political jobs.

Examine what each one of these agencies actually does and you will find it engaged almost wholly in drawing blood—taxes—from one part of the economic body and reinjecting that same blood—taxes—into another part of the same economic body. But it isn't quite as simple as that. There's just a little trick in it. Having drawn into their syringes blood from one part of the economic body, the New Deal economic doctors inject as much of the blood as they can into their own veins and what is left they inject into another part of the economic body.

Examine any or all of the New Deal recovery measures, up and down, in and out, crosswise or otherwise, and you will find that is essentially what the New Deal is.

Hence we see our sick economic body shriveling up, and the political body ballooning out, getting bigger and bigger.

A multitude of bureaus and about 500,000 new political jobs at a cost of $1,000,000,000 a year have been created to operate this enterprise-destroying and political power-building machine.

Here is an example of how it works.

The New Deal doctors by the end of 1939 had mortgaged and taxed all the people in the country, including the farmers, for about $3,000,000,000 for farm-benefit payments. They took about $300,000,000 of this for their share and gave the farmers the remaining $2,700,000,000 and a Federal mortgage on their farms. The farmers' share, on a population basis, of the Federal debt added during that time amounts to more than $4,500,000,000.

All this mortgaging and spending is arbitrarily taxing away billions and billions of dollars from certain States, groups, and individuals and giving them to other States, groups, and individuals. For example, from 1934 to 1939 Mississippi obligated herself in taxes and debt for about $40,000,000 and received in grants, farm subsidies, etc., more than $400,000,000, or 10 for 1.

Ohio in the same time obligated herself in taxes and debt for two and a quarter billion dollars and received in grants, payments, etc., a little more than one and a quarter billions.

Illinois obligated herself in debt and taxes for three and a half billions and received back one and a half billions.

What is all this taking away by political force from some States, groups, and individuals of the product of their labors, and giving it to other States, groups, and individuals but the destruction of private property? Here we have demonstrated clearly the truth of the old aphorism that "the power to tax is the power to destroy."

Consider the money program. Is there any essential difference between the political confiscation of our gold money and forcing us to use a political promise-to-pay money, and the political confiscation by the Communists in Russia of their hard money and forcing their people to use a political promise-to-pay money?

One of the basic tenets of communism is the prohibition of the use of hard money by the people. All Communists have regarded this as the most effectual weapon for destroying private property. If they have demonstrated one thing more than any other in Russia it is this: Ownership of private property cannot be prevented where hard money is in use by the people, and where it is not so in use all private property, down to the last morsel of bread, is in jeopardy.

Where private property is protected, there you will always find the greatest protection of human rights, the most employment, and the highest standard of living. Our Constitution provided the greatest protection of property rights, and hence of human rights, under which our Nation enjoyed the highest standard of living ever attained by any people.

On the other hand, where the right of private ownership of property is not protected, there you will find human rights destroyed also. There you will find a lower standard of living, as prevails in Russia today, where people may not even own their homes, and their very lives are in the control of the political authority. It can and has sent them by the millions into exile to perish from hunger and cold.

The United States Housing Authority scheme, which is well under way, proposes to abolish private ownership of four to six million homes. It proposes to confiscate by taxation not less than $40,000,000,000 to build and finance politically owned homes. It is not true these houses are owned by the community in which they are built. They are owned by the Federal Government the same as post offices and other Federal buildings. What possibly could be more communistic than political ownership of our homes, the most sacred possession of the family?

So we could go on and show how other New Deal agencies are communistic. The T. V. A. is communism. So are many of the activities of the 30 Government corporations that have been formed.

The almost complete political control now exercised over the banks and credit, and the control which has been set up over all industry, are leading to communism. Political control of industry was considered by the Communists in Russia as an essential step to complete political ownership and operation. Political planning and political control must eventually end in political ownership.

The New Deal spending machine has now become a veritable Frankenstein that is out of control, whose yawning jaws demand more and ever more money to spend. The Federal debt keeps zooming upward and threatens us more and more with national bankruptcy. Should this occur, totalitarianism will be the result, with the complete destruction of private property.

The issue before the American people is clear. Communism or free enterprise. Nor is there any half-way ground. We must have one or the other. We cannot exist half slave and half free.

I thank you.

Laying of the Cornerstone, New Federal Building, Columbia, Tenn.

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

ADDRESSES BY HON. JAMES A. FARLEY AND OTHERS

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by the Honorable James A. Farley, Postmaster General of the United States, at the laying of the cornerstone of the new Federal building at Columbia, Tenn., on Monday, April 1, 1940; the introduction given by Judge W. C. Whitthorne, judge of the county and criminal courts of Maury County; and the address which I gave on this occasion:

The CHAIRMAN (Mr. W. D. Hastings). I take pleasure in presenting Hon. W. C. Whitthorne, judge of our county and criminal courts, who will introduce the speaker of the day.

Judge WHITTHORNE. We are assembled here today for the purpose of laying the cornerstone of a building to be used for a worthy public service.

This thriving historical middle Tennessee town has heretofore been honored by the visits of distinguished men who became Presidents of the United States—Andrew Jackson, Martin Van Buren, and Andrew Johnson—and this was the home of President James K. Polk. At one other time we had the pleasure of having with us the Honorable Cave Johnson, a Postmaster General of the United States.

Hence, we are very happy to have with us on this auspicious and eventful occasion another eminent and distinguished citizen of the United States, our present Postmaster General, who by his honesty, courage, and perseverance has attained a position worthy of the commendation of all good citizens and an inspiration to all young men. He has not only studied the history of mankind in their struggle for life, liberty, and happiness, but he participated in this struggle, and by his actions has shown that he sympathizes with them.

It becomes my pleasure to present to you the Honorable James A. Farley, Postmaster General of the United States.

Mr. FARLEY. It is a pleasure to be here today to take part in Columbia's program for the national festival of Mule Day. It seems to me to be especially appropriate that you should include among the events of the day the laying of the cornerstone of this fine new building, a symbol of our National Government.

I repeat it is a source of refreshing happiness to be here. It is an inspiration to travel across the State of Tennessee by rail and highway, or to look down from an airplane upon the panorama that unrolls in constantly changing mood from the pine-topped peaks of the Smoky Mountains to the slowly flowing waters of the Mississippi.

Your highways that lead through mountain passes into this great bluegrass basin indeed are roads of romance and adventure, even as they are pathways to progress. In riding over these highways, it is impossible to escape the thought that they follow the trails of the wilderness beaten out by rugged men who carried squirrel rifles and chopping axes, and whose hardy souls knew no fear, admitted no defeat.

Today you have paid a fitting tribute to the livestock industry; especially to that patient beast of burden, the target of many a farm and city joke, the American mule. That loyal animal down through the years has furnished the power to furrow the fields, to transport to market the product of factory and farm and has been an indispensable part of the motive power of the American Army—the humble, stalwart, dependable, American mule. This annual Mule Day celebration, which, I have learned, has been taking place here in one form or another for 100 years, is but another proof that the vital spirit of the pioneer still survives in Tennessee. I can see with my own eyes that it is active here in Maury County.

Now, there are among you, I am sure, many who have a more intimate acquaintance with our friend the mule than I. Some of you are sellers; some are buyers. You can tell a good mule from an indifferent mule by one look at the slope of his withers or the trim of his hock. You could not be bamboozled by a mule—and it would be folly for me, if I so desired, to impress you with my superior qualifications as a competent judge of this kind of work animal. I do know that he is a sturdy toiler, who gives an honest day's work for an honest day's hay. That is enough for me.

In a lonely moment some of my southern friends, who in the course of time have exchanged their blue jeans for white collars, and callouses on their hands for callouses on more sedentary places, will fondly recall for me the days when from daylight to sundown they used to walk in old Beck's footsteps down the cotton rows. Without exception they speak of those days with gentle yearning, and of old Beck with admiration and affection. They will tell me how the dew sparkled like diamonds on the cotton squares, how they filled their straw hats with cool hickory leaves against the midday sun, and how the sweetest sound they ever heard, or ever hoped to hear, was good old Beck's hee-haw in the golden dusk that meant both to him and the mule—"take out."

Unfortunately that is an experience which life has denied me. In my youth I never had the benison of such close companionship with a mule. You judges of stock can tell that, I imagine, by the slope of my withers. I wore blue jeans all right, but my quitting time came with a whistle, not with a bray.

Nevertheless, I have had the opportunity in a personal way to learn a great deal about—and from—a mule, since the people of my party presented to me, as chairman of the national committee, a very fine and attractive specimen. I have heard you talk here today about "sugar" mules and "cotton" mules. Judging by her size, I have concluded that Queenie must be a "cotton" mule. But I have learned a lot about mules from Queenie.

I have learned, for example, that a mule may become frightened and run away but will always stop before doing himself bodily harm. That is more than some people in politics can do. In a like manner, a mule will always stop eating before he founders. Sometimes I have to remind a patronage seeker to take that hint.

My association with mules leads me to think that the outstanding characteristic so often attributed to them, called stubbornness, is no more than common, level-headed mule sense, backed by strong conviction. It seems to me that we might use more of that homely virtue to our advantage right now in the solution of some of our national problems.

In this county and in other parts of middle Tennessee you folks see in the mule and livestock industry something well worth developing. That vision has made this celebration an event of national interest. It has done more. Transferred to thousands of farms in this section, that vision has kept alive and growing an important American industry which has contributed largely to a better balanced national economy. It has increased the income of you farmers.

I have learned that the total value of mules sold on the streets of Columbia and in the barns here last year was approximately $2,000,000. I have been told also that there are several other markets in middle Tennessee where the results in farmer income are equally as good. One of your auditors informs me that in his county alone there are 10,000 mules, or an average of 2 mules to each farm. I am glad to learn that the mule census has been completed.

We came here from your capital city this morning over the Andrew Jackson Highway, and into the old home of James K. Polk. To mention the name of Jackson is but to start a chain of meditation upon one of the greatest of all Americans—a stalwart son of Tennessee, who handed the National Government back to the people when it was in danger of slipping from their grasp. Jackson gave democracy a new birth, a new meaning; he made it a human reality.

In Nashville I heard the story left to us by Uncle Alfred, a faithful servant of the Hermitage for many years—a story which suggests the iron will of Andrew Jackson, that characteristic which some have called stubbornness.

A visitor to the Hermitage asked Uncle Alfred if he thought Old Hickory went to heaven after his death.

"I don't know 'bout dat, but ef'en he wanted to, who's gwine to stop him?" asked the aged servant.

It was that characteristic which brooked no interference when he thought he was right that enabled Jackson to win his battles for the people against formidable odds. He needs no eulogy, no sales talk to anyone in Tennessee. He lives in your heart even as he grows in the heart of every real American. He is the living symbol of the democratic form of government which derives its just powers from the consent of the governed and which serves with equal justice the lowly and the obscure, as well as the wealthy and the publicized.

It was in the spirit of Andrew Jackson that a new Chief Executive entered the White House on the 4th of March in 1933. And may it be said to his everlasting credit no American President since the days of Andrew Jackson has fought a more desperate battle to improve the social conditions of this Nation, or won a more decisive and permanent victory, than our good friend Franklin D. Roosevelt.

You people who breathe the balmy air of this great basin in middle Tennessee and who feed your flocks and breed your horses and mules on the bluegrass that grows in such abundance in these fruitful valleys are fully justified when your hearts swell with honest pride in the knowledge of your contribution to our national life. It is less than 50 miles from the home of Jackson to the home of Polk. In this land of the good earth, the destiny of a greater America was significantly, eternally influenced by these two neighbors who left their indelible imprint upon the pages of our Nation's history.

Tennessee has produced other distinguished Americans. I count it among the cherished privileges of my life to have served in the Cabinet of the President of the United States with another great son of Tennessee, the Honorable Secretary of State, Cordell Hull. His character, his integrity, his humility, and his marked unselfishness have brought him to a foremost position among all men. He is truly a man that all Tennessee, all America, and, indeed, all people in the world who believe in fair dealing, justice, human rights, religious and racial freedom, and peace among men sincerely and fully appreciate.

But while you pride yourselves on your great leaders, past and present, it is easy to see that your faces are turned toward the

future. Anyone can sense the fact that you are conscious of the opportunities that await you here in this valley. Your faith is well founded, because it rests upon a stabilized agriculture.

During the past 7 years the eyes of the Nation have turned to this region because of the progress of the monumental development program of the T. V. A. Here in Columbia, a major distribution point for the floods of cheap electricity that come over the rim from the Tennessee River, you have the perception to see the comforts, conveniences, and aids that have been made possible to you for your homes, your industries, and your farms. Here for the first time it is being demonstrated that a sound conservation program, based on the wise use and control of water, can increase the abundance of an entire region and broaden the promise of its future.

We have seen evidence today here in Columbia that your idea of agriculture embraces more than just plowing the land, seeding crops, and reaping a harvest. This 4-mile march of mules, ponies, and walking horses is but a bird's-eye view of your splendid livestock industry. Raising livestock is as distinctly agricultural as the planting of corn or the threshing of wheat. It is an activity which I earnestly hope will receive much greater encouragement.

We are assembled today in the shadow of the ancestral home of James K. Polk, a former President of the United States, to lay the cornerstone of an impressive building of the American Government. Once again, it is impossible for us to get away from that feeling of his unseen presence in our midst.

Like many American cities, Columbia had its beginning in the days of the pioneer. It is recorded that on April 1, 1807, exactly 133 years ago today, your postmaster, Isaac Roberts, rendered his first report. By January 1, 1814, Benjamin Joslin was delivering the mail here once a week on a route from Nashville extending to Franklin, Columbia, Big Spring, Bear Creek, the Factors, McIntoshville to Chickasaw. If Joslin was a native son, I'll venture that he rode a mule in making his weekly rounds.

The first record of any money coming into the Department from Columbia was in 1827. It amounted to $833.14. Compare that return with the receipts of your good postmaster, Joe Dedman, for the fiscal year 1939, amounting to $56,241. The steady progress of Columbia is known not only to the officials of the Post Office Department but it is even better known here in your own community, in your State, and throughout the country. Your city is eminent everywhere as a center of culture and refinement; a community of God-fearing, industrious, home-loving Americans.

You have beautiful and attractive churches, schools, homes, and business buildings. This fine edifice will lend additional importance to your city. When completed it will rank high among the most stately and impressive structures ever erected in any city by the Federal Government. It will be a monument of grace and distinction, one that for years will be a source of patriotic pride and civic interest to you, your neighbors, and your visitors.

In following a principle of life, to give honor where honor is due, and to give credit to those to whom credit belongs, may I call attention to the outstanding contribution and long hours of intensive work devoted to this enterprise by our mutual friend the distinguished senior Senator from Tennessee, Hon. KENNETH MCKELLAR?

At all hours of the day, and some hours of the night, you would find Senator MCKELLAR beside the desk of Smith Purdum, the Fourth Assistant Postmaster General, or at the planning board of the Supervising Architect of the Federal Works Agency, requesting, pleading, arguing; insisting that Columbia be provided with one of the finest, one of the most modern, beautiful structures among our family of American Government buildings. As a result, when this edifice is completed, that is exactly what you will have. I can also say that the able statesmanship of Senator MCKELLAR helped to secure the necessary appropriations for the dams of the Tennessee Valley Authority, and for many things that are beneficial to the people of the State of Tennessee.

In conclusion, may I congratulate you one and all on the good fellowship of this community and the good fortune that has come to Columbia in the erection of this magnificent Government house.

Mr. COURTNEY. Mr. Chairman, General Farley, Governor Cooper, distinguished guests, and friends, I can add nothing, of course, to what has been said here this afternoon. I do want to say that I was requested by Senator MCKELLAR and Senator STEWART to express their sincere regret and disappointment at being unable to be present today. They had made preparations to come but at the last moment the majority leader in the Senate requested them to remain on account of the legislation now pending in that body, of vital import to the Nation, upon which the Senate is so closely divided.

The appropriation for the building that is to stand here was secured by Senator MCKELLAR and my lamented predecessor, Judge Clarence W. Turner, sometime ago. I am sure that from his home in the skies Judge Turner looks down upon this scene today and smiles to see the fruition of his labors. We owe Senator MCKELLAR and the memory of my departed friend a lasting debt of gratitude. When the specifications came out designating limestone for the building, Senator MCKELLAR insisted on marble. The architects and the Post Office Department acquiesced in his insistence. You will have here, therefore, a building of rare beauty and dignity. Not one to last for half a century but one that generation after generation down the corridor of time will wonder at and admire.

For myself, as Representative from this district, and for our people, I want to express sincere and grateful thanks to General Farley and his distinguished assistants for their presence here today. Their acceptance of the invitation extended them by your competent and tireless chairman and their willingness to undergo the hardships of long travel to come is characteristic of the Post Office Department as conducted by them in Washington. In the short time that I have been in the House I have enjoyed my contacts with that Department. Every official connected with it is obliging and courteous. It makes no difference whether one has been in Congress 20 days or 20 years, if a request made is reasonable, it is granted regardless of seniority of service.

I am glad that they had the opportunity of seeing this section of my district. A section rich in resources, rich in legend, song, and history and rich in the character of its citizenship. A section that has shared with the Nation native sons that have become great statesmen, great soldiers, great churchmen, great authors, and great executives. I know that they will remember their visit here always and feel repaid for the time so cheerfully given us.

As for General Farley, there are few men like him. If he has an enemy in the world I never heard of him. A genial man's man loved by all, but withal a devout and constant Christian, without a moral weakness, who will leave any social gathering when the church calls to prayer. By his own rugged will and determination he has fought his way from obscurity to a commanding position as a statesman in the Nation's affairs. But in that long, hard struggle he has never shown a trace of bitterness but all along the way has loved his neighbor as himself.

I recall these lines from a poem I read once:

"I would not sit in the scorner's seat nor hurl the cynic's ban,
Let me live in a house by the side of the road and be a friend to man.
I know there are brook-gladdened meadows ahead and mountains of wearisome height,
That the road stretches on through the long afternoon and passes away to the night;
But still I rejoice when the strangers rejoice and weep with the strangers that moan,
Nor live in my house by the side of the road as one who lives alone.
No; I would not sit in the scorner's seat nor hurl the cynic's ban,
Let me live in the house by the side of the road and be a friend to man."

If any man ever exemplified that homely but magnificent philosophy of life Jim Farley has and we are grateful to him beyond measure for his presence here today.

Sales of Military Airplanes

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

EDITORIAL FROM THE NEW ORLEANS PICAYUNE

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Picayune of March 31, 1940:

[From the New Orleans Picayune of March 31, 1940]

NO DALLYING HERE

Results obtained by the House investigating committee on military airplane sales to the Allies might qualify as exhibit 1 on how a congressional committee can expedite its work. It took this group only a few hours to find out what it wanted to know and issue an informal report.

At the time the investigation was authorized it was said that there were most suspicious circumstances to be explained. Had the sales abroad resulted in raising prices for American planes? Had the exports interfered with the Army procurement of the latest planes? Had we parted with some of our military secrets? Moreover, had Mr. Morgenthau and Ambassador Bullitt cajoled President Roosevelt into overriding protests of Secretary Woodring and Army officials against releasing late-model planes?

Some committees of recent model could have fussed and dallied over trifles in connection with such questions for months. But, as it was pointed out before the inquiry began, there was nothing to justify a long hearing that would complicate the airplane manufacturing programs because the questions could be answered by a few readily available witnesses. For once, evidently, that is how a congressional committee felt about such a situation. It questioned

Secretary Woodring, Assistant Secretary Johnson, General Marshall, and a few others who should know, and got the answers. A little later the committee members informally gave their approval to the policies now being followed.

Meanwhile several plane manufacturers and a special Presidential committee appointed to coordinate domestic and foreign airplane orders conferred and issued a joint statement: "There was general agreement that large additional foreign orders can be handled in a manner affording complete protection to our national interest and to the satisfaction of the airplane industry."

Thus swiftly and satisfactorily concluded is an investigation that might have been spun out to serve, at least temporarily, propagandists, politicians, and special interests—but wasn't.

Use of Gold and Silver as Money and Its Effect on Our National Prosperity

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1940

LETTER FROM J. H. EBY

Mr. WHITE of Idaho. Mr. Speaker, in studying existing business conditions and business trends in contrast with the conditions in this country in the great era of development after the Civil War it is interesting to note the part played by the upbuilding of the national commonwealth by the development of our mining industries and the production and use of the precious metals—gold and silver—in our monetary system, as outlined in a letter from a pioneer mining engineer, J. H. Eby, which is inserted herewith.

SPOKANE, WASH., *April 2, 1940.*

HON. COMPTON I. WHITE,
Member, House Committee on Coinage, Weights, and Measures, Washington, D. C.

DEAR COMPTON: It seems that almost every congressional committee except this one (Coinage, Weights, and Measures) has been invoked to legislate in the interest of having the country return to the normal of the good old days when jobs hunted the men with work for every man who was willing to do it.

There has been a lot of talk of no new frontiers, no more land to take up, no more mineral in the ground for the individual; in fact, there is nothing more to be won except by the use of large capital to finance mining. From 1849 until the nineties there were none of the regulatory and paternalistic agencies of the Government, on the land there was no rural-mail delivery, or electrification programs, but there was work for labor and a good living at least for the farmer, yet there was no sign of defeatism as today which is the antithesis of the pioneer spirit which made our country great.

The present lamentable conditions which Congress has been ineffectively trying to remedy and unless they soon succeed will see the end of that spirit which made our Nation great to be replaced by the inferiority complex of defeatism. It seems that the remedy can best be found not by the high-brow studies of abstract economics but by a study of the conditions under which the spirit which made us great existed and a return to them from the present conditions of general depression of today. It is through the individual laborer, farmer, miner, merchant, that this must be done, not by the innumerable Government agencies of regulation, subsidization, wage-hour laws, social-security laws, etc., ad infinitum, but by putting him on his own feet and giving him a chance to work out his own salvation.

In considering the conditions under which the great development took place the medium of exchange as it was then and as it has become now will get at the root of the present troubles. As a concrete case for comparison permit me to use the mining industry with which I am familiar and don't have to go back any further than the late eighties and early nineties as I saw it in the mining camps of Colorado.

In those days the jobs were hunting the men. There were no unemployed or idle men except those who chose to be so. Wages were lower than now, hours were longer, and a 60- or 70-hour week was the rule, and they wanted it. Paydays came once a month, and the wages were paid in gold and silver coin. Everybody had plenty of money, and many had so much they wanted to get rid of it by gambling. There were no really large capitalized companies with offices in the East operating, and scores of local mines were developed and producing at a profit, entirely locally owned and financed.

Gold and silver coin was used exclusively and they refused to accept any paper currency even if authorized by Congress. They would have none of it, and it was considered an insult to offer it to them. If one reached the camp with a pocketbook full of paper money used in the East, they refused to accept it, and it was only at the bank where they would exchange it for gold and silver coin, to be gotten rid of by sending it out.

In 1926, I visited the same camps. Gold and silver coin had all but disappeared. The mines paid with bank checks which paid in paper money, Federal Reserve notes, and so forth. The mines were producing as much as before, but instead of 20 or 30 locally-owned mines and new developments constantly adding, there were only two or three, all owned and controlled by Eastern capital. The wages were almost doubled and the hours reduced from 70 to 56 per week. Boarding houses charged higher rates, and costs of living had gone up when they should have gone down. The towns were dead, with many business places and residences boarded up; grass growing in the streets which knew nothing but dust and mud from the tramp of feet for 24 hours per day in the past. No longer were pack trains needed to reach the mines, for there were roads instead of trails, and autos and trucks in place of horses and mules. Nor were the slow and crooked narrow-gage railroads, with 10 cents per mile for passengers and all the traffic would bear on freight, the only connection with the outside world. New million-dollar highways connected them with the outside world. There was so little money circulating that a gambler could not have earned his salt where 10 gambling houses operated 24 hours per day. It took weeks and even months to rustle a job.

This tells the story of fact which I wish to put over to you. Your committee can change this, and it is your duty to do so if you have the welfare of our country at heart. In those days the Government would not accept anything but gold and silver coin for taxes, payments on patents of homesteads, or mining claims and tariffs.

There is plenty of gold stored at Fort Knox, Ky., and all the silver produced in the United States, which is not much, could be coined at the rate of $100,000,000 per month and used to pay Government expenses and retire bonds and paper money. In 6 months' time there would be a prosperity greater than any we have had before if this coin were kept in circulation and not hoarded.

So far as the loss of gold coin by wear in use, that can be reduced to the costs required to maintain a paper currency in decent condition. Our advanced knowledge of alloys and the many different alloy metals not known before except as curiosities has made this possible, and if the Bureau of Standards can't do it there are scores of research laboratories which could in short order develop not only one but perhaps several such hard-gold alloys.

I respectfully ask you to give this your most careful consideration for the purpose of making an effective contribution to remedying the unhealthy conditions persisting in spite of all the other efforts of Congress.

Respectfully,

J. H. EBY.

Federal Bureau of Investigation

EXTENSION OF REMARKS

OF

HON. AARON LANE FORD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

RESOLUTION BY THE UNITED STATES ATTORNEYS' ASSOCIATION

Mr. FORD of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Unitcd States Attorneys' Association:

Whereas certain unwarranted and unfounded attacks have been made during the recent weeks against the Federal Bureau of Investigation and its Director, Mr. J. Edgar Hoover; and

Whereas there is no group in better position to know intimately and at first hand of the type of work and the manner of performance of such work by the special agents of the Federal Bureau of Investigation than the United States district attorneys: Therefore be it

Resolved by the United States Attorneys Association in conference assembled, That its commendation, approval, and endorsement be given to Director J. Edgar Hoover and his administration of the Federal Bureau of Investigation—

(a) For the fair and efficient investigations conducted and for the valuable training and crime statistics services provided to other law-enforcement agencies by it.

(b) For the high standards of ethics and conduct maintained by special agents of the Federal Bureau of Investigation in its law-enforcement work.

(c) Because of the high regard for the preservation of civil liberties while conducting its investigations in order to procure evidence for vigorous enforcement of the law.

Television Controversy

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

EDITORIAL FROM THE WASHINGTON POST

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of April 8, 1940, entitled "Television Controversy":

[From the Washington Post of April 8, 1940]

TELEVISION CONTROVERSY

Two weeks ago the Supreme Court handed down an opinion which has a very direct bearing upon the controversy between the Federal Communications Commission and the Radio Corporation of America over the commercialization of television broadcasts and the promotional methods used to sell television sets. In that case (*Federal Communications Commission* v. *Sanders Brothers Radio Station*), the Court reversed a decision of the court of appeals and upheld the validity of an F. C. C. order permitting establishment of an additional broadcasting station in Dubuque, Iowa.

Evidence showed that the station, already licensed, had operated at a loss. As the new station would compete with the existing station for advertising support, it was contended by the aggrieved party that the F. C. C. ought to have denied the license.

Pointing out that the case raised a fundamental question as to the functions and powers of the Commission, the Supreme Court then proceeded to state at considerable length what it conceived to be the purpose of the Communications Act and the limitations imposed by it upon the F. C. C. The Court particularly stressed the fact that Congress has left the field of broadcasting open to free competition and that it is no part of the regulatory scheme to suppress wasteful competitive practices.

Of special significance in clarifying the scope of the F. C. C.'s authority is the Court's assertion that the Communications Act does not regulate the business of broadcasters. The Commission is given no supervisory control of radio or television programs, of business management, or of policy. In short, the Court concluded, "the broadcasting field is open to anyone, provided there be an available frequency over which he can broadcast without interference to others, if he shows his competency, the adequacy of his equipment, and financial ability to make good use of the assigned channel."

This opinion seems to warrant Senator LUNDEEN's charge that the F. C. C., in suspending its order to allow limited commercial television broadcasts, is trying to exercise power that has not been granted it by Congress. Such is evidently the view of Commissioner Craven, who also dissents from the majority view that the recent promotional activities of R. C. A. may "freeze" technical development in television.

As Commissioner Craven points out, there is no reason why persons who are aware of the fluid state of television should not buy receivers if they are willing to assume the financial risks involved. It is, of course, important that the public be informed that television is still in a highly experimental stage and that transmission standards are not yet established. Owners of receiving sets must be prepared for changes that will render such equipment obsolete within a limited time.

Having acquainted the public with the facts, there is no necessity and, indeed, no warrant in law for the F. C. C. to set itself up as a sort of czar over the television industry. The high prices charged for television sets will prevent most people of small means from purchasing them. And those who are able to buy will help to finance the development of an infant industry. That is the traditional American way of doing things, and the way which encourages private enterprise to go forward with costly preliminary developmental work.

If false or misleading statements are made by manufacturers in offering television sets for sale, the Federal Trade Commission, not the F. C. C., is the regulatory agency which should call the offenders to account.

Seven Eventful Years Under Roosevelt

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by my distinguished colleague [Mr. MEAD] before the Democratic National Club, New York City, April 6, 1940, on the subject Seven Eventful Years Under Roosevelt.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. MEAD. Jefferson, patron saint of the party, inspirational advocate of representative government, archliberal of his day, richly earned our respect and homage. A man of courage and realism, a master of many talents, devoted to the cause of humanity and democracy, he essayed the unpredictable, the unprecedented, the radical, in political behavior. He attained his fame as a leader in the pursuits of peace—engraved his name in history by advancing the cause of human liberty and social justice.

Roosevelt, like Jefferson, is the archliberal of this day. The foremost defender and advocate of representative government in the world, he has attained his fame by administering to human needs. Like the founder of the party, he seeks a formula that will modernize our democracy. Both were born in wealth; both lived to serve the poor and unfortunate. Like Jefferson, he is a man of many talents—a man of culture, education, and refinement. Practical, positive, and progressive, like Jefferson, he does not cater to custom or precedent when those conventions impede the functioning of representative government or tamper with the advancement of human rights. He, too, attained fame in times of peace and under the most confounding of social and economic circumstances.

Roosevelt is the Jefferson of this day. Criticized by some for his liberalism, beloved by the masses for his humanism, he is a beacon of hope shining throughout a troubled, war-torn world.

I am proud that I have been, and that I am now, on his side. I came here tonight not to defend but to acclaim the administration; not to cover up but to review the first 7 years of the New Deal. While it is true that perhaps we are too closely associated with our party politics, or bewildered at times by the constant attacks of the opposition, it is likewise true that history will record the last 7 years indelibly upon the memory of America as years of heroic leadership, matchless statesmanship, and of unexcelled progress.

When bitter partisanship dies down and we are able to review this era in the light of truth and justice, they will be listed as 7 triumphant years, and the records and the personalities of those that led the forces of democracy in this fight will be listed among the cherished memories of our Republic.

New York may well be proud of the rich contribution it has made during these 7 fateful years. It was a New Yorker, a member of this club, who was President of the United States and leader of the administrative forces during these difficult days. The name of our distinguished fellow member, Franklin D. Roosevelt, will never perish. It was another great New Yorker, another member of this club, whose unequaled political leadership, whose devoted loyalty as a member of the Cabinet, makes us stand up and cheer at the mention of Jim Farley's name. It was a third New Yorker, likewise a respected member of this club, whose genius and creative ability, whose loyalty and steadfast devotion to the cause of the unfortunate, gave him inspiriation and strength to propose and to defend the major measures of this administration. We all salute our own BOB WAGNER.

No one could recite the story of the 7 eventful years without reviving the memory of the black, bleak winter of '32 and '33. No one could credit or condemn the present administration without a knowledge of the condition of the country when it assumed the responsibilities of government. As we recall the conditions in our Nation, after 12 years of continuous Republican administration, and as we survey conditions in the United States today, after 7 years of Democratic control, we realize that the country is far better off than it was in March of 1933.

I have here an article from the New York Times, dated March 3, 1934, authored by a most respected authority, Turner Catledge, giving a description of conditions in this country 7 years ago. This description is not mine, it is one published by the New York

Times. It is entitled "A Memorable Day," from which I read this excerpt:

"Few people who live in Washington will ever forget the New Deal's natal day. That day dawned a dark one in every respect. The great depression hung over the country like a darkening cloud. Banks were closing literally by the hundreds. Life savings in bank accounts and securities were being blown away like so much dust. Homes and farms were going on the auction block in ever-increasing numbers. In certain sections citizens were beginning to grow desperate. Word reached Washington that morning of hungry people raiding a food store in one community in the Southwest. In another State, only a few days before, irate citizens had forcibly stopped a foreclosure sale, and in another they had actually dragged a judge from the bench and threatened to tar and feather him for carrying out the State law in declaring the forfeit on a farmer's mortgage."

When we recall the bread lines of hungry, desperate men, the burning of grain for fuel, the bankruptcy of business, the failures of our banks, the desperation and desolation everywhere, we can give thanks, on this anniversary, to a Democratic administration which relieved us of those conditions and rescued the Government from the abyss into which it was plunging.

Under the inspiring leadership of President Roosevelt, Congress met in the spring of 1933, in the now famous 100-day session.

Through its acts homes were saved from foreclosure; farm mortgages were refinanced; banking was stabilized; deposits were saved and guaranteed; railroads, insurance companies, utilities, and corporations were bailed out of hopelessness; jobs were provided through a program of emergency public works; bankrupt cities and communities were assisted in meeting relief burdens; a Nation was filled with new hope and refreshed confidence.

Gone were the apple venders, the soup lines, and the hunger marches. Gone was instability, insecurity, and wholesale impoverishment. Gone was the blackness and helplessness of national disaster.

In their place came stability, security, and the breath of promise of better things to come.

That was the revealing chapter in modern American history which proved that democracy can work when emergency demands it and when capable leadership commands it.

Franklin D. Roosevelt accomplished the most difficult economic task that ever confronted an American President—and he mastered the task with speed, assurance, and unfailing cheerfulness. By the success of the emergency program he rescued an embittered Nation and he bound together the scattered hopes of 120,000,000 desperate people.

After the emergency program was a reality, after the rescue had been effected, after faith and confidence had been restored, it was then the duty and obligation of the administration to plug up the financial leaks, to remedy the social defects, to prevent further economic losses and future failures by bringing our laggard Government up to date. Farm income had to be increased, consumers' power had to be augmented, our unemployed had to be put to work, our waning resources had to be conserved. While it took courage and leadership, the administration, with one advance after another, brought guidance and direction to the utility and the investment trusts; required honesty and a higher form of ethics in the exchanges of the nations; gave stability and confidence to our financial organizations; provided higher labor standards for our workers, social security for our unemployed and our aged, added work opportunities in the conservation camps, and on public-work projects. It laid down the formula upon which the new social and political order must rest; it modernized the activities of Government, delayed altogether too long by submissive reactionary influences; it pointed the way through the steady extension and expansion of these new activities of Government to the ultimate correction of our economic difficulties.

Unfortunately, the recovery and reform program was not as acceptable when confidence was restored, and the outlook made brighter, as was the case with the emergency rescuing program. Reforms meant restraint, a higher moral code, a more equitable sharing of the Nation's wealth. Recovery, while it meant jobs and business and added wealth, and increased consuming power, likewise, of necessity, meant increased tax rates, and the violent opposition of many powerful influences. For years, in local, district, circuit, and Supreme Courts, a Nation-wide barrage of attacks from the most potent and influential sources was leveled against almost every reform measure of the administration. While time was provided to enable the Nation to adjust its differences, and to solve its problems, years were wasted in futile legal strife before finally the legislative and the administrative branches of the Government were accorded the wholesome and the considerate cooperation of the judicial arm of the Government. Today, after years of effort, the formula is a reality, the new order has proved itself successful, and the administration has accomplished its progressive march from one necessary readjustment to another. The plans and policies invoked by President Roosevelt, first to rescue the country from a debacle, and thence to promote the public welfare; to maintain order, and to encourage national prosperity, became known as the New Deal recovery program. It was the logical answer to the steady expansion of our Nation's productive efficiency brought about by improved means, by modern methods, by machine refinements. It is our answer to the force of economic pressure, resulting from a steady progress toward social and economic interdependence. Without the New Deal program, agriculture would be prostrate, industry in the throes of depression, labor in a state of bewilderment. For America to have resisted it, instead of working in harmony with natural economic law, would have created confusion, worse confounded.

As a Nation, we still have our problems, but they are far less serious than they were 7 years ago. We are on the steady upward grade. Under conditions of safety, of confidence, and of opportunity we are far better off than any other nation in the world. We have proved our ability as a representative democracy to master our complex problems of economics and of Government.

The prosperity of the future depends upon the continued sympathetic and enthusiastic administration of the recovery program.

We have embarked on a Nation-wide program which not only envisions a happy, secure, peaceful people, but likewise affords concrete and practical methods for our future stability.

For the millions who toil for a livelihood we have granted emancipation from industrial slavery, long hours, inadequate pay, child labor, and cutthroat practices of competition; for the unemployed, for the bewildered youth, and for the needy aged we have provided a wholesome, democratic, effective system of social security; for the conservation of our vast natural resources we have established measures designed to preserve the fertility of our soil, protect our forests, and halt the devastating ravages of erosion and floods; for industry, commerce, and transportation we have opened new pathways of prosperity and abundance, which has brought them to the levels of the predepression years; for agriculture and for the farm producer we have attained a steadily rising economy, the benefits of which now pour into the bloodstream of the entire Nation.

We have laid deeply the mudsills of a great, liberal, all-embracing, democratic program. Its superstructure will be erected and maintained by its friends, the Democratic Party. Despite the merciless and capable opposition of many powerful influences of the old order, we will carry on our natural and appointed task—the task of making democracy progress.

In 1933 we recaptured democracy for America through liberal processes. In 1940 we will continue our command. We have the courage; we have the formula; we have the leadership.

The Farmer and the Forest Service

EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

RADIO ADDRESS BY HON. GIFFORD PINCHOT

Mr. PITTMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting address on the important subject The Farmer and the Forest Service, delivered by Hon. Gifford Pinchot, former Governor of Pennsylvania, and broadcast by the National Broadcasting Co. from Washington, D. C., on February 17, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The farmer and the Forest Service, the farm and the forest. Why am I putting the two together? Because of the attempt of the Interior Department to take the Forest Service away from the Department of Agriculture.

Well, why not? What has forestry to do with farming? The answer is more than I could tell you in a month of Sundays.

To begin with, farming without the forest couldn't go on. The farmer must have fence posts, fuel, and wood for a thousand different uses. For no farmer can succeed without the help of trees. The farmer and the forester are two fingers on the same hand.

I'm a forester, and that is one good reason why for 40 years I have been deeply interested in the welfare of American farmers. Forestry is the side partner of farming. Indeed, when you come right down to brass tacks, forestry is farming—tree farming. Just exactly that.

TREES REGARDED AS A CROP

Farming is getting one crop after another from the land. Forestry is getting one crop after another from the land—trees in the case of forestry, potatoes, or cotton, or wheat, or whatever in the case of farming. Trees can be grown and are grown as a crop just like anything else that has its roots in the soil and its leaves in the air.

The farmer gets one crop after another of hay, oats, wheat, cotton, and tobacco from his farm—crop after crop. The forester gets one crop after another of cordwood, fence posts, logs, poles, railroad ties, from his forest—crop after crop.

The forester, like the farmer, gets a lot of products on the side from his land. Good farming yields also such things as butter, eggs, apples, calves. Good forestry, in addition to fencing, lumber, and firewood, yields such things as returns from grazing, regulation of stream flow, protection against soil erosion, and protection against wind, every one of them necessities of the farmer. Wind erosion and water erosion in the West and South are deadly enemies of the farmer.

Farming cannot go on unless one crop follows another. No more can forestry. A farm crop may reproduce itself without seeding, or it may have to be sown or planted. Just exactly so with trees. Each succeeding crop of trees may grow up without help, like each succeeding crop of hay, or young trees may have to be planted, just as each crop of tobacco has to be set out.

Different kinds of field crops must be handled in different ways. So must different kinds of trees. You can't handle potatoes like pumpkins or winter wheat like corn. Neither can you handle black locust like beech or hemlock.

A well-handled farm gets more and more productive year after year. So does a well-handled forest. And on a badly handled farm, contrariwise, production decreases, the soil washes or blows away, and not only the farmer but the public interest gets it in the neck. And the same is true of a badly handled forest, only more so.

The main difference between farming and forestry is that on a farm you can usually get a crop every year from the same land, while from a forest usually you can't. It takes less cultivation and more time to grow a crop in the forest. It takes less time and more cultivation to grow a crop on the farm. But what you get in both cases is a crop—a crop from the land.

AS PRESIDENT ROOSEVELT SEES IT

The frozen fact is that forestry is a part of farming, and every farmer who owns a woodlot and takes care of it will agree with that statement. And so does the President of the United States, for no longer ago than last December he said, speaking to American foresters, "the forest problem is part of the broad problem of modern agriculture."

You can't farm without wood, you can't irrigate without water (and that usually comes out of the forest), you can't run cattle or sheep in most parts of the country without summer or winter or all-year range in the forest. And I could give you other illustrations till the cows come home. Forestry is tree farming, don't ever forget it, and the farmers of America can't get along without the help of the trees.

Congress recognized that forestry belongs with farming when in 1876 it established the first Government organization devoted to forestry and put it in the Department of Agriculture. Ever since that time Agriculture has led all the other Government departments put together in everything that concerns the growth and use of trees, just as it is carrying on research about other crops.

Ten years later Congress created a Forestry Division, and then a Bureau of Forestry, always in Agriculture. Congress knew what it was doing and wanted it that way.

The Agriculture Department was advancing forestry in two ways. It was working in the woods to get sound forest management—real tree farming—substituted for destructive lumbering. At the same time it was carrying on research, both in the woods and in the study, to learn about the habits of growth, the uses, and the best treatment of our American trees.

Through this combination of research and action the Agriculture Department did and is doing far more than all other agencies combined to create and set going the art and science of American forestry.

This combination is like the ax and the helve. The cutting edge of the ax does the work; the helve directs the ax and makes it useful. Try cutting down a tree once with an ax-head and nothing else.

Forest research is the helve, but the practice of forestry in the woods is the ax that gets the work done. These two go together. Neither can do good work without the other.

While forest research and forest management in the Department of Agriculture were doing their best to bring sound practical forestry to America, something else was happening which proved better than any argument the foolishness of separating the two. Congress gave the President the right to set aside forest reserves (what we now call national forests) and left them in charge of the Interior Department, which had control of the public domain.

HOW INTERIOR BUNGLED THE JOB

There was not a single forester in that Department, and for years not a single person in the division which was supposed to run the forest reserves from Washington had ever set foot on one of them. The result was disastrous to the forests. Under the Interior Department the handling of the reserves was so ridiculously bad that it was actually comic.

For example, one man in the field who had charge of some of the heaviest forest in the world was ordered from Washington to buy a couple of rakes for himself and his only ranger and clean up the dead and down timber on nearly 4,000,000 acres. Some job! And a rule of the Department forbade a forest ranger to go out of his district to fight a forest fire although it was burning in plain sight just across the line.

The rangers and other field men were political appointees, nearly all of them incompetent, many of them lungers or otherwise crippled, and not a few dishonest. The whole situation became so impossible that even the men who had charge of the forest reserves wanted to turn them over to the Department of Agriculture.

In 1904 Secretary of the Interior Hitchcock said in his annual report: "Forestry, dealing as it does with a source of wealth produced by the soil, is properly an agricultural subject," and he added that the transfer of the forest reserves to the Agriculture Department was "essential to the best interests, both of the reserves and of the people who use them," and that, too, was the frozen fact.

In four successive annual messages to Congress, Theodore Roosevelt urged that transfer. Finally, in 1905, Congress did transfer the forest reserves to Agriculture. And ever since their management has been a model of clean, competent, nonpolitical, efficient administration.

There is no better bureau anywhere under the Government than the Forest Service. No one even pretends that its work could be better done in the Interior Department than in the Agriculture Department, where it was born, grew up, and has made, and is making, such an admirable record.

THE TAIL AND THE DOG

Nevertheless and notwithstanding, the Interior Department has for years been trying to take the national forests and the Forest Service away from the Department of Agriculture. And it is trying to do that very thing right now. Just one more case of the tail trying to wag the dog.

Why? Because the amount of forestry practiced by the Interior Department is hardly more than a flyspeck in comparison. There is no tree farming on national parks. The whole area on which Interior could practice forestry if it chose is below 40,000,000 acres. But agriculture has nearly 200,000,000 acres of forest on farms to look after, and is directly responsible for 175,000,000 acres of national forest. Call it 350,000,000 against 40,000,000, and you get the idea.

But there is even a better reason. The Forest Service belongs in the Department of Agriculture because it is in close, constant, and necessary cooperation with more than half of the other bureaus of that Department.

The Forest Service cooperates with the Agricultural Adjustment Administration, the Soil Conservation Service, the Extension Service, the Farm Security Administration, the Bureaus of Agricultural Economics, Plant Industry, Animal Industry, Entomology, etc., etc. It is tied into these and other parts of the Department on no less than 24 important activities, all of which would be left with one foot off the ground if Interior should realize its ambition to get back what it lost—what it had once and proved it couldn't take care of.

I wonder if you realize what forestry means to American farmers. One-third of the Nation's good commercial forest is on farms. Farm-owned woodland covers 185,000,000 acres, or an average of 44 acres per farm. Forest production from farms in 1937 was worth $330,000,000. What did I tell you about forestry and tree farming?

FARMERS CANNOT AFFORD TRANSFER

There is no part of this Nation in which the farmers can afford to have the Forest Service taken away from its home in the Department of Agriculture and forced to live among strangers.

The South as a whole has 60 percent of her whole area still in forests. Would southern farmers, who need forests almost as much as they need field crops, like to have forestry turned over to the Department of the Interior, which knows no more about the problems of southern agriculture than I know about the dark side of the moon?

In the Northeast region 70 percent of the land is in forest. In the Lake States 80 percent. In the prairie region 330,000 farms are in country that needs shelterbelts. In the West irrigation farming depends absolutely on the forest for water and for protection from destructive floods.

Half of all our farms are in distressed rural regions, and 60 percent of the land on those farms is forest. In those forest lands there is a huge reservoir of work waiting to be tapped. Do the farmers want that question separated from other farm questions?

But I haven't yet mentioned the strongest of all reasons why the Forest Service should stay where it is. That reason is that the 30,000,000 farmers of the United States need to have it left, and want to have it left, in the Department of Agriculture, where it is now. They want it left where it can keep on helping them as it has been doing. The farmers know what they want, and they haven't left the slightest doubt about it. They have spoken through their great national organizations with no uncertain voice, and what they said was this: "Let the Forest Service alone. We want it to stay where it is. We want it in Agriculture."

The Farm Bureau Federation, the National Grange, the Farmers' Union, the National Cooperative Council, the Federation of Milk Producers, and many other farm organizations have made official protest against the proposed transfer of the Forest Service to the Interior Department; and so have the foresters of America, through the American Forestry Association, the Association of State Foresters, and the Society of American Foresters; so have the conservationists, through the National Federation of Women's Clubs, the Izaak Walton League, the Camp Fire Club of America, and so on; and so have the national-forest users. They have spoken through the National Livestock Association, the National Wool Growers Association, the National Lumber Manufacturers Association, the Amer-

ican Mining Congress, and through their representatives in the House and Senate.

The more closely people come in contact with the national forests and the Forest Service, the more vigorously they are in favor of leaving them where they are. But greatest and most important of all is the voice of the farmers of America saying, "Let the Forest Service alone."

Ahepa Has No Ax To Grind

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

ADDRESS BY V. I. CHEBITHES, SUPREME PRESIDENT, ORDER OF AHEPA

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. V. I. Chebithes, supreme president of the Order of Ahepa, on the occasion of welcoming the guests of the order to its fifth biennial national banquet, at the Mayflower Hotel, in Washington, D. C., on March 4, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AHEPA HAS NO AX TO GRIND

Most Reverend Archbishop Athenagoras, Your Excellencies Turkish Ambassador and Royal Hellenic Minister, Senators and Congressmen of the United States, representatives of the Federal departments, representatives of the press, members of the Order of Ahepa and its auxiliaries, ladies and gentlemen, on behalf of the chapters, the district lodges, the supreme lodge, and the entire membership of the Order of Ahepa, I am happy, and I consider it a privilege and an honor to extend to you all a most cordial and hearty welcome to this our fifth biennial national banquet in Washington.

The Ahepa, which means the American Hellenic Educational Progressive Association, is a national fraternal order, conceived in the minds and born from the hearts of American citizens of Hellenic ancestry; it is established upon faith in God and belief in the divinity of Jesus Christ; and is dedicated to the task of inculcating respect for the inalienable rights of man, loyalty to the United States of America, love for its free institutions, and reverence for its sacred history and noble traditions. The fulfillment of its mission is entrusted to the efficacies of a free democratic government, mutual understanding, united effort, and cooperative action.

Through this order we teach and learn the tenets and fundamental principles of self-government; acquire due appreciation of the rights of citizenship and a clearer realization of the duties accompanying the privilege of being citizens of a free country. Through this order we labor for the perfection of our moral sense, for the promotion of good fellowship, altruism, and mutual helpfulness, pointing out the beauties of sacrifice and the deformities of selfishness. Through this order we strive to augment the educational advantages of this country by opening and maintaining new channels for facilitating the dissemination of culture and learning. Finally, through this order we seek to discourage calumnies; restrain our tongues from evil and our lips from speaking guile; and to teach by precept and example that: to live is to serve, to rule is to obey, to rise is to lift up the fallen, and to gain the greatest good in life is to give our best for a great and good cause.

The purpose of these great biennial Ahepa banquets, honored, as this one is tonight, by so many Senators, Congressmen, and representatives of the Federal departments, by so many diplomats, and by so high officials of church and State, is neither selfish nor ulterior. The Order of Ahepa has no ax to grind. We seek no special privileges; we are not interested in any pet plan or legislation designed to give special rights or advantages to us as a class or a group of citizens. What is good for the rest of the country is good enough for us. We are patriotic and law-abiding citizens by natural inclinations and by historical traditions. We were never known to demand anything that was not right nor submit to anything that was wrong. Illegal practices, unlawful means and methods, and obnoxious tactics are not in our line. We abhor and detest them in others and most certainly will not tolerate them among us.

So I invite our distinguished guests to be carefree, light of heart, and easy of mind. Your hosts of tonight will not be your besiegers or persecutors tomorrow. You will not meet any of us wearing a black shirt, carrying a red rag, or a hooked-cross banner, or an ax-cored bundle of sticks, demanding the keys to public and private stores of food and arms, the combinations to Uncle Sam's treasuries, and a safe conduct to some foreign country. Neither will any of you face any of us on the witness stand pointing the finger of scorn or accusation against you. Perish such thoughts. We wave nothing but Old Glory, carry high nothing but our privilege of American citizenship, and demand nothing but what is guaranteed to us by the preamble and Bill of Rights of the Constitution. And, insofar as accusing you of wrongdoing is concerned, it's out of the question. We investigated every prospective guest before he was actually invited. Our report is the same as that of the California sheriff who was sent to investigate some purported irregularities in a nudist colony. His report was that he "couldn't pin anything on anybody."

In all seriousness, there are no ulterior motives or purposes directly or indirectly connected with this affair. Its sole and only purpose is to bring us together as citizens of a common country having a common interest in its progress, peace, and prosperity; to become better acquainted with each other, to exchange ideas, to discuss frankly, freely, and openly the problems that are now hard pressing upon us and civilization in general, to learn what we can do to help solve the problems, serve the needs, and preserve the interests of America in these critical times, and to commend, compliment, and encourage those who have labored faithfully in the loyal discharge of their respective duties, thus advancing the interests, strengthening the position, enriching the prestige, and enhancing the influence and power of America.

The Vision of the Fraternal Order of Eagles

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. LUDLOW. Mr. Speaker, the vision manifested by the Fraternal Order of Eagles in respect to governmental and social trends has been almost uncanny in its accuracy. This great order was many jumps ahead of any other group in America in respect to the inevitability of old-age pensions—so much so that it may rightfully be called the sponsor of the old-age pension movement in America.

Senator O'MAHONEY's recent proposal to place a tax on machines calls to mind that it has now been well on to 6 years since the Eagles Magazine challenged the attention of thinkers on that subject in an editorial by its gifted editor, Frank E. Hering, entitled "Which Get the Jobs—Machines or Men?" Those who like to trace the beginnings of epochal movements will be interested in reading this article, which appeared in the Eagles Magazine for October 1934.

In the Eagles Magazine for March 1938 appeared another article, also by Mr. Hering, in which the editor was led by the spirit of prophecy to make this prophetic observation:

> Will machines ultimately be taxed so that the cost of the machines' products will be as much as, or only a little less than, the cost of products made by men?

Mind you, this was 2 years before the taxing of machines became a subject for consideration in Congress.

This article entitled "Jobs: Is This the Solution?" is so interesting and so pregnant with meaning in our machine age that I have secured unanimous consent of the House to have it reproduced in the Appendix of the CONGRESSIONAL RECORD. It is as follows:

[From the Eagles Magazine, March 1938.]

JOBS: IS THIS THE SOLUTION?

Very lately some hundreds of "little-business men" met in Washington at the invitation of President Roosevelt. Prior to this conference, the President had met with leaders in finance and industry who presented to him their suggestions for changing the present economic retreat into an advance toward coveted prosperity.

Now there was one factor that all individuals and all groups, however divergent their opinions might have been on other matters, regarded as alarming: Millions of workers are out of jobs—probably ten or twelve million in all. Prosperity, even of a mild character, cannot be achieved until jobless men and women are back at work, or at least until those that want work and are physically and mentally able to work, have jobs.

Obviously, if the number of jobless were reduced to one or two million, the wages received by those employed would, when spent, create such a demand for goods that business, big and little, would feel the dynamic force of favorable economic conditions, and move forward to a greater prosperity than America has ever known.

The United States is the richest country in the world. Our people have always enjoyed a high standard of living. Our natural resources are the envy of other nations. Why is it that one-fourth of our employable population is out of work, or working only part time?

Of course, a completely satisfactory answer to this question involves the consideration of many factors. Faulty distribution of commodities, our ignorance of how best to use credit, the fact that employers and the Government often work at cross purposes—these are some of the contributing causes of unemployment. But the outstanding cause of unemployment is this:

The machine is more and more taking the place of the man. The machine is doing the job cheaper, and often better, than the human worker can do it.

Only the other day Mr. Mann and the editor sat in a hotel room overlooking Lake Michigan, discussing a newspaper article that had to do with unemployment. It quoted figures that came from official sources in Washington. It spoke of the worry and suffering of millions of our people, and emphasized the grave concern of the President over the increasing number of the jobless in the United States today.

The editor expressed the opinion that machines are too rapidly displacing workers. Agreeing with him, Mr. Mann offered instances of such displacement as had come under his eye in his Nation-wide travels. He mentioned especially the effect of the introduction of a few enormous labor-saving machines in the soft-coal fields of southeastern Kansas in the Pittsburg district. He gave the names of towns once bustling with activity that have been practically depopulated by machines that have taken the place of men.

Millions of jobs are on the way out. At the same time more things—shoes, wheat, coal, automobiles—can be produced, and with fewer workers. This is the gravest economic problem. Our national prosperity depends upon its solution. Of course, every effect has its cause. Why are jobs scarcer at a time when production is greater?

It is an unchallenged truth that when wages are high and are tending to go higher, the producer tries to find ways of producing his goods so cheaply that he does not have to raise the selling price to a point at which his customers cannot afford to buy. The methods used to keep prices down are of vital importance to every worker, as well as to every employer of labor.

During the very recent past the so-called Wagner Act was passed. It provides for collective bargaining, and has been a boon to many labor unions in securing higher wages and shorter hours for workingmen. Obviously the cost of what labor produces—that is, prices—will be greater unless some way is found, or something is invented, to do the job at least as cheaply as labor has been doing it—and to do it as efficiently. But, what is of first importance to the average employer is to do an efficient job as cheaply as. or more cheaply than, human labor can do it.

Manufacturers, farmers, mine owners, packers, and producers generally think that they have largely found the answer to the problem. What is the answer? Machines. More machines. Better machines.

Today, fewer men produce more automobiles more cheaply than they did 10 years ago. In the Middle West, soft coal is being mined at a lower cost per ton. In the grain belt the actual labor of planting and harvesting is less expensive, if only the farmer can purchase outright, or on time, the machines to do the work that the skill and brawn of the farm laborers have done in the past.

Take a minute or so to read this one instance of how machines are displacing men:

At a cost of $1,500,000, the new Buckheart strip coal mine, 6 miles southwest of Canton, Ill., has installed labor-saving machinery that will make it "the most efficient coal mine in the world." The mine will produce an estimated 1,000,000 tons of coal a year. It will employ a crew of only 60 men.

A gigantic shovel, electrically operated, removes the topsoil from the seam of coal that lies from 30 to 60 feet beneath the surface. The machine scoops up 40 tons of dirt at a time. It weighs 2,500,000 pounds—perhaps the largest piece of moving machinery in existence. It is operated by one man.

Following this stripping shovel comes the coal shovel, a device that scoops up from 5 to 7 tons of coal at a bite, and loads it into huge trucks. And this machine is also operated by one man.

This is but one illustration of the deadly struggle that is going on between jobs and the machines that eat up jobs. If a giant machine, operated by one man, can scoop up 40 tons of earth at a bite, and another can load 7 tons of coal in a single operation, what is to become of the hundreds of men that such machines displace?

The demands of labor for higher wages as a result of collective bargaining will more and more cause the employer to turn to machines that will reduce labor costs. And because fewer men will be employed, even though at a higher wage, the large-scale producer will avoid the loss occasioned by industrial unrest and strikes.

But what of jobs for men?

Is this the solution? Will machines ultimately be taxed so that the cost of the machines' products will be as much as, or only as little less than, the cost of products made by men?

What disposition would be made of such a tax after it had been collected? Well, it might be used to employ, on State and Federal highways and other public works, the men who have lost their jobs to machines. These men would then be working in the public interest. Their wages would be paid, in whole or in part, by the tax levied on the machines.

A program of this kind would aid in the stabilization of employment. It would, furthermore, relieve taxpayers of the support of jobless men, and place the burden where it rightfully belongs, on the machines that displace men. Of course, the rights of the employer should be respected when the rate of the tax is determined, he should receive a fair return on the capital invested in the machine. The amount of the tax is for experts to decide.

The problem of unemployment caused by labor-saving machines cannot be adequately solved until there is a definite adjustment of the economic relations between men and machines.

Is there a better solution?

Seven Years of Progress Under the New Deal Farm Program

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

RADIO ADDRESS BY HON. FRANK E. HOOK, OF MICHIGAN

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on April 8:

The 13th of March will long be remembered as a sad day for democracy in world history, for it was on this day that courageous Finland was forced to capitulate to the harsh terms of Soviet Russia, and the hope of early peace among Europe's warring powers went glimmering. This was the day that the Republican National Committee released to the press that masterpiece of dissembling on the farm program, criticizing the 7 years of progress under the Roosevelt administration.

The Honorable JOSEPH W. MARTIN, House Republican leader, appointed a farm committee of 46 Republican Congressmen, with Congressman HOPE, of Kansas, chairman of that committee. The chairman of that group, Congressman HOPE, has referred to the 7 years of the Democratic agricultural program as a failure, without proving it or even submitting a substitute. They would like to have the farmers of America forget those 10 years of tailspin that ended with the crash of 1932 and the greatest depression in our history. To paraphrase the Universal Songster:

> HOPE tells a flattering tale—elusive, vain, and hollow.
> Ah, let not HOPE prevail lest disappointment follow.

Evidently until Congressman HOPE's elevation to the chairmanship of Representative MARTIN's Republican committee he didn't think the Democratic program was so bad, because he was one of its most ardent supporters, which is evidenced by his voting record. Therefore, I feel it is not HOPE, "the farmers' friend," speaking his own mind and heart, but rather the new high-priced and high-powered Republican brain trust. For it is well know that the G. O. P. have hired the most nimble minds and skillful pens that money will buy to disparage the New Deal record of the past 7 years and distort and misrepresent the achievements of this great period of American democratic progress. They camouflage the fact that 80 percent of the Republicans in Congress have voted against legislation to help the farmer.

The farm population and the people of America haven't forgotten the Republican days of 10-cent corn, 25-cent wheat, 6-cent cotton, and 3-cent pork and beef, or the fact that nearly $500,000,000 was lost in the ill-fated Republican Farm Board blunder. Billions of dollars were squandered by the Republican organization as a subsidy to foreign nations in the form of loans that were never repaid. It is worthy to note that this foreign subsidy was more than three times as much as the Roosevelt administration paid to help American farmers during the past 7 years. The money spent by the Roosevelt administration in the present farm program stayed at home to help the home farmer. Of all the money loaned to European nations, Finland is the only one that repaid her loan. The Roosevelt appropriations for American farm relief were used for the specific purpose of improving American farm conditions. The Republican subsidies to European countries were largely used by those countries to buy munitions and supplies to prepare for the present world war.

Today, under the controlled ever-normal-granary system, farmers cooperating with the A. A. A. receive a 57-cent loan on their corn, an average loan of 63 cents on wheat; the dairymen cooperating in marketing agreements authorized by congressional legislation in 1935 are in a vastly better position than during the days of 1932 when they were forced to take whatever price they were offered. The burdensome surplus days of 1932 cannot be compared to the ever-normal granary days of the present, when the surpluses of corn and wheat and cotton, controlled by the producers, have given us prices substantially above world prices, and during these

days of threatened world war have given this Nation the protection of ample supplies of vital materials for food and manufacture.

The farm program, with the ever-normal granary of the New Deal, has contributed substantially to the resources of this Nation and to our preparedness for peace, for it is only through our strength as a Nation, in material resources, and in the vigor of our populatino, that we can hope to stay out of war.

Approximately 6,000,000 of America's 7,000,000 farmers are cooperating in the Federal farm program of soil conservation and crop adjustment, surplus control and marketing agreements. Tremendous benefit to this Nation has come from the rural farm-to-market roads built during the past 7 years that have lifted millions of farm families literally "out of the mud." The Rural Electrification Administration has accomplished more during the past 4 years in bringing electricity to farm and rural homes than was accomplished in any other like period in the history of our Nation.

In fact, the farmers today own more automobiles, more radios, and have bought more merchandise than at almost any time previously—greatly to the benefit of industry and the small-business man. The food supply consumed by the people of this Nation was never before as ample or as well balanced as today.

In the present Roosevelt Democratic program the farmer is given security by guaranteed bank accounts and crop insurance. He has the advantages of a farm credit system developed during the New Deal years that for the first time in history makes production loans to farmers based on their needs and on the seasons, at interest rates lower than ever before offered.

In 1933 agriculture lay in ruins, shattered by the Smoot-Hawley tariff, by uncurbed financial speculation, by wastage of our resources, and by the final knock-out blow of neglect to meet the needs of the people.

The Republican wreckage was complete. The New Deal was faced with the tough job of fitting together this scrambled jigsaw puzzle of shattered prosperity.

In the last 7 years a Democratic administration has been putting together this difficult jigsaw puzzle which was left by the Republican Party on the doorstep of the Nation in 1933. It has been a tough job and it is still a tough job to restore the whole picture of national prosperity, but we will restore the picture if the Republicans do not try again to kick it to pieces.

In building toward a sound picture of substantial and lasting prosperity, new pieces had to be shaped. The first job was to pry open closed banks and to guarantee deposits, restoring the faith of our people in our financial institutions. The next great piece of legislation fitted into the picture was the Agricultural Adjustment Act that enabled farmers to adjust their production, control their marketing, and increase prices toward parity.

With the establishment of the New Deal Farm Security Administration in 1935 competent tenants, sharecroppers, and farm laborers were able to become farm owners. Under this program loans are also made to destitute and low-income farm families for the purchase of farm supplies, equipment, and livestock, for the refinancing of indebtedness and for family subsistence.

Debt-adjustment committees, chosen by the farmers themselves, have under the Farm Security Administration helped debt-burdened farmers retain their property and enabled creditors to obtain some payment on what often had appeared to be frozen assets.

In helping needy rural families escape from relief rolls and make a new start on land capable of producing a decent living the resettlement program of the New Deal Farm Security Administration has earned the respect of all Americans who are sincere in their belief that our farmers will weather the storm.

Through the Farm Credit Administration a wave of foreclosures on farms was halted and credit given to farmers for the production of crops and livestock at low rates of interest. The conservation of soil, water, and trees became a vital part of the new Democratic picture of a permanent and lasting prosperity. The Rural Electrification Administration and Farm Security Administration brought light and hope to millions of Americans. Progress was made in winning back our lost export markets by reciprocal-trade agreements with foreign countries. Our forest, national-park, and wildlife resources have been fitted into the picture of national prosperity by the New Deal.

This nearly completed picture of a reconstructed America has been developed from the Republican chaos of 1932. When full parity of agricultural prices to farmers is really achieved, a huge piece will be set into the picture of economic prosperity. Farm-price parity serves the farmers, the laborer, and all consumers, making for fair returns to the producer and fair, uniform prices to the consumer, and provides industry with the benefits resulting from the increased purchasing power of the farmer and rural people, who provide the Nation's greatest market for commodities of all kinds.

I want to impress upon you that farm price and income parity means as much to the laboring man and the consumer as it does to the farmer. Industry should learn that it, too, in the interest of the general welfare, must contribute to parity, not only of the farmer, but the workingman and the consumer as well. We know that when the industrial-production index is up, we have prosperity; when it is down, there is depression.

The farmer has not yet attained parity of price or income, but his economic condition has been vastly improved over the melancholy days of 1932, as indicated by parity tables. Translated into terms of commodities, it takes a little over 7 pounds of cotton to buy a work shirt, but in 1932 it cost the cotton grower 11 pounds to buy that same kind of shirt. A little over 2 pounds of wool will buy a work shirt today, but in 1932 it cost 7 pounds of wool. A bushel of wheat today will buy the work shirt, but in 1932 almost 2 bushels were needed. A little over 1 bushel of corn will buy a work shirt in 1940, while in 1932 over 3 bushels were required. No wonder the farmer felt that his shirt had been taken off his back in 1932.

It's an old saying in my State of Michigan that "You can't fool the farmer, by heck!" and it gives me great pride in the New Deal achievement of democracy in action, to read in my home district newspapers of meetings and activities of the A. A. A. county committees chosen by vote at a nonpartisan election by the farmers of these counties, and of agricultural conservation meetings and land-use planning meetings, all indicating that the farmers of my district are themselves developing and executing the agricultural conservation program—fitting the Agricultural Adjustment Act as passed by Congress to the needs and to the soil and climate of my section. I know that this is going on in the more than 3,000 agricultural counties of America.

This is most emphatically the antithesis of regimentation. Our farmers have been told they are being regimented but I do not believe that the independent-minded farmers of this Nation feel that they are being led by the nose when they go to meetings where they can express their opinions and where it is left to them to decide whether they wish to cooperate with their neighbors in a farm program directed toward their mutual benefit.

The A. A. A. is encouraging farmers to take part in a great program of soil conservation, making it possible by a system of awards for service rendered by farmers, to employ on a vastly increased scale such sound and necessary practices as liming the land, applying phosphate fertilizers to pastures, increasing legumes, planting and protecting farm wood lots, and many other practices needed to maintain and improve the land for the benefit of the present generation and posterity.

The crowning achievement of the New Deal's farm program has been the unification of the farmers of America. Farmers of all sections are working together and the agriculture of our country as a whole has become united to a degree never before known in this Nation. With the farmers' house united, after 7 years of the New Deal, an ever-increasing and permanent agricultural program for America is now soundly established.

I am talking turkey to you, and I am talking turkey to the farmers of America. They have it in their power to say whether we are to continue the New Deal with its Nation-wide farm program under the Agricultural Adjustment Administration, a program that has steadily and surely pulled agriculture out of the morass of low prices and low income, or whether we are to try some newfangled plan to be offered by that party which for more than half a century, under the guise of a protective tariff, has promised agricultural equality with other industry and has never fulfilled that promise.

The Republican Party has never kept faith with the farmer, and it never will. For 50 years it was so little concerned with his welfare that it did not even mention him in its platforms, secure in the belief that a safe majority of farmers were traditionally Republican and would stay put, in spite of political neglect and exploitation of their interests.

By their fruits ye shall know them. I trust the farmers will realize who their friends are and act accordingly.

Cost of Producing Milk

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

A SURVEY MADE IN THE DETROIT MILKSHED

Mr. CRAWFORD. Mr. Speaker, in view of the great mass of farm legislation enacted by Congress in recent years and the low prices which now prevail on milk and milk products, and, further, in view of the new proposals which are presented from time to time by Secretary of Agriculture Wallace and the general dissatisfaction with results obtained from present farm legislation, I feel that Members of Congress and the reading public will be interested in a recent survey made which deals with the cost of producing milk in the Detroit milkshed. I submit the study for the information of the House and the reading public.

PRESENTATION OF THE MICHIGAN FARMERS GUILD ON THE COST OF PRODUCING MILK IN THE SIXTEEN COUNTIES DETROIT MILKSHED

(Compiled and prepared by Edward E. Kennedy, vice president, The National Farmers Guild, Washington, D. C.)

INTRODUCTORY STATEMENT

The Michigan Farmers Guild is a State-wide organization of farmers, the primary purpose of which is to secure the cost of production for the products of the farm.

A large portion of our membership is in the Detroit milkshed and most of our members are engaged in the production of milk subject to the control of the Michigan State Milk Marketing Board under the milk-marketing law.

The Legislature of the State of Michigan defined their intent in the enactment of the law in section (3) of the act, as follows: "(a) To determine and fix a minimum price to milk producers based on cost of production."

It is our considered judgment that the milk-marketing board has the authority to follow the mandate of the statute and the intent of the legislature, and the expectation of every Michigan milk producer to "determine and fix a minimum price to milk producers based on cost of production."

It is our purpose in this presentation to aid and assist and cooperate with the Michigan State Milk Marketing Board in the determination of the cost of producing milk, following the well-known business principle in the determination of a necessary selling price which is known throughout the business world as the cost of production.

Under our capitalistic system price determination begins with the producer or manufacture and follows through to the point of ultimate use or consumption. The great dairy industry, which produces a larger total income than any other single agricultural product in America, or in Michigan, should be no exception to this rule and certainly the law recognizes this basic principle in requiring the Michigan Milk Marketing Board to "determine and fix a minimum price to milk producers based on cost of production."

We recognize that there are considerable irrelevant arguments and misstatements of facts concerning the supply and distribution of milk but the fact remains, supported by every official document worthy of the name, that more dairy products, including milk, are consumed in the State of Michigan than are produced in the State of Michigan and that there are more dairy products, including milk, consumed in the United States than there are produced in the United States, therefore, not be subjected to conditions beyond the jurisdiction of our own Government. The farmer is entitled to his cost of production required to be determined and fixed as a minimum price to milk producers.

As a sound economic principle the income and real purchasing power of the nonagricultural groups is actually based upon the incomes of the producers of raw agricultural products. It is historically true that for every dollar of cash farm income received by farmers, labor receives a dollar in income from wages, and results in $7.50 of national income. In other words, the prosperity of the Nation is based upon agricultural prosperity; the employment opportunities of labor, the business opportunities of business, depend upon income received from agricultural raw-material production. To cite extremes for the purpose of illustration, when farm prices are high every employable among labor is employed, business is prosperous, and poverty and want are reduced to the absolute minimum. On the other hand, during the period following the depression of 1929 when farm prices were low, in fact the lowest in several decades, the bread lines were the longest, unemployment was at its peak, business stagnation was at its height, and want was everywhere amidst plenty. To sum it up, low farm prices starve people.

As a matter of social and economic justice to the milk producers in the Detroit milkshed, the price of whole milk should be restored to cost-of-production levels to restore purchasing power to the farmer, to provide employment opportunities for labor, to increase the use and consumption of milk and dairy products among both our urban and rural population.

As a matter of public health, which is so aptly stated in the preamble of the milk-producing law: "Milk is the most necessary item of human diet; the procurement, pricing, and maintenance of an adequate supply of pure, wholesome milk, and its efficient distribution is vital to the industry and to the public health and welfare; that a low return to the producer for milk jeopardizes his standard of living, the agricultural assets supporting the credit structure of the State and the continuance of an adequate and satisfactory supply of milk."

It is recognized in common sense and in the law that the farmer must receive an income from milk equal to his cost of production to insure his greatest efficiency and to protect his ability to produce clean, pure, and wholesome milk, and meet the requirements and standards fixed by the health authority in the interest of the public welfare.

And as a matter of law, the authority vested in the milk-marketing board is unqualified. The principle of our recognized capitalistic system harmonizes with our respectful request to determine and fix a minimum price to milk producers based upon cost of production.

THE COST OF PRODUCTION

To this presentation we are attaching hereto the detailed figures supporting the cost of producing milk and other farm products.

In the 16 counties of the Detroit milkshed there is a total of 61,943 farms, comprising in all 5,688,246 acres of land. There is, therefore, an average of 91.8 acres per farm. On these farms there is a total of 308,003 cows. These cows produce annually 5,200 pounds of milk each, or 1,601,615,600 pounds of milk, with a butterfat content of 3.8 percent.

In these figures the farm is necessarily considered as a business unit. The production of milk and butterfat is an integral part of the business of farming in this area. It cannot be separated.

In tables II to VI inclusive we budget the operating cost per farm. In this budget we set up real-property investment and depreciation, or an item of $420.83. This item must be met out of farm income.

We budget an item of equipment for the farm. The basis is present valuations. This item represents a charge against the farm of $214.03. This also must be met out of farm income.

We budget an item for management and labor. It is the largest single item. The amount is $1,350. This too must be met out of farm income. It does not include remuneration for unpaid family labor.

We budget an item of special fixed charges, the total of which is $104.67 and lastly an item of current expenditures. In this category are the classification of out-of-pocket expenditures which are inescapable for any efficiently managed farm. The total of these expenditures is $479.44.

All this shows a grand total of budget cost per farm of $2,568.97. In other words, each farm in this 16-county Detroit milkshed must yield an income from farm production averaging $2,568.97.

In determining income we have used a 5-year basis, that is a 5-year average yield or production times a 5-year weighted average farm price. This is preferable to a single year. It is more accurate. The peaks and valleys of production are thus equalized to a true average and the fluctuations in price are also equalized to actual.

The only exception to this rule in these figures is the case of milk production. In this case we used the most recent annual production per cow. However in the case of price we used 5-year weighted average farm price.

The sum total of the above is that the maximum average income per farm from all products is $1,720.56, as against a budget requirement of $2,568.97, or a net annual shortage, or loss per farm, of $848.41.

To meet the deficiency in income it is, of course, necessary for the unit farm price of all products to be increased by an amount sufficient to produce an aggregate income equal to the cost.

In determining the cost of production of milk, the same percentage of the budget cost per farm is apportioned to whole-milk sales per hundredweight which whole-milk sales contributed to the total per-farm income in the preceding 5-year period. Or, the 5-year weighted average farm price be increased by the percentage which the cost is of the income, namely, 153.98 percent.

DEFINITION

The term "cost of production," as used in this presentation, is defined to mean the price which the farmer should receive for each of his products—the price which, multiplied by production, will meet the out-of-pocket expenditures, depreciation, or reserve for replacements, a fair compensation for management and for labor.

The "reasonable profit" is included in the price proposed as the cost of production. It is included in the return upon the investment value of real estate and farm equipment and "producing" livestock. The equity above debt in the investment value represents profit. It is meager, to be sure, but is presented as reasonable.

DISTINGUISHED FROM OTHERS

The figures presented here are comparable to the figures which a public-utility company prepares for presentation to the rate-making authority in Michigan or any other State to justify such commission in fixing a rate which is reasonable. Without such presentation of facts from the private industry affected a public authority might be totally helpless to avoid a rate or price which would be arbitrary and capricious and in violation of the due-process clause of the Constitution.

These figures are comparable to those which a manufacturer must prepare each year in order to intelligently arrive at a necessary selling price for the articles he proposes to market to yield him a profit in addition to management and wages for labor, depreciation, and other expenditures.

There is another system of figures which are also called cost of production. They need not be considered here except for the purpose of illustrating the difference. This is the type of cost accounting where a farmer or manufacturer or businessman makes an examination at the close of his year's business, the primary purpose of which is to determine whether he has attained the standard which he set up at the beginning of the year, and whether he is actually showing a profit or loss, and how much, as the result of the price schedule he established at the beginning of the year.

CONCLUSION

The cost of producing milk in the 16 Detroit milkshed counties is a careful, businesslike presentation of the necessary price concept of cost of production. We believe that this principle of determination of cost of production must be followed in order to comply with the mandate of the statute and the intent of the legislature and to avoid fixing a price to milk producers which is arbitrary and capricious, in violation of the due-process clause of the Constitution.

THE COST OF PRODUCTION OF WHOLE MILK AND OTHER AGRICULTURAL PRODUCTS IN 16 COUNTIES OF THE DETROIT MILKSHED: GENESEE, HILLSDALE, INGHAM, JACKSON, LAPEER, LENAWEE, LIVINGSTON, MACOMB, MONROE, OAKLAND, ST. CLAIR, SANILAC, SHIAWASSEE, TUSCOLA, WASHTENAW, WAYNE

(Prepared by Edward E. Kennedy, vice president, National Farmers' Guild, Washington, D. C.)

GENERAL STATEMENT

This presentation is submitted as representing the cost of producing whole milk and other agricultural products of the farm in the 16 counties comprising the Detroit milkshed. It represents the prices the farmer should receive for his milk and other products at the farm.

The farm is considered as a business unit of which the production of milk and dairy products is an integral part.

It will be observed that the income from whole milk represents 18.793 percent of the farm income exclusive of the fixed income of house rent and that the income from the sale of butterfat represents 6.905 percent of the farm income exclusive of house rent income. Therefore the income from all dairy products represents 25.695 percent of such farm income.

Following the age-old business principle of budgeting cost for the purpose of price determination, 25.695 percent of the budgeted cost must be charged to dairy products on the basis of: 18.793 percent to whole milk, 6.905 percent to butterfat.

The cost of production is computed on the basis that will give a return of 5 percent on the investment in real estate and improvement and 6 percent on the investment in dairy herds and other equipment for the farm. It gives the farm operator a salary of $100 a month for the year. It also includes the fixed and necessary items of current costs, including depreciation.

These figures are conservative and fully substantiated by records of the United States Department of Agriculture and the Bureau of the Census for the 16 Michigan counties and included in this study with the exception of the few items estimated on a conservative basis and familiar to every farmer and businessman as an integral part of the operation of a Michigan farm in the Detroit milkshed.

TABLE I.—*Number of acres in crops and acres otherwise utilized, and per farm in the 16 counties, Detroit milkshed*

Crops	16 counties	Average per farm
	Acres	*Acres*
Wheat:		
Winter	344,178	5.5
Spring	5,188	.8
Oats	514,126	8.3
Oats, fed unthreshed	23,651	.3

Total, Detroit milk shed	5,688,246	91.8

Number of all farms in 16 counties, milkshed		61,943
Number of all acres, 16 counties, milkshed	acres	5,688,246
Average per farm	do	91.8
Total number milk cows on 61,943 farms		308,003
Annual production milk, 16 counties	pounds	1,601,615,600
Butterfat test, average	percent	3.8

SCHEDULE OF BUDGET COSTS, PER FARM, THE 16 COUNTIES, DETROIT MILKSHED

TABLE II.—*Real property investment and depreciation*

1. 91.8 acres, at $54.62, $5,014.11, at 5-percent interest	$250.70
2. Dwellings, $990.80, at 4-percent depreciation	39.71
3. Other buildings, $1,208.40, at 5-percent depreciation	60.42
4. Fences, $400, at 10-percent depreciation	40.00
5. Water and lighting system, $300, at 10-percent depreciation	30.00
Total	420.83

TABLE III.—*Equipment for farm*

6. Machinery and equipment, $590.87, at 16-percent interest and depreciation	$94.54
7. Horses and mules (3), $372, at 14-percent interest and depreciation	52.08
8. Milk cows (4.9), $303.80, at 14-percent interest and depreciation	42.53
9. Brood sows (1), $12, at 14-percent interest and depreciation	1.68
10. Breeding ewes (6), $37.80, at 14-percent interest and depreciation	5.29
11. Chickens (63), $52.92, at 14-percent interest and depreciation	7.41
12. Male stock maintenance, etc	10.50
Total	214.03

TABLE IV.—*Management and labor*

13. Farm operator, compensation, 12 months	$1,200.00
14. Hired labor, 100 days	150.00
Total	1,350.00

TABLE V.—*Special fixed charges*

15. Taxes, real estate	$42.50
16. Insurance, buildings	10.22
17. Maintenance, soil fertility	51.95
Total	104.67

TABLE VI.—*Current expenditures*

18. Insurance, personal property	$8.52
19. Insurance, crops	5.57
20. Seeds purchased	51.54
21. Commercial feeds purchased	86.82
22. Fuel oil, electric power	48.78
23. Automobile (three-fourths charged)	97.50
24. Organization fees and dues	10.00
25. Marketing expense, milk	48.15
26. TB and Bang's test, capital loss	6.20
27. Veterinary expense	10.00
28. Telephone and telegraph	21.00
29. Blacksmith work	20.00
30. Other machine work	25.00

TABLE VI.—*Current expenditures*—Continued

31. Legal expense and fees	$10.00
32. Binder twine	4.80
33. Threshing, cost	15.53
34. Miscellaneous, licenses, etc.	10.00
Total	479.44
Total budget costs per farm	2,568.97

SCHEDULE OF BUDGET CASH INCOME PER FARM IN THE 16 COUNTIES, DETROIT MILKSHED

TABLE VII.—*Income from crops*

Crop	Acres per farm	Average yield	Average farm price	Net income
37. Wheat, winter	5.5	20 bushels	$0.874	$76.14
38. Wheat, spring	.8	15.6 bushels	.874	13.98
39. Oats	8.6	27.4 bushels [1]	.378	29.67
40. Corn, grain	6.0	33.2 bushels [1]	.735	49.87
41. Corn, silage, etc	3.6	Feed		
42. Barley	.9	24.3 bushels [1]	.625	8.06
43. Rye	.6	12.3 bushels [1]	.667	3.24
44. Potatoes	1.5	104.3 bushels	.51	79.76
45. Sugar beets	0.6	8 tons	6.17	29.61
46. Mixed grains	.2	Feed		
47. Hay, all	14.5	1.3 tons [1]	6.90	46.92
48. Miscellaneous	9.7	Per acre	37.50	363.75
49. Pasture	28.0			56.00
Cash income from crops				757.00

[1] Deduction for feed.

TABLE VIII.—*Income from livestock*

50. Hogs, 8 head, at $8.20	$147.60
51. Veal, 4 head, at $8.73	62.85
52. Lambs, 7 head, at $8.28	46.37
53. Chickens, 90 head, at $0.136	48.96
54. Wool, 6 fleeces, at $0.263	12.09
Total	317.87

TABLE IX.—*Income from milk and butterfat*

55. 25,480 pounds milk produced	
56. 16,052 pounds whole milk, at $1.84 hundredweight	$295.36
57. 358.2 pounds butterfat, at 30 cents per pound	108.53
Total	403.89

TABLE X.—*Income from eggs*

58. 434 dozen eggs, at $0.214	$92.88
Total	92.88

TABLE XI.—*Fixed income*

59. House rent, at 15 percent value	$148.92
Total	148.92
Total average income per farm	1,720.56

TABLE XII.—*The cost of production in the 16 counties, Detroit milkshed*

Product	Income received, average 5 years	Percentage of total	Necessary income to meet budget cost	Necessary unit price, or cost of production
Wheat:				
Winter	$76.14	4.85	$117.24	$1.35 per bushel.
Spring	13.98	.89	21.53	Do.
Oats	29.67	1.89	45.69	55 cents per bushel.
Corn	49.87	3.17	76.79	$1.13 per bushel.
Barley	8.06	.51	12.41	96 cents per bushel.
Rye	3.24	.21	4.99	$1.03 per bushel.
Potatoes	79.76	5.08	122.81	79 cents per bushel.
Sugar beets	29.61	1.88	45.59	$9.50 per ton.
Hay, all	46.92	2.99	72.25	$10.62 per ton.
Miscellaneous	363.75	23.14	560.10	
Pasture	56.00	3.56	86.23	
Hogs	147.60	9.39	227.27	$12.66 per hundredweight.
Veal	62.85	4.00	96.78	$13.44 per hundredweight.
Lambs	46.37	2.95	71.40	$12.75 per hundredweight.
Chickens	48.96	3.12	75.39	21 cents per pound.
Wool	12.09	.77	18.62	41 cents per pound.
Whole milk	295.36	18.79	[1] 434.80	$2.83 per hundredweight.
Butterfat	108.53	6.90	167.11	47 cents per pound.
Eggs	92.88	5.91	143.01	33 cents per dozen.
Total	1,571.64	100.00	2,420.01	
Fixed rent	148.92		148.92	
Grand total	1,720.56		2,568.97	

[1] 3.8 percent butterfat.

Comment: We find that the average income received per farm, less fixed rent, of $1,571.64 lacked $848.37 of being equal to the budget cost per farm, or the budget cost is 153.98 percent of the average income received. Therefore the unit price must be increased by 53.98 percent.

Milk—the cost of production: The cost of producing whole milk, as shown in the accompanying table, is for milk with 3.8 percent butterfat content. Considering the normal differential in cost of producing 3.5 standard milk, the price for 3.5 standard whole milk would be $2.71 per hundredweight at the farm.

The Credit Union

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me over the Mutual Broadcasting System at Washington, D. C., on April 4, 1940, in regard to the Credit Union.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, it is refreshing to turn from the darkening outlook in world affairs, so much in our thoughts today, and to watch the constructive forces still busily at work in peaceful America.

At a time when democratic processes are being ridiculed over a large part of the world, we continue to use them to promote experiments in better living. One such experiment, which has thoroughly proved itself, is the subject of my talk this evening. It is the so-called credit union. Through it, a growing army of Americans are learning how to solve a problem that has bedeviled the common man for ages. What is this problem, and how does the credit union help in its solution?

Many of you already know the credit union. If so, you have the answers to these questions on the tip of your tongue. For the benefit of others, let me explain that the term "credit union" is the name given to a form of local club or association whose growth in recent years has been nothing less than startling. It is an association carried on by working people of limited income, usually the employees of a single company.

Its whole purpose is to enable its members to help each other in the management of their money affairs. This it does. First, by accepting their savings, and by encouraging them to form the habit of saving. Second, by giving them a place to borrow money. And, finally, by giving them an opportunity, through this saving and lending service, to plan and organize their personal finances, and thus to keep their individual and family life on a sound financial basis.

Now, why should people need to form a credit union for purposes of this kind? The answer is that, for lack of just such facilities, countless men and women today, as in the past, are suffering the long train of evils that flow from disordered finances. We are only just beginning to realize that, for a great part of our earning population, the management of the none-too-large income is a vital matter. It touches their lives at almost every point. Well-handled, even a moderate income asks for health and enjoyment. Mishandled, it brings, at best, despondency, discord, and dulled initiative, and, at worst, it leads to disrupted families, violence, and crime.

Note that these evils do not necessarily arise just from overspending. Many workers could get along very well if the year's expenses spread themselves out as evenly as the year's income. But they never do. On the contrary, the common man is always faced with the possibility of having a special demand for more money than he can put his hands on at the moment.

Sickness does not wait on pay days. Neither does the insurance premium, nor the break-down of the furnace, nor the automobile accident. When these things happen, if he has no savings or property, he has only one recourse—he has to borrow. And waiting around for just such an emergency, there is always a crowd of exploiters, the loan sharks and money lenders, whose exactions, as has been aptly stated, are limited only by the need of the borrower, and the greed of the lender.

This is no new problem. I am told that the oldest known papyrus of ancient Egypt is a promissory note given by a hard-pressed peasant for a measure of grain. It called for an interest payment of 200 percent. Through Babylon and Rome, and on down through the Middle Ages, the sordid story runs. As mentioned before, it continues in our own times. Modern conditions, indeed, provide a bountiful field for the unscrupulous money lender.

Millions of workers now look to the weekly pay roll as their only source of income. Often the pay envelope is strained to the limit to meet current demands. Then comes the emergency, and the usurer has another victim. The worker will be fortunate if he does not find himself paying on the loan, and its excessive interest, over a long term of years. Whether or not the situation becomes that desperate, it is a fact that far too many families struggle along year after year under a disheartening load of debt. Life settles down into a routine of providing for immediate needs and turning the rest of the weekly pay over to insistent creditors. For the men and women concerned, this is certainly not a happy state. Looked at nationally, it makes for an instability that is not without its dangers.

How much better off all of us would be if the great majority of our families were running along well ahead of the game, with a tidy reserve instead of a dragging debt! What a difference it would make if most of us had full command of our money affairs instead of being forever ridden by them!

When we ask what is needed to turn ourselves in that direction, we will find, I am sure, that two measures will go far toward supplying the answer. First, the wage earner must have every facility for saving in advance against future needs, so as to avoid being forced into debt. And, second, when he does have to borrow, he must have a place to go where he can get money at reasonable rates.

Thirty years ago the employed worker began to discover that he had in his own hands the means of providing himself with just such services. For the necessary funds he had a handful of change and a dollar bill or two. That much he could save out of each week's or each month's pay, and so could a hundred or a thousand others around him. Putting these little surpluses together, month after month, he and his fellow workers were amazed to find what a tremendous power their puny savings in no great length of time could generate. Suppose, for example, each of 100 persons should have only 50 cents a week for a year. The group would have $2,600 at its disposal for loaning and reloaning to its own members. In 2 years it would have $5,200, and the growing capital, used as a revolving fund, would in that time have furnished $12,000 to $15,000 worth of credit.

We can only imagine what a force for good such a credit reservoir would mean to these 100 wage earners. Moreover, in the process of saving only a little many of them for the first time would be finding a new pleasure, the pleasant thrill of thrift. With this germ ideal it was only necessary to make the credit union a reality by giving it practical working machinery. A plan was set up experimentally, and it has worked so well that it continues in main outline to the present day. I need not describe it in detail. But I may say that it is devised to keep the credit union wholly in line with our cherished democratic ideals of self-reliance, self-control, and self-management.

The members of the credit union run it themselves, through elected officials. They finance it entirely through their savings. They have a standing committee to audit its books. The only outside supervision it receives comes from the Federal and State Governments, which keeps an eye on its affairs in the same manner as with banks. Tried out first in New England, the credit union gradually grew and spread to every corner of the land.

In recent years, after a long period of finding itself, it has come with a rush. All but six States have credit-union laws. A Federal Credit Union Act has been in effect since 1934. Credit unions are busily functioning everywhere, in factory groups, in railroads, among teachers, in Government offices, in church parishes. Last year, over 1,000 new credit unions were started. Every working day of the year sees some 2,000 more members added to credit-union rolls in the United States. Most of the great nationally known business houses have encouraged their employees to form credit unions, and trade-unions have sponsored several hundred of them. All told, about 8,500 credit unions are now in active operation.

When I say that last year these credit unions had a combined capital of $175,000,000, made up entirely of members' savings, and, when I add that they used this money to make loans to members totaling a quarter of a billion dollars, it will be evident that the credit union has established itself solidly as an American institution.

My own State of New York, I am pleased to say, was one of the pioneers of this splendid movement. Today, it is one of the foremost credit-union States. New York's credit-union law dates from 1913 and was one of the first of such acts to be adopted in the United States. Close to 650 credit unions are now active in the State. Their combined membership runs well over 200,000.

The city of New York has the majority of the credit unions in the State, but activity and interest are State-wide. In Buffalo, a credit-union school is carried on each year, and that city alone has 100 credit unions. Yet New York has only a fraction of the credit unions it might have, and undoubtedly will have, some day. And what is true of New York is also true of the whole United States.

Credit-union leaders insist that we are still only in the beginning of the movement. It will go on and on, simply because the credit union fits so admirably the needs of the common man, and contributes so much to his wholesome and better living.

To all the testimonials of approval of the credit union by business leaders, labor leaders, and others, I am glad to add my hearty endorsement, and to recommend the formation of credit unions wherever they can be practically carried on.

Golden Anniversary Celebration of the Washington Printing Pressmen's Union

---

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

ADDRESS BY FORMER SENATOR BERRY

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have inserted in the RECORD a synopsis of an address delivered by former United States Senator George L. Berry, and president of the International Printing Pressmen and Assistants' Union of North America, on the occasion of the golden anniversary celebration of the Washington Printing Pressmen's Union, No. 1, on March 30, 1940.

Mr. President, I think this synopsis of the former Senator's address is something which all Senators and the people generally should read. It gives a wonderful showing of what

is being done by the International Printing Pressmen and Assistants' Union. That union has over one and a half million dollars invested in a trade organization which educates apprentices. It conducts a home for the aged. It has for many years conducted a large engineering department dealing with the science of printing and all its advancements.

I think it is marvelous that during all the depression none of their members has ever had occasion to apply for relief. The regularly employed employees have right along voluntarily reduced the number of days they have worked in a week so as to take care of their own.

I take pleasure in offering this address for the RECORD, because of my early association with the printing business, and early membership in the International Typographical Union.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

An organization of men which has endured for a period of 50 years has by that very fact sustained its right of existence. It is proof, too, that the men making up such an organization have been motivated not only by idealistic but by practical concepts. No organization can disregard these two elements—idealisms and practicabilities—because they cannot endure without the support of each other.

In the case of the Washington Printing Pressmen's Union, No. 1, and for that matter in the case of the hundreds of local unions that dot the Continent of North America, they have supported the high principles of brotherhood in all of the aspects that might be expected, and they have pursued a course of practical consideration of the problems which have come to them over the spread of 50 years.

An organization of men who will share their work with their fellows in times of stress to the extent of reducing their budgets 50 percent in order to make a more equitable allocation of employment opportunities to give sustenance, and then to spend approximately $8,000,000 to care for those who could not come within the plan of equitable division of employment opportunities is an organization that can well be recorded as fulfilling the true principles of brotherhood.

Too, an organization that cares for its apprentices by educational processes and practical demonstrations, that pays pensions and mortuary benefits, that operates a hospital and a home for the aged and a trade school dedicated to the furtherance of efficiency in the industry sustains the declaration that it has fulfilled both the idealistic as well as the practical concepts in a manner that should absorb the attention of all forward-looking citizens.

During this present and past depression the members of the International Printing Pressmen and Assistants' Union of North America have been able to sustain themselves and to care for their unemployed members. There has been no Federal project especially designated to take care of the printing-trades unions, and if there has been any of the members of the International Printing Pressmen and Assistants' Union upon the relief rolls such information has not yet been historically recorded.

There are three or four phases of the practical aspect of our operations which are worthy of the public's consideration and I wish to identify them as follows:

First. It can't be said that we have either abridged the opportunities of worthy apprentices to learn our trade, nor can it be said by any employing printer or newspaper publisher on the continent that there has ever been a shortage of competent artists to produce printed matter. We have not engaged ourselves in flooding the market with artisans when there was no job for them, but we have taken the caution of seeing to it that our industry has never been without competent workers either to meet the requirements of good times or bad times.

Second. We have found it possible to engage ourselves in the development of trade education. We operate the largest technical trade school in printing in the world. It is dedicated to the proposition of improving craftsmanship and meeting the changes occurring rapidly in the industry in which we are engaged. It is dedicated to our industry's welfare, but the union sustains it.

Third. We have maintained for nearly a quarter of a century one of the most highly respectable and responsive engineering departments to meet the elements of waste, experimentation, and tests that has ever been recorded in the history of trades-unionism and, for that matter, in industry, dedicated to the promotion of better printing. We can make it more profitable and in consequence make the industry financially more stable and thus in turn better able to meet the requirements attendant to the legitimate and essential requirements of all of those engaged in the business, namely, the investor, management, and labor.

Fourth. We have seen in this 50-year period, which is tonight being celebrated by the Washington Printing Pressmen's Union No. 1, an evolution from the Washington hand press to the drum hand-fed hand press with a production of approximately 350 completed newspapers an hour of four pages to a reasonable average production upon this continent of 32 pages folded, 40,000 per hour, and in the same period we have observed the introduction of the offset printing machines, rotogravure machines, silk screen printing machines, high-speed sheet-fed and roll-fed magazine machines, automatic fast-speed job presses, and various other types of presses engaged in the printing of matter on paper, leather, cloth, tin, rubber, etc. With each of these revolutionary changes the members of the International Printing Pressmen and Assistants' Union have not only contributed many of the devices, not only developed many of the presses in toto and the processes required in connection with such machinery, but, in addition, have introduced them, operated them, and through them have brought to the industry almost unprecedented economies and greatly improved economic conditions for all the workers engaged in the newspaper and printing industry of our time.

In the establishment, maintenance, and expansion of our idealisms and our practical concepts we have been motivated by the general recognition that we occupy a definite place in the sun in our industry. We have learned from the practical experiences that our economic improvements must be measured by the prosperity and stability of the business in which we are engaged; that disintegration and waste in all of their ramifications affect the workers much more than our partners, the investor and management, because there are more of us. In consequence of this belief and in face of the proven logic of the policy we have been able to maintain an order of peace and good will that has very largely, if not entirely, dissipated the losses attendant to the stoppage of our business, whether it occurs through lock-out on the part of the employer, or the strike by the employee.

In the policy of peace we are committed to the exhaustion of the recourses by mediation and conciliation, and 98 percent of our differences that arise in the conduct of our business are settled by this process, but in the case where the differences can't be settled by this means, we have resolved to apply the principle of arbitration rather than to engage in the processes of war.

Senate Bill 785 and Domestic Silver

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

ARTICLE FROM THE SPOKANE (WASH.) SPOKESMAN REVIEW AND LETTER IN REPLY

Mr. TOWNSEND. Mr. President, I ask consent that there be published in the CONGRESSIONAL RECORD my letter of April 9, 1940, to the editor of the Spokane (Wash.) Spokesman Review, together with the text of that newspaper's article referred to in my letter.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

[From the Spokane (Wash.) Spokesman Review of March 31, 1940]

ANTISILVERITE PULLS FAST ONE—AIMS AT FOREIGN SILVER, TOWNSEND WOULD NULLIFY DOMESTIC PURCHASE ACT

The original Townsend bill, S. 785, which was said to be aimed at foreign silver only, actually contained provisions which would have nullified the actions of Congress last summer in setting a statutory coinage price of 71.11 cents for domestic silver, says a special bulletin of the American Mining Congress received by the Northwest Mining Asscciation.

This fact had largely escaped the attention of Members of the Senate. The American Mining Congress therefore addressed ROBERT F. WAGNER, chairman of the Senate Banking and Currency Committee, in the course of which it said:

"We wish to protest emphatically against inclusion in a bill ostensibly relating to foreign silver of provisions which would nullify the considered action of Congress with regard to newly mined domestic silver, the opening sentence of which is:

" 'That the Silver Purchase Act of 1934 is hereby repealed and all power and authority of the President and the Secretary of the Treasury with respect to the acquisition of silver, the changing of the weight or content of the standard silver dollar, or the monetary value of silver, or the issue of silver certificates, under any act of Congress shall cease and terminate on the date of enactment of this act.' "

WASHINGTON, D. C., *April 9, 1940.*

EDITOR, SPOKESMAN REVIEW,
Spokane, Wash.

DEAR SIR: My attention has been called to the article in your March 31 issue carrying the headlines "Antisilverite Pulls Fast One;

Aims At Foreign Silver, TOWNSEND Would Nullify Domestic Purchase Act."

You appear to have been misled as to the effects of my bill by the letter which the American Mining Congress, under date of March 20, 1940, addressed to the Honorable ROBERT F. WAGNER, chairman of the Senate Banking and Currency Committee.

When that letter came to my attention I addressed a communication to Senator WAGNER calling his attention to the fact that my bill, as approved by the subcommittee of the Senate Banking and Currency Committee on February 13, 1940, and by the full Banking and Currency Committee on March 20, 1940, in no way touches the domestic-silver subsidy enacted July 6, 1939. I am sending you a copy of part II of the hearings before the Senate Banking and Currency Committee held on March 19, 1940. You will find on pages 251–252 the statement of the American Mining Congress and my own statement on the same subject.

In view of the unintentionally misleading item in your publication, I shall appreciate your giving this letter the same publicity.

Very truly yours,

JOHN G. TOWNSEND, Jr.

America's Position in Present World Affairs

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. REYNOLDS. Mr. President, in view of developments over the past several weeks, and in particular in view of America's position in the unfortunate affairs of the world today, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD an editorial which, several weeks ago, I clipped from the Daily News of Washington, D. C., a Scripps-Howard newspaper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

ASKING TOO MUCH

The Manchester Guardian thinks it is only reasonable that "we (England) should ask tolerance" from Americans "if our fight for our existence, and for theirs, subjects them against our desire to serious inconvenience."

There they go. England is fighting for the life of the United States, which declines to risk its own skin. We are slackers, and we should be ashamed for having the gall to squawk when England pushes our rights around. That's what the British seem to be saying.

It is a shabby recompense for our revision of the Neutrality Act, a step which is enabling England and France to obtain airplanes they could not buy elsewhere.

Granted that this country's sympathies are overwhelmingly pro-Ally and that a German or a German-Russian conquest of Europe would be abominable, still the glib thesis that England is fighting for the existence of the United States is easier to propound than to prove. And we might ask, by way of retort, on whom is England relying for the maintenance of the Occident's voice and prestige in the Orient—where the British stake is far greater than ours? But that is another story.

England apparently has the idea that we are so completely anti-Nazi and pro-British that she can blithely step on our toes and snub our diplomatic protests, regardless of international law. The increasing crispness of Secretary Hull's notes indicates that the idea is ill-founded.

The censorship of our mails, the leisurely and (to us) expensive search of our ships for contraband, the forcing of our vessels into belligerent ports (which the Neutrality Act forbids them to enter), the British boycott of American tobacco, apples, and other products, the navicert nuisance—these things in cumulation constitute an intolerable affront to our rights.

What can we do about it, if England persists in the face of our protests?

The most unlettered cockney in London knows one thing we could do about it, if worse came to worst. We could put a brake on those airplane shipments, and we could do it very simply and quietly. It is probably only a coincidence, but just yesterday the White House revealed that the President had appointed a committee, headed by Secretary Morgenthau, to coordinate foreign purchases in this country so that they will not interfere with our own defense expansion.

A nod from that committee to an airplane manufacturer, and a British order would be turned down or deferred.

Few Americans would relish any such drastic retaliation against England's infringement of our rights. Milder measures can be invoked. But England will be wise not to presume too much on American tolerance. She may recall that Japan's neglect of our protests concerning her conduct in China has led to the scrapping of the Japanese-American trade treaty (effective Friday).

England is not Japan. But there is no guaranty that her popularity in America will survive in the face of repeated affronts to our rights and even of apparent discrimination against our shipping in favor of other neutrals, as charged by Secretary Hull.

It is hard to believe that British statesmanship cannot ameliorate these difficulties.

Americanism

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

RADIO ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following radio speech, which I delivered over the national network of the Mutual Broadcasting System from station WOL, Washington, D. C., on Monday evening, April 8, 1940:

Friends of the radio audience, to preserve throughout America a spirit of true Americanism is the highest duty to which we can devote ourselves. Indeed, upon the fidelity and wisdom with which we discharge that high duty depends the very existence and preservation of our free institutions. Americanism consists of unqualified loyalty to the fundamental ideals and principles set forth in the Constitution of the United States and particularly the Bill of Rights as embraced in the first ten amendments guaranteeing freedom of speech, press, assembly, and religious worship.

I believe that a spirit of true Americanism permeates the hearts and minds of the American people tonight to a greater extent than ever before. There are many reasons for this fact. The government which is genuinely solicitous of the welfare of all its citizens, is deeply concerned with the well-being, the education, the comfort, the health, and the happiness of the men, women, and children who comprise the Nation, and properly protects them in the enjoyment of their constitutional rights, naturally attracts and holds the warm-hearted allegiance and affectionate loyalty of its people. The fullest possible measure of social justice and economic security among all citizens, regardless of class, is the best and, in fact, the only reliable insurance against all so-called subversive movements.

On the other hand, the government which is callous and indifferent to the lot of its citizens, neglects their rights and interests and welfare, is concerned principally with promoting the selfish interests of a comparatively small favored group and extends special privileges to that group and allows its policies and course of action to be influenced and dictated by the heaviest contributors to the party campaign fund, instead of considering the needs and interests of the great number of men, women, and children whose welfare should be the first concern and main objective of all government, cannot permanently retain the support and loyalty of its citizens.

There were far more Communists and wild-eyed radicals in the United States at the end of the ill-fated Hoover administration than at any other period in our history. In various parts of the country hungry citizens broke into stores and took the food supplies which their families needed. Farmers in Iowa and other agricultural States drove away sheriffs and officers of the law with their pitchforks. In several States judges of the courts were manhandled and threatened with violence. In a number of States hunger marchers actually took possession of the State capitols. The very life and fate of America were then hanging in the balance as by a slender thread. The late Senator Borah, who will live in history for his exalted patriotism and fine Americanism, epitomized the entire tragic situation in his laconic statement, "You cannot eat the Constitution."

What brought about the cruel dictatorships and loss of human freedom and liberty in Russia, Germany, and Italy?

President Roosevelt answered that question in his annual message to Congress in these words:

"The social and economic forces which have been mismanaged abroad until they have resulted in revolution, dictatorship, and war, are the same as those which we here are struggling to adjust peacefully at home.

"You are well aware the dictatorships—and the philosophy of force which justifies and accompanies dictatorship—have originated in almost every case in the necessity for drastic action to improve internal conditions where democratic action to improve internal conditions for one reason or another has failed to respond to modern needs and modern demands."

Yet President Roosevelt, twice chosen by the American people as our leader in this, our successful crusade to save and preserve our form of government and free institutions by a peaceful solution of our social and economic problems, has himself been accused of being a Communist and of being sympathetic with subversive movements. The fact that everything the President has achieved and stands for is the exact opposite and antithesis of communism has not spared him from being made the object of this foul and cowardly charge.

Small wonder then that other public men serving their constituents faithfully and patriotically in offices of lesser rank have been singled out—and thus honored—for similar attack and abuse.

In the same message to Congress President Roosevelt also pointed out one of the most serious dangers and perils facing our country today. He uttered this solemn warning: "Doctrines which set group against group, faith against faith, race against race, class against class, * * * this is the danger to which we in America must begin to be more alert. * * * Equally those selfish and partisan groups at home who wrap themselves in a false mantle of Americanism to promote their own economic, financial, or political advantage are now trying European tricks upon us, seeking to muddy the stream of our national thinking, weakening us in the face of danger by trying to set our own people to fighting among themselves * * * By * * * overstatement, bitterness, vituperation. * * * In the long run history amply demonstrates that angry controversy wins less than calm discussion."

I fully agree with President Roosevelt. My friends, public enemy No. 1 in any community is the person who by printed or spoken word, through misrepresentation of the true facts and by deliberate and malicious falsehoods, seeks to incite to prejudice and hatred and to divide and array against each other the people of that community, who would otherwise live together in peace, harmony, and contentment, and unitedly build a better, bigger, and happier community.

Without calm discussion, indeed without any discussion or debate at all, an amendment was slipped through the House in the last session of Congress by being attached to another measure, and without ever having been considered by a committee, which was extremely dangerous and clearly un-American. Fortunately, the Senate has refused to consider it at all, and the amendment is now buried in the archives of the Senate Judiciary Committee.

The amendment referred to was offered to section 2, a Federal criminal syndicalism law, purporting to punish those who advocate overthrowing the Government by force and violence, and would appear upon its face to be desirable and laudable legislation. However, it would constitute a highly dangerous departure from the conspiracy statute requiring proof of an overt act recognized under our laws and the Constitution for 150 years. It would make it possible for the liberty of a citizen, editor, publisher, or reporter to be sworn away by a few personal enemies whose mere oral testimony would be sufficient to convict. Under such a statute you, my listener, no matter how innocent, could be convicted upon the mere unsupported word of a few personal enemies, or one or two officers of the law, without proof of an act or deed on your part. Such a law would place in jeopardy the life and liberty of every citizen and would place in the hands of unconscionable and unscrupulous politicians, employers, and labor leaders, too, a most dangerous weapon with which to persecute and ruin their adversaries and those to whom they are opposed. The first Member of the United States Senate to raise his voice against this departure from our traditional and constitutional safeguards was Senator Borah, who bitterly denounced the amendment and said, "You aid the cause of sedition rather than prevent it." The Senator undoubtedly had in mind the use that could be made of such a law by those who themselves might want to scheme and conspire to overthrow the Government. This is the very type of legislation which has led to the persecution, imprisonment, and execution of thousands of liberty-loving men and women in the totalitarian and communistic states of Europe. Such legislation clearly violates the decision of the United States Supreme Court in the DeJonge case, in which the Oregon State criminal syndicalism statute was held unconstitutional. Chief Justice Hughes, who wrote the opinion, said:

"The greater the importance of safeguarding the community from incitements to the overthrow of our institutions by force and violence, the more imperative is the need to preserve inviolate the constitutional rights of free speech, free press, and free assembly, in order to maintain the opportunity for free political discussion, to the end that government may be responsible to the will of the people and that changes, if desired, may be obtained by peaceful means. Therein lies the security of the Republic—the very foundation of constitutional government."

The House also passed and again the Senate has refused to even consider a bill to establish detention or concentration camps, wholly un-American and another step to Hitlerize America and clearly in violation of the Bill of Rights, and contrary to a long series of decisions by the United States Supreme Court.

I could quote almost every one of the founding fathers of our beloved Republic in burning words of denunciation of such and similar un-American legislation, but I have a feeling that you would prefer, as I do, to hear again from Senator Borah, because he was closer to us and spoke as one thoroughly familiar with present-day conditions and the times in which we live. In the very last speech he ever delivered on the floor of the United States Senate, when beams of light from eternity must already have been breaking across his weary brow, within a few weeks of his departure to the Parliament of God, Senator Borah said concerning these and similar bills:

"It is important, vitally important, that we expose and punish, as we are now engaged in doing, the activities of those whose 'isms' run counter to the principles of our Government. Whenever and wherever we can reach them through legal methods, let us reach them; and once having laid hands upon them under the law, neither apology nor flimsy excuse nor misguided mercy should interfere with their punishment. The most vicious enemies of human liberty, the most dangerous to free institutions, are the treacherous foes who seek shelter under the laws and institutions which assure free speech, free press, and personal liberty, and then make use of this shelter to destroy the Government which protects them.

"It is living up to our teachings and principles which really counts in this great struggle for the preservation of free institutions. Introducing bills and passing laws which strike at the letter—and if not the letter, the spirit—of democratic principles, these are the things which undermine and break down faith in democracy. Measures introduced and urged which are in themselves impeachments of the whole scheme of democracy do infinitely more harm than a thousand Communists chattering on the street corners. * * *

"Mr. President, * * * so long as the Bill of Rights stands and is preserved in its integrity, so long as we live up to its terms and conditions, there can be no denial of free speech, of free press, no religious persecution, no arbitrary government, no concentration camps, no breaking into homes, no unlawful arrests, no denial of personal liberty." This was Senator Borah's farewell message to the American people.

My friends, there is no room in America for communism, fascism, nazi-ism, or that other most deadly of isms—pessimism—there is room for only one ism and that is Americanism, as we have heard it defined tonight by President Roosevelt, Chief Justice Hughes, and Senator Borah, three of the greatest Americans of our generation. We have the finest country and the best government on earth. Let us keep them that way. Our flag has been red, white, and blue for 150 years—it is going to remain red, white, and blue. Neither the red flag of communism nor the black flag of fascism is ever going to be unfurled over the United States of America. We are going to keep America out of Europe and we are going to keep Europe out of America.

Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

ARTICLE BY JOSEPH A. CONRY

Mr. BYRNS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. Joseph A. Conry, former Member of Congress from Massachusetts, which appeared in the Springfield Republican of March 8, 1940:

[From the Springfield (Mass.) Daily Republican of March 8, 1940]

OUR FOREIGN POLICY

TRADE PACTS—RELATIONS WITH RUSSIA, MEXICO, AND CHINA

TO THE EDITOR OF THE REPUBLICAN:

Persistent rumor from Washington names Secretary of State Cordell Hull as the President's choice for the Democratic nomination for President at the Chicago convention. The story gains support from the fact that the President believes the foreign policy of America will be of greater importance to the country in the next decade than our domestic policy. Mr. Hull has administered the foreign affairs of the country during the past 7 years under the eye of the President; therefore, he may be admitted to be better informed on the subject than any other man in the Presidential circle.

The State Department tries to maintain a policy of precedent, regardless of the political complexion of the Government, which doctrine has been largely accepted by Mr. Hull, except with respect to his reciprocal-trade agreements, that are his personal pet projects. In theory these trade agreements are intended to be for the greatest well-being of the greatest number of our people, but like many other beautiful theories they don't always work well in practice.

Sixty years ago General Hancock, Democratic candidate for President, dismissed the tariff issue as a "local matter," being

laughed at by his opponents. Yet there never was a truer statement made in a political campaign. All opposition to the reciprocal-trade agreements is of a local nature, being the just complaint of those whose business is injured by foreign competition, the answer at once being that this must be endured in order to extend our export trade which will absorb our surplus products.

But in the field of political dealings with foreign countries our people will ask many questions. There is communism in Russia, which is understood to have been the immediate reason for the refusal of the Soviets to keep their promises made in 1933 when recognition was extended by President Roosevelt. At that time it was agreed in writing that Russia would pay its debt to the United States and refrain from advocating communism in the United States. Mr. Hull officially told the Senate a month ago that Russia had broken these promises.

For more than 10 years Mexico has been seizing property of American citizens without bothering to pay for it. Two years ago, in July 1938, Secretary Hull made formal demand on Mexico to pay for property so confiscated. In his note Secretary Hull said: "Agrarian expropriations began in Mexico in 1915. Up to August 1927, 161 properties of American citizens had been taken." The nugget of this document is found in the paragraph reading: "In result, the American owners whose properties have been taken are left not only without present payment, but without assurance that payment will be made within any foreseeable time." Russia and Mexico are partners in defaulting on payment for property taken from American citizens by those Governments.

In China, under the Nine Power Treaty, we have felt constrained to insist upon "the territorial and administrative integrity of China," although China itself doesn't know what that means. China hasn't had for half a century such a thing as "territorial integrity." Yet we maintain gunboats in China, and when we ask what they are doing there the answer is, "To protect the lives and property of American citizens." Protect from whom? Why, the Chinese. Yet we don't send gunboats into Mexico and Russia to protect the lives and property of American citizens.

If China is capable of self-government, the United States will not admit that fact so far as the administration of justice is concerned. The United States maintains a court in China to which American citizens have the right to appeal for justice. Since the adoption of the Nine Power Treaty, United States gunboats have repeatedly shelled Chinese towns, notably Nanking and Changsha, occupied by the very people whose "independence and administrative integrity" we solemnly agreed to protect.

Forty years ago we gave Cuba its freedom, with all the rights and privileges of self-government, while for the same period of time we have held the Philippines in bondage. Admiral George Dewey, the hero of the Spanish War, insisted that in the matter of self-government the Filipinos were the equal of the Cubans. Now that the dawn of independence for the Filipinos is at hand Paul McNutt, Presidential aspirant, advocates holding on to the Philippines for the indefinite future. Francis B. Sayre, present High Commissioner, with true New England sentiment of antiimperialism and love of human liberty, believes in Filipino freedom at the earliest date.

We have made the freedom of the seas a purely local issue, as General Hancock said of the tariff. Firstly, by establishing a geometrical line outside the shores of the Western Hemisphere and serving notice on the world that no fighting will be tolerated within that area, which notice was promptly rejected by all the belligerents in the present European war. Then we notify our citizens that they must keep out of certain waters in the war zone—then other waters may be used with care, altogether five differing spheres being the result of our view of international law.

These various subjects are outlined as possibilities of the United States getting into trouble by undertaking to regulate the foreign policies of the world. In other years when Americans went abroad to get in trouble, men at home sniffed, saying, "Why don't they stay at home, where law and order prevail?" Now, if we are going to enter the grand scale of world politics, we should begin to work on our inventory and see by what treaties we are bound and how binding those same treaties are on the other parties. A perfect beginning would be with respect to our relations with Russia, Mexico, China, and the Philippines.

JOSEPH A. CONRY.

BOSTON, *March 5, 1940.*

Sabotage of Wheeler-Lea Bill (S. 2009) by Inland Waterway Interests

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

Mr. VAN ZANDT. Mr. Speaker, in the near future this House will be expected to consider the conference report on S. 2009—the Wheeler-Lea railroad bill.

No one will deny that the principal and most controversial provision of the conference report on S. 2009 is that section pertaining to the tax-free inland waterways being placed under the supervision of the Interstate Commerce Commission.

Since the passage of S. 2009 the conferees have been studying the Senate and House bills. While this study is being made a very interesting thing has happened as evidenced by the action of an unofficial committee composed of certain Members of this House. This so-called committee, as I recall, were those who sought to amend the bill so as to exclude the inland waterways from being subjected to regulation by the Interstate Commerce Commission. That amendment was defeated by this House, and because of that action many of the members of this unofficial committee voted against S. 2009 on final passage.

Here is the interesting thing. The advocates of the amendment already referred to that would have protected the interests of the inland waterways have now blossomed forth like the coming of spring and parade themselves as staunch friends of the railroaders of this country. In their frenzied efforts to sabotage this railroad legislation, they have disseminated propaganda that would lead one to believe that everybody is opposed to S. 2009.

But let us in a calm and deliberate manner establish from facts the true sentiment that prevails in this country regarding S. 2009, and, at the same time, unmask these masqueraders bent on sabotaging this particular legislation.

In the first place, the President of the United States stands fourfold behind this legislation, and to support this statement I quote the following from a radio address from the White House on April 28, 1935, when he said in part:

> There is need for legislation providing for the regulation of interstate transportation by bus and trucks, to regulate transportation by water, new provisions for strengthening our merchant marine and air transport, measures for the strengthening of the Interstate Commerce Commission to enable it to carry out a rounded conception of the Nation's transportation system in which the benefits of private ownership are retained while the public stake in these important services is protected by the public's Government.

Some of you may say that was back in 1935 and is not an up-to-date expression of our Chief Executive. But if you are a "doubting Thomas" let me refer you to the President's press conference on March 8, 1940, when he rebuked the three Santa Clauses of the administration, Secretary of Agriculture Henry A. Wallace, Secretary of War Harry Woodring, and Admiral Emory S. Land, Chairman of the United States Maritime Commission. At that time President Roosevelt said he had not previously heard of the Wallace-Woodring-Land objections since they were made known during his recent absence on vacation cruise, but that he felt the question of the greater good for the greater number should control congressional decisions rather than the restricted interests of the department heads involved. Consequently, he said he joined with Senator WHEELER in hoping that a conference agreement would be reached and the legislation enacted at the present session.

The President continued by referring in his press conference to a speech he made several years ago in support of consolidating Government regulations of all transportation systems. Today he said he hopes the pending bill, S. 2009, will be an important step toward this end.

Since mention was made to the Santa Claus activities of the Wallace-Woodring-Land combine, it is not difficult to recognize their reasons for opposing S. 2009.

Let us consider Secretary of Agriculture Wallace, who, during the past year, handed out more than $1,000,000,000 in Government subsidies; then Secretary of War Woodring is revealed by the records to have disbursed for rivers and harbors $723,006,637; and Admiral Land in the past 2 years expended $155,364,000.

Why should not these three disciples of Santa Claus rise in opposition because S. 2009 is a step in the direction of taking the Government out of competition with private business? The railroad men of this country have noted with gratitude President Roosevelt's rebuke of these three stalwarts of the present administration, who in the absence of the Chief Executive, talked out of turn.

The views of President Roosevelt are supported by repeated utterances of the Interstate Commerce Commission, one as late as January 29, 1940, and by the Federal Coordinator of Transportation, who is chiefly responsible for the provisions of S. 2009, dealing with this subject.

Many of you are personally acquainted with Maj. Gen. T. Q. Ashburn, one-time President of the Inland Waterways Corporation. It is interesting to note that when he appeared in behalf of this bill before the Senate committee, April 11, 1939, he said:

So far as Senate bill 2009 is concerned, I have read it over very carefully. I think it will accomplish all that it is intended to accomplish, and I think it is a good bill.

At the same hearing General Ashburn was asked the following question by the chairman:

There has been testimony before this committee that if this bill passes, regulating water carriers on the Mississippi River, it will put the water carriers out of business. Do you have any such fears of that, or do you think that will be the result?

In reply, General Ashburn stated:

I have no fear at all of that, and I think they ought to be regulated.

At the same hearing we find another interesting statement attributed to Mr. Harry C. Ames, representing the Mississippi Valley Barge Line Co., a privately owned carrier on the Mississippi. On April 12, 1939, he used this language:

And on behalf of that company I desire to go on record as saying that we are not opposed to regulation; in fact, we favor regulation which will bear equally and protect equally all forms of transportation.

A similar view is well expressed by Mr. Edward P. Farley, chairman of the executive committee of the American-Hawaiian Steamship Co., and former chairman of the United States Shipping Board, who, in a statement bearing date of February 14, 1940, advocated the passage of S. 2009. In that statement he points out that 12 years ago there appeared on behalf of the owners of nine domestic fleets, representing the great preponderance of tonnage in domestic common-carrier service, a brief in support of unified regulation. Near the end of his illuminating statement, Mr. Farley says:

The claim that regulation of water rates by the I. C. C. would result in favoritism to the railroads is an unfair indictment of the intellectual integrity of the members of the Commission. No charges of unfairness or discrimination have been sustained in all the long life of the Commission.

Since we have the benefit of the views of recognized authorities on inland waterways, now let us for a moment discuss the advantage, if any, that the consumer may get from the inland waterways under the present program of unregulated, tax-free, and Government-subsidized policy.

The eminent gentleman from Montana, Hon. BURTON K. WHEELER, chairman of the Senate Interstate and Foreign Commerce Committee, and one of the best informed authorities on the subject, speaking before the Senate and basing his remarks upon extended hearings, said:

The fact of the matter is that when the oil companies, the steel companies, or any of the rest of them ship their products by water they receive a benefit, but the consuming public does not get one 5-cent piece benefit out of it. As a matter of fact, when the companies ship oil or steel on the Mississippi River they charge the railroad rate from Pittsburgh to the particular point, whether the commodity is shipped by water or whether it is shipped in any other way.

The Senator also referred to a recent hearing before the I. C. C., held in Memphis, Tenn., February 1939, application No. 17430, involving rates on gasoline and kerosene from Baton Rouge to Alabama points. In this case Mr. A. M. Stephens, general traffic manager, Standard Oil Co. of Kentucky, testified thus:

We exercise our judgment and foresight in consideration of all these matters. We have found that none of the other companies are passing any of this money on to the consuming public.

Now, as an instance in mind, I have before me, at the present time, a statement of the market price delivered to points in northern Georgia, to which you move gas out of Guntersville—for instance, at Dalton—when you first began operation the market price at Dalton was 18 cents; that is the posted market on May 8, 1938. In December 1938, it was 17.5 reflecting a reduction in the refined market at Shreveport and the Gulf Coast, and it represents one-half cent reduction entirely in the tank price so far as dollars are concerned. In other words * * * we have not seen any passage of this savings to the consuming public. * * * We have not found that any of that has been passed on to the consumer.

Further support is given Senator WHEELER'S views by Mr. W. H. Reed, an oil dealer in Memphis, Tenn., in a recent address, when he said:

Taxpayers are fed the "baloney" that the Mississippi River is a wonderful thing for the people of Memphis. * * *

As to the oil business, the truth is the Mississippi River is the curse of Memphis.

On the one hand, public taxes keep the river highway open for oil barges of the oil corporations. On the other hand, water transportation, made possible by millions of dollars of public money, has crucified the railroads and there would be thousands of jobs for railroad men if they got the freight that now moves by water.

The question is * * * if the public pays millions in taxes to get the benefit of cheap water transportation, does the public get the benefit of water transportation, or what?

The answer is that the oil corporations get the benefit of cheap water transportation. And the oil corporations keep the profits themselves. The public pays the bills to make water transportation possible. The oil corporations get richer.

When I buy a tank of gasoline I pay the spot-market price for the gasoline. But, in addition, I have to pay the oil company, as freight, the railroad freight rate on gasoline from Shreveport, La., to Memphis. Understand, that the gasoline I get never saw Shreveport, La. It came to Memphis by water from the New Orleans refining district. The actual water charge on this gasoline is about one-half cent per gallon, but I have to pay a railroad rate from Shreveport, which is over 2 cents per gallon. In other words, the oil corporation takes me for a buggy ride to the extent of 1½ cents per gallon. In money, this means that every time I get a 10,000-gallon car of gasoline, the oil company makes $150.

As further proof of the consumer "holding the bag" in the vast expenditures for inland waterways, the Federal Trade Commission has just finished a study of the motor-vehicle industry, summarizing their conclusions with the following assertion:

Some manufacturers often bill their dealers for transportation in amounts in excess of the actual cost of delivering automobiles to the dealers. * * * The Ford Motor Co.'s transportation charges are based on the carload rate from Detroit, Mich., to destination. Both General Motors Corporation and the Ford Motor Co. have assembly plants in various parts of the country.

Transportation charges in excess of the actual amount paid apparently are not confined to deliveries from assembly plants.

Both these companies use water as well as highway operations, and yet charge the purchaser the rail rate, whatever the savings may have been on subsidized waterways and highways.

Mr. Speaker, I hope by this time that my colleagues who have listened to my remarks will realize that S. 2009—the Wheeler-Lea bill—has the support not only of the President but of many recognized authorities on transportation.

The fallacy of aiding one mode of transportation to the detriment of the other is apparent to these keen and analytical minds who recognize the fact, as I have tried to explain, that the consumer, despite extravagant claims by the proponents of the inland waterways, in the final analysis gets nothing in return for the millions of dollars granted by the Government in subsidies to water transportation.

The railroad management and their employees support the President and other authorities in their position of urging passage of S. 2009, the Wheeler-Lea bill.

At this time I want to quote Mr. E. E. Norris, president of the Southern Railway, and Mr. B. M. Jewell, president, Railway Employees' Department, American Federation of Labor, when, in a joint statement, they said:

All forms should be equally regulated, equally taxed, and treated equally in the matter of subsidies. This bill is a step in the right direction, so far as regulation is concerned. The railroads and their employees are asking only for equality; they seek to destroy no one; they invoke the principle of fair dealing and common justice.

In conclusion, as one who has spent 24 years in the railroad industry as a humble employee, my advice to my colleagues is to beware of the efforts of those who profess to be friendly to the best interests of the railroads, but who, in reality, are bent on sabotaging this needed legislation.

Address at Fortieth Anniversary Celebration of the School of Commerce, Accounts, and Finance of New York University

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

ADDRESS BY HON. B. CARROLL REECE, OF TENNESSEE

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I present a copy of an address which I made at the Annual Commerce Dinner, celebrating the fortieth anniversary of the School of Commerce, Accounts, and Finance of New York University, held Thursday evening, April 4, 1940, at the Roosevelt Hotel, New York City, as follows:

I am deeply grateful for the high honor of being permitted to participate with you in this fortieth anniversary of the founding of the School of Commerce, Accounts, and Finance of New York University. My pleasure further has been heightened by the fact that this natal celebration of our School of Commerce, Accounts, and Finance coincides with the fifteenth anniversary in the deanship of our much loved and greatly esteemed friend, John T. Madden. Looking at him tonight, I should say he is good for at least 15 more years as dean. No greater blessing could descend on New York University than that good health should attend Dean Madden for many, many more fruitful years of service to this university.

Anniversaries are fit occasions for reminiscing and probing back into our memories. As I sat down to compose this talk, needless to say, my memory went back to the many happy days I spent as an instructor of economics here 21 years ago. In my mind's eye passed the picture of the progressive development of this university and of its school of commerce, accounts, and finance during the last 2 decades. And in my musings I had a pang of regret that I had left the economics classroom for the more turbulent and hurly-burly life of the legislative chamber. I yearned once again to be able to proclaim economic principles instead of struggling—vainly most of the time in the last 7 years—to prevent attempts to repeal economic laws.

When I left the lecture platform for the political stump, we were only a short time distant from the horrors of the World War. We thought then that our worst troubles were behind us—that a new day and age were before us when representative government would attain its fullest bloom and that poverty was on its way to extinction, at least for all in this country. The world, we then thought, had been made safe for democracy while our economic machinery had been tuned to produce more of the good things of life for people in all conditions of life. Little did we know at the time the poisonous ingredients brewing in an unseen witch's caldron. Little did we know of the economic forces having their origin in the World War that would sweep over the world a decade hence and all but overwhelm us.

In the 20 years which have passed we heard many strange, and sometimes false, doctrines enunciated in high places. We have seen masses of people carried away by emotion to believe they could ignore the most inevitable of all laws—those we call the laws of economics. As a nation we have swung from one extreme to another—from a new economic era to a New Deal. In the former period the belief prevailed that the prosperity and happiness of all our people could be based on rapidly rising security prices, artificially bid up to preposterous heights. During most of the second decade of this period our people had faith that it was possible for us to spend ourselves into prosperity—that we could become richer by producing less. If the pendulum went too far one way, it certainly has gone too far in the opposite direction during the second decade.

If an unrestrained competition and certain corporate and business malpractices contributed to creating the great depression of the thirties—basically the origin was in trends set loose by the war—then the extreme and mistaken efforts made during the last 7 years to correct the conditions of the twenties have resulted in prolonging this depression far beyond what should have been its span.

Today this country remains in the throes of the longest and severest depression ever experienced by this Nation. No other country in the world, except possibly the French, who likewise had a New Deal, has made less progress out of the trough of depression which gripped the world 10 years ago than we have. In every major nation, again with the exception of the French and ourselves, industrial production several years ago passed 1929 levels. Here we struggled on with an industrial production substantially less than the 1929 level until Europe again went to war.

Today, more than 10 years after this depression commenced we have ten million unemployed—a total as great as existed in 1932 when the world-wide depression was at bottom. It is estimated there are today more than four million between the ages of 18 and 22 who have never had regular jobs. During the last year our national income was some ten billions less than in 1929 and, indeed, was not more than we enjoyed in 1924 when we had some ten million fewer population. Consequently per capita national income is substantially less than it was in all but 1 year of the twenties.

Most significant of all factors of the last 7 years to my mind is the fact that for the first time we had a recession in national income, without first achieving a peak higher than that of 1929. Throughout the nineteenth and early part of the twentieth centuries national income rose a few years and then fell and then rose again. But each peak was higher than the preceding peak. In 1933 realized national income touched bottom for this depression and the climb upward started. In 1937 it had reached more than $69,000,000,000—ten billions short of the previous peak of 1929. Instead of continuing upward and passing the 1929 peak, national income in 1938 fell back by $7,000,000,000.

This was the first concrete, definite notice to the country that we were on the wrong track. There was the indusputable evidence that we could not rely on the economic policies of the New Deal to lead this country to economic recovery. The shift in the political sentiment of the country coincided with, if it were not actually induced by, this recession in economic recovery so clearly marked out by the unprecedented circumstances of this decline in national income.

What is the underlying cause of this state of affairs? Those who have been in charge of the mismanagement of the Nation for the last 7 years tell us that what has transpired during this period is evidence that America is at the end of its road; that the frontier is closed; that no longer can there be extensive development but only intensive development in this country. For the first time in the history of our country a spirit of defeatism has been adopted.

But this has been their philosophy for almost 8 years. Their conclusion is not based on the events of the whole period, it was their conclusion when the great depression was less than 3 years old. It was their conclusion after the bottom of the depression had been touched in the summer of 1932 and when we had commenced gradually to work our way upward.

Listen to candidate Roosevelt during the fall of 1932:

"Our industrial plant is built," he said. "The problem just now is whether under existing conditions it is not overbuilt. Our last frontier has long since been reached and there is practically no more free land. * * * A mere builder of more industrial plants, a creator of more railroad systems, an organizer of more corporations, is as likely to be a danger as a help. * * * Our task now is not discovery or exploitation of natural resources or necessarily producing more goods. It is the soberer, less dramatic business of administering resources and plants already in hand."

There briefly we have the philosophy which has guided economic New Deal action. In 1932 the new dealers started out on the premise that he who would build more industrial plants, organize more corporations, discover new resources, or even produce more goods should be treated as public enemy No. 1—he would be a "danger," as the President put it, to our national welfare.

Well, the New Deal saw to it that the "danger" of expanding our industrial and business plant did not materialize. Having denounced as a "danger" any expansion, and then taking steps to prevent this "danger," the new dealers pointed to the results of their handiwork as evidence that in the first place they were right.

It is something like the story of the cantankerous farmer who decided his cow was no good and turned loose his dogs to chase her around the barnyard for an hour. Then when she gave sour milk he proudly proclaimed:

"You see, I told you she was no good."

How was the country saved by the New Deal from this "danger" of individual expansion? In the first place, persons obviously hostile to American business and industry were named to policy-making positions and places of administrative responsibility.

Secondly, a series of reckless experiments in the field of fiscal policy and finance were undertaken, thus spreading fear and uncertainty among those who had money to invest. Thirdly, legitimate business and industry were subjected to harassing regulation as well as to ever-changing bureaucratic edicts. Fourthly, in certain spheres of activity the Federal Government became a competitor of private enterprise and private industry, which all of its inherent powers giving to it a great advantage. Last but not least was the damage done to business by policies in the field of labor relations, especially this administration's complacent attitude toward sit-down strikes.

Each of these constituted a factor discouraging to business development. Alone any one of these factors would not have stopped our forward advance. But taken collectively and on a half dozen fronts at once, they made it impossible for American industry and business to move forward. Thus was the danger of further industrial expansion averted during the last 7 years.

There is no need here for me to mention by name those new dealers who demonstrated their hostility to American business and industry, irrespective of its goodness. Their names are known to you, and if they are not, read Raymond Moley's revealing book, After Seven Years. It contains competent evidence from a man who not only was on the inside but who was the right-hand man of the President for several years.

Nor is it necessary in this place to go into details regarding the reckless fiscal policies of the last 7 years. It suffices to recall taxa-

tion measures designed not to produce revenue but to punish business and whip it into line with certain social policies; to mention the policy of spending and deficit financing which these new doctrinaires insist is the only correct approach to our problem; to point out the monetary experimentation and manipulation which marked the first several years of this regime.

All of these measures had the effect of stopping the lifeblood of business expansion, namely, new capital and investment. Constant tampering with the value of the dollar created a fear of inflation which still hangs over us. Increasing taxes had the effect of reducing or destroying profit margins for investors, who, as a result, were confronted only with a "heads I win, tails you lose" prospect. Nor is it only the wealthy who have felt the heel of the Government. Easy-money policies deliberately pursued by the Treasury have ground down interest rates on savings accounts and bonds which are held by persons of moderate means and by educational and philanthropic institutions. These measures likewise have an adverse effect on the life-insurance policies held by an overwhelming majority of our people.

While the monetary experimenters and the tax collectors were busy on one front, a half hundred new regulatory Federal agencies were brought into being to harass business and industry on other fronts. No longer were congressional enactments the only law of the land. Edicts by the hundreds each week from these 50 bureaus became of greater importance to the businessman of the Nation. No compilation yet exists of the mass of rules imposed on business and industry in the last 7 years. But the Federal Government is now undertaking their codification. When the job is completed it is estimated they will fill 23 volumes of 1,200 pages each.

More serious than the number of such Executive orders or agency decrees is the fact that they are subject to change, with little or no notice, for good reason or through the whim of some subordinate. Let me illustrate. Television, as you know, constitutes one of the best prospects for the development of a new industry in this country. It is now a $25,000,000 industry that has not yet commenced to make any money. Despite all the obstacles and pitfalls placed in the way of new industrial expansion, the promoters of television have pushed onward with their work, using their own money, in the hope that in time they will be able to market a salable product and thus profit from their labors and the risks they have taken.

Several months ago the Federal Communications Commission approved rules to permit the start of limited commercial television operations. Rules published only a little more than a month ago permitted telecasters to sell air time to commercial sponsors and charge enough to defray actual program costs. This encouraged one company to plan the construction of television stations in several large cities and to undertake an advertising campaign for the sale of television reception sets.

Then, about 2 weeks ago, came another Federal Communications Commission order. This order reopened the entire question of commercializing television, postponed the starting date for television programs, and ordered hearings into the whole subject. Why? Because, said the F. C. C., television is still in a fluid state and needs more research. Moreover, explained the Commission, it wished to protect the public against the danger that rapid strides in television technique would make today's receivers outmoded in a year or two, leaving the public stuck with obsolete sets. Also projected was the suggestion that television broadcasting might better be handled by a public body.

But a week ago the Supreme Court had something to say about the extent of Government regulation of broadcasting.

"The Commission," said the Supreme Court, "is given no supervisory control of the programs, of business management, or of policy. In short, the broadcasting field is open to anyone, provided there be an available frequency over which he can broadcast without interference to others, if he shows his competency, the adequacy of his equipment, and financial ability to make good use of the assigned channel."

I suppose the television industry may find some consolation in the Supreme Court's decision—made in another case—but the telecasters' feeling must be like those of the young man behind the bars whose lawyer confidently told him, "They can't put you in jail for that."

Does anyone believe that the automobile industry today would be as great and as momentous to our national welfare as it is if there had been a commission in Washington 40 years ago with authority to tell Henry Ford that he could not market his first model because, through technological developments, it might be obsolete in a year or two? Does anyone believe that under such a regime Henry Ford would have been encouraged to continue to build and improve his cars—and, what is more, to create thousands of jobs in one of the finest industrial plants in the world?

Before the New Deal the law at least was plain. It was written down in black and white. Every businessman could familiarize himself with the law and act accordingly. This new government by men—we might even say by caprice—has served only to chase business around so that its net progress is as sour as the milk of that farmer's cow. Business cannot successfully operate under a government by commissions which may change their standards as they will and dispense their favors in accordance with the predilections of their members.

Take the Securities and Exchange Commission as another example. The complaint of the financial community is not so much directed to what they believe are unnecessary hardships imposed upon the securities business but to the atmosphere of uncertainty and fear in which they operate.

A simple illustration will give you an idea of what I mean. Under the securities legislation it is perfectly lawful for an underwriting syndicate to "support the market" for an issue of securities it has sold to the public. On the other hand, it is unlawful for the syndicate to manipulate the market. But where is the line to be drawn between "supporting the market" and "manipulating the market"? Ever since this legislation was enacted underwriters have sought to have the Securities and Exchange Commission clarify this point. The Commission either can't or won't. So every day large underwriters are harassed by the uncertainty as to how far they may go in supporting a market and the fear that if they go too far they may go to jail.

You know what the New Deal's labor legislation has done to business: More strikes than in any comparable period in the Nation's history, labor split into two hostile camps, and the employer caught between the upper and the nether millstone of jurisdictional disputes. We are all too familiar with the biased and prejudiced attitude of the National Labor Relations Board. Yet the administration spokesmen refuse to permit any cleaning up of that mess. It is not an exaggeration to say that the New Deal's labor policy has cost industry billions of dollars and has cost the workers many millions through unemployment due to strikes and permanent loss of jobs by the closing down of plants.

The picture I have endeavored to present to you of how the New Deal has crippled business and checked the flow of investment funds has been admirably sketched in a recent issue of Barron's Weekly by James Truslow Adams, eminent historian and economist. Mr. Adams says, and I quote:

"The capitalist today knows he may lose if his judgment is wrong, but also that if he is right, what he may be allowed to retain is so small in comparison with the risks that the game is not worth the candle. He has always been willing to take risks for the sake of great profits, but no sane man takes great risks for nothing.

"It is not merely that taxation is heavy, with every prospect of its being yet heavier in the future, but that it tends to be used punitively with the intention of not simply raising money for the legitimate needs of government, but of remodeling our social system into a form unknown. Governmental regulations and red tape not only take the time of executives but with 49 governments, State and Federal, to say nothing of local, turning out some 20,000 new laws a year, businessmen cannot know from day to day where they stand before the law. There is also too rapid change. We are told that some governmental policies are on a 24-hour basis, but business cannot afford to take great risks in the investment of millions in plants which may not be productive for years if the attitude of government toward business cannot be predicted for even a week."

Such has been the result of a philosophy that our economic progress has reached a dead end and efforts to subject business and industry to governmental planning through bureaucratic control and a socialistic spending program. The choice which confronts us today is between a system of free enterprise and a politically planned and politically dominated economy.

As the Republican program committee said in its recent report—which you should read if you have not—"It is impossible to maintain side by side a planned economy, politically determined and politically dominated, and a system of representative self-government."

"Government," this report went on to say, "cannot dominate and direct the economic life of a great nation on the basis of a central plan and leave everything else free. Sooner or later it must dominate and direct everything else—including press and school and church—or the free criticism and free action of the men and agencies left free will upset the central plan, which always will be vulnerable simply because no man or small governing group knows enough to plan the life and enterprise of a whole people."

Some people in Europe already have made a choice between a politically dominated economy and way of life, on the one hand, and free enterprise and political liberty on the other. The American people this year also shall make a choice, and I have no doubt whatever that if they are made aware of the implications of their decision they will prefer our traditional American way of free enterprise to what has happened abroad.

What Cuts Can Be Made Toward Budget Balancing

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

ADDRESS BY HON. WILLIAM LEMKE, OF NORTH DAKOTA, AT LUNCHEON OF THE PEOPLE'S LOBBY, INC., SATURDAY, MARCH 2, 1940

Mr. LEMKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio talk I made on March 2, 1940, over the Columbia Broadcasting System, as follows:

Before we discuss our financial mess let us find out where we came from and where we are going. During the last 7½ years Congress has appropriated approximately $78,000,000,000. This, if

equally divided among our 130,000,000 people, would mean a check for every baby, every boy and girl, and every man and woman of $615. Yet we have not made a single man or woman that I know of self-supporting because of these huge, dizzy appropriations.

The fact is that one-third of the families of this Nation have been compelled to exist on an income of less than $450 a year. This $450 is not for one member of the family but for the average family of five, or $95 per person per year. Is it any wonder that this one-third of our population consumed less than one-third of what they ought to and would consume if they had the purchasing power? Is it any wonder that the Secretary of Agriculture talks about surpluses?

Another one-third of our families—one-third of our population—has to live on an income of $1,056 per annum, or $211 for each member. This class again consumes less than one-half of what it should or would consume if it had the purchasing power.

This same two-thirds of our people find it necessary to go further into debt each year. Their income is not sufficient to provide an existence. To put it in a different way, 86,000,000 out of our 130,000,000 population do not get sufficient income to enable them to consume more than two-fifths of the goods that they could and should consume.

This, in a land that boasts of the abundant life—that brags of its intelligence, and its civilization. This, in a land that wants to tell other nations what forms of government they should have, or how they should run their affairs. Is it any wonder that some of the dictators are beginning to poke fun at us and suggest that we take care of our unemployed and our own ragged and hungry before we tell them what they should do?

We have plenty of raw material and plenty of able and willing labor to satisfy the needs of all. Yet, on every hand we see unemployment, poverty and rags—malnutrition. The great American engine is stalled. Both the elephant and the donkey are sadly out of joint—are mentally sick and ailing. This disease cannot be cured by more taxation, by handing out more sandwiches, and by plunging the Nation and the individual deeper in debt.

Our problem is not overproduction but underconsumption and maldistribution. This is an idea that the Secretary of Agriculture has not yet caught up with. He still talks of surpluses and overproduction in the midst of unemployment and starvation—still insists upon the curtailment of food and clothing that the two-thirds of our people need and want. He still insists upon the importation of agricultural and manufactured products from foreign nations—this, under the so-called good-neighbor policy. I used to think that charity began at home. I know now that it begins abroad.

Now that Congress has gone on an economy spree let us consider what cuts can be made without injury to the health or the well-being of our people. Congress will be compelled to make provisions for the unemployed and the hungry as long as they exist, but in this Nation we have no business having unemployed or hungry people. There are several real cuts that could be made without injury to anyone. We could lop off about $2,000,000,000 of the $2,800,000,000 so-called national defense.

If we would use this $2,000,000,000 to make our people again self-supporting it would be the greatest possible national defense. No defense unless it is supported by patriotic men and women is of any real value. Without manpower no battleship or fortification will be able to fire a single shell.

Why build battleships at the expense of the unemployed? We have no enemies. No nation is pointing a gun at us. The American people still have the good common horse sense to insist that we stay out of foreign conflicts. They know that we cannot stop the insanity in Europe. The further we stay away from that conflict the better for us—we got too close to it in 1917.

Another way to cut appropriations is for the administration to collect the $14,000,000,000 that foreign governments borrowed from us, and that they brazenly refuse to pay. This money can and should be collected.

Another good-sized cut in appropriations could be made if we would use the money and the credit that belongs to us all for us all, and not only for a select few. If the Government would use the $5,164,941,100 Federal Reserve notes, which it gave away for nothing to the Federal Reserve banks, to pay its obligations with, then we could lop off $1,000,000,000 in interest each year on the $44,000,000,000 of outstanding Federal indebtedness. Let us make the cuts where they can be made without causing misery.

In Memoriam—Samuel Untermyer

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

Mr. DICKSTEIN. Mr. Speaker, the death of Samuel Untermyer was an irreparable blow to all friends of justice and good government. Samuel Untermyer in his own person typified more than anyone else the work of a public-spirited citizen, who in spite of the fact that he was a lawyer for great interests was, nevertheless, primarily the people's counsel. Untermyer gave unstintingly of his tremendous energy and unique ability as a cross-examiner to the cause of good government.

Whenever his services as counsel were called upon in the public interest, there was Samuel Untermyer lavishly disposing of his time, effort, and energy for the public weal.

It was Untermyer who some 20 years ago brought about the cessation of the building racket in the city of New York by exposing the nefarious manner in which people in the building industry sought to take advantage of the necessity for quick building by raising prices of materials and increasing the cost of construction to fabulous sums. It required the painstaking energy of Samuel Untermyer and his rare ability to bring out facts on cross-examination to convict the racketeers in the industry and enable the people at large to enjoy building at a reasonable cost.

Again, when the Rapid Transit interests of the city of New York tried to saddle the community with a high fare, in spite of their solemn contracts fixing the fare at 5 cents, it was Untermyer, who, by his legal acumen and his ability to marshal facts which would convince a court of the injustice of the increase, was able to save for the people of New York the 5-cent fare, thereby earning the thanks of the vast multitude of our citizens, who otherwise would be subjected to annoyance and the inability to live away from the crowded and congested sections should the 5-cent fare not have been maintained.

Where corporations sought the device of interlocking directorates in order to escape supervision by governmental agencies, Untermyer was able to expose this ill, and it was very largely due to the new road he thus blasted for government regulation of corporations that he was able to induce Congress to pass the Securities Exchange Commission bill, which is now on the statute books as a real safeguard of the investments of our people in corporate enterprises.

Many years ago Untermyer exposed Wall Street and the money trusts, and still further back he brought about honesty in the financial field, paving the way for investigations so ably conducted by others, resulting in reform in the field of banking and insurance.

A useful life has come to a close, and although Samuel Untermyer long passed the Biblical span of four score and ten, nevertheless he could have and would have had many years of usefulness to the country and community, years of usefulness which his death has so cruelly terminated.

H. R. 1, a Bill To Tax Interstate and Absentee-Owned Chain Stores

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1940

RADIO ADDRESS BY HON. WRIGHT PATMAN, OF TEXAS

Mr. PATMAN. Mr. Speaker, permission having been granted, I am inserting herewith a radio speech made by me over the Mutual Broadcasting Co.'s network, April 7, 1940, in a debate with the gentleman from New York, Congressman EMANUEL CELLER, on the subject of taxing interstate and absentee-owned chain stores:

Mr. Chairman, ladies and gentlemen, H. R. 1 provides that the first 50 retail stores, if within one State or within 100 miles of home office of the company, will pay no tax at all. The amount of tax is graduated according to the number of stores in excess of 50 to 500 stores. The tax is $500 per store on all over 500 stores. In order to encourage the very large companies to reduce the number of stores scattered all over the United States, section 2 of

the bill provides that the tax will be multiplied by the number of States in which they do business, but this latter tax will not be effective for 7 years, giving them a reasonable period of liquidation, provided they do not increase their stores or change the location of a store during these 7 years; otherwise, the tax, which is admittedly a prohibitive one, will apply. The terms of the bill are so liberal that only those who desire to defend monopoly can afford to oppose it.

WHAT BILL WILL ACCOMPLISH

This bill, if passed, will raise revenue, cause the employment of millions of people, grant reasonable security to small business, lower retail prices through clean competition, and benefit farmers and small manufacturers. At the same time, it will not penalize any business except monopolistic business, and if chains bring lower prices, this bill will not interfere, as a sufficient number of stores is entirely exempt from any tax to permit a concern to be large enough to obtain the maximum discount by reason of mass purchasing power.

ONE OF EFFECTS OF BILL

One of the effects of this bill will be to choke off 20 New York chains and allow the other 6,980 chain-store companies, along with all independent merchants to be given a fair chance.

FEDERAL RELIEF ALONG WITH INTERSTATE CHAINS

Such a law will restore community life and will retard further concentration of wealth into the hands of a few. Even if the New York chains sell for less, it is not real economy for you, as a consumer, to save $1 when it will cost you $4, as a taxpayer, to take care of the unemployed caused by the $1 saving. We did not have Federal relief until we had interstate chains.

FARMERS LOSE $3,000,000,000 ANNUALLY

These New York chains have ganged up on the farmers and ruined their prices. Testimony before the committee disclosed that the farmers in the United States last year were forced to sell their products for $3,000,000,000 less than a fair market price because of this conspiracy.

CONSUMERS DO NOT GAIN

Mrs. Consumer, are you willing to encourage a system that will probably cause your husband to lose his job and deny your children a fair opportunity in life in order to save a few cents a week? Do you want your children's careers confined to work on the W. P. A.? How will they use the education that you have sacrificed to give them if you do not keep open the broad road of opportunity? I ask you, Mrs. Consumer, to sit down and think these questions through for yourself.

WHEN IS A BUSINESS TOO BIG?

Some businesses are necessarily big. But some businesses grow too big to be in the interest of the people. We must decide which we want: Slow death for independent business or death sentence for monopoly. A dictatorship is more efficient than a democracy, but we are not willing to give up our liberties for a more efficient government. Democracy and monopoly are inconsistent. When one grows, the other dies. We must destroy monopoly or monopoly will destroy us.

We have concerns in America today that are so big that the Government cannot properly enforce civil and criminal laws against them. We should not restrict the energy, ambition, initiative, and ability of an individual whose business must change when he passes on. We should give him unlimited power to expand and develop during his lifetime. But we do not owe a corporation, that continues on from generation to generation, becoming more powerful all the time, that same protection. When it becomes too large it should be curbed.

The few men who own a few banks in New York and who control most of the corporate wealth of the Nation have been teaching the people to say, "There is no evil in bigness—only demagogues so contend." The use of a good slogan is oftentimes more powerful than a logical argument, since so many people who think not, who reason not, and who have no vision have so much time to repeat it to one after another.

When Germany took over Czechoslovakia an official of one of the largest concerns in this country was heard to say: "We should expect the little countries in Europe and elsewhere to be absorbed by the larger countries, just like big business is absorbing little business here in the United States. We will eventually have only big countries and big corporations."

REMEDY TO USE

Practically every informed person realizes the dangers confronting us by reason of certain monopolies, but there is a difference of opinion as to how we should curb them. Secretary of Agriculture Henry A. Wallace in a recent letter said that the chain stores in food and other industries are "so large that their methods and practices need some regulation to prevent the misuse of bargaining power and to enforce fair methods of competition." He further says that the "abuses and dishonest practices by the chain stores" should be prevented. He admits the evil, but I am sure he has failed to give the remedy sufficient consideration, or he would not suggest regulation. Doubtless he is willing to leave the remedy to Congress.

CONGRESSMAN CELLER'S ARGUMENTS AGAINST CHAINS

It does not often occur in a debate that one can use arguments of his opponent to prove his case. However, it is true in this debate.

I desire to commend my distinguished and able opponent, the Honorable EMANUEL CELLER, of New York, who will follow me in this broadcast, the congressional leader of the opposition, on the many fine and very convincing arguments heretofore made over a period of years against the interstate chain-store monopoly before he changed his mind. It is a question about which honest men may differ. The CONGRESSIONAL RECORD for May 14, 1929, contains one of his many speeches against this octopus. In that speech he said:

"With the continuance of chain-store practices, all retailing may be finally in the hands of chains, and a goodly portion of the population will then become either serfs or masters."

Again on February 21, 1931, Congressman CELLER said:

"The American people must be aroused to the dangers confronting the social system in this continued growth of chain stores."

Again on June 17, 1931, Congressman CELLER suggested that New York State adopt a chain store tax law.

Again on January 29, 1931, Congressman CELLER warned the people that chain-store growth must be "scotched." He further said at that time, "Chain stores blossom and grow like weeds and destroy."

January 3, 1932, Congressman CELLER debated the question with a chain-store representative. The subject was "Shall Chain Stores Be Taxed?" His wonderful speech contained the following knock-out statements:

"This great growth of chains may mean more economic gain for some, but the social and spiritual loss to the Nation by throwing out of business thousands of independent merchants is too great."

Further: "Chains are making us a nation of clerks and are robbing American manhood of opportunity."

In this speech, he recognized the danger of chain growth to the farmers. He said:

"Chain stores have not only used their mass-buying power selfishly, but they have used it so abusively that many have questioned the mass-buying power of the chains in our system of distribution."

I cannot improve upon these arguments.

May 17, 1932, Congressman CELLER, my distinguished opponent in this debate, introduced in Congress a chain store tax bill for the District of Columbia. The taxes provided in the bill were exceedingly high, much higher than the tax proposed in H. R. 1. In the Celler bill, all chains having 200 or more stores would be required to pay an annual tax of $1,000 per store. He said, when the bill was introduced:

"Recent studies clearly indicate that chain stores do not sell more cheaply than efficient independent retail merchants, although the chain-store associations are endeavoring to deceive the public into a contrary belief. Chain owners are not interested in anything in the local communities except the profits they take therefrom. Chains do not become a part of the religious, civic, or commercial life of the communities."

I repeat that I cannot improve upon his arguments. I concede to my opponent the right to change his mind, but that does not prevent me from using his good arguments when he was on my side of this question.

TAX BEST VEHICLE

Those of us who have worked on this problem for years are convinced, after conferring with the best lawyers this Nation has produced, that the most effective way to stop monopoly is through the taxing power. If Congress passes a regulatory law, it will be years and years before the highest court finally passes on it and before it will become effective. Besides, no one has yet suggested a constitutional regulatory law that will get the job done. If Congress passes a tax law, it will be effective immediately; there will be no doubt about its constitutionality, and it will be enforced by the Bureau of Internal Revenue. If there is delay in the payment of the tax, penalties will be imposed. So if you want delay, which is bordering on the do-nothing policy toward monopoly, in this particular case, insist on a regulatory law. If you want action, and quick action, against these New York corporate chains, you should insist on a tax bill, H. R. 1, as the vehicle. The big fellows would dread a regulatory law about as much as a rabbit would dread being thrown into a briar patch. It would be possible for them to influence the regulators, but they cannot influence the tax collectors. All the officers in the Federal, State, and city Governments could not adequately enforce a regulatory law against them. They are too big—too many methods of evasion. During the past 50 years there has been too much catching them and turning them loose with a slap on the wrist with a velvet hammer. It would be as easy to regulate the methods and practices of a rattlesnake as it would to regulate a big monopoly. It is not unusual for Congress to use the taxing power to reach a worthy objective. Why should there be an exception in the case of the New York chains?

BEST FINANCED LOBBY IN THE WORLD

The best financed lobby in the history of the world is here in Washington, D. C., fighting this bill. One of the many of these lobbyists has boasted of the fact that he represents American industry with assets of fourteen and one-half billion dollars. The hotels here in the Capital City are filled with them and their highly paid attorneys, newspapermen, and propaganda agents. Men and women of influence are being hired to come from distant cities and States to Washington to see their Congressmen in an effort to try to persuade the Congressmen to vote against this bill.

SOME NEWSPAPERS FAIR

Every witness we had before the committee contributed his own time and expenses. We have no hired publicity agent to assist our side. In other words, we are putting on a "po' boy" campaign.

However, being armed with the truth and on the right side, we feel confident that we will win. Do not expect to get the truth from all the newspapers in the country. Some of the newspapers are publishing in editorials, word for word, the inspired and paid-for propaganda of the interstate chains. At the same time they refuse to publish anything that is favorable to our side. I desire to commend those great newspapers that have been fair in this controversy.

BAD TREND MUST BE CHECKED

We want to check this trend toward ghost towns and dried-up communities. We want more "main streets" and fewer "chain streets." Interstate chain control means the first step toward either socialism or dictatorship. It is un-American for two childless brothers to own 15,000 retail stores in the 48 States when there are over 4,000,000 young men and women under 25 years of age who are out of work and cannot find employment.

DO YOU WANT RESULTS?

If you want quick action that will bring quick results, ask your Congressman and Senators to help us pass this bill at the earliest possible date. Write to your Congressman and ask him to send you a printed copy of the hearings before the committee on H. R. 1 and ascertain the facts for yourself. The United States Chamber of Commerce has more members who are small-business men than big-business men, yet the big ones run it because the little fellows do not let their wishes be known.

I appeal to the people in this Nation, who have vision and realize what monopoly will do to this great country, to let your wishes be known—let your voices be heard. If you will do this, I feel reasonably certain that H. R. 1 will become a law before the end of this session of Congress. What is your answer? Will you do your part?

Wisconsin Goes Anti-Third-Term

EXTENSION OF REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1940

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the Appendix I include the following editorial published in the Milwaukee Journal dealing with the vote in the State of Wisconsin during the recent election:

The change in temper of voters which defeated all the Democrats in Wisconsin's congressional delegation in 1938 continues. The swing to the Republican ranks is notable. Four years ago at the April election, the Democratic strength was 402,000; the Republican 190,000. Tuesday's vote, with two-thirds of the precincts reported at this writing, shows the total Democratic vote barely leading the Republican. But even this is not most significant.

At the first opportunity the voters have had to express themselves on the President since 1936—since the Supreme Court packing bill, the Executive's reorganization bill, which failed, and the wartime foreign policy—the Republican vote added to the vote for Garner exceeds the Roosevelt vote. Every Garner vote and every Republican vote is against a third term.

Thomas Dewey seems to have done himself a lot of good by coming into the State. People apparently like his vigorous campaigning and evidently are not afraid of his youth. For Senator VANDENBERG is liked in Wisconsin and until recently was very generally given the edge over Dewey.

No one is smart enough to say exactly what was in the minds of the voters. Some are influenced by one issue, some by another. President Roosevelt, with the two Roosevelt slates, has a handsome personal endorsement, considering that his supporters are bucking the anti-third-term tradition, that there is a good deal of feeling in dairyland against the Roosevelt trade-agreement program, that there is anxiety about the part we may be playing behind the scenes in Europe, and that the unemployed in numbers are still looking for jobs after 7 years of priming the cistern.

In addition to the outstanding questions are the intangibles. There is perhaps a feeling that after 7 years, with the New Deal having its way at most points, after piling up the taxes and the debt, the New Deal has had its chance and it is "time for a change." We heard that phrase over and over in the State campaign of 1938; it still seems to be going strong.

Wisconsin is known as a liberal State. Vandenberg is considered a middle-of-the-roader, Dewey a conservative, and Garner no new dealer, but their combined vote exceeds Roosevelt's by many thousands.

The national campaign is a long way from over. Wisconsin has attracted attention because it voted early. Not by the 3 to 1 Republican vote of New Hampshire, but by a notable vote it has rejected the third term. Republicans are not discouraged.

The Chain Store Bill

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1940

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address which I made in the American Forum of the Air, on The Chain Store Bill, over WOL, Washington, D. C., and the Mutual Chain, April 7, 1940, as follows:

My distinguished and respected colleague, the gentleman from Texas [Mr. PATMAN] has quoted some of my early and maiden statements in the House. I have since, however, studied both sides of this question most scientifically and most carefully, and have come to a different conclusion. Economically, I have grown. Even Jefferson, Lincoln, Roosevelt, and other high dignitaries have changed their opinions. "A wise man altereth his purpose; but a fool persevereth in his folly."

Even my distinguished colleague has changed his mind. He introduced H. R. 1, but has already amended it since its introduction. That bill, as amended, will impose a Federal graduated excise tax on chain stores of a most drastic nature. Starting with $25 a store on companies operating 10 stores, it gets up to $500 per store on stores in excess of 500. Not only that, but if the stores operated by a company are located in more than one State, then the tax per store is multiplied by the number of different States in which the stores are located. A company, for example, with 500 stores spread over 25 States would have to pay a total Patman tax amounting to $3,635,000, or $7,250 per store per year, over and above all other Federal, State, and local taxes which it would also have to pay, the same as its competitors. In the case of one of the well-known chains whose stores are familiar to you all, this special Patman tax would amount to $235,810,000 a year—which is more than even this large and successful company could earn in 15 years!

But this proposed tax, destructive as it would be, is just one-half what Mr. PATMAN originally proposed. By his suggested modification he himself admits that he was at least 50 percent wrong, and now I shall proceed to show that he was not merely 50 percent wrong, but 100 percent wrong.

The gentleman from Texas, Mr. PATMAN, says this bill will seriously affect only 20 large interstate chain-store companies, although he has never specified which particular 20 he has marked for slaughter. As a matter of fact, however, this bill would affect not 20 but hundreds of companies all over the country and would cripple or destroy every chain-store company which operates many units in many States. That is not only its admitted purpose, but would be its inevitable effect. This is confiscatory legislation in its most destructive form. Its unconstitutionality is self-evident and has been so declared by the counsel for the Joint Committee on Internal Revenue Taxation, Mr. Weaver Myers, who was asked for his opinion by the subcommittee of the Ways and Means Committee which is now conducting a public hearing on the measure in question.

The bill has been emphatically denounced not only by great farmer groups, like the National Grange and the American Farm Bureau Federation, but also by the Inland Daily Press Association, by the National Association of Real Estate Boards, by the National Association of Building Owners and Managers, by the New York Federation of Women's Clubs, and by other organizations of equally significant import, but also by over 400 other groups and associations representing millions and millions of farmers, property owners, consumers, workers, manufacturers, civic clubs, merchants' associations, and even organized retailers themselves.

The havoc caused by the passage of the bill in question would be shocking. According to a report of the United States Department of Commerce, there would be fired from their jobs, thousands of workers directly. Indirectly, there would be an equal number of workers fired who are now engaged in producing, transporting, and selling merchandise to chains. Railroads and automobile companies would suffer immeasurably. In short, a very heavy percentage of the total American producing, merchandising, and transportation systems would be wiped out of existence—to what end and for what purpose? For the benefit of inefficient retailers and revengeful and envious jobbers who do not give a hootin' howl for the needs of the consuming public, and who are unable to meet changing economic conditions.

What is this chain store against which my very worthy colleague has thrust the fury of his disfavor. In public interest, let us know its story.

Nearly all chain stores as we know them today were created by individual retailers who started with one store. Many of our largest chain stores of today had their modest beginnings in one

store 75 years ago, others 50 years ago, others 25 years ago, others at late as only 10 and 5 years ago, the latter demonstrating that opportunity still exists in American retailing.

The chain store received its great opportunity to serve us after the World War. American mass production, perfected in order to feed, to clothe, to arm, to "medicine" the whole world, found itself, after the war, with huge surpluses which it could not dispose through the ordinary channels of distribution. Production had exhausted itself to reduce expenditures, to analyze purchasing power, to cut transportation costs, and to increase inventory turnover.

To restore American prosperity and economic equilibrium in the depression days of 1920–21, a comparable effort had to be applied to retail distribution. Under these conditions, chain stores received their greatest opportunity to serve, and accordingly saw their greatest development.

The resultant expansion of chain stores was built upon a foundation of slow but vigorous growth dating back many decades. During their entire development period, chain stores had concentrated on training their organizations and on perfecting their methods and practices. The conditions that prevailed following the World War simply provided them with the opportunity to harness these methods and practices on an enlarged scale in order to clear the overstocked shelves of producers and to fill the empty larders of consumers with necessities and to bring them conveniences and luxuries at economical prices. From 1919 to 1929, therefore, chain stores increased their business from about 4 percent of the total retail trade of the United States in 1919 to 20 percent in 1929.

Chains grew and advanced because consumers everywhere increasingly patronized them because of their lower prices and better values.

This growth and advancement, in turn, stimulated improvement in all retailing. Many individual retailers grew into chains during this period. Progressive merchants were stimulated to self-improvement. In a large measure American distribution took its position as the world's best retailing system because of the progress of chain stores.

Today, authorities say that the chain store has probably seen its greatest growth. It does about 23 percent of the retail business of the United States, leaving fully 73 percent of the Nation's retail trade to independently owned stores and 4 percent to other types of retail distribution. Thus the charge of monopoly of chains is mere balderdash.

As against 1,474,149 individually owned units, there were 139,810 chain stores in 1935, the last year for which governmental data are available. Meaning that regardless of the fact that the chain store has already seen its greatest growth, we find that 9 out of every 10 stores in America are still independently owned and that fully 73 percent of our American retail business is still being done by individually owned establishments. No monopoly there.

Having concentrated on eliminating every wasteful process in their methods of distribution, retail prices in chain stores are, as a result, increasingly favorable to the consuming public. Both governmental and independent surveys have established the fact, for example, that chain-store prices, generally, average about 10 percent lower than the average prices of competitive systems.

The Federal Trade Commission unequivocally proclaims that "chain stores sell for less." It said, in part: "To tax out of existence the advantages of chain stores over competitors is to tax out of existence the advantages which the consuming public has found in patronizing them, with a consequent addition to the cost of living."

Chains are thus bringing items of luxuries to the masses of America that formerly were available only to the very fortunate few.

The passage of the Patman bill would sort of "Balkanize" our States, and confine all retail operations to one State. It is hard to understand the love and misguided enthusiasm that our distinguished colleague, the gentleman from Texas [Mr. PATMAN] has for the so-called "little man." Why does he limit that enthusiasm or love to retailers? What about wholesalers? There are many wholesalers with branch establishments all over the country. If the gentleman from Texas would be logical, he should likewise tax out of existence the great Ford, Chrysler, and General Motors systems. They sell cars in more than one State, and they control all avenues of distribution. But if that were done, only millionaires could own cars. Mass production would be destroyed because without mass distribution we could not have mass production. It is mass distribution, as represented by chain stores and consumer cooperatives, that has brought radios and automobiles and furniture and other articles, now necessities but formerly luxuries, to the masses.

If the gentleman from Texas [Mr. PATMAN] were logical, he would tax away the right of tobacco companies to sell their wares from coast to coast, and then only the rich could smoke cigars and cigarettes which, because of mass distribution, are now sold cheaply. As is pointed out in a leading editorial: "Maybe we would be happier if our shoes came from the local cobbler, our flour from the town grist mill, our news from the town crier. Life might be less complex. Driving a horse is easier on the nerves than driving an automobile. As far as we are concerned, however, we'll take the grocery chains, the 5-and-10 stores, the assembly-line automobiles, and the store-bought clothes in preference to the one-horse economy for which the gentleman from Texas [Mr. PATMAN] seems to yearn.

About $5,782,000,000 annually is being expended by chain stores in purchases from American manufacturers and producers. Nearly $2,500,000,000 additional is expended annually by chain stores for rents, wages, and taxes and to cover the cost of their trucking, advertising, repairs, heating, and electricity. This latter sum is equivalent to more than twice the cost of building the Panama Canal. The proposed bill would ruin many small factory towns whose plants supply the chains. My distinguished colleague would make of these towns mere shambles and force their workers onto the relief rolls.

Approximately $1,314,000,000 of this $2,500,000,000 sum, alone, is paid by chain stores to 1,307,900 men and women working in their stores, offices, and warehouses. The Census of American Business found that chain-store employees enjoy higher wages than employees of competing establishments.

These chain-store companies, including those which my learned colleague's bill will most seriously affect, are owned by their stockholders—including many laborers, widows, office help—persons in every walk of life.

It is estimated that there are about 1,700,000 citizens who own stocks and bonds of chain-store companies, representing an average of about 13 stockholders for each chain-store unit. If these stockholders were ever assembled at one time, they would fill, to overflowing, the 18 largest football stadiums in this country.

The net profits of chain stores do not, therefore, accumulate in bank vaults. They go back to these 1,700,000 citizens who reside in thousands of communities in the United States, and who, as the principal stockholders of these companies, are their real owners, and control their destinies. Thus, the charge of Wall Street control is senseless jargon.

As was stated recently by Ralph Hendershot, financial editor of the Scripps-Howard papers, the automobile companies forced a great many blacksmith shops throughout the country to close their doors. But the decision as to whether the blacksmith should go or stay rested with the public, which decided that it would rather travel by automobile than with the old horse and buggy. Similarly, the consuming public has decided that it preferred to trade with chain stores than with the old type independent merchant. Thus, the desire to buy goods as cheaply as possible parallels the wish to travel more swiftly.

My distinguished colleague can no more legislate chain-store systems of merchandising out of existence than he can legislate automobiles into limbo.

Most enlightening and informing is the most recent statement of Secretary of Agriculture Henry A. Wallace, who said in effect, as follows:

"The bill would 'discourage and prevent' efficient methods of marketing and distribution, instead of promoting them as 'sound public-policy requires.' Also, that State taxes on chain stores already are so high that 'it seems obvious that the larger interstate chain system would be driven out of business. Probably, many of the smaller chains would also find it impossible to operate under these additional taxes." Mr. Wallace said the administration has approved his statement through the Bureau of the Budget. "The Agriculture Department is not insensible to the dangers associated with large corporations," he said, "whether they are engaged in handling food or any other kind of business. The chain stores in the food industry as well as some others are doubtless so large that some regulation is needed to prevent a misuse of bargaining power and to enforce fair methods of competition. The Department would favor such regulation. However, we think it unwise and unnecessary to give up the economies which have been brought about by chain distribution in order to prevent certain practices which may not be in the public interest."

The growth of individual retailers into chain stores, and the development of chain stores into great American institutions has been attended with the following results:

1. They have largely eliminated the gouging of the consumer in unprotected localities by making available to everyone the savings resulting from scientific merchandising and large-scale operation.

2. They have established a higher standard of storekeeping, with better sanitary standards, with more attractive display, and with more convenient shopping facilities.

3. They have increased the attractiveness and quality of merchandise and have made it available in greater variety to consumers in isolated sections who would otherwise have to select from the scanty assortment offered by the small-scale retailer.

4. They have gone a long way in eliminating waste in distribution with untold savings to their customers.

5. They have placed a desirable emphasis upon a cash—or pay-as-you-go—policy among the general public, particularly as to the consumer's everyday needs of life.

6. They have created a generally improved type of merchant not only within their own ranks but by example and competitive necessity among their wide-awake competitors who have profited from proximity to ably managed stores.

7. They have increased consumption through lowered prices, with a consequent increase in productive employment and with improved standards of living.

8. They have partially checked the tendency of people in suburban or rural areas to flock to the cities, because they have brought to thousands of main streets some of the advantages often associated only with metropolitan centers.

The principal advocate of H. R. 1 besides its able author is actually a group of middlemen, brokers, and their retailers.

Lacking any real proof of any present evil effects resulting from the chain stores, Mr. PATMAN and that certain class of wholesaler-retailer, which is pressing for the passage of H. R. 1, bombard us with dire threats of what the chains, if not destroyed, will do to

us in the future. Now, let us use a little common sense and see what will actually happen if the Patman bill becomes a law.

First. If the chain stores are driven out of existence, there will be higher retail prices. It is absurd and meaningless to urge that prices will not go up. That is what the bill is for. That is what that certain class of wholesalers and their retailers who are the bill's proponents desire and expect.

Second. There will be a general decline in efficiency in American retail distribution just as there has been in the gas stations in Iowa and elsewhere which were formerly operated by chains but which, because of antichain-store legislation have more recently been operated independently.

Third. Higher retail prices will mean fewer goods sold. This, in turn, will mean less American production, less American opportunities for employment, longer American relief rolls, and more American depression.

Fourth. Higher prices, less goods sold, and less production will mean that the Government will collect less taxes all along the line. I haven't heard the bill's author or any other of its proponents state with any conviction who would or could take up the $255,900,000 annual tax burden now carried by the chains. As a matter of fact, they know and you know that individual retailers taking the place of chains neither would nor could meet this burden. It would simply have to be moved over, in large part, into other industries and onto private home owners. This, in turn, will mean that there will be even greater difficulties in balancing our public budget and reducing the national debt.

Fifth. A return of the wholesaler-independent retailer interests to dominance in our system of retail distribution will return America to her cracker-barrel days and is certain to result in a further decline in the business of the small towns throughout the country and the tendency of the consumers living in these small towns and out in the country to do their shopping in the larger cities where competition is more likely to be kept alert and alive. Close up your chain stores now in existence out in your small towns and see how quickly the retail trade of those towns will vanish.

Sixth. If this bill is passed and if the proponent wholesaler-retailers attempt to collect on it, as obviously they hope to do, it is not difficult to foresee that we shall also soon see a country-wide reaction, a wave of public indignation, a demand for violent curbs on the wholesaler-retailer system, itself, that is likely to sweep all the advantages the wholesaler-retailers now possess away from them. Wholesalers and retailers supporting Mr. PATMAN'S proposal don't seem to realize that they are playing with social dynamite that is likely to go off in their own hands. One wonders, for example, whether they have heard of the consumer cooperative project, its widespread roots, its vitality, and its readiness to spring forward in this country if and when the right conditions present themselves. Certainly if this bill passes, consumer cooperatives might well come in goodly numbers. I warn the retailer-wholesaler proponents of the bill they will have no bed of roses. Competition will be just as keen if not keener. They will get more than they bargained for, with consumer cooperatives. If these certain wholesaler and retailer leaders are as smart as they think they are, then isn't it about time that some of them should have some ideas on what is going to happen after they have wiped out the chains? I am confident that a great many, if not the majority, of wholesale and retail executives throughout the country are already really concerned about these problems generated by a certain few of their number. I am convinced that even these few are beginning to recognize that they are being misled and confused by their leaders. Perhaps the eventual day of reckoning is not far off.

Meanwhile, what about the consuming millions of this country who, if this bill is passed, will be sacrificed to the selfish gain of a minority group?

We leave this question with confidence in the hands of the able gentlemen of the House Ways and Means subcommittee which is now conducting hearings on this bill. In public interest we fervently hope that these capable, far-sighted representatives of the people will assign this so-called chain-store destruction bill to the congressional morgue.

Flood Control—Survey of Columbia River in Clark County, Wash.

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON FLOOD CONTROL

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me today before the Committee on Flood Control:

STATEMENT BY HON. MARTIN F. SMITH, REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON—FLOOD CONTROL—SURVEY OF COLUMBIA RIVER IN CLARK COUNTY, WASH.

Mr. SMITH of Washington. Mr. Chairman and gentlemen of the committee, I desire to compliment you on the fact that you are holding these hearings and preparing to report out an omnibus flood-control bill for the authorization of new projects and new surveys in this session of Congress. The so-called economy and Budget-balancing movement has gained such headway in this session that meritorious worth-while activities of the Federal Government are going to suffer as a result. Even our flood-control and river and harbor program has not been spared, despite the fact that it has been generally recognized for years that there are no sounder, wiser investments made by the Federal Government than those which have to do with protecting the lives and property of our people against disastrous floods and soil erosion and the development of our rivers and harbors to provide low-cost water transportation to serve our farming and urban communities.

In this session I have introduced H. R. 8938, to authorize a preliminary examination and survey of the Columbia River in Clark County, Wash., in my congressional district, extending from the downstream point of the Vancouver Lake area to the upstream point of the Bachelor Island area, a distance of approximately 3 miles, with a view to providing flood control for that area. This is a very important and very urgent project, as some of the finest farm lands in the vicinity are rapidly being eroded and washed away, and speedy action must be taken to halt the damage which is being done. Several years ago your committee authorized a survey of the Vancouver Lake area, and considerable surveying has already been done out of the limited allotments available for this purpose in recent years and the Army engineers expect to make further progress with this survey this summer. This new area will be supplemental and adjacent to that already being surveyed and is equally as important, if not more so.

I wish to thank the Flood Control Committee for the kind consideration my constituents have received at your hands in the past. We have gone a long way from the point at which we started in 1934, when my first bill for the survey of the Columbia River with regard to flood control was approved by this committee and favorable action upon it was taken by Congress, together with similar bills relating to the Cowlitz, Chehalis, and Lewis Rivers. We have had millions of dollars expended for the prevention of floods and soil erosion in Cowlitz, Wahkiakum, Clark, Pacific, Lewis, Grays Harbor, Skamania, Thurston, and Mason Counties in my district. There is no other activity of the Federal Government which has proved so beneficial and been so universally approved by our citizens and taxpayers, who realize that these improvements are of permanent value.

Mr. Chairman and gentlemen, I trust that you will authorize a survey under my bill H. R. 8938, and I desire to thank you for granting me this time.

Gold and Its Power, Part VII

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

Mr. THORKELSON. Mr. Speaker, in listening to discussions on money, particularly upon gold money, I am often impressed with the apparent lack of knowledge on this very important subject. This confusion seems to be universal, for I have yet to find two people who agree on this subject. In trying to discover the reasons for this confusion, I have come to the conclusion that it is caused by unwillingness to accept the true significance of gold.

We must, in order to understand this, accept gold as the international standard of value, and that parts or grains determine the value in each piece of money. Furthermore, international balances are settled in ounces or grains of gold and not upon national or local currencies, such as shillings, francs, and dollars.

National currencies without gold are unstable, and international gold currencies are stable. The importance of gold is clearly evident today as nations gird themselves for war, for, make no mistake, the present world strife is promoted by the international money changers for a dual purpose: First, to secure possession and control of the world gold supply; second, to use this power to build an international

empire or state over which Shylock is to rule as king of kings.

In this final attempt by Mr. Shylock to establish world domination we, the people of the United States, have innocently rendered valuable aid by allowing the President, a supine Congress, and an incompetent Supreme Court to deprive us of sound or standard money. The gold is now owned or controlled by the international bankers, an alien and enemy interest of the United States.

The President, supine Members of Congress, and conniving Justices of the Supreme Court have apparently in collusion upheld a fraudulent act, which, in increasing the dollar value of gold, has brought about a loss to the United States of $14.33 for every ounce of gold expended for merchandise or credit. The people are, in addition, charged with the cost of protecting and guarding this gold, a property which now does not belong to the people, but is owned instead either by private or alien interests. The people of the United States sustained an irreparable loss when Congress enacted the Gold Reserve Act, for it deprived them of their own property and conferred title to private and alien interests. All who engaged in the enactment of this law did not only transcend the constitutional power delegated to them by the people, but connived in fraud and deception. Congress should, in justice to the people and for the security of the United States, repeal the Gold Reserve Act, repudiate gold certificates, and restore title of the gold to the people of this Nation, to whom it rightfully belongs. Private interests should forever be barred from ownership and control of the Nation's gold, and this is particularly true of international and alien interests, for they are indeed enemies of the United States.

SOUND MONEY

The old gold standard is still employed in adjusting international balances, and cannot be changed except by international agreement. The old dollar contained 25.8 grains of gold nine-tenths fine, or 23.222+ grains of fine gold. Much discussion takes place on the floor of the House in regard to the gold-buying policy of the Treasury Department, and many Members hold to the opinion that no more gold should be accepted by the United States. The daily press also laments the fact, and criticizes the Treasury Department for the ever-increasing accumulation of gold. On April 3, 1940, our gold stock amounted to 527,722,655 ounces, or $18,470,292,924 in fine gold. Members of Congress, private citizens, and the press hold this a dire calamity, which if allowed to continue may bring about disaster. This outlook, if nothing else, is lacking in soundness or, let me say, is not in accordance with established facts. Neither is this view confirmed by the attitude of the international bankers, for they have finally, by our stupidity, acquired title to the world's gold supply.

A little thought on this subject should make it clear as we propound these questions:

What other metal can be used as an international standard for money? No one can deny that gold alone possesses the physical characteristics which made it a most desirable metal for money. Is it not true that gold has been used for money for thousands of years? Is it not true that gold is the international standard for money? In view of this, is it not perfectly stupid and silly to believe that this is now to be abandoned?

Much fear is expressed by my colleagues that the price of gold may depreciate, that the ounce value of gold may be reduced, and I say, suppose this should happen. What would we do? We would then proceed to buy gold, for as the price decreases per ounce we could buy an ever-increasing amount at a constant decrease in price until we obtain possession of all the gold in the world. Surely no one can deny that it would be to our advantage to pay $20.67 for 1 ounce of gold instead of $35, and no one can deny that it would be to our advantage to buy an ounce of gold for $5 instead of $20.67. But the question is, Will this ever happen? The answer is absolutely no, for an ounce of gold being a standard unit will not be reduced in price by any nation as each reduction is equal to a gift and would, when completely reduced or given away, leave the treasury of each nation without gold.

The fact is that we have never—and I invite the Treasury Department to contradict this statement—we have never bought 1 ounce of fine gold from any nation in the world. We have instead extended credit in bonds or securities, or else we have sold merchandise to foreign nations for gold. This gold is now supposed to be in the United States Treasury. The daily statement of the United States Treasury on April 3, 1940, showed that it amounted to 527,722,655 ounces, or $18,470,292,924.02. This is the new gold dollar, which contains 15.521 grains of gold nine-tenths fine, or 13.7142 grains of fine gold.

It is now my intention to show that the United States has lost $5,562,265,641, excluding the $2,000,000,000 in the stabilization fund, as a result of having increased the dollar value of gold per ounce from $20.67 to $35. The loss per ounce of gold amounts to $14.33, which is the difference between the old and the new price of gold.

For a better understanding of this let me say that there was in the Treasury of the United States on February 28, 1933, 159,249,355 ounces of fine gold, or $3,291,684,172 in gold nine-tenths fine.

Subtract the 159,249,355 ounces of gold from the 527,722,655 ounces of gold which was in the Treasury April 3, 1940, and you will have left 368,473,300 ounces of fine gold. This represents the ounce increase in gold from March 1, 1933, to April 3, 1940. Multiply the 368,473,300 with $20.67 and you will get $7,616,343,111. Add this amount to the $3,291,684,172, which was in the Treasury February 28, 1933, and you will have the sum of $10,908,027,283, which represents the old standard dollar value of the gold now in the Treasury of the United States.

Subtract the $10,908,027,283 from the $18,470,292,924 and you will have $7,562,265,641, a sum which represents the fictitious increase in dollars that was brought about when 1 ounce of gold was increased from $20.67 to $35.

Subtract from the $7,562,265,641 the $2,000,000,000 gold in the stabilization fund and there will be left $5,562,265,641, which represents a part of the loss which industry, agriculture, and labor have sustained as a result of increasing the dollar value of 1 ounce of gold from $20.67 to $35.

THE BIG STEAL

Before 1933, 100 ounces of gold was worth $2,067. Since the Gold Reserve Act was passed, 100 ounces of gold is worth $3,500, a difference of $1,433, which represents the loss we sustain for every 100 ounces of gold that comes into the United States.

This is premeditated and willful fraud that must be charged against those who insisted that our international dollar be tied to 15.521 grains of gold nine-tenths fine. Furthermore, it is legal cause for impeachment that should be carried into execution as an act of justice to our own people and for the "general welfare of the United States." Further evidence that this was a deliberate and willful act may be found in the fact that we are the only nation with a fixed gold-grain value in foreign-exchange money.

I furthermore charge that this fraud was planned so that the United States would finance the British war machine with 69 cents out of every dollar spent in the United States. I presume that provisions were also made for England to invest 31 percent of every dollar expended in real or stable securities, which can be liquidated when we return to the old gold standard without gold loss to the Bank of England, but with a total loss to the United States.

THE FINANCIAL TRICK OF SHYLOCK

The British Government, through the Bank of England, may now establish credit for, let us say, 1,000,000 ounces of gold. One million ounces of gold at the old or standard dollar value of $20.67 amounts to $20,670,000; a million ounces of gold at the new value of $35 per ounce amounts to $35,000,000. The difference between these two amounts is $14,330,000, and it is this difference that will be used to finance the British war.

This $35,000,000 credit, which represents 1,000,000 ounces of gold, may be invested in the following manner: $20,670,000 may be invested in real estate or other industrial stocks and bonds, to remain there until the end of the war. This would be particularly true if the investment were made in real estate. If these investments were made in industrial stocks and bonds, it is possible that they might be sold on a climbing market and at sufficient profit to balance or exceed the $14,330,000 which was used to buy war materials.

The international bankers are one large family of successful grafters, who, because of our stupidity, have always been able to take their profits out of our hide. I look for a stock-market flurry somewhat similar to that which we had in '28 and '29, and the purpose of this will be to clean the American people out of cash by selling English-owned American stocks to gullible and willing gamblers. We should not take part in such transaction, because the international bankers will deal from the same cold deck that they dealt from in 1928 and 1929.

If the investments are made in real estate, it may remain until after the war, because value of real estate remains more or less constant. At the end of the war the old gold standard will be reestablished by international agreement, and we, of course, will add our weight to bring that about. The dollar will then be fixed upon 25.8 grains of gold nine-tenths fine, and the ounce will be worth $20.67. Great Britain can then, with $20,670,000 invested in real estate, sell such real estate for the original investment in dollars which will by that time be worth 1,000,000 ounces in gold.

It should therefore, be clear that the United States has been prepared by the President and the Secretary of the Treasury to finance the contemplated British and French war, for it was upon their advice that the ounce value of gold was increased from $20.67 to $35.

I am also willing to concede, basing my opinion upon past performances of our English, French, and Russian Ambassadors, that the recent report that has come from Europe is correct, and that Mr. Bullitt and Mr. Kennedy did engage in undiplomatic guaranties unbecoming to foreign representatives.

The attitude of the Executive and the Secretary of State lends credence to this report, for both are, if nothing else, dupes of the internationalist. If the Executive and the Secretary of State would display the same interest and be as diligent in protecting the interest of the United States as they are in aiding the interest of Great Britain, much good would accrue. As it is now, I fear the future, for the American people will not allow themselves again to be used as menials for the British internationalistic Government. In other words, British propaganda is wasted and deliberate incidents may bring about impeachment.

Inasmuch as I have referred to the $2,000,000,000 in the gold-stabilization fund and that it was not included in the five and one-half billion dollars that I said was a total loss, I hope the custodians of this fund will employ the utmost care in protecting this money, as otherwise our loss may amount to seven and one-half billion dollars.

The Secretary of the Treasury should now inform the public what he is stabilizing with the $2,000,000,000 in gold, which is not accounted for in the Treasury balance sheet. We would like to know if this money is used to stabilize English and French currency and bonds. We know positively that it is not used to stabilize German or Italian currency, and that it is not needed for our own, as our dollar is secured with 15.521 grains of gold. I grant that section 10A in the appendix of the Gold Reserve Act grants both custodians the right—or the Secretary with the approval of the President—the right to deal directly or through such agencies as he may designate, in gold and foreign exchange and such other instruments of credit and securities as he may deem necessary to carry out the purpose of section 10A. However, I earnestly hope, in spite of the fact that Congress granted this unconstitutional authority, that the Secretary of the Treasury and the President will be careful in protecting the money entrusted to them. I realize this act stipulates that the President's decision will be final and not subject to review by any officers of the United States, but I also contend that an accounting must be made before the end of this year when both gentlemen are replaced in office.

I have often wondered what impelled the New Deal statesmen to vote for this act, and how they missed reading the paragraph in the Constitution that stipulates that—

> No State shall make anything but gold and silver coin a tender in payment of debts.

And that—

> No money shall be drawn from the Treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

I have discussed this because it is such flagrant violation of the Constitution and such gross injustice to the people that Congress should, to redeem itself, set this thing right before the end of this session. The people are tired of it, and Congress should be ashamed of it, for such legislation can only bring about public ridicule and contempt for those who are elected to preserve, to protect, and defend the people's right.

FEAR NOT THE ACCUMULATION OF GOLD

No one should display the slightest fear had we all the gold in the world, for were it true, what a power we would be. The constant discussion and agitation to bring about fear from an oversupply of gold is, if you understand the internationalist, an attempt to confuse the goi so that he will accept the loss of gold as a blessing by Shylock. What fools we are to let this international rabble lead us into blind alleys. What a pity it is to have courts that connive with this horde to establish citizenship. What we need more than anything else are American judges in our own courts, for Shylock gives no justice to the goyim. This is clearly evident in the prosecution and persecution of such Americans as are guilty of no other crime except opposing the Communist and the communistic internationalist, and that, I may say, is a duty of each and everyone who believes in the fundamental principles of this Republic. We need to clean our courts, the justice departments, and political law-enforcement bodies. They are now not only un-American, but are in addition to that, dupes of Shylock.

Let us assume that we had all the gold in the world, that when it is locked up tight, other nations abandon the use of gold money. What is to prevent us from using the same money that other Nations use? Surely we are well supplied with all metals except nickel and tin, but both can be had in the United States or its territories for the trouble of developing such mines. It behooves all those who labor under the delusion that gold may become obsolete to take another look, for somebody is trying to pull the wool over their eyes.

There is another point that should be of interest to the taxpayers of the United States, and that is the loss we sustained when we bought silver from the whole world at 70 cents an ounce, when we could have bought the same metal for less than 30 cents an ounce. In this transaction, I do not doubt that gold was paid for over-priced silver, all for the benefit of the international money changers.

I believe it is high time that Shylock front for himself, that he sail under his own colors instead of under those of other creeds and people. It is pathetic to observe the helpless and debase goi, selling character and respectability to a people who would, without the slightest hesitation, leave him on the side of the road, a victim of his own imbecillic folly.

WHAT ARE THE FACTS?

The facts are: We do not own the gold and the Treasury Department does not own the gold now stored in the vaults of the Treasury Department. We, the people, are the victims of an international conspiracy in which a majority in Congress, the Executive, and the Supreme Court join hands with the exploiters to deprive the people of sound standard money, security, and protection. This might have been an

innocent act on their parts, but in spite of that it is inexcusable and should be so held by the people of this Nation.

The fact is that on April 3, 1940, $16,169,495,120.64 was owned, according to the daily statement of the United States Treasury, by interests outside of the Treasury and by the Board of Governors of the Federal Reserve System. This is private interest, and the Federal Reserve banks are privately owned and in no sense a part of the Federal Government or the Treasury Department, except in using the Department as a convenience to exploit the people.

The Department of Commerce record shows that foreign nations, probably England and France, own $7,883,000,000 of industrial bonds and securities bought before the dollar was devalued and which now amounts to $13,348,088,985, new gold dollars. This makes a total of over $29,000,000,000 of liabilities against the $18,000,000,000 now in the Treasury. Who owns the gold? Certainly not anyone else except the international banking interests.

The facts are: We the people owned or were protected by the gold in the Treasury of the United States until 1933, when Mr. F. D. Roosevelt assumed the office of President of the United States. Our investments, securities, and life insurance were in a sense assured by the gold in the Treasury, and it was not a crime to set gold aside as security in case of need. This was only right and just because the gold belongs to the people of this Nation and should always remain so, even if not in circulation.

What are the facts now? When President Roosevelt took office in 1933 his administration took the gold away from the people and gave it to the international bankers. He made it a crime for our people to own or to have gold in their possession. He repudiated obligations of the Government to our own people but did not repudiate similar obligations when held by alien interests.

He has left our own people with a purely deflated dollar, devoid of all value except what it may buy from day to day, but he gave to the international bankers, and other alien interests, gold certificates. "He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance." He has appointed his own judges of the courts, who have little regard for anyone except their own people, and the majority is persecuted at the hands of this alien minority. "He has combined with others to subject us to a jurisdiction foreign to our Constitution, and unacknowledged by our laws; giving his assent to their acts of pretended legislation," and we have now reached the point where the majority rights are jeopardized by minority justices.

This and much else has happened since 1933, when the New Deal was launched by public acclaim. The people are now getting what they voted for, and for that no one can be blamed except themselves, for the majority rules. The outlook is not good, because the leadership of both political parties is dominated by the same alien interest which has directed the administration for the past 12 years, and of which no administration has been entirely free for the past 40 years.

The only hope for the people is to send men to Congress who will not deviate from the literal meaning of the Constitution, and who will spend their time repealing laws which are in conflict with that document. Repeal the Gold Reserve Act and place the gold to the credit of the people of the United States as security for money and other investments. Dissolve chain banks, and establish instead banks in outlying districts, so that the country may be developed. Cancel our obligations to foreign governments against their original war obligations to us. Liquidate our Export-Import Bank as well as all other banking interests in which the United States is now engaged.

We cannot go forward under a two-class monetary system—gold for Shylock and wampum for the people. It is we, the people, who earn the money, and we want it so the blessings of liberty may be secured for ourselves and our posterity. If the internationalist objects to this, he should be deported so that we may have peace, for he admits that wherever he is there is dissension and strife.

THE OUTLOOK

The outlook is not good, for the commodity money or the legal tender now in use, being purely inflated currency, is of little value. It is bound to blow up one of these days, and that is particularly true should gold be withdrawn from the United States. Our national debt is bound to increase as Government income decreases. It is, therefore, practically impossible to escape national bankruptcy. As a matter of fact, we are well on that road now, because the yellow and blue commodity chips are just about the most worthless medium of exchange that people with self-respect will tolerate.

I do not believe that the people will take the administration's failure lightly, or that they will forgive those who have been instrumental in bringing it about. Control of courts and judges is not going to protect this administration or its proponents when the people discover the truth, for they will go to town with all of them. I look for this collapse within the next 4 years, and it would, indeed, be unfortunate should it fall upon anyone else except those who were responsible for bringing it about.

Mrs. Roosevelt's Youth Congress—What Is Its Portent for America?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

ARTICLE BY EUGENE LYONS

Mr. MUNDT. Mr. Speaker, Eugene Lyons, who has written the thought-provoking article, Mrs. Roosevelt's Youth Congress, which appears in the April issue of the American Mercury, is undoubtedly a frequently read author by every Member of the House and Senate. If he is not, he should be, because Mr. Lyons belongs to that rare group of writers these days who actually has had first-hand experience with the problems about which he writes.

Eugene Lyons went to Russia as the Moscow correspondent for the United Press in the early days of the communistic revolution in that country. Mr. Lyons went there not only as a correspondent but with the specific desire and intention of helping to propagandize America in behalf of communism because at the time he left America for Russia Mr. Lyons was one of those ultra-ultra radicals and literary parlor pinks who thought it was "smart" or "modern" or "liberal" to cuss democracy and commend communism. Unfortunately, the whole American colony of "inverted intelligentsia" did not go with Mr. Lyons to Moscow—more unfortunately still, some of them have secured jobs with the New Deal here in Washington instead; but that is another story. In all events, Moscow was good for Eugene Lyons. Living with communism over there instead of lying about communism over here literally gave significance to slang by "making a Christian" out of Mr. Lyons.

Every Congressman should read Assignment in Utopia, written by Eugene Lyons, and giving in detail his gradual transition based on many years of first-hand experience in Russia from an advocate of communism to one of this country's best informed and most persistent proponents of the republican form of government we enjoy in America.

In view of Mr. Lyons' first-hand knowledge of communism and its methods and his intimate acquaintance with its leading exponents in this country, his discussion of the Roosevelt rally of the American Youth Congress is especially meaningful.

With Lyons communism is no remote, illusory cure-all or panacea; he has lived with it, worked with it, tried to accept and admire it, and he finally become so sickened by its God-

lessness, its intolerance, and its cruelty that he discarded its deceptive tenets and rededicated his efforts to defending the American way of life. His is no paternalistic playing around with the fiery fringes of radicalism; his is no pseudo-liberalism that thinks it "smart" or "modern" to defend the right of youth to go to the devil; his is no attitude based on the hope that political dividends may accrue from widely publicized and exaggerated efforts to encourage license under the guise of liberty. Mr. Lyons' attitude toward the "un-American Youth Congress" stems from his first-hand knowledge of how its tune is dictated and its dance steps prescribed by foreign agents of Soviet Russia and by the subversive methods of American Communists. As a true friend of youth, Mr. Lyons knows that such rallies as the White House American Youth Congress misrepresents the sentiment of real American youth, and misdirects the thinking of the unfortunate gullibles attracted by this thinly disguised "front organization."

YOUTH CONGRESS MISREPRESENTS AMERICAN YOUTH

American youth is the most idealistic, patriotic, and high-thinking class in America. It is being rendered a distinct disservice by the Youth Congress, which recently assembled here under the auspices of the White House; the vast majority of American youth no more believes in the intolerant and un-American precepts of the American Youth Congress than do the vast majority of sincere peace lovers believe in the alien leanings of the late but unlamented League for Peace and Democracy, which has disbanded subsequent to having been establishd as a Communist-front organization.

If the New Deal and its directors would help American youth, the formula for such assistance is to provide honest jobs in private industry at decent wages and salaries and not to encourage malcontents in their caustic criticisms of the basic traditions and foundations of American government.

NEW DEAL HAS INJURED AMERICAN YOUTH

It is my conviction that the New Deal has worked its greatest injury upon the youth of America. For nearly 8 years it has perpetuated the depression and deprived American youth of the opportunity they have invariably enjoyed at least in some stage of every other American administration trusted by the people for a two-term stay in authority. Even worse than that, dodging and ducking the responsibility of meeting today's problems with today's resources, it has borrowed and borrowed and borrowed against the future until the national debt limit has been reached, which is just another way of saying it has shifted to the shoulders of American youth the necessity of paying for as much of the extravagance and graft of the New Deal as the law of the land permits.

NEW DEAL MALADMINISTRATION CAUSES DISCONTENT OF YOUTH

Never before in history has any other administration piled upon the boys and girls of any era anything even remotely resembling the extent of governmental debts which has been foisted upon young America by the deficit spenders of the New Deal. The President and the First Lady cannot at this tardy date, in the very twilight of their sphere of authority, compensate to American youth for the luckless plight into which they have injected them by providing sleeping rooms or board or even friendly speeches to a group of misguided youth assembling in the White House to pass resolutions at an American Youth Congress.

Basically, the cause of such resolutions of discontent and such rallies of radical youth is to be found in the New Deal program of reduced production, continued unemployment, unbalanced budgets with mountain-high debts for youth to pay, and a devotion to European wars combined with a disregard for domestic problems. Perhaps the Roosevelts owed the American Youth Congress some hospitality since their regime has contributed so definitely to their problems, but the key for unlocking the door of opportunity and giving American youth an American chance once again, is not to be found in fine speeches and gracious gestures to frenzied conventions, but it is to be found in a sound, safe, and sane Government program which will give jobs and opportunities to the young people of America who, after all, are more interested in a fair chance for a free people than they are in a friendly reception for a rump organization which completely fails to represent the typical youth of America.

Mr. Speaker, I believe all readers of the CONGRESSIONAL RECORD will find the following article by Eugene Lyons stimulating and thought-provoking. I commend it to your attention in the interests of a better day for the youth of America, whose lifelong tax sacrifices have been pledged by the New Deal during its two-term alliance with the "imps of squandermania."

[From the American Mercury for April 1940]

MRS. ROOSEVELT'S YOUTH CONGRESS

(By Eugene Lyons)

One week end in February several thousand young men and women took over Washington. They were a loud, sloganeering, chip-on-shoulder, treat-'em-rough mob. Though they called themselves delegates to a congress, there was nothing remotely deliberative about their proceedings or behavior. They came and remained, rather, in the excited spirit of a revival meeting or mass meeting. The blight of unanimity lay upon their every session, except, as the Commu-Nazi weekly, New Masses, reported in great glee, that "one or two obstreperous individuals managed to get themselves thrown out." These lonely dissenters achieved that distinction through the high crimes of suggesting the exclusion of those who take orders from foreign dictators, and demanding an expression of sympathy for the Finnish victims of Russian aggression. The delegates hurrahed lustily on certain key words and slogans, howled down every sign of disagreement and bum's-rushed those who objected. The so-called American Youth Congress rejected everything that smacked of tolerance, reasonableness, or civilized respect for unpopular views. It had the truth by rote and was ready to stone all nonconformists to death.

Even the President of the United States was not exempt from its totalitarian wrath. This despite the fact that Franklin D. Roosevelt, and Mrs. Roosevelt, had made themselves patrons and protectors of the gathering, despite the fact that the arrangements for the congress had been made from the White House itself by Abbott Simon, their house guest. Perhaps, for the first time in the history of the Republic, an American President was booed on his own front lawn by his invited guests. A little later, as though to ram the insult home, the congress cheered an unbridled and shamelessly demagogic attack on the President by John L. Lewis; neither did it show much consideration for Mrs. Roosevelt herself when she tried, belatedly, to inject a little common sense into the howling-dervish performance.

Let us get the picture straight. In that Washington episode we are not dealing with ardent youth going to unmannerly extremes in support of its ideals. There was not even the odor of idealism to explain the intolerance. Nowhere in the record is there a trace of dedication to larger causes, of concern for anyone but themselves, of pity or sympathy for the current victims of tyranny the world over. We, us, gimme—or else! The spectacle would have been disheartening if the actors had been weary and cynical oldsters; on the part of youngsters, from whom we might normally expect a little idealism, it was downright obscene.

Nor was it a question of youth defending its convictions. It is silly to talk of convictions in relation to a group which, only 7 or 8 months earlier had shouted no less hysterically for the very opposite slogans. The about face had not been preceded by honest discussion, by a searching of conscience, by a deliberate reexamination and reappraisal. It had been sudden flip-flop on signal from the cheer leaders—and not the first such somersault either. At the time of its formation, in 1934, the American Youth Congress took the Oxford pledge and adopted a vehemently antiwar attitude. Late in 1935 the congress suddenly dropped its pacifism and became militantly antifascist and procollective security. Amazingly, this reversal coincided with a similar reversal on the part of the Communist International and its multitudinous affiliates. Coincidence, however, was raised to the level of the miraculous by the second somersault. For the congress dropped its antifascist line and its collective-security program immediately after the Communist International, having joined hands with Hitler, had done so.

We need not be alarmed by the views of the congress. What is alarming is that the delegates, as individuals, have no views. They merely accept a program handed down from above, ready made to the last accent, without so much as inquiring who tailored it or where or why. The danger is not in what the congress members think, but in the fact that they don't think. The youth meeting was ominous beyond its immediate size or influence, because it was a striking exemplification of the "leader principle" in action—in many respects the boldest demonstration of that basic totalitarian principle on American soil.

II

In allowing herself to be used as a respectable front for this demonstration, Mrs. Roosevelt no doubt imagined that she was defending the right of young people to think and act for themselves. Unfortunately she was doing the exact opposite—conniving to prevent young people from thinking and acting for themselves. She might have tried the simple test of inquiring privately from a dozen or two of the delegates why they had suddenly exchanged their anti-Fascist line for an anti-imperialist line; their support of collective security for isolationism, their opposition to

aggression against weak nations for indifference to such aggression. After all, these are profound changes in viewpoint to be accomplished in a few months. She would have discovered the self-evident fact: That these befuddled young people had not undergone any inner revolution at all but were merely following instructions in blind faith. They had given up the prerogative of thinking, questioning, arguing, in return for the spurious satisfaction of collective shouting under dynamic cheer leaders. It was not at all a question, as Mrs. Roosevelt put it, of the congress not voting as it did not believe, on Finland or anything else. It was a question of exploring in a reasonable, democratic spirit what the delegates did believe—and why. The resolutions adopted by such a gathering are not nearly as important as the process by which the resolutions are reached.

The nobility of her motives does not make Mrs. Roosevelt's role in this affair any the less mischievous. It is no exaggeration to say that her support gave the congress politicians a moral authority which made it easier for them to jam through the official views and to suppress dissenting opinion. In effect she sided with the organization against its members, with collective know-nothingism against democratic and intelligent discussion. She might have exerted her influence in due time to insure free discussion on all disputable questions and elementary democratic procedure to safeguard minority views. Instead, she played the game to the end with the congress leaders.

Perhaps the most baffling aspect of her stubborn self-righteousness is to be found in Mrs. Roosevelt's strange blind spot for the other youth organizations, grouped in The Campaign for Youth Needs. Her championship of the American Youth Congress—in face of its mob spirit, its boorishness, its irreverence, and above all the fantastic way in which its program always parallels the Moscow line—amounts to an obsession. In her position she has no right to be so dismally wrong.

The President, too, would have done better by all American youths to unmask in advance the totalitarian character of the Congress and to expose its foreign allegiance. He elected instead to support it with White House invitations and to argue about its views as though they really represented the reasoned convictions of a sector of American youths. Even the "spanking" he administered amounted to a recognition of the congress which will be exploited by its communist leaders to inveigle more innocent boys and girls into the organization. John L. Lewis, indeed, immediately gave us a sample of what a reckless demagogue can do in exploiting the fears and desperations of youth. The President had set the stage for him beautifully.

There is no doubt, of course, that fear and desperation are at the bottom of the whole sad business. Because youth lives today in the shadow of unemployment it is easy prey for totalitarian demagogues. For that very reason it should be protected by intelligent elders against the predatory power hounds, against indigenous and foreign know-nothingism. For that very reason the Mrs. Roosevelts and other well-meaning and high-minded ones should be less hasty in supporting those who "mobilize" frightened youth for purposes of their own. The ardent young people who provided the main support for Fascism in Italy and for Hitlerism in Germany in their march to power were likewise desperate and fear ridden. Having watched the process in both Italy and Germany, the writer recognized the same temper, the same unthinking, hurrah-shouting, intolerant, cocksure mob spirit, the same loud-mouthed, sloganeering, power-drunk types of leaders in the Washington shindig of the Youth Congress.

The problems of youth will not be solved in this wise—unless the concentration camps, the mental goose-stepping, and the moral degeneracy of the European dictatorships represent a solution.

The press has failed to understand the totalitarian implications of the episode. The meeting and its championship by gullible liberals are symptoms, danger signals, of a national mood.

EUGENE LYONS.

Tinkham One of G. O. P.'s Best Men

EXTENSION OF REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

ARTICLE FROM THE NEW YORK ENQUIRER

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Enquirer, which sets forth many of the fine qualities possessed by the gentleman from Massachusetts, HON. GEORGE HOLDEN TINKHAM, one of the most beloved and highly respected Members of the House of Representatives:

[From the New York Enquirer of April 8, 1940]

TINKHAM ONE OF G. O. P.'S BEST MEN

If the two-party system so long in operation in the national politics of the United States is to give the Republic the maximum of service and the minimum of mere partisanship, the party of Jefferson and that of Lincoln must be ever willing to recognize merit and to place the well-being of the Nation above all other considerations in selecting men for public office.

By reason of the issues now at stake for the Republic, internally and externally, both the Democratic and the Republican Party cannot be said to be measuring up to their responsibilities to the United States and to themselves.

Take the Republican Party.

It ought to be an easy matter for those in charge of that party to perceive that the American people are nauseated with the present condition of affairs and the factors in the past which brought about that condition. They want to see a new leaf turned over at Washington, and they are looking to both parties to give them a Presidential candidate who they know will carry out their will after he begins his tenancy of the White House.

The Republican Party has a number of men worthy of the White House. Let's consider just one of them.

Representative GEORGE HOLDEN TINKHAM, of Massachusetts, would make an ideal nominee of the party of Lincoln. Mr. TINKHAM is a wealthy man. In his case, wealth is a commanding qualification, for by his splendid record he has shown that riches and Americanism are not incompatible. He is a sane, experienced, and enlightened statesman, a citizen whom Washington and Lincoln themselves would have the utmost satisfaction in recommending to the voters of the Nation.

GEORGE HOLDEN TINKHAM is an American in every element of his being. The traitorous internationalism which now casts, and has so long cast, its defeatist influence over the Republic finds in him a militant opponent.

He holds, as Washington and Lincoln held, that the vital interests of this nation preclude our participating in any way in the concerns of the Old World. And he perceives that, by reason of the conspiracy afoot between Washington and Old World powers to drag this land into war in the interest of foreign imperialism, and the other anti-American courses being pursued on the banks of the Potomac in the realm of international affairs, the foreign policy of the United States is of paramount importance in this year's Presidential campaign.

He perceives, too, that the man chosen by the Grand Old Party as its Presidential nominee must take a firm, unequivocal and honest stand for America on the question of her dealings with other nations.

The fearless and able statesman of Massachusetts, whose voice is as the voice of Washington and of Lincoln amid the blatant utterances of public men and aspiring public men in whose hearts and souls patriotism finds no place, is not a candidate for the White House. Whether GEORGE HOLDEN TINKHAM, a veteran public servant who is eminently right alike on domestic and international concerns, could be induced to accept the G. O. P. nomination is problematical. He is, however, one of the men not to be overlooked in arriving at the fateful decision which now confronts the Republican Party.

Some Real Horse Sense From An Able Businessman

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

EDITORIAL BY PAUL BLOCK

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

SOME REAL HORSE SENSE FROM AN ABLE BUSINESSMAN

Every once in a while somebody steps up to the American people and gives them a good, straight-from-the-shoulder dose of common sense. He throws away all the oratory of the politicians, all the theories of the economists and professors, all the muddy thinking of the unintelligent, and gets right down to brass tacks.

Men with the honesty and sincerity to do this have unfortunately not been too numerous in our past. Lincoln did it; so did Grover Cleveland and Theodore Roosevelt. Someone is also doing it today, without pulling his punches or caring where the chips may fall. He is Wendell L. Willkie, president of the Commonwealth & Southern Corporation, and he deserves the thanks of all who are interested in the country's welfare for the straightforward, unselfish way in which he has recently been attacking our national problems.

In politics Mr. Willkie is apparently an absolute independent. He refuses to praise one party and damn the other. What he is

interested in is bringing about recovery, as quickly and as soundly as it can be done, without regard to party labels or class distinctions.

An outstanding example of his clear thinking is his remark in a San Francisco speech, "It is amazing how the extreme new dealers * * * have been able to appropriate the word 'liberal' to their reactionary doctrines."

The New Deal is reactionary and not liberal, Mr. Willkie says, because it has concentrated power in the hands of government. The heart of the American system is the limitation of power. For years until 1929, too much power was concentrated in private hands; since then it has become even more centered in Washington. In both cases this is wrong, Mr. Willkie contends; government monopoly is just as bad as private monopoly. What must now be done is to free the people, whose enterprise and initiative are what make our economic system go, from the regimentation of government while still protecting them from monopolistic control.

It is vital, Mr. Willkie feels, that the Government abandon its attitude of hatred toward business. Business, by which our people live, cannot be separated from our economic system and made a whipping-boy; it cannot be condemned as wholly wrong, any more than all the people can be wholly wrong. "If we are to live, if we are to maintain our present standard of living, and most of all, if we are to hope for greater things in the future business must flourish. No single reform instituted by the New Deal, or for that matter no handful of reforms, would keep American business down. But the attitude, the intangible hostility toward this most fundamental part of our economic system has made it impossible to act any longer in a free and enterprising manner."

For the fresh air which Mr. Willkie brings to the discussion of our pressing problems, for the common horse sense which he talks, he deserves gratitude. That he cuts across party lines, refusing to avoid the facts as he sees them to make political capital for any group or person, including himself, is incontrovertible proof of his honesty. He is telling the American people what is wrong and how to right it and it is to be hoped that they will listen.

PAUL BLOCK, *Publisher.*

A Congressman Reports

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address entitled "A Congressman Reports," which I delivered April 4, 1940, over Radio Station WMCA at New York City, as follows:

Speculation continues unabated as to President Roosevelt's attitude toward a third term. Rightfully, in my estimation, the President should not make his declaration at this juncture. The longer he waits, the more he outmaneuvers and bewilders the Republican opposition. Frankly, I don't believe that the President, in the light of the stubborn, anti-third-term tradition, will accept a third-term nomination, even if it were handed to him on a silver platter.

I am a delegate to the Democratic National Convention. I am one of those who would be willing to nominate Roosevelt for a third term. He can have a third nomination if he wishes it. Witness the Wisconsin primary result. But I am convinced, from my knowledge of the President and his works, that he will not accept such designation. I am sure he is not unmindful of what Jefferson said:

"* * * The service for 8 years, with a power to remove at the end of the first 4, comes nearly to my principle as corrected by experience; and it is in adherence to that, that I determine to withdraw at the end of my second term. The danger is that the indulgence and attachments of the people will keep a man in the chair after he becomes a dotard, that reelection through life shall become habitual, and election for life follow that. General Washington set the example of voluntary retirement after 8 years. I shall follow it * * *."

The question is naturally asked, Who will the Democratic nominee be if Roosevelt rejects the nomination which might be offered him? In view of the great strides in economic progress made by the New Deal—although same has not been acceptable in numerous quarters, even though the rank and file of the masses of people approve—Roosevelt is entitled to name his successor so as to insure the continuation of his policies. I believe the names of Douglas, Jackson, or Hull are acceptable to him, and rightfully so. And I hope and pray the convention will confer on Jim Farley the Vice Presidency, if he wishes it. I know of no man better entitled to that preferment than he. A Douglas-Farley or Hull-Farley Democratic ticket would be unbeatable.

It is becoming more and more apparent to Members of Congress that something must be done, and done quickly, concerning the many barriers that State legislatures have thrown up against interstate commerce. A bird's-eye view of the United States would show thick, concrete walls erected around each State that assumes towering heights, for the purpose of shutting out trade from other States, presumably for the benefit of the local citizenry. The marketing-laws survey of the Works Progress Administration has made an interesting study, showing something of the "Balkanizing" of the States. Let me give you a few examples:

(1) In Rhode Island you cannot bring milk into the State (grade A or grade B) from any surrounding State unless you tincture it pink. Imagine trying to drink pink milk. This is done presumably to help Rhode Island dairies. Rhode Island may naturally expect reprisals from her competing States.

(2) In Georgia you cannot mark eggs "fresh" unless the chickens laying the eggs laid them in that State. Assuredly bordering States will go Georgia one better.

(3) In Maine if you have a 35-foot auto truck, you cannot get it out of the State. The truck is simply walled in, because all the States surrounding Maine preclude by statute a truck unless it is a 40-foot standard-size truck.

(4) In Michigan wine made from home-grown grapes is taxed (by the State) 4 cents per gallon; but if you bring wine into Michigan from a neighboring State, say, for example, Wisconsin, the tax is 50 cents per gallon. In all likelihood Wisconsin will take revenge on Michigan and soak Michigan wine makers 60 cents per gallon.

(5) In Arizona if you wish to sell fruits and vegetables from an auto truck, and if you are from another State, you would be required to pay a separate and distinct license tax in every county of the State. And so, if you are doing business in all the counties, you are required to pay a tax of $4,400. The tax is $500 for each county with a population of 100,000 or more, and $300 in all other counties, although native Arizonians pay no tax.

These walls remind one of the tariff walls which the Thirteen Original States erected against each other. For example, there was a tariff wall between New York and New Jersey directly after the Revolutionary War. It almost led to bloody conflicts between citizens of the two States.

A very serious danger has now become most pressing, and I have therefore offered a bill to set up a permanent bureau in the Department of Commerce to make a complete study of the problem and to make recommendations quickly to Congress to do away with these State trade-barrier strait jackets to bring about increased interstate commerce.

Much has appeared in the press recently about my friend J. Edgar Hoover. The criticisms which have been leveled against him are highly unfortunate and unjust. During my 18 years in Congress I have learned to admire the administrative skill, the probity, the idealism, and the boundless energy of Mr. Hoover. There has never been a breath of scandal connected with him or his organization. In law-enforcement work, where enemies must be made, this is saying much. The attention of the chronic enemies of the Federal Bureau of Investigation seems to have been centered recently on a certain case which originated in Detroit, covering the arrest of a number of individuals charged with violating the statute prohibiting the recruiting of persons for military service abroad. Be it remembered that Mr. Hoover did not start this investigation. He was ordered to do this by the then Attorney General Murphy. Indictments were returned by the grand jury. These indictments were ordered dismissed by Attorney General Jackson. All that Mr. Hoover did was to carry out orders.

Charges have been made that Mr. Hoover and his men subjected the defendants to third-degree methods and that they were intimidated. If there was any violation of constitutional rights, it was by State officials and not by the Federal Bureau of Investigation.

Let us not be ungrateful. No one has done more to put fear of God into the criminal than has J. Edgar Hoover. Note the remarkable work he did in running down the Christian Front culprits now on trial in Brooklyn. There is no longer any kidnaping menace. Since June 1932, 178 kidnaping cases have been investigated by the Bureau, and all but two of these cases have been solved.

Bank robberies a few years ago were committed with a considerable degree of safety. This is no longer true. Mr. Hoover has reduced this type of crime approximately 75 percent.

The records show that J. Edgar Hoover and his men are responsible each year for an average of more than 5,000 convictions. Over 96 out of every 100 persons taken into court for trial by Mr. Hoover and his men are convicted. Under the intrepid leadership of Mr. Hoover, the psychology of the Nation toward crime and criminals has changed. Up to a few years ago, it was the practice for motion pictures and magazines to glorify the criminal as a brave and adventuresome hero. Today the criminal is portrayed as an enemy of society, and the law-enforcement officer is set up as a peacetime soldier hero, who risks his life for his country. A few years ago, little boys in their games used to play the role of gangsters; today they play as G-men.

A Nation-wide conference of United States attorneys at Washington today expressed a vote of confidence in J. Edgar Hoover.

Be it remembered also that not so long ago, Mr. Hoover was offered a radio contract which called for his appearance on a radio program for a period of 3 minutes' time each week for 26 weeks. For this he would receive a considerable sum of money, several thousand dollars for each appearance. He declined the offer for

fear it might interfere with the effective carrying on of his chosen work.

I was happy a few months ago to note the appointment of Myron C. Taylor as the President's representative at the court of Pope Pius XII in Rome. Some time before this appointment, I wrote a letter to Secretary of State Hull, urging such an appointment. I believe I can be forgiven for stating that I may have had some slight influence on the President's decision to send Myron Taylor to Rome. An examination of the records will reveal that diplomatic relations with the Holy See were first established on December 15, 1784, when the Papal Nuncio at Paris wrote to the American Commissioners that his Government had agreed to open the ports of Civita Vecchia on the Mediterranean, and Ancona on the Adriatic, to American vessels.

On June 26, 1797, John Baptist Sartori, of Rome, was commissioned as the first consul to represent the United States in the papal dominions.

The diplomatic relations thus established between our country and the Papal States were maintained for nearly three-quarters of a century in a spirit of mutual friendship and respect.

In 1867 the American mission to Rome came to an official end, but through no fault or action of the Holy See. Congress simply refused to continue the appropriation, so that as Secretary of State Seward stated, "Legally, the action of Congress left the mission still existing, but without compensation."

In my opinion, the action of our Government was somewhat hasty and ill-advised, and was an ungenerous return for the good will the Papal See had always manifested toward our Government and our people.

We are all happy to note that Mr. Taylor has been designated as the President's special representative at Rome with a rank corresponding to that of ambassador. While, strictly speaking, these diplomatic relations, heretofore groundlessly severed, have not technically been restored, nevertheless, the reestablishment of relations between Washington and the Holy See should be a clarion call to the civilized peoples of the world that religious and personal liberties are inherent in our democracy. This despite the unwarranted criticism of certain churchmen.

Eight years ago, those engaged in the liquor industry were deemed outlaws. Liquor was the "jackpot" of the underworld. What a difference today! Today, it is a gold mine for the Government. Liquor ranks with tobacco and gasoline as a major source of public revenue. Its worth to the Nation today is over a billion dollars a year. The total liquor tax collected for 1939 was $1,030,000,000. That was twice the revenue collected from liquor sources in 1934, the first year of the post-prohibition era. And it is four times the revenues realized on liquor in the pre-prohibition year of 1916.

How is this revenue divided? The major portion goes to the Federal Government. It gets 63 percent, or $636,000,000. The balance, $308,000,000 goes to the States in license fees and in profits from State-operated retail liquor stores. Such system is in operation in 16 States. The cities and local municipal agencies get the rest, or approximately $85,000,000. Certainly liquor is quite a nest egg for the Nation. These facts indicate that there will be no recurrence of prohibition. The price would be too great.

Over 100 bills have been offered in the House against aliens in this country, and this despite the fact that there are only 3,600,000 aliens left in the United States, and despite the further fact that during the 6-year period ending July 1, 1939, more persons left the United States than came into the country. We have a permissible immigration quota of 150,000 per annum. This number has not been filled for years. For example: The British quota is 65,721 per annum. But only 3,604 Britishers came in during the past fiscal year. That meant that 62,117 numbers were practically thrown down the sewer. The same is true for Ireland and many other countries. Whereas the quota for Rumania is but 312, over 100,000 clamor for admission. Thousands cannot come in from benighted Germany. I would leave untouched the permitted maximum of 150,000 from all countries but rearrange quotas from the separate countries and permit more refugees to come in who flee torture and persecution. I would keep the immigration house the same size but rearrange the size of the quota rooms.

One antialien bill provides that there shall be no more immigration into the United States.

Another bill provides that all aliens who have not petitioned for citizenship as of December 1939 shall be deported. We are not told where we would ship them. Perhaps they should, according to the author, be taken down to Sandy Hook and dumped into the sea.

Another provides that all aliens ordered deported, and for whom travel documents, i. e., passports, cannot be obtained from the country of birth, shall be placed in stockades, concentration camps, for an indefinite period of time, which in some cases might mean for life. And this shall be done at the whim and caprice of the Secretary of Labor. I inveighed against this bill, directing attention to its unconstitutionality, since it deprives an alien of due process (no jury trial); and also, in its provision of indefinite imprisonment, the Bill of Rights is violated. Nevertheless, this bill passed the House, and is now pending in the Senate.

Another bill provides that an alien shall be deported if he espouses "any change in the form of Government," whatever that may mean. That could mean anything and everything. An alien could not, for example, advocate equal rights for women, despite the fact that it is a projected amendment to the Constitution, acceptable to many millions of women. Nevertheless, such an utterance by an alien, under the provisions of this bill, would result in his deportation.

These bills are the outcome of a campaign against the alien, engineered by professional patrioteers. Frequently in our history we have had similar attempts to drive the alien from our midst. There were, for example, the Alien and Sedition Laws of 1789, the Know-Nothing Party movement of 1820, and the Ku Klux Klan of 1920.

It is hoped that better minds will prevail in the Senate, so that these bills will become "dead letters."

As to business conditions generally, I believe the outlook is good. Exports are on the decided upgrade. This is particularly so with reference to airplanes. The direct effect of increased orders from Europe and elsewhere may not be felt for a short period, but unemployment numbers should be greatly decreased in the ensuing summer months as a result of this increased business.

Sumner Welles, the distinguished diplomat, who has just returned from Europe, has made his report to the President. Rightly, that report should not be made public. It would be too pessimistic as to prospects for peace. However, there has been considerable seepage from such report. Undoubtedly, Welles has brought back an excellent factual study of the conflict in Europe. He undoubtedly will report that Russia and Germany are more interested in war than in peace, and, for that reason, Roosevelt's attempt to develop a peace formula cannot meet with success at this juncture. The war, apparently, must go on. Roosevelt rightfully senses this, and states that there is "scant immediate prospect for the establishment of any just, stable, and lasting peace in Europe." Germany, with diabolic cunning, in an attempt to ditch Welles' efforts at peace, timed the publication of the so-called German White Book with Welles' return to this country. This book contains documents supposedly seized from the Polish Government, and purports to show the pro-Ally role played by the United States in bringing about the war. Our Secretary of State Hull and other authorities have rightfully called this White Book a pack of unmitigated lies. Of course, this White Book will intensify the conflict and tension between Washington and Berlin.

One of the opinions that Welles undoubtedly has brought back is to the effect that the proposed Russian-German-Italian axis has apparently been stymied. Both the Pope and the King of Italy object most strenuously to any alliance with Soviet Russia and both the Pope and King Victor Emmanuel still have considerable tug on the hearts of the Italian people.

I personally cannot see the ending of the war for at least another 2 or 3 years. Apparently the allied blockade cannot win the war. Something more is necessary. Germany has been able to get supplies of food and oil from Russia and Rumania in large enough quantities to render less effective the British blockade. A decisive blow against Hitler might be struck by way of the Black Sea, but that would stir up the Balkans; that "back door" way would be dangerous. All in all, there are no visible signs of an early peace, and nobody knows that better than Sumner Welles.

To my mind, one of the best-informed offices of the world is our State Department. For example, it knew many months in advance that war would come. It privately informed the administration of this fact, despite denials in most responsible quarters that war was not imminent. There is hanging in one of the offices of the State Department a European map that is blue penciled. It indicated long in advance of the conflict the probable line-up of warring powers. It also pointed out the countries to be invaded and the lands to be taken and the way they were to be parceled out amongst the conquerors. The prophecies involved in that blue penciling are well-nigh uncanny. I doff my cap in awe and wonderment to the heads of the State Department.

Abdication of the Tariff Power

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

ARTICLE BY GEORGE ROTHWELL BROWN

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown, which was published in the Milwaukee News-Sentinel of April 7, 1940:

[From the Milwaukee News-Sentinel of April 7, 1940]

THE ABDICATION OF TARIFF POWER—NO CONTROL BY UNITED STATES CONGRESS OVER PRESIDENT'S TRADE PACTS—SHALL WE AMEND THE CONSTITUTION?

(By George Rothwell Brown)

WASHINGTON.—President Roosevelt's demand for extension of the Reciprocal Tariff Act of 1934, which expires June 12, and the Senate's tentative approval of that demand on March 29, following previous favorable action by the House, have focused attention of all thoughtful American citizens on the necessity for correct-

ing what is alleged to be one of the most flagrant violations of the Constitution under the New Deal.

It may even require an amendment of the Constitution to terminate such delegation of legislative powers to the Executive by a succession of Democratic Congresses, in alleged disregard of the organic law, and to prevent further impairment of the people's basic liberties which the founders of the Republic intended to safeguard.

Since the trade agreements negotiated by Secretary Cordell Hull are actual treaties, their promulgation without ratification by the Senate is denounced by many authorities as unconstitutional.

SUPREME COURT BARRED DELEGATION OF POWER

The Supreme Court—the old Supreme Court—disapproved the unconstitutional delegation of power by the Congress to the Executive in its majority opinion on January 7, 1935, when in the case of the Panama Refining Co. against Ryan—the celebrated "hot oil" case—the Court said:

"The Congress manifestly is not permitted to abdicate, or to transfer to others, the essential legislative functions with which it is thus vested."

On May 27, 1935, in holding the N. R. A. unconstitutional in the "sick chicken" case, the Supreme Court again quoted the language of the "hot oil" decision.

Democratic Congresses from 1933 on have delegated both legislative and treaty-making powers to the Executive.

In lump-sum appropriations—on one occasion $4,880,000,000—Congress surrendered to the President the mighty and all-important power of the purse—a power expressly lodged by the Constitution in the Congress and expressly withheld from the Executive.

POWER OF THE PURSE FIRST GIVEN CONGRESS

It was the power of the purse which made the Tudor and Stuart kings despots and tyrants. It was in taking this power into its own hands that the House of Commons in England established free government.

The founders of the American Republic richly endowed the popular body of the legislative branch—the House of Representatives—with powers to protect the people. The language by which the powers of the executive, legislative, and judicial branches are defined is clear and emphatic.

There is no British tribunal which can declare an act of Parliament unconstitutional. The will of Parliament is the supreme will of the land.

Not so with the American Congress, which functions under a written Constitution of specified powers. Hence the will of Congress is not supreme, and the judicial power is required by the Constitution to declare null and void statutes which conflict with the Constitution.

PARLIAMENT SUPREMACY ASSUMED BY CONGRESS

The Roosevelt Congresses, it is charged, disregarded this conception and came to act as though it were similar to the British Parliament, functioning without hindrance or restraint under an unwritten constitution.

As James Bryce, in his The American Commonwealth, says:

"In the American system there exists no such body. Not merely Congress alone, but also Congress and the President, conjoined are subject to the Constitution, and cannot move a step outside the circle which the Constitution has drawn around them. If they do, they transgress the law and exceed their powers."

Bryce declares that when President and Congress conjointly transgress the law, it is the duty of the meanest citizen to treat their acts as void.

There was a time when the meanest citizen could say of a statute, "The Supreme Court will declare it unconstitutional."

Today, the average citizen no longer confidently assumes to make predictions.

Although Mr. Roosevelt's attack on the old Supreme Court failed when the Senate refused to enact the "packing" bill, subsequent changes have enabled the President to appoint a majority of the justices.

Since the Supreme Court which, in the "hot oil" and other cases, condemned delegation of power to the Executive, no longer exists, but has been succeeded by a personnel which may view such delegation of power quite differently, a demand is growing for adoption of an amendment to the Constitution that will forbid such delegation of power.

It would be quite possible to draft an amendment which would prohibit the Congress from yielding any of its powers to the Executive. The issue is discussed in a great many Supreme Court decisions, going back as far, indeed, as 1892, in *Marshall Field & Co.* v. *Clark* (143 U. S. 649) and *Butterfield* v. *Stranahan*, 1904 (192 U. S. 470).

FOUNDERS FEARED POWER OF EXECUTIVE

The founders of the Republic feared precisely what has come to pass.

For example, James Madison, father of the Constitution, presented a series of amendments in the First Congress. One of them was adopted by the House, as follows:

"The powers delegated by the Constitution to the Government of the United States shall be exercised as therein appropriated so that the legislative shall never exercise the powers vested in the executive or judicial, nor the executive the powers vested in the legislative or judicial, nor the judicial the powers vested in the legislative or executive."

MADISON'S PROPOSAL NOW BEING REVIVED

But the Senate rejected the proposed Madison amendment.

The following day a motion was made in the Senate to add the following to the proposed amendments, which became the Bill of Rights:

"That the legislative, executive, and judiciary powers of the Government should be separate and distinct. * * *"

This resolution also was defeated in the Senate.

The proposal made by James Madison in the First Congress—in the exact language quoted above—is being revived for adoption in a proposed amendment as an immediate duty of Congress.

Grapes of Wrath Facts Challenged

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

RADIO ADDRESS BY THOMAS W. McMANUS

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast by Thomas W. McManus over radio station KPMC, Bakersfield, Calif., March 26, 1940:

COST OF GOVERNMENT

The cost of government falls heavily on everyone. It affects the ownership of home and farm and the stability of employment. Every property owner understands that before he can enjoy the use of his property or have the income from rentals he must pay his taxes. Before interest can be paid on mortgages, taxes must be paid. If the tax rate is more than the property can earn, it becomes prohibitive and the property is valueless. The surest way to destroy individual ownership of property is to build a tax structure so great that real estate will no longer be desirable as an investment. When the earnings of property are not enough to pay the taxes, the property is sold by the Government to pay them.

When the tax on the businessman is so great that he must curtail his activities and lay men off work, unemployment grows. When the tax on industry is so great that the manufacturer cannot expand or improve his machinery, it means stagnation and disaster. The situation grows more serious every day.

TAXES DOUBLE IN 10 YEARS

Out of every dollar you earned in 1920 you paid 11.9 cents in taxes. Ten years later, in 1930, you paid 11.4 cents in taxes from every dollar you earned. And here is an alarming figure: By 1939 the tax burden had so increased that you paid last year 20.8 cents in taxes for every dollar earned, which was nearly double the amount you had to pay 10 years before.

POLITICIANS SQUAWK AT OVERHEAD CUTS

You pay for all this Government spending, for all the political job holders, and when the legislature wants to reduce the expenses of administering relief so that more money goes to the poor and less to the politicians, naturally there is a squawk from those politicians who do not want to lose their easy jobs. The counties can handle relief administration for approximately 8 percent, in contrast to the Federal Government, which takes 30 cents out of every W. P. A. dollar for overhead, and the State, which takes about 25 cents out of every S. R. A. dollar for administration.

Every good citizen interested in the welfare of this county must support the attitude of Senator J. I. Wagy and Assemblyman Rodney Turner, for, while they have different political affiliations, they both have the same idea. They want to help the taxpayer and the workingman to get the most out of the money he must pay in taxes. You should tell them you appreciate their very fair stand in your behalf.

GRAPES OF WRATH FACTS CHALLENGED

Supervisor Ralph Lavin has given to the press his letter to President Roosevelt regarding Steinbeck's The Grapes of Wrath, and the President's reply. Mr. Lavin also boasts that he is proud of a letter that Steinbeck has written him. The supervisor's letter to the President indicates his endorsement of the idea that fiction is based on facts, and I wish to challenge the facts as far as Kern County is concerned.

I challenge him to produce the vulgarity, the lack of decency, and the immorality among the people who have come here from Oklahoma. They are decent, God-fearing Americans, who have been swept by tides of misfortune in the last few years. Because President Roosevelt's Agricultural Adjustment Act has caused thousands of acres of land to lie unplanted, there has been no work for them, no opportunity for them to earn even that meager livelihood which had always been their lot. I challenge Supervisor Lavin to produce to me a single farmer in his district or in Kern

County who has cheated his workmen by false advertising or who has ganged up with vigilantes to do violence to these people who have come here.

LIBEL ON KERN COUNTY

I challenge him to find a deputy sheriff, a police officer, or men wearing Legion caps, who have gone out to club, to beat, or to shoot helpless people. This is a rotten, vile libel on Kern County.

Supervisor Lavin represents the district from East Bakersfield west to Buttonwillow, and I want him to show the people of Kern County where these abuses that the Steinbeck book portrays exist. I want him to find out where in Kern County there is a doctor or a hospital that has refused care to a woman at childbirth, and I want him to present proof that the Kern County Hospital has been guilty of such inhumane acts.

Nowhere in the world is public hospitalization more generously administered to those who cannot pay than in Kern County, and it is a vicious libel to say that any poor person who is sick and without money cannot receive both medical aid and hospitalization here.

WHAT KERN HAS DONE FOR MIGRANTS

In the year 1938 Kern County took care of more than 15,000 migrant people who were in need of medical care. In the year 1939 it took care of 7,000 people who were not residents of this county—and the California Health and Medical Aid Association of the F. S. A. took care of approximately another 7,000 people.

Nowhere in the world is any comparable service given to the sick.

CALIFORNIA WAGE RATE $2.80 PER DAY

Now, in defense of the Kern County and California farmers, I want to quote the record of the United States Department of Agriculture's Bureau of Economics. The average wage rate in Arkansas is $1.05 per day, in Texas $1.30 per day, in Oklahoma $1.55 per day, and the national average is $1.59 per day. The average wage paid by the California farmers is $2.80 per day.

STEINBECK DENOUNCED IN CONGRESS

I want now to quote the Honorable LYLE H. BOREN, of Seminole County, Oklahoma, speaking before the House of Representatives in Washington. He said:

"Today I stand before this body as a son of a tenant farmer, labeled by John Steinbeck as an 'Okie.' For myself, for my dad, and my mother, whose hair is silvery in the service of building the State of Oklahoma, and whose hands are calloused with the toil known by every tenant farmer of Oklahoma, and for every good man and good woman, every fine son and noble daughter of the great, good class of people which this putrid-minded writer labeled as 'Okies,' I arise to say to you, my colleagues, and to every honest, square-minded reader in America, that the painting Steinbeck made in his book is a lie—a black, infernal creation of a twisted, distorted mind. Though I regret that there is a mind in America such as his, let it be a matter of record for all the tenant farmers of America that I have denied this lie for them. * * *

"Let me call your attention to the fact that in the first few pages of his manuscript that he had tractors plowing land of the Cookson Hills country where there are not 40 acres practical for tractor cultivation. He had baptisms taking place in the irrigation ditches in country near Sallisaw, Okla., where an irrigation ditch has not run in the history of the world. He took Sallisaw out of the hills of eastern Oklahoma and placed it in the Dust Bowl. His careless disregard for these matters indicates only his complete disregard for the truth. It is certain that he wrote about a country he had never visited and a people with whom he was not acquainted and had never contacted."

I admire the loyalty of Mr. BOREN to the people he represents, and I deeply regret that Kern County's supervisor, Mr. Lavin, does not share that good opinion about the people he represents.

PROBLEM FOR THE FEDERAL GOVERNMENT

I join with Congressman BOREN in his tribute to the people of his native State. I think that the poor tenant farmer should have more opportunity, and that the Federal Government should generously deal with this problem, and help them in their own home States, and not expect people to travel 2,000 miles across the deserts and the mountains for needed medical care and relief that they should have in their home communities. The F. S. A. should help them to get resettled there and make a decent living, because California has now exhausted every opportunity. We can do no more.

RADICALS DISTORT FACTS

There are a group of radicals, all the way from a deep red to a light pink, who like to call themselves liberals, who distort the facts. They are attempting to make political capital out of the misfortune of the people on relief in California, and to stir up bitter class hatred throughout this country. Of course, the more people they can induce to come out here, the more distress is created, which makes fertile ground for the seed of communism.

CALIFORNIA CREDIT EXHAUSTED

California has exhausted its credit. The State director of finance says he has been notified by the bankers that they can no longer buy State warrants, with the State in the red by nearly $75,000,000, and the people burdened with oppressive taxes.

URGES FEDERAL ACTION

I want to quote to you from Senate Joint Resolution No. 3 introduced by Senator Fletcher, of San Diego, at the last special session of the legislature and unanimously passed by both houses:

"Whereas, in view of the fact that we live in a Christian nation and a civilized community, it is incumbent on the citizens of California to be concerned for the welfare of their neighbors who find themselves in the humble position of requiring aid to meet the necessities of life; and

"Whereas the taxpayers of the State of California have been called upon to aid and assist in assimilating this influx of unfortunate American citizens who have migrated to our State in desperation and are in dire need; and

"Whereas we feel that this obligation is a responsibility of the State from which these people came; and

"Whereas the State of California paid to the Federal Government between the years of 1933 and 1938, inclusive, more than one billion one hundred millions in taxes and received from the Federal Government from all sources in return only nine hundred and fifty-two millions—California having paid nearly $200,000,000 more in taxes than it received from the Federal Government during that period; while the State of Oregon during that same period paid to the Federal Government approximately fifty million in taxes and received in return more than two hundred and twenty-six millions, or four and a half times what it paid in; and

"Whereas the State of Nevada paid about fifteen millions to the Federal Government and received in return about ninety-eight millions during the same period, or more than six and a half times its payments into the Federal Treasury; and neither of these States received an appreciable amount of immigrants, nor are they carrying the local load that California is carrying on account of the large number of persons receiving old-age assistance in our State: Now, therefore, be it

"Resolved by the Senate and Assembly of the State of California, jointly, That the President of the United States, the Congress, the F. S. A., and the Commissioner of W. P. A. are hereby respectfully urged and implored to come to the aid of California and give immediate attention and favorable action to our just cause at this crucial moment when it is necessary to call an extraordinary session of the legislature to appropriate additional funds for relief."

TIRED OF ABUSE

We understand how eminently fair California has been about this entire problem; and still we must listen to the abuse of the radicals who are making an indecent spectacle of themselves and continually harassing the public officials. The people of Kern County are growing sick and tired of this gang of Communists and C. I. Oers who represent but a small fraction of people on relief continually making protests when they have no real justification for such protests.

I think we should tell Harry Bridges to tell his C. I. O. men in Kern County that they are not helping his organization in pursuing these un-American tactics, and that we do not intend to let Bridges or anyone else like him dictate to, bully, or bluff the people of Kern County or of the State.

In this pleasant and happy Easter time, may I extend to each and everyone of you my every good wish. Let us banish from this land every vestige of racial prejudice, of religious bigotry, of class hatred. Let us unite the Nation in the great purpose of solving our problems in the American way, so that our country shall ever be the land of liberty, and the land of opportunity.

W. P. A. Relief Needs

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

LETTER FROM DAN B. McGOVERN, PUBLISHER OF THE RENTON CHRONICLE, RENTON, WASH.

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I am enclosing a very provocative and challenging letter from Editor Dan McGovern, of the Renton Chronicle, published at Renton, King County, Wash. Mr. McGovern has, in his characteristically piquant language, summarized a very aggravating situation relative to relief needs in the United States. He sets forth cogently the pressing urgency of adequately providing for the W. P. A. workers and the underprivileged of our land. I agree wholeheartedly with his viewpoint and urge my col-

leagues here in the Congress to subordinate all else to considerations of safeguarding the morale of the people of the United States.

The letter speaks for itself, and is as follows:

THE RENTON CHRONICLE,
Renton, Wash., March 18, 1940.

Hon. JOHN M. COFFEE,
Member of Congress,
Washington, D. C.

MY DEAR CONGRESSMAN: I read in the papers that the present W. P. A. enrollment of 2,300,000 would be reduced 700,000 by July 1. It is in my mind that you were and are opposed to this decrease; however, I have seen little activity among Members of Congress, in either House, in opposition to this monstrous suggestion.

America has stood at the crossroads so often that the phrase has become hackneyed, and this is perhaps only another time. But surely this is not the moment to curtail national expenditures at the expense of the very poor of the country.

We have billions for war. This is said to be in the national defense. Mr. COFFEE, are war expenditures more in the national defense than the defense of American homes from demoralization?

Republican spokesmen tell us that "this administration spending must stop somewhere." I would agree with a statement going something like this: "It would be much more desirable if the Government did not have to spend money for the relief of its poor people." And I, with everyone else of course, would welcome the day when no more Federal or other kind of relief was necessary.

But under the present conditions such relief is necessary. It is vital. If the huge financial and industrial interests in this country—the interests which control all the billions of the Nation's wealth (and I mean just exactly that—all)—cannot or will not take steps to put these W. P. A. workers to work, what is there left for the Nation to do?

Is there a feeling among any important group in Congress that those people should be left to starve? Or are Congressmen and Senators ignorant of the fact that when those men are turned off the W. P. A. they actually face starvation?

I think that you are entirely familiar with the fact that when a man loses his job on the W. P. A., he and his family are within only a few days of hunger. I said hunger, Congressman. That means—if the various Members of the Congress need enlightenment—that means having pains in the stomach for lack of food; it means that the little children cry for nourishment; it means that mothers have not the strength to supply milk for their infants. O, Mr. COFFEE, it means that they're hungry for food, that they're cold, miserable, and defeated. Were you ever hungry? How about other Members of Congress? Surely some of them at some time or another have been hungry.

Mr. COFFEE, this Nation is wealthy beyond the wildest dreams of Utopians or economists, and yet we are seriously contemplating a further crucial deprivation of several millions of our fellow citizens whose only crime is that they cannot be, or are not being, put to work by the agencies that control all the work the country has.

These men are part of this Nation. Many of their fathers and grandfathers helped build this country. Their children are among those upon which the future of the Nation depends; and we say calmly that "According to figures released today, it is estimated that 700,000 men must be dropped from the W. P. A. on July 1."

Is it the assumption, Mr. COFFEE, that those men and their families will not be hungry after July 1? Is there supposed to be some magic in the air of the month of July which shall supply sustenance for them? Or is it the idea that they can exist on the patriotism generated by the 4th of July parades?

Mr. COFFEE, I am this week placing at the head of my editorial column the words of the chorus of God Bless America. And I am going to keep those words there. And I am going to pray that He will help us. But do you think that He will be pleased with us if we shut our overflowing granaries against our brothers who sit out in the cold and have not bread?

The economists—sitting fat and drugged with their own little prosperity—say "America must retrench." The pro-Americans say "The spending orgy of the administration is what holds America back." The Liberty Leaguers say that the Budget must be balanced. But I say, Mr. Congressman, that the only honest-to-good, the only essential, the only vital and immediate "must" in this Nation today is the people must eat.

Mr. COFFEE, there has got to be more hell raised down there in Congress. And there is no delegation in Congress that has a clearer mandate to raise hell in the interests of the poor, the hungry, and the demoralized than the delegation from the State of Washington.

JOHN, don't let this cruelty come to pass. If we do this ghastly thing, let us then quit talking about the cruelties of Japan in China, of Italy in Ethiopia, of the Fascists, the Communists. Because I have never heard that any of the cruelties ascribed to those nations or parties including withholding from hungry people bread when there was bread aplenty for all.

I had no intention of writing you at this length. But believe me I mean it like hell.

Sincerely,

DAN MCGOVERN.

Address of the Postmaster General

EXTENSION OF REMARKS
OF
HON. RICHARD M. DUNCAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. DUNCAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. James A. Farley, Postmaster General of the United States, at the combined ceremonies marking the first-day sale of the pony express commemorative stamp in connection with the eightieth anniversary of the establishment of the pony-express service and the dedication of the new Federal building, St. Joseph, Mo., Wednesday morning, April 3, 1940:

I am very happy to be in St. Joseph today and have the privilege of participating in the ceremonies which strengthen the bonds between your historic city and the United States Post Office Department. The pony express has long been associated with St. Joseph, Mo., which was its eastern terminal. The new post-office building that we dedicate this morning will rank, I am sure, in quality and appearance with the finest in our country.

This pony-express stamp first sold here today is destined to become one of the most popular of American issues. The Post Office Department, as you know, is honoring a number of great American leaders by a special series of postage stamps; but we want to remember as well those many nameless individuals who made such a colorful American institution as the pony express a vital part of the Nation's expansion. May I, on the eightieth anniversary of this pioneer service, felicitate both St. Joseph and the capital of California—Sacramento—which is also celebrating the one-hundredth anniversary of its famed Fort Sutter. This stamp suitably recalls those days of the West's golden trails and iron men.

When I spoke at Hannibal recently, at the time of the first sale of the Mark Twain stamp there, I mentioned that city's traditional Mississippi River background. St. Joseph also, since the days when as Joseph Robidoux' Landing it was the gateway to the West and had its own rich background of river and frontier experience. The broad Missouri, of gold seekers and fur trappers, of men such as your whittling mayor, lanky Jeff Thompson, was a picturesque part of our national heritage. Your State has bred a type of ruggedness and good humor which stands as an example to all.

I believe it fitting that the newest addition to the architecture of your city should be located on Edmund and Charles Streets, which are named after the sons of your founder.

This building, erected at an over-all cost of $775,000, has been constructed so as to be both attractive and useful to St. Joseph. Its modified classical design gives it a sturdy, modern appearance. Courthouse facilities have been made conveniently available. Offices are arranged to coordinate and speed the work of the various departments located in the building. I commend those who had a part in the construction and congratulate the citizens of this city upon the finished product that forms a definite contribution to your community.

Certainly this post office is very different from the old Federal building, and this impressive structure is a far cry from the ancient wooden post office before which, on that Tuesday afternoon in early April 1860, a crowd gathered to watch the first pony-express rider gallop off as a starting link in a 2,000-mile chain of horsemen. Some of you have heard stories about that eventful day of bands and speeches and tense excitement and a record-breaking train run to get the eastern mail into St. Joe on time. Mayor Jeff made a speech. "Citizens of St. Joe," he said, "I bid you give three cheers for the pony express, three cheers for the first overland passage of the United States mail." And, amid the cheers, the rider was off and away on the long trail to California.

The West of a century ago was wild, raw, and empty, but—almost in no time—cities were shooting up like big healthy youngsters. The old clipper ships and covered-wagon fleets bridged the two oceans. And then came the magic word "gold."

A torrent of humanity swirled westward, and by 1860 half a million settlers were beyond the Rockies. Hearts held high and hopes storming all citadels, a generation had grown up in the West. Proud, bold—this new America soon grew a bit homesick and yearned for news of New York and Washington, of slavery and Union and elections.

That is why we had a pony express. That is why that solitary rider forded the river at St. Joseph and sped onward; another horse, another horse and rider, 40 of them sped one way while 40

others raced their horses eastward from the hills of California. On and on they pounded, 80 riders, using 400 horses, day and night, over desert and snowdrift, they went on—while a Nation waited.

"Neither snow nor rain nor gloom of night stayed these couriers from the swift completion of their appointed rounds."

Then at last the goal. On the afternoon of April 13, not yet 11 days after leaving Saint Joseph, the mail, brought by the last horse and its tired rider, swept into Sacramento, thence by boat to San Francisco. Almost at the same time the last horseman was greeted with a roar and reception at the other end of the line. That night the speeches and the bonfires blazed high. The great romantic epic of the pony express had been born.

The story of the next 19 months has more melodrama than a dime novel. These men on horseback accomplished all that human skill and bravery aided by a horse's speed could do. Through every obstacle and danger, rocky slides and treacherous streams, they spurred their animals. If a horse lost its balance, was injured or shot, the rider would snatch off his saddle-covering holding the special dispatches and go the rest of the way to the next station on foot. In hundreds of crossings, the mail was lost only once—later to be recovered from the Indians seizing it.

Trouble with certain Indian tribes was, in those days, inevitable. Besides constantly facing ambush, the messenger often found a station in flames and no fresh horses and rider to relieve him. There was no stopping; he had to go on himself. "Buffalo Bill," William F. Cody, once rode 320 miles without a rest.

But even hostile Indians retained some of the honor which later warfare has erased. "Pony Bob" Haslam, one of the pony-express immortals, was once surrounded by a band of 30 Pah-Utes armed with rifles. Haslam, undaunted, rode full speed toward the group. The leader of the Indians, obviously impressed by the white man's bravery, made a peace signal and cried, "You pretty good fellow—you go ahead." And Bob went through without a shot being fired.

Riders were proud of their endurance and pace. The same "Pony Bob" set up a record of 380 miles straight traveling without rest. Don Rising could keep up a speed of 20 miles an hour. Johnny Frey was so fast that before a 30-mile spell of riding, he'd shout to the cook, "Put breakfast on the fire, and I'll get out to St. Joe and be back here to eat it."

In the present day when some of our young people tend to get discouraged and "fed up" with the ease of modern living, they would do well to recall how much less comfortable and safe were the lives of these daring young men. Their boundless enthusiasm for their work was symbolic of the spirit that has brought this Nation forward and onward. We need, today, more of that same enthusiasm, more of that willingness to take the next jump in stride.

Mark Twain's sketch of the express rider presents a vivid picture. I should like to quote it:

"Every neck is stretched further, and every eye strained wider away across the endless dead level of the prairie; a black speck appears against the sky, and it is plain that it moves. * * * In a second it becomes a horse and rider, rising and falling—sweeping toward us nearer and nearer, and the flutter of hoofs comes faintly to the ear—another instant a whoop and a hurrah. * * * A wave of the rider's hand, but no reply, and man and horse burst past.

"No matter what time of the day or night his watch came on, and no matter whether it was winter or summer, raining, snowing, hailing, or sleeting, or whether his 'beat' was on level straight road or a crazy trail over mountain crags and precipices, or whether it led through peaceful regions or regions that swarmed with hostile Indians, he must always be ready to leap into the saddle and be off like the wind."

The pony express was a romantic adventure. But it was also a business and required great care and planning. Before the first horseman left St. Joseph months of trail blazing and preparing had to take place. Two hundred stations, the four hundred horses, as well as station keepers and riders, had to be arranged and provided for. And even though the charge per letter was at first $5 for each half ounce, the pony's backers were not financially successful.

Yet the work which the pony express did—just as with present-day operation of the Post Office Department—cannot be measured simply by financial or less. The value lies in its service. For 79 weeks, by 308 transcontinental crossings, covering over 616,000 miles, and delivering 30,000 pieces of mail, the pony express was the air mail of the sixties. One week after Abraham Lincoln's first message to Congress California heard his words—in time to make the words count. Perhaps, even that State's important decision to back the Union side of the issue was due to the speed with which the people were made aware of the situation and the facts.

Unquestionably, the pony express stirred the imagination of the entire country to an extent that made possible the future closer binding together of the sections. The service opened up the West, showed the need for closer and faster contact. A people whose appetites were now whetted could be encouraged to build railroads and telegraph lines. Already the clicking of the little keys forecast the process of saddles off and wires on. On November 26, 1861, 1 month after the completion of the first transcontinental telegraph, the last rider took the mail through, and hung up his rider's horn. An era had ended, another began.

But when it was needed, the pony express was invaluable, and its passing was sincerely regretted by the people of that day. The San Francisco Pacific wrote in November: "A fast and faithful friend has the pony been to our far-off State. Summer and winter, storm and shine, day and night, he has traveled like a weaver's shuttle back and forth till now his work is done. We have looked for you as those who wait for the morning. * * * When days were months and hours weeks, how you thrilled us out of our pain and suspense, to know the best or know the worst. You have served us well."

It did serve well. Today the Post Office Department believes in the same religion of service which the members of that human telegraph, the pony express, once practiced. The mail must still go safely through, snow or rain and gloom of night. Only the Nation is now larger and our citizens write bigger and better letters, which cover millions of miles. The mails move by every means of transportation. Our air mail today is of the skies and travels faster than the fleetest rider is reputed, by the oldest old-timer, to have once streaked across the prairie. But the tradition has endured. The air-mail pilot, skimming westward to the coast, trails the shadow of his metal steed down upon the path left by the flying pony of the plains.

The stamp first sold here today is of the 3-cent denomination and picturizes a pony-express rider beginning one of his memorable trips. I give this stamp to you today as a lasting memorial of that early era when, in response to the needs of our forefathers in the building of the West, there came into being that most colorful American enterprise, the pony express.

The Congressional Secretaries' Club—Boon to Congressmen's Efforts To Increase Value and Standard of Public Service

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

Mr. SPARKMAN. Mr. Speaker, during the last few sessions of Congress there has been under way here on Capitol Hill a highly constructive educational program for the increase of efficiency in congressional offices and I feel that at this time the Congressional Secretaries' Club deserves to be given recognition for this splendid accomplishment.

This organization is composed solely of members of our immediate office staffs and its chief purpose is to disseminate to our offices helpful information and material not readily available and to conduct educational programs on subjects pertaining to our office work.

May I also comment on the fact that this is purely a nonpartisan organization? I am advised by secretaries associated with members of all political parties that never once has the matter of party politics been injected into the activities or discussions of this group.

This is neither a debating society nor primarily a social club. Its aims and purposes are, as I have already outlined, for the enlightenment of our office personnel. This group should not be confused with the Little Congress, which primarily delves into the arts of public speaking, debating, and parliamentary practices, and the membership of which is open to all legislative employees.

The Congressional Secretaries' Club has rendered valuable assistance to those offices participating in its membership, and the leaders of the group are to be commended, I feel, for the fine constructive program which they have launched. The volume of work which comes into our offices makes it necessary for us to depend somewhat on our secretaries for many contacts with departments. This club is filling a long-vacant gap, and I hope it continues its good work.

INSTRUCTIVE ADDRESSES BY DEPARTMENT HEADS

Each week the Secretaries' Club has a guest speaker at its meeting, and this speaker delves into the proper procedure to be followed by congressional offices in expediting business with that particular department to the best interest of our constituents. Following an informative address there is usually an opportunity given for questions, and the result is that one question may develop a thought helpful not only to the office represented by the secretary asking the question but also to other offices. Frequently, too, I am advised, the suggestions made during these meetings are helpful to the departments themselves. On some occasions the speaker

comes from outside the ranks of the Federal service, but the subject discussed is always one of interest to congressional offices. Included among the Government speakers to date this year: Commander N. P. Lovett, of the Naval Intelligence; Dr. Stanley K. Hornbeck, of the State Department; E. F. Mashburn, of the Coast Guard; Lt. Garland Suggs, of the deep-sea diving school of the Navy Department; Maj. R. J. Lovett, of the Army Intelligence; and our own Hans Jurgensen, Jr., tally clerk of the House of Representatives, who explained how to make the most use of the daily calendar. Other speakers this year included Granville Jacobs, who discussed ways of remembering names and faces; Dr. James F. Grady, who gave pointers on letter writing; Dr. Louis A. Warren, an authority on Abraham Lincoln; Norman Saksvig, world's champion typist, who demonstrated improved typing methods; and Dr. Myer Jacobstein, of Brookings Institution, who explained congressional reapportionment.

From this fine array of speakers it is apparent the Congressional Secretaries' Club is doing much to improve the knowledge and efficiency of our clerical staffs.

VALUABLE INFORMATION BULLETINS

There is another feature of the Congressional Secretaries' Club, Mr. Speaker, which I find indispensable in my office. I refer to the official bulletins, or "tip" sheets, as they are commonly called by the secretaries.

During the present Congress the club has issued something like 35 of these "tip" sheets, containing hundreds of items of value to every congressional office. I can cite one Member of Congress who will tell you he estimates a saving of $25 on his stationery account alone as the result of the suggestions affecting economies which his clerk learned about through this service of the Secretaries' Club.

Another Member of Congress was paying postage on mail of official nature being sent to American consular officers in foreign countries and through this club his clerk learned how these letters could be sent without cost to the Congressman.

As an example of some of the "tips" given, I have glanced over these sheets and note that there are 26 different sources listed where we can obtain pictures (without cost) to be hung in our offices. You know when we move into an office its walls are bare and a few of these beautiful pictures do much to enhance the appearance of the place in which we work.

These sheets also list about 30 sources of maps of various sorts which some of our constituents find of value. Also listed are a great many bound books suitable for our own office reference. Three of the valuable ones in this connection include Style Manual of the Department of State, Government Printing Office Style Manual, and Flags of the United States and Other Countries. There are 20 items relative to office supplies. There are 120 suggestions relative to improving office efficiency.

Government departments, you know, do not usually come up here to Members of Congress and say, "We have made a study on this subject or that subject which we feel will be of value to people in your State. Would you like to have some copies?" No; for the most part we just stumble onto the publications that are issued, unless we search through the Government catalog; and they are not all listed there.

Well, the research division of the Congressional Secretaries' Club has made that easier, too, and, as a part of its services, the club lists the new publications just as fast as its staff can find out about them. Were it not for this activity I am sure many of our people back home would not be getting the bulletins that we are now sending, for our individual staffs do not have the time each day to make a canvass of the departments for new publications.

The Secretaries' Club has also prepared and distributed one of the most complete and concise sheets I have seen relative to the points of interest in Washington, the location and hours visitors are admitted. This lists a number of important points of interest usually overlooked by visitors in the National Capital.

SCHOOL ON VETERANS' AFFAIRS

Because of the constantly changing laws and regulations relative to the cases of veterans who have fought in the wars in which the United States has been involved, and also the changing laws relative to the benefits for the dependents of those veterans, that work is an important part of every congressional office.

The Congressional Secretaries' Club, realizing the importance of this phase of our responsibility to veterans and their dependents, established a school on veterans' affairs in order better to qualify secretaries to prepare evidence for Congressmen in handling these cases with the Veterans' Administration.

This school was held recently in the rooms of the Committee on World War Legislation through the kindness of that committee. The sessions covered about 1½ hours each day over a period of 1 week. Lectures were given by the chiefs of the different divisions of the Veterans' Administration and following each address there was a forum type discussion session. Approximately 150 secretaries attended the school, which was sponsored by the Secretaries' Club but made available to every secretary on the Hill, both Senate and House. The club distributed testimonial certificates to those attending all of the sessions.

Gen. Frank T. Hines commented favorably on the school idea and authorized E. L. Bailey, Director of Dependents' Claims Service; H. L. McCoy, Director of Insurance Service; and his assistant, George E. Brown, of Veterans' Claims Service; R. J. Jarnagin, chairman of the Board of Veterans' Appeals; and Samuel Rose, Chief of Contact, to act as instructors.

I am sure the results of this school are already bearing fruit in the congressional offices which were represented at the school.

EDUCATIONAL TOURS

To get an idea of how the various agencies of Government handle affairs of interest to congressional offices, as well as other business matters pertaining to their respective departments, the Congressional Secretaries' Club inaugurated a policy of holding a series of evening educational tours through a number of these departments. The agencies cooperated by making these tours possible in the evening.

Of particular credit to the secretaries was their trip through the Government Printing Office. In order to get a complete picture of the various processes involved in the preparation and printing of the CONGRESSIONAL RECORD and other publications, these secretaries went to the Government Printing Office at an hour of the night when most of us were thinking about going to bed. They saw practically the entire operation involved in the issuance of the RECORD.

Another of these tours was through the Federal Bureau of Investigation, and still another through the National Archives, where they saw valuable documents being prepared for preservation for posterity. Other tours included the Washington Navy Yard, the Library of Congress, and the Naval Observatory. I understand two or three other important tours are planned before adjournment.

SECRETARIES' CLUB DESERVES PLAUDITS

Mr. Speaker, before closing I wish to reiterate that the Congressional Secretaries' Club is doing a splendid job in carrying on the program just outlined in my remarks. They fill a great need, and do us a most valuable service. They have been carrying on for 5 years without fanfare, without publicity, and without seeking recognition for their achievements. So far as I know, this is the first time a Member of Congress has ever made mention of this organization and its record of endeavor on the floor of the House. To the officers of the club, Paul A. Olson (COFFEE, Washington), president; William Young (PATRICK, Alabama), vice president; Essie Coleman (GREEN, Florida), secretary; Roberta Messerly (KIRWAN, Ohio), treasurer; William Hackett (CRAWFORD, Michigan), information director; Harold Clark (MURDOCK, Arizona), legislative chairman; Harold Hagen (BUCKLER, Minnesota), immediate past president; and to the membership, I extend

heartiest congratulations for the contribution they are making toward the increased effectiveness and value of the Congressmen with whom they are associated. May their shadow never grow less.

Relief From Stringent Naturalization Laws

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

Mr. D'ALESANDRO. Mr. Speaker, I am heartily in favor of encouraging naturalization and I am transmitting herewith copies of correspondence I have had with the United States Department of Labor, Congressman Samuel Dickstein, chairman of the Committee on Immigration and Naturalization, and Judge Calvin W. Chestnut and Judge William Coleman, of the United States district court in Baltimore, in an effort to secure relief from the present laws, thereby giving more persons an opportunity to become citizens.

The letters referred to are as follows:

OCTOBER 25, 1939.

Mme. FRANCES PERKINS,
Secretary of Labor, Department of Labor Building, Washington, D. C.

DEAR MME. PERKINS: On March 22 I introduced H. R. 5228, which provides that any alien is eligible for citizenship who was lawfully admitted to the United States for permanent residence prior to November 11, 1918, and who has ever since lawful entry maintained bona fide residence in the United States and has complied with the requirement of a good moral character, may be naturalized upon full and complete compliance with all the requirements of the naturalization laws, with the following exceptions:

He shall be exempt from all educational requirements, provided he has attended citizenship classes for at least 6 months and, upon proof thereof, shall be exempt from all verbal or written examinations.

I introduced this bill for the real forgotten people of our Nation. Some of these people came to this great America in the 1880's and 1890's, young, honest, industrious people, who never really had the time or the opportunity to learn how to read and write. They married, had large families, and have given their best years in honest labor. Many are property owners and taxpayers. Many had sons and daughters who served our great country in the World War. The sons and daughters of others are today in the vanguard of America's progress. Yet these same clean-living people of America cannot become citizens unless they pass an examination that would probably "flunk" a high-school graduate or perhaps a college graduate. If the only requirements for citizenship were contributions to national wealth through honest labor and love for democracy, almost all of our noncitizens could easily become citizens.

There are thousands of people in the United States who have made application for their first and second papers but who failed to pass the examination. In making application they renounced allegiance to their native countries, and yet they are not citizens of the United States. They love America; they belong to America; they are willing to fight to defend America and keep it democratic and free, so why deny them citizenship?

In reference to my inquiry as to the status of this bill, Congressman SAMUEL DICKSTEIN, chairman of the House Committee on Immigration and Naturalization, received the following letter from you:

"Permit me to refer to the letter of the clerk of your committee requesting comment on H. R. 5228.

"The bill was introduced on March 22, 1939, by Mr. D'ALESANDRO and bears the title 'A bill for the admission to citizenship of aliens who came into this country prior to November 11, 1918.'

"It proposes a new subdivision to be included in section 4 of the Naturalization Act of June 29, 1906, as amended. That section which prescribes the naturalization procedure contains 14 subdivisions, several of which authorize a short form of procedure as to particular classes of aliens. Bill H. R. 5228 would provide that any alien who was lawfully admitted to the United States for permanent residence prior to November 11, 1918, and has ever since said entry maintained a bona fide residence in the United States shall be exempt from all educational requirements provided that he has attended citizenship classes for at least 6 months.

"As this bill will expedite the naturalization of aliens who have resided in this country continuously for a period of 20 years and can prove good moral character and attachment to the principles of the Constitution of the United States, I believe that it has considerable merit and may well receive the favorable consideration of the Congress."

In the meantime, while this bill is pending in committee, may I make a personal appeal to you in behalf of these people who reside in Maryland, that you permit Mr. P. J. Phillips, senior examiner, to give oral examinations instead of written ones, to eliminate the present hardship which the written examinations work on them.

I understand that this is permitted in many other States, and I would like to secure the same privilege for the people of Maryland.

Thanking you for your usual kind consideration, I am,

Respectfully yours,

THOMAS D'ALESANDRO, Jr., M. C.,
Third District, Maryland.

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington.

Hon. THOMAS D'ALESANDRO, Jr.,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN D'ALESANDRO: I have your letter of October 25, 1939, in which you request me to instruct Mr. P. J. Phillipps, of our Immigration and Naturalization Service, to give oral examinations instead of written ones to petitioners for naturalization in the State of Maryland.

I have been advised that the procedure you request is not subject to my control, but is entirely within the discretion of the judges of the United States District Court at Baltimore, Md. (34 Stat. 599, U. S. Code, title 5, sec. 398). The Federal court judges at Baltimore have expressly ordered written examinations because of their belief that persons who are unable to write the English language should not be naturalized.

Under the circumstances, it will be necessary for you to confer with the United States district court judges at Baltimore to obtain the reform you desire.

Sincerely yours,

FRANCES T. PERKINS.

DECEMBER 29, 1939.

Hon. THOMAS D'ALESANDRO, Jr., M. C.,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN D'ALESANDRO: Further reference is made to your letter of November 13, 1939, concerning the type of educational examination in use in the various field districts of this Service.

An inquiry directed to the field officers of this Service brought reports regarding the practice followed in their respective districts which are summarized as follows:

A written examination is accorded in the United States district courts at Washington, D. C. and Baltimore, Md.; also, in the Federal courts at Alexandria, Norfolk, and Richmond, Va.; at Asheville, N. C.; and in the third district court at Salt Lake City.

In the other districts the examination is oral, except in those instances in which the petitioner is unable to speak or hear. Where practicable, a written examination is given to such persons which facilitates understanding on the part of both the applicant and the examiner.

Cordially yours,

JAMES L. HOUGHTELING,
Commissioner.

FEBRUARY 8, 1940.

The Honorable W. CALVIN CHESNUT,
United States District Judge, Post Office Building, Baltimore, Md.

DEAR JUDGE CHESNUT: As per your request, I am writing to you in reference to modifying the present method of handling examinations for citizenship. I am herewith enclosing a letter I received from Madam Perkins, Secretary of Labor, in this connection, which I would appreciate your returning to me after it has served your purpose.

Those persons who cannot read or write English are now unable to secure their citizenship papers in Maryland, while in other States, with the exception of Washington, D. C.; Alexandria, Norfolk, and Richmond, Va.; Asheville, N. C.; and in the third district court at Salt Lake City, they have the privilege of taking oral examinations.

By this time you will no doubt have received a letter from Congressman DICKSTEIN, chairman of the House Committee on Immigration and Naturalization, in regard to my bill—H. R. 5228. In the meantime, while this legislation is pending, I would certainly appreciate it if you and Judge Coleman would give some consideration to the matter of allowing the people of Maryland the same privilege accorded in other communities.

Sincerely yours,

THOMAS D'ALESANDRO, Jr.,
Member of Congress, Third District, Maryland.

JUDGE'S CHAMBERS,
UNITED STATES DISTRICT COURT,
Baltimore, Md., February 10, 1940.

Hon. THOMAS D'ALESANDRO, Jr.,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN D'ALESANDRO: I have your letter of February 8, enclosing letter to you of October 31, 1939, from the Secretary of Labor, both relating to the practice in naturalization in this Federal district.

Your suggestion is that the practice of requiring the applicant for naturalization to take a written examination may be too rigid

in some cases where the applicant can neither read nor write English. Your thought is that the judge of the court should exercise discretion in permitting an oral examination in cases where the applicant is otherwise shown to be qualified for citizenship, but is unable to read or write English.

As you probably know, the qualifications for admitting an alien to citizenship are prescribed by the Act of Congress which is codified now as section 382 of title 8 of the United States Code, the last amendment of which was June 29, 1928, ch. 819, 52 Stat. 1247. This section, in addition to making certain requirements as to length and place of residence, provides that the applicant must affirmatively show that "during all the periods referred to in this section, he has behaved as a person of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the United States."

The examination of the applicant is for the purpose of determining whether he has the prescribed qualifications. By the acts of Congress of June 8, 1926 (ch. 402, 44 Stat. 709), and June 10, 1933 (Executive Order No. 6166, sec. 14—now codified in title 8 of the United States Code as sec. 399 (a)), provision was made that the senior district judge of a Federal district court is authorized to designate an examiner of the Immigration and Naturalization Service "to conduct preliminary hearings upon petitions for naturalization to such court, and to make findings and recommendations thereon."

For a number of years past in this district the practice in naturalization has been in accordance with this act of Congress. That is to say, the examinations of the applicants are made by an officer of the Immigration and Naturalization Service who makes written recommendations to the court as to the qualifications of the applicant. In general these recommendations are followed by the district judge but it is to be noted that subsection (c) of the last-mentioned statute provides that "the court may, in its discretion, and shall, upon demand of the petitioner, require the examination of the petitioner and witnesses under oath before the court and in the presence of the court."

The number of applicants for naturalization in this district is very large and recently the number have been considerably increasing. By order of court the second Monday in each month, except July and August, is designated as the day for naturalization and on an average there are now about 100 or more applicants each naturalization day. It is, therefore, very important in the ordinary work of the court for the judges to have the advantage of recommendations of the Immigration and Naturalization Service authorized by the act of Congress referred to. Otherwise the work of the court would be very materially hampered by the length of time required for individual oral examination of each applicant in court.

With regard to the practice as to written or oral examinations by the examiner, there is no rigid and inflexible rule either of law or of practice in the district that absolutely and in all cases requires that the preliminary examination be in writing. It has, however, been a fairer and better test of the applicant's qualifications than an oral examination. One reason is that the applicant has more time to answer the questions and is able to give more thought to them if the examination is written than if it is oral. Therefore, in this district some years ago the examiner was informed that the judges of the court thought written examinations preferable.

However, as you will note from the above quotation from the statute itself, if the examiner recommends that the applicant be not admitted to citizenship, the latter, upon request, is entitled to have an examination in court and this may be oral as well as written and probably, in most cases, would be oral. It is not frequently that an applicant who is rejected by the examiner applies to the court for a personal examination in open court, but wherever this has been brought to our attention, the oral examination has been given in court.

I return the letter from the Secretary of Labor enclosed with your letter to me.

Yours very truly,

W. CALVIN CHESNUT,
United States District Judge.

JANUARY 30, 1940.

Hon. WILLIAM COLEMAN,
Judge of the United States District Court,
Baltimore, Md.

DEAR JUDGE COLEMAN: This committee recently had before it for hearing H. R. 5228 (Mr. D'ALESANDRO), for the admission to citizenship of aliens who came into this country prior to November 11, 1918.

H. R. 5228, among other things, would exempt such aliens from all educational requirements, provided said aliens had attended citizenship classes for at least 6 months.

It developed at the hearing that the committee had already reported a similar bill, H. R. 6381 (Mr. LESINSKI). This bill fixed the entry date prior to February 5, 1917; it also embodied the provision for the exemption of the educational test as contained in Mr. D'ALESANDRO'S bill. H. R. 6381, having been reported and being now before the House, there would be no object in reporting the similar bill of Congressman D'ALESANDRO.

As the committee is in favor of the legislation contained in these two bills, it is hoped that early and favorable action will be taken by both the House and Senate.

The committee desires to call attention to this pending legislation to the judges of the courts and for that reason is acquainting you with the present status of the proposed legislation.

Very respectfully yours,

SAMUEL DICKSTEIN, *Chairman.*

BALTIMORE, MD., *February 19, 1940.*

Hon. THOMAS D'ALESANDRO, Jr.,
House of Representatives, Washington, D. C.

DEAR MR. D'ALESANDRO: Replying to copy of your letter of February 8 to Judge Chesnut, which you have sent me, I beg to enclose copy of letter which I have today addressed to Hon. SAMUEL DICKSTEIN, chairman, Committee on Immigration and Naturalization, House of Representatives, which I believe fully sets forth my views with respect to the matter referred to in your letter.

Very truly yours,

WILLIAM C. COLEMAN,
United States District Judge.

FEBRUARY 19, 1940.

Hon. SAMUEL DICKSTEIN,
Chairman, Committee on Immigration and Naturalization,
House of Representatives, Washington, D. C.

DEAR MR. DICKSTEIN: I acknowledge receipt of your letter of January 30 calling my attention to H. R. 5228, introduced by Mr. D'ALESANDRO, and H. R. 6381, introduced by Mr. LESINSKI, pending legislation, the object of which is to exempt from any educational test persons applying for admission to citizenship who have entered this country prior to a particular date named in the bills.

While you do not expressly ask for an expression of opinion by me with respect to this legislation, I take the liberty of saying that from my experience of some 12 years in the naturalization of aliens, I feel that to make any such exceptions as are proposed by the legislation above referred to would be undesirable, would be an arbitrary discrimination, and would tend to lower the standard of citizenship.

I am in receipt of a letter from Mr. D'ALESANDRO, Congressman from the Third District of Maryland, under date of February 8, in which he refers to the same pending legislation and asks that Judge Chesnut and I give consideration to the matter of allowing applicants for citizenship in Maryland to become naturalized without proving that they are able to read or write English.

I have just written Mr. D'ALESANDRO that I am opposed to any such statutory change as would compel, regardless of the individual case, relaxing of the standards as now maintained in the Maryland district. Mr. D'ALESANDRO calls attention to the fact that the Maryland district is one of the few districts in the country where the privilege of taking oral examinations is not accorded to applicants for naturalization. While I am not conversant with the requirements throughout the country, I think the present standards are not only entirely consistent with the law but impliedly required, because I fail to see how one can indicate that he is "attached to the principles of the Constitution of the United States and well disposed to the good order and happiness of the United States" or is able to understand the meaning of the franchise or to vote intelligently unless he has at least some ability to read and write simple English. The law leaves it to the discretion of the trial judge to determine the fitness of the applicant. In adopting the standards which we have here in Maryland, we believe that they are fair and reasonable, and entirely consistent with the present law. My experience indicates that a large number of applicants for citizenship not only remain in this country for a number of years before applying for citizenship, and preparing themselves to qualify, but as a matter of fact are not really interested in citizenship as such. That is to say, their primary desire is to use their citizenship for the purpose of obtaining exemption, for absent parents or other relatives, from the usual quota requirements before entering this country, or to obtain for themselves the advantage of old-age pensions, etc.

Very truly yours,

WILLIAM C. COLEMAN,
United States District Judge.

Business and Government

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

ARTICLE BY HON. JOSEPH C. O'MAHONEY, OF WYOMING.

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a very able and timely article written by the Senator from Wyoming [Mr.

O'MAHONEY], and printed in the Democratic Digest, on the subject of business and government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Democratic Digest for April 1940]

BUSINESS AND GOVERNMENT

(By JOSEPH C. O'MAHONEY, United States Senator from Wyoming)

The Democratic Party, as Woodrow Wilson once pointed out, is the only party in the history of the United States that has never died. The secret of this vitality is, as he put it, that "it has always had a heart under its jacket." What Wilson meant by this phrase was that our party has always recognized that the responsibility of government is to serve people. That is why throughout its long existence, its dominant policy has been the defense of human rights.

Never has it been more vigorously and effectively devoted to its historic policy than during the last 7 years. It has written so great a record of service to farmers and workers and the general public that the special policy committee of the Republican Party, after working for more than 6 months to define an issue against us, has placed the seal of approval upon the principal achievements of the Roosevelt administration. Soil conservation and agricultural subsidies for the farmer; collective bargaining, relief for the unemployed and wage-hour legislation for the worker; social security, stock-market regulation and the policy with respect to the gold standard for the general public, are all acknowledged by Prof. Glenn Frank's G. O. P. program committee as reforms which must be retained. The virtue of all of these policies lies in the fact that they have been so beneficial to the rank and file of our people that even the leaders of the opposition know that they cannot be abandoned. Yet those same leaders who put none of these reforms into effect when they were in control of the Government are obviously hoping for some return of the popular favor which has been lost to them for the past 10 years.

MUST PROTECT GAINS UNDER ROOSEVELT

It is important for us as Democrats to know why this is so, for by that knowledge we can protect the gains which have been won under Roosevelt for the general welfare and prevent the danger of a return to reactionary policies that might even threaten the fundamentals of popular government. Paradoxically enough, it is to the inherent distrust the people have for big government that the opponents of the Democratic Party are trusting in their efforts to sow the seeds of fear that, contrary to all our old principles, we are in fact trying to make the Government more powerful than the people.

This and this only is the danger we face as we prepare to enter the campaign of 1940. With the democratic principle under attack all over the world, with a triumvirate of dictators planning the domination of Europe, with more than half the population of the globe denied those inalienable rights, to protect which this Government was established, it is more than ever important that as Democrats we examine the philosophy of our party in the light of modern conditions.

The Democratic Party came into existence at a time when both business and Government were primarily local. There were only about 15 corporations in the whole country when the Constitution was adopted and all but three of these were banks or canal companies. In these circumstances the States were clearly adequate to exercise whatever regulation of economic life was necessary in the public interest. Consequently, the Democratic Party was the defender of State's rights.

After the Civil War, however, a great change came with the development of the railroads. As they gradually extended from one State to another and began to exercise a constantly increasing influence on economic life, it finally became apparent that they had outgrown the regulatory power of the States and the people turned to Washington for the protection of the public interest. Beginning with the creation of the Interstate Commerce Commission in 1887, the powers of the National Government have been steadily expanded to keep pace with the growth of the business corporation in size and influence. In no other way was it possible to protect the public. As economic power over the Nation was concentrated by reason of corporate development in private offices in New York, political power was concentrated in Washington. Ever since the turn of the century every national campaign has turned on the issue whether the national power in Washington should be controlled on behalf of all the people or on behalf of the so-called interests which, operating from New York, dominated our economic life. In this struggle the Democratic Party was always for the exercise of national power on behalf of the people.

LIBERAL FORCES UNITE IN DEMOCRATIC PARTY

That issue was decided in favor of public control in the elections of 1932 and 1936 when the progressive and liberal forces of the country, previously divided among all the parties, joined forces in the Democratic Party and elected Roosevelt. These were victories for popular government, not for big government. They manifested the will of the vast majority of our citizens that the economic processes of our time should be regulated by the representatives of all the people in the interests of all. Opponents of the Democratic Party, however, are assiduously seeking to cultivate the fear that it is our purpose to elevate the Government above the people and give it powers of control rather than of regulation.

There are therefore two principles which we should make crystal clear. These are:

First, that the Government has no right, and will not be permitted, to control or direct the people, but is now, as it was in the days of Jefferson, an instrumentality for service to all classes and all interests;

Second, that organized business has no right and will not be permitted to control the Government, but that like Government its function is to serve and not to exploit or to control the masses.

Those of us who belong to the Democratic Party know that these are our principles and that it is not the purpose of this administration to enable Government to assume control over the people. This has been made clear in the record of the most far-flung and highly intricate of all the agencies we have established—the Agricultural Adjustment Administration under which, by the establishment of local committees, Secretary Wallace has successfully preserved an exceedingly large measure of local responsibility and control. But the cry of "regimentation" issuing from the lips of some of the chief beneficiaries of Democratic policies will be used to create a different impression.

It is only a few weeks since Standard Statistics Co., one of the leading reporters on fiscal and business affairs, gave out the figures to show that the net incomes of 669 leading corporations in 1939 had increased more than 83 percent above those of 1938. In the latter year, these corporations, including the principal railroads, industrials, and utilities had a total net of $657,548,000. In 1939 their total was $1,236,983,000. Yet, it is chiefly from those who claim to speak for these institutions thus comfortably placed on the profit side of the ledger that the complaints and warnings come. Strangely enough, however, though the profits of big business have shown this remarkable upward trend, the unemployment problem remains. Industrial production in 1939 was above the levels for 1929 before the crash, but employment was below and the Government is still compelled to make huge appropriations to provide "made work" at inadequate pay for a portion of the millions for whom private business and industry have no places.

INCREASE PURCHASING POWER OF MASSES

The Government has never been able to appropriate enough to give jobs to more than a fraction of the idle, nor to pay more than starvation wages to those whom it does employ. More than 13,000,000 persons are now certified by local welfare agencies as eligible, through the stamp plan for distributing surplus commodities, to receive as a gift a 25-cent blue stamp with the two 25-cent orange stamps they are able to buy. Thus with profits accumulating for the great economic units, there is still a large proportion of the population unable to support itself.

The farmers who cannot sell their crops for even the cost of production and the unemployed who cannot find real jobs at real wages are no longer economically free. Yet they constitute the very elements with which America can inaugurate an era far more prosperous than any of which the human race has ever dreamed. It is by building up the ability of these millions to buy the products of farm and factory that the markets for our inexhaustible abundance can be created. The way to do that is obviously to encourage private industry to create the jobs which will take the unemployed off the relief rolls of Government.

The way to do that involves not only the clear enunciation of the two democratic principles already mentioned, namely, that government will not be permitted to control the activities of the people, and that organized business will not be permitted to control government, it involves also a definite program of encouraging little business, of protecting it from being swallowed up by big business and of aiding it to furnish employment. It involves a recognition of the fundamental fact that people come first, before government, and before business, that they are entitled to an increased participation in the profits of commerce and industry, and that such increased participation can only result in ever-mounting profits for all forms of business.

The system of private property, the profit motive and democracy are all parts of the same ideal. They are founded in the freedom of the individual, in his inherent right to work as he pleases, and to vote as he pleases. Capitalism and democracy are under attack now because men have not learned how to adjust their individual lives to the large organizations which they must create in order to take advantage of the facilities which science and invention have developed.

A modern transportation system, like a railroad or an air line; a communication system, like the telephone and telegraph lines, or the radio networks; or almost any of the huge modern industrial plants are possible of accomplishment only by collective enterprise. When these organizations swallow up the individual, the danger is that government will swallow up the organizations as has already happened in Italy and Germany. In such cases the individual loses both economic freedom and political liberty.

It is for us in America to preserve both. There is no political party better suited by experience and tradition to accomplish this great objective for which the whole world is waiting than the Democratic Party.

Are You Aware?

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

ARTICLE FROM THE DETROIT FREE PRESS

Mr. MICHENER. Mr. Speaker, pursuant to privilege granted to me to extend my remarks in the RECORD, I include an article from the Detroit Free Press, of April 4, 1940, by Hamilton Butler, which is as follows:

ARE YOU AWARE?

That the value of American merchandise exports was 3 percent greater in 1939 than in 1938?

That the value of American merchandise imports was 18 percent greater in 1939 than in 1938?

That the increase in our exports was due principally to war orders from Europe and subsidies granted to agricultural products sold for exports?

That we imported enough foreign gold last year to provide foreigners with a dollar for every dollar's worth of American goods they bought?

That, with all these factors favoring the sale of goods abroad, we increased our purchase of foreign goods six times as much as we increased our sales?

Payment of Rural Electrification Loans by Farmers

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9 (legislative day of Monday, April 8), 1940

STATEMENT BY THE RURAL ELECTRIFICATION ADMINISTRATION

Mr. SHIPSTEAD. Mr. President, I ask unanimous censent to have printed in the RECORD a statement by the R. E. A. refuting charges that the farm cooperatives are not paying their loan charges to the Federal Government. In my opinion it is remarkable that in so short a time they are doing as well as the record indicates.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF AGRICULTURE—RURAL ELECTRIFICATION ADMINISTRATION

Calling attention to a determined search by "some few" utility leaders for signs of failure in the R. E. A. financed power systems, Harry Slattery, Administrator of Rural Electrification, today declared their aim is "smashing and taking over the rural electrification cooperatives." He added:

"The financial showing of the systems to date, coupled with the fine spirit of the cooperative leaders, gives us confidence that this destructive aim will be defeated. Power service for farmers, by farmers, is here to stay."

Mr. Slattery's statement was made in a memorandum to directors, managers, and superintendents of the nearly 700 R. E. A. financed systems in 45 States. Refuting "palpably mistaken" assertions that the systems have not earned the interest charges on their loans, he listed 280 systems which up to February 29, 1940, had made payments of interest, or interest and principal, out of their operating revenues. The number of systems in operation at that time was 579. Of the 299 systems not making payments from revenues, Mr. Slattery pointed out that a large proportion are newer systems, in their early development period and not yet obligated to make any payments to the Government from their revenues.

The remainder are in default. The total of defaults, or payments in arrears, as of January 1, is only $56,765, Mr. Slattery pointed out. A number of other systems have not merely lived up to the payment schedule but have made advance payments of interest and principal, from operating revenues, amounting to $140,643, as of the same date. This Mr. Slattery termed "an excellent showing," adding:

"It is pretty generally conceded that all rural electric enterprises, whether public, private, or cooperative, require a period of growth of perhaps as much as 5 years before they attain their full development * * * not one of the systems financed by R. E. A. has been energized for so long a time as 5 years."

A check of all of the systems in one State showed that as a group they were covering their interest requirements two and a third times, after paying all operating costs, including an allowance for taxes and depreciation, according to his memorandum. One of these systems showed net operating revenues four times as great as the interest requirements.

Mr. Slattery's statement to the system leaders concluded:

"Certainly these figures seem to indicate that by and large these R. E. A. loans will be, as they are intended to be, self-liquidating. It is true that a lot of hard work will be needed to make and keep them self-liquidating. But that has never been any secret; R. E. A. officials, for example, have said it over and over again to you and to others. Pretty largely, that hard work is up to you. Meanwhile, the trends of use and revenue are upward, and that is more significant just now than any of the figures."

MEMORANDUM TO DIRECTORS, MANAGERS, AND SUPERINTENDENTS OF ALL R. E. A. FINANCED SYSTEMS

DEPARTMENT OF AGRICULTURE,
RURAL ELECTRIFICATION ADMINISTRATION,
April 4, 1940.

Recently it was charged on the floor of the United States Senate, and rather widely reported, that the R. E. A. financed cooperatives "have not earned the interest" on their loans from the Government. The statement is palpably mistaken. Here are the facts that controvert it.

Two hundred and eighty of the five hundred and seventy-nine energized systems financed by R. E. A. had up to February 29, 1940, made payments of interest, or interest and principal, out of operating revenues. A list of these borrowers, together with the amounts paid, is attached. I think it constitutes a telling reply to those who assert that the systems are not paying and cannot be expected to pay their own way.

As to those not listed, a large proportion are not yet obligated to make any payments to us out of their revenues. They are not so obligated until 30 months after the dates of their notes to us. In the meantime, and largely for technical reasons, they pay us interest out of loan funds on such money as has been advanced to them during the period of construction and initial operations. As many of you know, this is a common practice in the financing and development of new business enterprises.

This period when no payments from revenues are due from the newer systems largely accounts for the difference between the number of systems energized—579—and the number appearing in this table—280—as making payments from operating revenues. Of course, it does not wholly account for the difference. Some few borrowers are in default, as was pointed out some time ago in the annual report of the Administrator of Rural Electrification to the Congress and as is explained further hereafter.

Ordinarily we do not disclose the position of any of our borrowers individually. Experience has demonstrated that hostile interests here and there are quick to seize upon the records of the less fully developed or less successful systems to misrepresent a present deficiency, real or apparent, as a conclusive failure. Accordingly, while the cooperatives and power districts may speak for themselves about their financial position—many do—we have seen no reason to set up the newer or thus far less successful systems as targets.

Some few—by no means all—utility leaders are searching for indications of failure because they still cling to the hope of smashing and taking over the rural electrification cooperatives. Every so often we learn of the direct, although usually more or less private, expression of these hopes. The financial showing of the systems to date, coupled with the fine spirit of the cooperative leaders, gives us confidence that this destructive aim will be defeated. Power service for farmers, by farmers, is here to stay.

The evidences of a determined search for information to use against the cooperatives are increasing rapidly. All of you have at one time or another been called upon, individually or collectively, to present for somebody's inspection detailed reports of your operations. When you ran down the source of the inquiry, or we did, it usually proved that the inquirer was linked with those utilities that remain antagonistic to cooperative electrification. You will doubtless remember the supposed editorial which recently appeared in many local newspapers all over the country demanding that all R. E. A. financed cooperatives publish financial reports. You will recall, too, that the source of this canned editorial was found to be the Hofer syndicate of Portland, Oreg., a so-called news service which, the Federal Trade Commission hearings several years ago disclosed, had collected $84,820 a year from various utilities and a like amount from other industrial concerns.

All of you, too, have received questionnaires from other agencies closely associated with, or sponsored by, private-utility interests.

They attempt to probe deeply into figures on such points as number of members connected, amount of energy purchased at wholesale and sold at retail, operating expenses, rates, revenues, and related items. Since all R. E. A. financed systems are still in an early developmental stage, it is perfectly natural that any showing some of you could make on such reports would be less favorable than it would be after your electric system had been in operation for a reasonable period.

To the foes of rural electrification every figure is a weapon to be turned against you and against the whole rural-electrification program. We have tried not alone to respect the rights of the borrowers but to minimize the exposure of the young cooperatives and other systems to the hostile attacks of those who would like to scuttle them.

However, the idea that there is little or no evidence publicly available that the loans made by R. E. A. are sound is utterly erroneous and harmful. There is plenty of evidence pointing to the soundness of these loans. Some of it has already been made available to everybody, and it is supplemented extensively in this memorandum.

The hearings of the House Appropriations Committee a few months ago contain considerable information on the payments and some defaults of nearly 100 R. E. A. borrowers. Moreover, we included in the Annual Report of 1939 a broad and easily understandable summary of financial progress and outlook. This appears on pages 124–135 of the report. In brief, it makes the following major points:

Not one dollar of the loans advanced up to December 1, 1939—totaling over $176,000,000—had been charged off by R. E. A. or transferred to an inactive account, although in financial experience generally such charge-offs are quite common.

No losses have been experienced on any loans, and there have been no foreclosures.

Twenty-seven installments of interest and principal on outstanding loans remained unpaid on June 30, 1939, and were thereby defaulted. Under authority of section 12 of the Rural Electrification Act of 1936, the Administrator is granting these borrowers extensions of time to pay interest and principal. The total of such defaulted payments on June 30, 1939, was $65,616.30.

Eleven borrowers showed up so well in point of revenues that they were able to make substantial payments of interest and principal in advance of the date due. Such advance payments made or about to be made up to December 1, 1939, totaled $79,594.70.

On R. E. A.'s wiring and plumbing installation loan contracts, under which $2,114,315 had been advanced up to December 1, 1939, collections showed less than 1 percent delinquencies. No extensions of time had been granted on any such loans, though full interest and principal payments begin 6 months after the date of the note.

Since the annual report was published I have been able to bring these two items up to date for January 1, 1940. By that date advance payments of interest and principal made from operating revenues amounted to $140,643. That is an excellent showing. It is pretty generally conceded that all rural electric enterprises, whether public, private, or cooperative, require a period of growth of perhaps as much as 5 years before they attain their full development. The reasons why they need this period for development, and the increasing use of electricity and increasing revenues that may be anticipated during the early years, are fully discussed on pages 126–129 and 132–133 of the annual report. Here, in considering the showing made thus far by R. E. A. borrowers, I simply want to point out that not one of the systems financed by R. E. A. has been energized for so long a time as 5 years.

Installments in arrears on January 1, 1940, totaled $56,765. This figure represents current delinquencies. Some defaulted payments reported earlier in the annual report have since been made up by the borrowers. Others are not included in the new total because of a rescheduling of the terms of payment to the 25-year basis authorized under the Rural Electrification Act of 1936 and proved up by experience.

In the early days the administration of R. E. A. set terms for the beginning of repayment of interest and principal on a very rigorous basis—too rigorous, as experience has shown, especially in view of the need, already mentioned, for a development period. On these earlier loans a 20-year maximum repayment period was provided for in the loan contracts, and, as experience demonstrated, with payments of interest and principal scheduled to begin long before anything approaching full development of the systems could possibly have taken place.

The Rural Electrification Act of 1936 was drawn with a clear recognition of the need for allowing for initial growth, and accordingly authorized the use of a 25-year maximum repayment period. All revisions of loan terms that have been or are being made, have been kept within the terms of the 25-year schedule, as was stated in the Annual Report. On many loans the 20-year terms have been retained, even though they appear generally less appropriate because thus far at least there has been no need to change them.

Looking at the question from another point of view, you will be interested in the results of a check we made recently of operating conditions for all systems in one State. It showed that in December 1939 the systems as a group were operating so successfully that after paying all operating costs, including an allowance for taxes and depreciation, they still had net operating revenues, or surplus, sufficient to cover all current interest requirements two and one-third times. One system showed net operating revenues four times as great as the interest requirements.

Certainly these figures seem to indicate that by and large these R. E. A. loans will be, as they are intended to be, self-liquidating. It is true that a lot of hard work will be needed to make and keep them self-liquidating. But that has never been any secret; R. E. A. officials, for example, have said it over and over again, to you and to others. Pretty largely that hard work is up to you. Meanwhile the trends of use and revenue are upward, and that is more significant just now than any of the figures.

HARRY SLATTERY, *Administrator.*

Radio Program Under Auspices of I Am an American Citizenship Foundation

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

PROGRAM OVER N. B. C. NETWORK ON APRIL 6, 1940

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio program over the blue transcontinental network, from the National Broadcasting Co.'s studios, Washington, D. C., April 6, 1940:

DORIAN ST. GEORGE. From Washington the National Broadcasting Co. presents a program under the auspices of the I Am An American Citizenship Foundation. This group aims to acquaint Americans with the benefits they derive from their American citizenship. The first speaker we hear this evening is Leo Spencer, director of public relations for the foundation.

LEO S. SPENCER. Ladies and gentlemen and distinguished visitors in the studio, it is my pleasure to introduce Mr. Edward Arnold, vice president of the Screen Actors' Guild of America, who is in Washington on a mission which I am sure appeals to all the people of our Nation. Mr Arnold.

EDWARD ARNOLD. It happens that in my profession I have made quite a number of appearances before the microphone. However, I should like to make this definite statement: I have never entered a broadcasting studio with a greater feeling of happiness than is mine tonight. Ben Neal and I came to Washington because of our interest in the House joint resolution to authorize the President to issue a proclamation setting aside a day to recognize and to honor 21-year-old Americans and naturalized citizens of the United States. The House bill has passed by unanimous vote and the Senate Judiciary Committee has favorably reported the resolution. There seems to be not the smallest doubt but that this resolution will pass the Senate during the coming week. The first I Am An American citizenship celebration (or panegyric, as we called it) was held in Hollywood Bowl on June 12 last year. Fifteen thousand persons joined in this patriotic rally, 5,000 of whom had just reached the age of 21. It was a thrilling and inspiring occasion, as the assembled hundreds of boys and girls from the high schools finished the song I Am An American and as the 5,000 come-of-age citizens finished the pledge of good citizenship with the words, "My heart is in America and America is in my heart. I Am An American." I don't believe there was an individual in the bowl who did not feel that this occasion was a high light in his or her life as a free-born American citizen. And I am also sure that the thousands who listened to the broadcast over N. B. C. felt the same inspiration. The success of the Hollywood Bowl celebration is known in every State in the Union. Quickly thereafter induction ceremonies were held in New York, San Francisco, and in many other cities. And now, as a result of the citizenship resolution before Congress, these various dates will be unified and one grand celebration will take place in every city and in every community of this great land of ours. Joining with us today are two great lawmakers, one a leading Democrat and the other a leading Republican. It is my pleasure and my happiness to introduce the Honorable JOHN MCCORMACK, Congressman from Massachusetts. Congressman MCCORMACK.

JOHN W. MCCORMACK. I am an American. This movement sponsored by the Citizenship Foundation is to encourage the formation of community-wide groups of local sponsors, individuals, and organizations to encourage all citizens, particularly those arriving at 21 years of age, and recently naturalized citizens to realize the great benefits of our institutions of government, and their responsibility in preserving and strengthening our institutions for our own generation, and for those of generations yet unborn.

I Am an American. What a world of meaning that phrase has to all of us who love our country, who believe in the great truths upon which it is based and for which it stands. Two thousand and more years ago the proudest statement that one who lived in those days could make was "I am a Roman citizen." The proudest statement from the angle of being a citizen of any country that one can make today is, "I am an American citizen."

You and I, who are citizens of our great country, ought to feel proud of our citizenship in this great democracy, and in our right to say, "I Am an American citizen." What does it mean? It means that we are citizens of a country that is the greatest democracy and most powerful nation in the world today; a nation based upon equity and justice for all; a country of honor among the other nations of the world. Back of that phrase, "I Am an American" stands the history and traditions of our country, the efforts of the early Colonial days, the battle for independence of the Revolutionary War, and the reasons therefor, the Constitution of the United States, the Civil War, the World War, and other conflicts in which we have been engaged, the great progress we have made as a nation, growing from the weakest nation in the world at the time of its inception, to the most powerful in the world today. That history, that tradition, that growth have been brought about through the efforts of individual Americans of past generations. Our institutions will be preserved and strengthened only through the efforts of each individual American. This is your Government and my Government, and its strength, stability, and growth depend upon each individual, the manner in which we assume our duties and responsibilities as citizens. Ours is a great heritage, transmitted to us by past generations of Americans, and it is our duty to preserve the same. The strength of America is the strength of you and me as individuals in our love of our country, in the fearless manner in which we perform our duties as American citizens in the preservation of our institutions against attack from within and from without, and the equally fearless manner in which we meet the trying problems that confront us of this generation. We must bear in mind, trying as our problems are today, that past generations of Americans had their serious problems, and they met them as history records in the best interests of our country. What past generations of Americans have done, we of this generation can also do, and we will do it. This generation of Americans will not be recorded in our history as failures. You and I are human agencies through which our Government and what it stands for pass from the last generation through us to the next generation. I repeat, and emphasize as strongly as I can, the strength in and success of our beloved country depend upon you and me as individual Americans.

I Am an American. What further does that assertion stand for? It stands for a country in which personal liberty is guaranteed to each and everyone of us by the Constitution, and that even Government, itself cannot impair or abridge those guaranties. It means that you and I are citizens of a country that guarantees as a right, not by sufferance or will of a dictator, "freedom of religious conscience"; freedom of speech and of the press; of the home and the family life being protected and held sacred against attack from any source; of the right of peaceful assembly; of the right of petition to our public officials; of the right of a trial by jury; of the protection of ownership of property against seizure except by due process of law; and of the other great human rights set forth in the Constitution, and guaranteed to each and every one of us. It means a "Government of laws, and not of men." It means equality of opportunity under the law. It means the right of you and me to go to the church that our conscience dictates us to attend. It means a Government that recognizes the omnipotence of God; that all power comes from God Himself, and not from man. Power, whether financial, political or otherwise, is a trust to be exercised for our fellowmen and the general welfare of our Nation.

As we view conditions in other countries where totalitarian or dictatorial regimes exist, we realize and appreciate more thoroughly what it means to be an American citizen. There are those here and abroad who would like to impose upon our people such a vicious and destructive government; who would substitute man for God as the origin and source of all power; who would destroy the efforts of mankind for countless generations in its efforts toward individual liberty. A movement of this kind is an effective means of combating such influences. It is educational and constructive. Local communities, through public-spirited citizens and organizations, religious, patriotic, charitable, educational, business, and otherwise should cooperate. Mr. Arnold, whom millions of Americans admire in his portrayal of life on the screen, is devoting his time untiringly to this great movement, I Am an American. He is to be congratulated. He and the organization I am an American Citizenship Foundation should be supported.

As a result of their activities and efforts, a bill has been introduced in Congress, House Joint Resolution 437, authorizing the President to proclaim citizenship day for the recognition, observance, and commemoration of American citizenship setting aside Flag Day, June 14, as Citizenship Day as a public occasion for the recognition of all who, by coming of age or naturalization, have attained the status of citizenship. That resolution has been reported favorably by the Senate Committee on the Judiciary. It should be passed.

In the time allotted to me, I must, of necessity, be brief. The public-spirited efforts of Mr. Arnold and his associates should be supported by all Americans. It is a pleasure for me to speak on this program with Mr. Arnold and my distinguished friend and colleague, Congressman BARTON, of New York. It is through efforts of this kind, supported by public-spirited persons and organizations in local communities that will effectively combat the subversive forces that are working from within and from without, and at the same time rekindle in our conscious minds the full force and meaning of our ability to assert "I Am an American citizen."

EDWARD ARNOLD. I am grateful to Congressman MCCORMACK, both for his eloquence and for his sincerity. And now we will have one more bit of evidence of the nonpartisan character of the I Am an American movement. Following the last speaker, a prominent Democrat, we now present a leading Republican, the Honorable BRUCE BARTON, Congressman from New York. Congressman BARTON.

Congressman BARTON: Do we Americans really care about our country?

A startling answer to that question appears in a little book just published by Prof. James Kerr Pollock, of the University of Michigan.

He analyzed the voting behavior of the citizens of Ann Arbor, Mich., over a period of 8 years, in which there were 24 elections.

Ann Arbor is a small city of high cultural advantages, the home of the university. It is a city with no palaces and no slums, with only a small percentage of foreign born—a typical middle-class town, representing all that we like to think of as best in American tradition and life.

What happened in these 24 elections? Of the qualified voters, only about 1 in 3 took the trouble to vote.

The percentage was higher in Presidential election years, when two out of three of the eligible citizens went to the polls. But in some of the local elections the vote dropped to less than 25 percent. Generally the men did a little better than the women, and voters between the ages of 50 and 60 did twice as well as those between the ages of 21 and 30. We seem somehow to have failed to impress upon our young people how precious is the right which their country confers on them when they reach the age of 21.

Democracy is not an easy form of government. It is the hardest of all forms to preserve and make work. It will not run itself. It requires intelligent interest, loving care, and a certain amount of self-sacrifice on the part of us all.

Surely these are a small price to pay for the precious right of free speech, free press, free education, and free worship—for the high position given to women under free institutions, and the freedom of all men and women to live and work where and how they please.

For these rights our fathers were willing if need be to die, and other men across the seas are willingly offering up their lives today.

Let us prove to ourselves and all the world, by our voting record this fall, that we are not unmindful of our splendid heritage. Where great gifts are bestowed, great responsibilities are likewise imposed. On every American, young or old, is laid the injunction of the sacred Scriptures: "For unto whomsoever much is given, of him shall much be required."

EDWARD ARNOLD. Thank you, sir. My brief contact in Washington with Congressman BARTON has made it easy to understand why he, like the Congressman from Massachusetts, is so well beloved on Capitol Hill. Yesterday afternoon Ben Neal and I had the pleasure of presenting a framed copy of the I Am an American creed, though Gen. Edwin Watson, to the President of the United States at the White House. The recitation of this creed is the climax of all our celebrations. We are fortunate indeed tonight to be able to close this program with the creed being read by its author, Ben Neal, who is also the founder of the I Am an American Citizenship Foundation. My friend, Ben Neal.

BEN NEAL. Before I read the creed, I should like to illustrate the nonpartisan, nonpolitical, and nonsectarian manner in which the I Am an American citizenship movement is sponsored. Other cities and communities are invited to form sponsor groups along the same lines. In Los Angeles the following sponsors are in charge of honoring the 21-year-olders and naturalized Americans.

The church group includes Archdiocese of Los Angeles, Church Federation of Los Angeles, Jewish Community Council, and University of Religious Conference.

Political parties are represented by Democratic County Central Committee, Republican County Central Committee, Young Democratic Clubs of California, and Young Republicans of California.

Organized workers are represented by the central labor council and organized employers by Los Angeles Chamber of Commerce.

In addition the following city and county-wide organizations make a total of 34 groups of sponsors: Board of education; board of supervisors; Boy Scouts of America; California Congress, parents and teachers; California Federation of Women's Clubs; county council, American Legion; county council, Veterans of Foreign Wars; Girl Scouts of America; Hollywood Post, No. 43; Los Angeles City Council; Los Angeles Junior Chamber of Commerce; Los Angeles Youth Commission; Loyola University; Marlborough School for Girls; Motion Picture Producers Association; Musicians Post, No. 474; Musicians Union, Local 47, A. F. of M.; Native Sons of the Golden West; seventeenth district, American Legion; twenty-fourth district, American Legion; University of California at Los Angeles; University of Southern California; Young Men's Christian Association; Young Women's Christian Association.

These public celebrations in honor of new citizens were originally conceived as belonging to all of our young citizens who believe in upholding the flag regardless of whether they are liberal

or conservative, regardless of political or religious differences. To reach its destined effectiveness, it must always remain so.

And now the pledge of citizenship, the I Am an American creed:

"I am an American!
The Golden Rule is my rule!
In humility and with gratitude
I acknowledge my undying debt
To the founding fathers
Who left me a priceless heritage
Which now is my responsibility.
With steadfast loyalty,
I will uphold the Constitution
And the Bill of Rights.
I will treasure my birthright
Of American ideals:
I will place moral integrity
Above worldly possessions.
Problems of interest to my country
Shall be of interest to me!
I will count my right of suffrage
To be a sacred trust.
And I will diligently strive
To prove worthy of that trust.
I will give my full support
To upright public servants,
But those with unclean hands,
I will firmly oppose.
Each obligation that comes to me
As a true American,
I will discharge with honor!
My heart is in America
And America is in my heart!
I am an American!"

DORIAN ST. GEORGE. You have heard a program presented under the auspices of the I Am an American Citizenship Foundation. Heard this evening were the motion-picture star, Edward Arnold; Representative John W. McCormack, of Massachusetts; Bruce Barton, Representative of New York; Ben E. Neal, president of the I Am an American Citizenship Foundation; and Leo Spencer, director of public relations for the foundation.

Hamstringing Television

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 8, 1940, entitled "Hamstringing Television":

[From the New York Times of April 8, 1940]

HAMSTRINGING TELEVISION

Exercising what looks suspiciously like a personal quasi-official right of eminent domain over broadcasting time, Mr. James L. Fly warns the radio public against buying television receivers and attempts to justify what is actually a threat of the Federal Communications Commission, of which he is chairman, to control the free development of a new art. As matters stand, the Commission authorized the transmission of commercial television programs on September 1, 1940, the advertiser to pay a fair but otherwise indeterminate charge not for time but for entertainment and sales talk. This permission is virtually rescinded while new hearings are held to settle technical and economic questions. Meanwhile television broadcasters mark time, and confidence in the quality of television receivers, now ready for the market, is rudely shaken.

The reason for this extraordinary vacillation is to be found in what Mr. Fly calls "the fluid state of the art," meaning that television is still so subject to radical technical change that receivers bought today may be useless next year. If this principle is sound, the Government might well restrain publishers from selling new textbooks on vitamins and hormones, cosmic rays, and atomic physics, for the simple reason that any discussion of recent progress in the natural sciences is outdated even while it is on the press. Mr. Fly's argument that the purchaser of an automobile or a camera always has something that he can use, even though it may soon be outmoded, whereas a television set may be no good at all next year, will not withstand scrutiny. It is true that our present receivers are designed for transmitted 441-line images. But the 441-line receivers will work with 400-line transmission, though not with the same quality of detail. They are good for 600-line images, too.

We were faced with much the same problem in the days when music and voices were recorded on both cylinders and disks. In the end disks won. It would be absurd to argue, as Mr. Fly does, that the owners of cylinder machines could still be entertained. They could not hear most of the great artists and orchestras, for which reason Edison, who had clung to the cylinder, decided to change his whole system of recording. The public did not complain. And so it was with radio. No one expects the television sets that are now ready to meet future requirements. It would be strange indeed if a branch of electrical engineering which has been the subject of so much research ever reached a point of stagnation. Progress, the fruit of research, inevitably implies the fluidity that Mr. Fly fears.

Television has engaged inventors ever since the 1880's. For 12 years images have been transmitted experimentally. During that time $9,250,000 has been spent by one company alone, not only in developing suitable transmitting and receiving apparatus but in discovering acceptable program material. At least 15 fixed and portable relay stations were licensed for experimental operation. Every promising experiment was made with different lengths of waves and types of equipment. No fewer than 8 types of commercial receivers and an unknown number of home-made types were tested. Some 70,000 individual postcard comments on programs were studied. Never was an art so thoroughly explored before it was launched as television.

It must not be forgotten that, as we know it, television embodies the ingenuity not only of American but of French, English, and German engineers with whom our laboratories have been exchanging discoveries. That the solution of the television problem reached here and abroad is essentially the same in principle is significant. What we have, then, represents a consensus of world-wide engineering doctrine. It seems little short of presumptuous on the part of the Federal Communications Division to oppose its own views to those of experts. If interference of Government with technical television progress is to be tolerated, no manufacturer can build for the future. Why not restrain the introduction of synthetic wool made from milk because already there is the possibility that it may be made from something else? Why not check the makers of 1,500 plastics because something better is in the offing?

Apart from these considerations the Commission's procedure is ominous, because it involves the assertion of the right to determine what is a fair charge for a television program. Here is the first step toward the regulation of a medium of expression as if it were a public utility. By implication the Commission may examine books in order to fix charges. If this principle is correct, then no publisher of a periodical may establish advertising rates without fear of correction. Nor will capital be encouraged to invest in companies that make television apparatus. The rate of a new invention's evolution may be retarded and even arrested.

No one questions that a type of electrical communication which makes heavy demands on the ether, already overcrowded, must be supervised by some governmental body. But what television particularly needs just now is not tyrannous restraint but guidance and aid.

Control of the Oil Industry in California

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1940

Mr. SHEPPARD. Mr. Speaker and Members of the House, there has been so much discussion by and between some departments of Government and interests in California pertaining to the control of the oil industry of that State that I feel it is now time that the Members of this House be kept posted on this issue.

Originally, we had the so-called Nye bill which, in general, proposed to take over the submerged coastal lands of the State of California which were accorded to the State at the time the State became a part of the Union. Originally, the Nye bill was all-inclusive in its application to coastal properties and then we suddenly found that it had been amended to incorporate the State of California exclusively. This bill, however, has not reached the floor of the House yet.

Then the next thing that we found pertaining to the oil industry in the State of California was last year there was proposed in California what was known as the Atkinson bill, and, surprisingly, we found our Navy breaking into politics in the State of California, contrary to all regulations and legal authority. The Atkinson bill was defeated in California with a tremendous majority, definitely indicating that the citizens

of the State of California did not want the proposals contained in the Atkinson bill.

The next thing we find is the now-pending so-called Cole bill, in which extensive hearings have been held both here in Washington and out in the field. The people of California do not want this piece of control legislation enacted any more than they wanted the Atkinson bill enacted.

During the hearings of the Subcommittee on Appropriations, Mr. George W. Holland, Director of the Petroleum Division of the Department of the Interior, was examined to some extent by the members of that subcommittee, and his Department's interest in legislation to control the oil industry in the State of California, as you will find indicated in the hearings of the Appropriations Subcommittee that was handling the Department of the Interior presentation.

I am inserting a communication signed by J. A. Smith, president of the Independent Petroleum and Consumers' Association of the State of California, making some comments pertaining to Mr. Holland's statements as they pertain to the issue.

LOS ANGELES, CALIF., *March 14, 1940.*

Hon. HARRY R. SHEPPARD,
Interior Appropriations Subcommittee,
House of Representatives, Washington, D. C.

DEAR SIR: Associated Press dispatches from Washington on March 5 indicate clearly that George W. Holland, director of the Petroleum Division of the Department of the Interior, who appeared before your honorable body March 5, is continuing his malicious campaign of misrepresentation in order to promulgate an alleged oil-conservation measure which would mean dictatorial control with Secretary Ickes a virtual czar of the industry.

Mr. Holland is quoted as saying, "I was firmly convinced then that the Atkinson bill (an alleged conservation measure) was a good State law and still feel the same way today."

We call to your attention the fact that the people of California did not so look upon the measure and voted it down by more than 600,000 votes. This, incidentally, was the second time such a measure has been defeated in our State and each time by a greater majority.

Mr. Holland testified that "about $380,000 was expended to defeat the legislation."

Since when is it a crime for one group of California citizens to oppose the wishes of another group of citizens? Mr. Holland, it appears, would impugn dishonest motives on the part of the independents and their friends in opposing the will of the Standard Oil Co., members of the Department of the Interior, and a discredited Governor.

It is true, as Mr. Holland pointed out, "that about $380,000 was expended to defeat the legislation."

The figure translates into dollars and cents our fears of political control of our industry. Again we raise the question, Is there anything wrong in opposing the interests which would monopolize oil production and control prices the consumer would have to pay for petroleum products?

Mr. Holland then comes through with a most revealing bit of information: "That about $380,000 was spent to put the Atkinson Act across."

This is the first time we have heard the estimate come from a Government official. We in California have yet to learn the actual total expended by the Standard Oil Co. and others attempting to pass their measure.

A preliminary report showed the campaign moneys to have come through the generosity of one person, an attorney for an affiliate of Standard Oil. To date, they have filed no complete campaign expenditures as is required by our California laws.

However, if Mr. Holland will investigate further into his new field we believe he will find the total cost to be more nearly $2,800,000 rather than his $380,000, which, we understand, to be only the amount expended in San Francisco and Oakland.

Mr. Holland's next bit of inaccuracy follows in his statement that "if the interests that put up the $150,000 to get signatures on the referendum petition had not contributed the money, there would not have been enough money put up to get the issue before the voters."

As a matter of official record we desire to inform your honorable body the cost of securing the signatures was less than $80,000. This proved to be approximately four times the normal cost of securing sufficient signatures to bring about a referendum on the action of the State legislature due to the campaign of threats, coercion, and intimidation put in motion by those who were for the bill.

As to the referendum itself—we hope that in this enlightened day of ours we will not be called upon to defend the merits of the recall, initiative, or referendum—the right of the people to review, reject, or accept the acts of their duly elected representatives.

Mr. Holland's misinformation before your committee, we believe, is in itself one of the most powerful arguments against the stand he has taken.

Mr. Holland's dictatorial attitude, his utter disregard for the wishes of the people of the State of California as expressed by their ballots less than 5 months ago, is a further indictment.

We ask you in all sincerity, Is it any wonder the people of our State fear the type of control advocated by this person when they see the ends to which he and his superiors will go to attain it?

"Control"—"Conservation"—call it what you will, in the final analysis it means price-fixing.

We believe that Mr. Holland and others in his Department should first acquaint the people of this fact—that controlled production sets up the machinery for controlled or monopolistic prices.

Once having made this honest admission, the people of the United States would be in a much better position to judge the merits of his arguments, inaccurate as they may be.

It is the hope of our board of directors and myself that this letter be made a part of the record of your proceedings.

Yours very truly,

J. A. SMITH,
President, Independent Petroleum and Consumers Association.

Samuel Untermyer

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1940

TRIBUTE BY RABBI WILLIAM F. ROSENBLUM

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to Samuel Untermyer, broadcast over station WEVD on the day of his funeral, Friday, March 22, 1940, by Rabbi William F. Rosenblum, of Temple Israel, of the city of New York:

It is one of the great ironies of life that men usually wait for a friend or neighbor to die before they realize fully how much they wanted him to go on living, how indispensable he was to their own destinies. This is not the time to quarrel with human foibles and frailties but they do explain why men never appear before their generation in all their kaleidoscopic significance until death has garbed them in the vestments of stillness and crowned them with the mitre of silence. Yes, there is an eloquence born of the silence of the dead who lie before us and a fervor prompted by the scene of their quietude which profoundly stirs us and will let us have no peace until we have given utterance to our inmost eulogies and heartfelt encomiums. This radio tribute to the life and service of Samuel Untermyer could have been spoken with equal genuineness during any day of his mature years on earth. It may be that death only gives it the seal of solemn documentation as a living testimonial.

I

The details of Samuel Untermyer's life have been broadcast to the Nation by the press of this country and of the world. And this morning, at imposing Greystone-on-the-Hudson, there was a solemn convocation at which a gifted colleague, Dr. Abba Hillel Silver, of Cleveland, who stood shoulder to shoulder with him in the fight for human rights, recounted his service and painted the portrait of his excellence before an assembly of notables led by the Governor of this great State. Here we are come to review a few of the broader aspects of his career and to highlight their deeper purpose that thousands of us may not lose sight of the portents of our age and through mournful reflection upon his virtues rededicate ourselves with equal passion and purpose to the never-ending war for the preservation of our rights and our liberties. There is a current fight against aggression and we must not lay down our arms until that struggle be decided, not by weapons of military might, but by the munitions of the spirit which in the end are more decisive. If there be one thing above all others which Samuel Untermyer epitomized it is the principle that the attack on tyranny and dictatorship, though not freighted with the frenzy and the fanaticism of the aggressor, need be no less effective. A definite and determined faith in an ideal and fervor for a cause can lift a minority out of its stupor and stir it to heights of conquest.

In the early days of the present German Reich, Samuel Untermyer was among the first to realize that the program of the misguided and misinformed Fuehrer might well become the desperate hope of millions upon millions of the world's ignorant and misled who would make of him the Messiah of their salvation. Therefore, he never hesitated to assert that the struggle was a universal one against Germany's new philosophy as well as Germany's new ruler and that the people must purge themselves of the one as well as the other before their merchandise could be declared free of the taint that now marked every item with the brand of moral decay. He supported a world boycott against Nazi goods to strengthen the world-wide boycott against Nazi ideas. Whatever may be said of the strategy or expediency of such a stand in the light of history's warrant or mankind's previous experience, no

one could fail to realize that Samuel Untermyer was proclaiming himself before his fellow men as unalterably opposed to all that Adolph Hitler had written into his black bible of hate and to all that he had smuggled into the technique of government and the mechanics of international diplomacy. No one could fail to know that, though targeted in this combat as a Jew, Samuel Untermyer took his place in the fray as an American who wished to see democracy survive and grow stronger, and as a citizen of the world who wished to see civilization leap beyond barriers of race and bigotry to a great common understanding between men and a great common denominator for mankind.

II

Untermyer was destined by his parents to become a rabbi. Though he turned to the law he never was a mere counselor or attorney. He proved that his parents were right in their estimate of his genius and of his nature by deporting himself throughout his long and distinguished career at the bar as a defender of the outraged and as a crusader against public wrong. In many ways he made of his practice of law a ministry of public service and thus in the courts of justice he realized to some extent the rabbinical dreams his mother and father had envisioned. He was a preacher in behalf of the many causes he espoused and, like the true minister, he was not deterred from entering upon a crusade against evildoers, though he himself may have unwittingly assisted them to places of power and of prominence.

Nothing is more vivid in my mind than the fact that in latter years Samuel Untermyer became one of the most relentless crusaders against some large corporate enterprises though in his young days he was the first to see the advantages of combinations of industrial undertakings and to assist in the formation of many of these business giants. When they became unhuman and abused their powers to mulct the public or to curtail their services he was as ardent in the effort to dissolve them as he was in the endeavor to bring them into being. Untermyer made his first million before he was 30, but he never lost his sense of kinship with the people at large and with their fight to keep our cities and our country free from corruption. He, the corporation lawyer who towered among the capitalists as a great force and as an imposing figure, did not hesitate to take a Schwab and a Rockefeller and a Morgan to task or to take up the cudgels for five duly elected Socialist assemblymen who, while the war hysteria was still at its peak, were expelled from the New York State Assembly.

III

Many are the times he contributed his mind and his means to investigations aimed at ridding the community of corrupt officials or corrupt conditions. He had a large hand in framing legislation which improved the insurance code; he was indefatigable in his advocacy of regulation for Wall Street. Years before such a law was enacted he insisted that the citizens of America should be taxed according to their income. Heroic was his service as counsel to the notable Lockwood commission, which exposed the building racket and initiated remedial laws in the field of housing. But of all the many causes he espoused for the people of his own metropolis none was more intricate in complexion and more difficult to solve than that of our transit system. He became counsel to the transit commission without pay and largely through his work and his legal genius the 5-cent fare remained an inherent right of the millions upon millions who use our transportation. He urged unification as the ultimate ideal for New York City, and it is not without poignancy that, as his life was ebbing, his plan was being garbed with the flesh and sinew of realization.

IV

Samuel Untermyer was an American Jew who did not lay too much stress upon the rites and rituals of his religion, but, intuitively, he translated into conduct some of its great precepts, notable among them the Talmudic injunction that whoever saves one life, it is as if he saves the whole world. He was known for the generosity and catholicity of his contributions. He gave to all causes and to all creeds. He did not ask for a genealogical chart or a microscopic report on one's blood when a plea came for help. He knew only that human beings needed his charity and that he was privileged to be able to give it. In that he was intuitively the Jew and innately the American. Annually he opened his flower gardens at Greystone to the people, all the people.

V

His most significant contribution to his fellow men, however, began when most men of his age would have welcomed the leisure to indulge in roseate retrospect of their accomplishments in earlier decades. He was past the Biblical threescore and ten when Hitler ascended to power as Chancelor of the German Reich. He saw at once, with a rare acumen that subsequent events applauded, that this Austrian who imposed himself upon Germany would not confine his program and his manias to the borders of his own land but that he would seek to impose his propaganda and his prejudices upon the whole world. Untermeyer did not begin his work then or continue it later as an anti-German but as an anti-Nazi, a distinction which we hope the German people themselves will some day make more clear to their waiting fellow men, for many of us are only too eager to be permitted to believe that there is a difference between that which is temporarily Nazi and that which is eternally German. He did not begin nor prosecute his activities as president of the World Anti-Nazi Federation or the American Non-Sectarian League for Human Rights, as a Jew reacting to the bestiality of Aryanism, but as a humanitarian without regard to sect, fighting against a new fanaticism which threatened to develop into a maniacal world sect bent upon the destruction of all but its own helots and henchmen. He did not even conceive of its scope as defending what we choose to call democratic principles but something broader, something more all-inclusive. He was concerned with championing human rights. And the boycott to which he committed himself was not in the tradition of war but through peaceful economic means. Some of us may have doubted its efficacy, but we did not doubt his sincerity.

VI

Perhaps the most striking eulogy we can preach, my friends, is to read the roster of those who tonight do not weep for Samuel Untermyer; the greatest encomium we can pay is to call the roll of those who, even in the hour of his death, will write his name down for cavil and for scorn:

There will be first those in the walks of life who serve only that they may feed at the public crib without stint or fatten upon the public misery without qualms.

There will be those who have sought here in this country to place the pariah's brand upon fellow citizens whose liberal views they did not favor or whose liberal quests they were prone to fear.

There will be those in our midst who have tried to fraternize with the black or brown ideas of racism and of anti-Semitism, or of the red, brown, and black ideologies of dictatorship, and whose efforts have not reached too far because the denunciation, the warnings, and the work of men like Samuel Untermyer have had an influence too wide.

And there will be those abroad and here in the camps of the Nazis, the Fascists, and the Communists, who will rejoice that the name of Samuel Untermyer—lover of liberty—has been added to this year's necrology.

But for millions and millions of men and women in this country and in the lands abroad, where the love of freedom still breathes, where the Nazi program of hate has not eaten into the spirit of the people as a festering canker, where God has not been taken out of the minds of men nor regard for human life out of their hearts, Samuel Untermyer will be mourned and eulogized. There he will become more than a memory, there his name will serve as an impetus to others to have courage in the face of onslaught, to have faith in the face of frenzy, to assume dignity when victimized by denunciation. There he will remain as a symbol of the truth that no one can embark upon anti-Semitism, whether it be one man or one nation or many peoples, without arraying against them the conscience of the civilized world. There he will live as a reminder of the faith that men must have in their neighbors and their neighbors' freedom if their own rights are not to be sacrificed on the altar of some dictator's ambition.

It always takes death to make us conscious of the obligations of life, and I cannot but conclude with the thought that the noblest obituary we can ourselves indite to the memory of Samuel Untermyer is to resolve that as long as a vestige of nazi-ism persists and such bigotries as anti-Semitism are peddled as world merchandise, that long we who have been in the fight with this pioneer will not give it up but that, ever more determined, we shall stand embattled against those things which serve to divide peoples instead of uniting them, those systems which erect barriers between races instead of surmounting them, those movements which set creed against creed instead of cementing them.

Thus, we can make of this tribute to the dead what he would have wanted most to have it be, a pledge to the living and the unborn that human rights shall not perish from the earth.

Congressional Conference on Unemployment

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

EDITORIAL FROM THE JACKSONVILLE (FLA.) TIMES-UNION

Mr. VOORHIS of California. Mr. Speaker, as Members of the House know, some 70 Members are at work at present on the problem of unemployment. We are working through subcommittees, each of which is studying what can be done in a certain field of our economic life to bring to an end this great scourge of our industrial society. When subcommittees have completed their reports they will be combined, coordinated, and summarized into one general statement of program and principles for the solution of unemployment.

It is most gratifying to have our work recognized as has been done in the following editorial from the Times-Union of Jacksonville, Fla.:

[From the Jacksonville (Fla.) Times-Union, of April 3, 1940]

A STATESMAN-LIKE UNDERTAKING

Seventy Members of the House of Representatives have undertaken one of the most commendable projects in the history of the Congress. Without regard for party affiliations these Members volunteered to devote time to studying factors bearing upon what economists consider the greatest single problem facing the Nation—unemployment.

They are not interested so much in learning the exact or approximate number of persons unemployed, which is highly debatable, as they are in determining, if possible, why unemployment continues on a large scale and what, if anything, may be done to remedy the situation.

According to The United States News, these men have put aside official committee work and the pressing routine of their offices, social and recreational engagements, to undertake the study. And if they find an answer, or a series of answers, to the questions they have been asking themselves, they propose to tell the House, and the country, about it. If time permits, before the session closes, they may ask legislation. Or, if the opposite course be suggested by their conclusions, they may ask that some legislative proposal be killed.

If they can evolve a set of principles they consider worthwhile, they may go before the resolutions committees of the national conventions and ask inclusion of these principles in the party platforms.

Some of the Members of the House began looking around a few months ago, says The United States News in an article outlining the project. They had realized that efforts at pump priming had been made, with varying results; that relief for the indigent unemployed had been provided. They regarded these things as palliatives; not cures. They had heard debates and discussions. But somehow, none of the messages appeared to give a picture of a complete situation.

Then a group of 24 began exchanging ideas on how to approach the problem. They met at night. In 3 weeks the group of 24 had increased to 70 and is still growing. The Unemployment Conference of House Members was organized, and Representative VOORHIS, California Democrat, named chairman; Representative MUNDT, South Dakota Republican, vice chairman; and Representative MURDOCK, Arizona Democrat, secretary.

Next, the organization, realizing that the cause of unemployment does not lie in any single factor, the conference divided into subcommittees, each charged with a study of a specific subject. Twelve subcommittees were created to study subjects as follows: Agricultural income, farm tenancy, foreign trade, monetary and financial system, monopoly, natural resources, public works, social security and old-age pensions, taxation, technological change, trade barriers, and youth. Each subcommittee consists of from three to eight members, and each has its own chairman. There are nine Democrats serving as chairmen and three Republicans.

These men are not expecting to develop miracles through their study, but they do expect to learn something, but they will not learn it from lectures by experts. They are consulting experts for factual information, but not for theories. They are conducting their study from the attitude of ignorance and seeking knowledge.

This at least is something new in congressional circles, and it promises unbiased, nonpartisan conclusions that should be worth while. With the lone Farmer-Labor Member, and a Progressive Party Member serving on the subcommittees, the group can boast a range of economic views from extreme liberalism to extreme conservatism. This adds further to the checks and balances of thinking that commends itself to the people of the country.

Judicial Review of Administrative Decisions

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

RADIO ADDRESS BY HON. FRANCIS E. WALTER, OF PENNSYLVANIA

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address recently delivered by me:

During the period extending from the establishment of our present system of government in 1789 to 1887, with two minor exceptions, there was no right to sue the United States. However, during this period of approximately a century the courts worked out, on the basis of their general jurisdiction, adequate practice and procedure for the complete review of the principal administrative decisions of Federal agencies. The courts held throughout this long period that they had jurisdiction to entertain suits against Federal officials who illegally seized private vessels on the high seas; who illegally held possession of private property; who had erroneously and illegally collected internal-revenue or customs taxes; who had illegally seized private property of a decedent claiming priority for the debts of the United States and who refused to perform ministerial duties though the jurisdiction in the latter class of cases is limited to the courts in the District of Columbia which possessed and now possesses, in addition to their statutory jurisdiction, a common-law jurisdiction derived from Maryland, which, as you know, once included the District of Columbia. By such procedure arbitrary and capricious, as well as erroneous and illegal administrative decisions were brought under complete review of the courts, both on the law and the facts. Generally, the facts were tried before a jury. When in the Arlington estate case Mr. Justice Miller answered the contentions of Government counsel that such judicial reviews of administrative decisions in suits against officials of the Federal Government unduly interfered with the administration of the law, by pointing out in the course of the opinion that without such reviews the administration could and might develop into tyranny. The Court knew whereof it spoke. In 1931 Chief Justice Hughes in an address delivered before the Federal Bar Association said:

"A host of controversies as to provisional rights are no longer decided in courts. Administrative authority, within a constantly widening sphere of action, and subject only to limitations of certain broad principles, establishes particular rules, finds the facts, and decides as to particular rights. The power of administrative bodies to make findings of facts which may be treated as conclusive, if there is evidence both ways, is a power of enormous consequence. An unscrupulous administrator might be tempted to say, 'Let me find the facts for the people of my country, and I care little who lays down the general principles.' We all recognize that this development has been to a great extent a necessary one. * * * Experience, expertness, and continuity of supervision, which could only be had by administrative agencies in a particular field, have come to be imperatively needed. But these new methods put us to new tests, and the serious question of the future is whether we have enough of the old spirit which gave us our institutions to save them from being overwhelmed."

In the earlier Milligan case, Mr. Justice Davis wrote the opinion striking down an administrative board established without the warrant of law which tried, convicted and sentenced to death a civilian residing in Indiana, far behind the military lines as an alleged military office and it is not without significance that before that case reached the Supreme Court the alleged conspirators in the murder of President Lincoln were tried by such a military board, convicted and hung. You may inquire why it is that if the courts for a period of approximately a century reviewed administrative decisions on the basis of both the law and the facts, they do not today review such decisions on the basis of law and the facts and if they do not, why the necessity that they should do so in appropriate cases. The answer to these questions is most interesting. As you know, only the Supreme Court of the United States had part of its jurisdiction defined in the Constitution and was established by name in the Constitution itself. All the appellate jurisdiction of the Supreme Court of the United States and all the jurisdiction conferred on that court and all the jurisdiction which is not named in the Constitution are of statutory origin, and as the Congress gives it in this respect, the Congress may likewise take it away. Further the circuit court of appeals and the district courts are created and exist by virtue of statutes, and their jurisdiction is wholly statutory to be exercised in accordance with the practice and procedure which may be prescribed for them. The result of this is that at one time in the history of the Federal Government, when party feelings ran high, the Congress repealed the appellate jurisdiction of the Supreme Court as to certain classes of cases, one of which was then pending before the Court. Upon repeal of the statute the Supreme Court dismissed that case and there was no judicial remedy provided for the review of administrative absolutism practiced in the Southern States under reconstruction. This lesson was not lost on minority groups representing special interests when the complexity of the business and the economic life of America became such, with the turn of the century, that Federal regulation and control had to be extended to many activities. The statutes creating the administrative agencies with the turn of the present century did in fact provide in most instances for judicial review of administrative decisions. However, these statutes after 1900, creating Federal administrative agencies sought to, and did restrict the scope of judicial review. The courts were not given jurisdiction under such statutes to review the administrative decisions as these same courts had reviewed administrative decisions from 1789 to 1900, and the Congress having spoken, courts were no longer at liberty to develop their general jurisdiction in this respect. Mr. Justice Miller in the case of the *United States* v. *Lee* (106 U. S. 196) said:

"* * * that during the existence of the Government for now nearly a century under the present Constitution, with this principle and practice (of judicial review of administrative decisions) well established, no injury has come to that Government. During this time, at least two wars, so serious as to call into exercise all the powers and all of the resources of the Government have been conducted to a successful issue."

The right to such judicial reviews existed prior to the Constitution under the colonial and State governments and Chief Justice Miller in the case of *Little* v. *Barreme* (6 U. S. 170), a case decided in 1904, enunciated the principle that had been followed in many cases in all of the Federal courts during the development of a complete judicial review of both the law and facts of administrative decisions. The statutes creating the newer Federal administrative agencies relating to regulatory and control matters in economic and social affairs of the people provided in some instances that the decision of the administrative agencies of the facts should be final and conclusive; in other instances that these administrative findings of fact should be final and conclusive if supported by evidence; and in a few instances that they should be final and conclusive if supported by substantial evidence.

There was no uniformity of the scope of judicial review under the statutes creating these administrative agencies but Congress certainly had the right to believe that there would never be any great departure from fundamentals as old as the Government itself. However, in a recent decision, the Supreme Court said:

"The action of the Commission finds no support in right, principle, or in law. It is wholly unreasonable and arbitrary. It violates the cardinal precept upon which the constitutional safeguards of personal liberty ultimately rest—that this shall be a government of laws—because to the precise extent that the mere will of an official body is permitted to take the place of allowable official discretion or to supplant the standing law as a rule of human conduct, the Government ceases to be one of laws and becomes an autocracy.

"Arbitrary power and the rule of the Constitution cannot both exist. They are antagonistic and incompatible forces, and one or the other must of necessity perish whenever they are brought into conflict. To borrow the words of Mr. Justice Day, 'there is no place in our constitutional system for the exercise of arbitrary power' (*Garfield* v. *United States* (211 U. S. 249)). To escape assumptions of such power on the part of the three primary departments of the Government is not enough. Our institutions must be kept free from the appropriation of unauthorized power by lesser agencies as well. And if the various administrative bureaus and commissions, necessarily called and being called into existence by the increasing complexities of our modern business and political affairs, are permitted gradually to extend their powers by encroachments—even petty encroachments—upon the fundamental rights, privileges, and immunities of the people, we shall in the end, while avoiding the fatal consequences of a supreme authority, become submerged by a multitude of minor invasions of personal rights, less destructive but no less violative of constitutional guaranties."

It is no secret today that many administrative agencies believe and practice the belief that they are above the law and that they consciously and deliberately disregard both the terms of the Constitution and the statutes under which they operate.

It is entirely possible for us in America to have administrative absolutism as tyrannical as in any of the totalitarian countries of either ancient or modern times. The Constitution does not of itself protect the individual from the uncontrolled decisions of administrative officials of the Federal Government. The Supreme Court of the United States does not have original jurisdiction in controversies between officialdom and the citizen. The jurisdiction of the lower Federal courts is entirely a matter of statute, and as I have above stated, statutes enacted during the reconstruction period denied the lower courts jurisdiction over some statutes.

Some of the labor organizations now think that comparatively recent statutes enforced by a certain administrative agency and reviewed in the courts have been interpreted by that agency contrary to the rights of labor and many businessmen are just as sure that the interpretation has been contrary to their rights.

Government by favor degenerates into absolutism. No one group in America can be sure that it will indefinitely control any agency of Government or the officials thereof, and the same instrument which that group may use today to punish its enemies may be used tomorrow to punish the group now in control. The only safe procedure for all groups is a full and fair as well as just interpretation of the law and the facts in any case.

It seems to me that he is a poor American who would want an administrative decision to be carried into effect against his fellow Americans when that decision was clearly erroneous or when it was contrary to the substantial evidence in the record or otherwise contrary to law. If there be any such real Americans who would want that done, I cannot go along with them because it is contrary to the genius of American fair play and contrary to the basic philosophy of our institutions of government.

Both businessmen and labor unions demand and require a system of law administration sufficiently flexible, expeditious, and inexpensive that it is possible for the average individual or corporation to secure a full and fair hearing before the administrative agencies and a complete judicial review if that be necessary to correct error of substantial proportions in any case.

There is pending in the Congress a bill known as the Walter-Logan bill, which is entitled "A bill to provide for more expeditious settlement of disputes with the United States," which will be considered shortly by both bodies. This bill was recommended by the American Bar Association after a specially appointed committee of that association studied the problem for upward of 7 years. This bill is an attempt to deal with the entire field of administrative procedure and judicial review of administrative decisions and is endorsed by all of the leading bar associations in America, the American Federation of Labor, the National Grange, and many other organizations that frequently deal with the Federal Government. Experts in the field of administrative law feel that a prolific cause of disputes will be eliminated through the provision in the bill allowing a judicial review of the rules promulgated by any agency, and in support of their contention point to the fact that in two agencies created by statutes containing a similar provision not a single case has gone to the courts. The judicial review of the decisions or orders of administrative agencies section follows the provisions of a statute that has been tried and found to be very satisfactory in its operation. The bill will in nowise place any Government agency in a strait jacket but will insure the administration of our statutes in accordance with the well-established principles of our form of government.

Problem of Migration of People Within the United States

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

ARTICLE BY LUDWELL DENNY

Mr. VOORHIS of California. Mr. Speaker, at long last it appears that the problems of the migrant people of America and of States like California to which they move are beginning to receive the attention of people throughout the Nation. At any rate, the following excellent and informative column on the subject by Mr. Ludwell Denny will be of very great value in setting forth some immediate and very important facts regarding the matter. I hope all Members will take the trouble to read what Mr. Denny has to say:

MIGRATORY PROBLEM

(By Ludwell Denny)

If enough Congressmen see the Grapes of Wrath film showing here, and if such persons as Eleanor Roosevelt and Herbert Hoover continue talking about the migratory problem, and if the public affairs committee gets wide circulation for its latest exposé, Congress may yet do something for those American refugees.

So far, President Roosevelt's Budget blocks even a continuation of the Federal Government's puny efforts. The proposed cut of $40,000,000 would leave the Farm Security Administration only $123,000,000. That would provide aid for only a fourth of the 120,000 midwestern and southern farm families who will otherwise join the homeless trek.

The effort is to prevent growth of the migrant army at the source, and then to resettle the present army on small holdings in new opportunity areas.

Two Voorhis bills would amend the Social Security law to provide Federal aid to States for care of transients. One would authorize an initial appropriation of $10,000,000 and encourage reform of State settlement laws. Another would provide $7,000,000 annually for State medical care of nonresidents.

Herbert Hoover yesterday at Stanford University said:

"We should undertake to care for these people not in great camps but by establishing them in 3- to 5-acre homes, with these settlements of small numbers spread throughout the country so they will be accessible to whatever employment there is."

Mrs. Roosevelt, on an inspection trip of Government and private camps in California, said Steinbeck's Grapes of Wrath did not exaggerate conditions. In advocating resettlement, she mentioned the Grand Coulee Dam project in Washington. Officials here hope that 100,000 families may eventually be settled there with Federal help.

But any large-scale help probably will have to wait on a congressional investigation. There is more hope now than 2 weeks ago that the House Rules Committee will approve the Tolan resolution for that purpose. Supported by the entire California delegation, it probably will pass.

There are many reasons why Congress has done so little:

1. When the powerful farm lobby gets its subsidies, there is not much left, even in a deficit budget, for the landless farmer.

2. The migrants cannot vote and therefore have no political drag.

3. Many of the Southern and Midwestern States are only too glad to get rid of their dispossessed and surplus families, driven to California and elsewhere.

* * * * * * *

The study issued today by the public affairs committee, Adrift on the Land, is by Paul S. Taylor. He is an economics professor at the University of California, member of the California Board of Agriculture, and consulting economist of the Federal Social Security Board.

He differentiates between the Joads and the old-type migration of single men who followed the grain harvests before the day of the combine, and also the one to two million families who now follow the harvests but return to their homes. Neither of those groups is similar to Steinbeck's families, who have been forced from their homes forever.

Among the factors which distinguish the Joad labor conflicts from ordinary farm-labor problems, according to Dr. Taylor, are industrialized agriculture, employers' desire for complete control of wages, perishability of crops, lack of status of mobile farm wage earners, and interstate migration of native Americans driven from their land.

He cites authorities for the prediction that the migrant problem will increase with mechanization of agriculture in the South.

The average migrant earns about $250 a year. Health conditions are the worst in the country, educational opportunities hardly exist, family life is demoralized, and rights of citizenship are denied. The violation of their civil liberties has been exposed by the La Follette investigating committee.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

Mr. COCHRAN. Mr. Speaker, the action of the Senate in agreeing to the resolution, without amendment, which extends for 3 years the right of the Secretary of State to continue to negotiate reciprocal-trade agreements, is, in my humble opinion, an outstanding contribution toward improved conditions in this country.

Back in 1930 the last Tariff Act—the Smoot-Hawley monstrosity—was placed on the statute books. At the time Republican leaders predicted prosperity, the like of which the country had never experienced, would result. The fact is, the country quickly went from bad to worse.

Mr. Speaker, the St. Louis Globe-Democrat is an outstanding newspaper. It has been critical of many laws this administration has passed. In its issue of Monday, April 8, I find an editorial on this subject, and, under leave granted me, I include it as part of my remarks. The editorial follows:

TRADE PROGRAM WINS

Secretary Hull's reciprocal trade agreements program was continued for 3 years by the Senate after a bitter fight, and with the signature of the President becomes a law, as the House passed the bill several weeks ago. This is an outstanding piece of legislation, and there is little to the credit of the opposition which permitted partisan considerations and geographic selfishness to obscure the far-reaching potentialities of the measure.

The Hull trade pacts are in line with the Secretary of State's belief that international amity is best served through the medium of commercial agreements, in which trade barriers are removed. People who do business with each other on friendly terms and with reciprocal regard for the needs of each, are not likely to fly at each other's throats at the first sign of difference. The good-neighbor policy is born of that belief, and in pursuance of it, Mr. Hull has signed 22 trade pacts with as many nations. His hope is to sign agreements with every other nation with which commercial exchange is possible.

If such pacts have merit now, their value will be vastly increased when Europe's war is done. To that end Mr. Hull drove hard for congressional assent to extension of his program for another 3 years after June 12, next. The battle was substantially won early last week when the Senate refused to require that all pacts must be approved by Congress. Such action, it was felt, would irrevocably subject the program to customary logrolling with the usual unsatisfactory results.

Secretary Hull, jubilant over extension of the program, stated that the three high objectives are:

"To promote the fullest practicable development of both our foreign and domestic markets, thereby achieving increased production and employment.

"To help in creating a solid foundation for any stable peace structure to follow the war.

"To safeguard free enterprise in this country against ever-expanding regimentation which would be the inescapable result of extreme foreign-trade controls of the kind that would be rendered necessary by a reversion to the Hawley-Smoot embargo doctrine."

With this as a policy and with our able Secretary of State directing its development, we are convinced Congress has wisely fortified the country against the troubled days of war and its aftermath. We believe that in time even those who opposed the program on grounds of sectional discrimination will appreciate its benefits.

Mr. Speaker, I also include an editorial from the Washington News on the same subject:

BACK TO BABASU

On that day in June 1930 when Congress took final action on the Hawley-Smoot tariff, Republican Leader Jim Watson stood on the Senate floor and flapped his arms in the best Hoosier oratorical style. Said he:

"We are in the midst of a financial depression * * * but I here and now predict * * * that if this bill is passed this Nation will be on the upgrade financially, economically, and commercially within 30 days, and that within a year from this time we shall have regained the peak of prosperity."

It seems pertinent, 10 years later, to recall this particular Republican prophecy and prophet. For today other Republican spokesmen—having just been routed in their efforts to destroy the Hull trade program—are uttering comparable nonsense. They are hopefully declaring that their legislative defeat will be turned into an electoral victory, come November.

The Republicans in 1940 are not without issues which can be turned into votes. But if they neglect the real issues and offer the people another phony bill of goods on the tariff, they may discover on the morning after the first Tuesday after the first Monday in November that alarums over imports of Cheddar cheese and babasu nuts are still good politics—in Maine and Vermont.

New Regulation Affecting Disabled World War Veterans

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

Mr. RANKIN. Mr. Speaker, I call attention to the fact that we have just won a great victory for the disabled veterans of the World War.

Ever since the Economy Act was passed the non-service-connected veterans who are rated at less than 100-percent disabled were precluded from receiving any compensation at all.

I introduced a bill to correct these injustices, and the Committee on World War Veterans' Legislation, of which I am chairman, has been holding hearings on it.

The Veterans' Administration agreed to take the proposition up and make an adjustment of its regulations governing these disability claims. That has been done, and a new regulation has been issued, which I am inserting as a part of these remarks.

This regulation not only cures a great many of these injustices, so far as the non-service-connected cases are concerned, but its provisions also apply to the service-connected cases.

The new regulation reads as follows:

VETERANS' ADMINISTRATION SERVICE LETTER

ADMINISTRATOR'S OFFICE,
April 2, 1940.

Subject: Total-disability ratings under Public, No. 2, Seventy-third Congress, and the 1933 rating schedule.

1. The attention of all rating agencies is directed to the following statement of policy approved this date which is quoted herewith for the guidance of all concerned:

"Total-disability ratings under Public, No. 2, Seventy-third Congress, and the 1933 rating schedule may be assigned without regard to the specific provisions of the rating schedule, except as outlined herein, when the disabled person is, in the judgment of the rating agency, unable to secure or follow a substantially gainful occupation as a result of his disabilities: *Provided*, That if there is only one disability, this disability shall be ratable at 60 percent or more, and that, if there are two or more disabilities, there shall be at least one disability ratable at 40 percent or more, and sufficient additional disability to bring the combined rating to 70 percent or more. Total-disability ratings, when the above conditions are met, may be granted for deafness, the organic loss of speech, for the amputation or loss of use of either hand or of either lower extremity above the knee (as to these amputations and losses of use, when followed by continuous unemployability after incurrence), as single disabilities or for other organic disabilities or combinations including organic disabilities. For the purpose of Veterans Regulation 1 (a), part III, only, the above specified 60 percent, 40 percent, and 70 percent percentage requirements may be reduced by 10 percent on the attainment of age 60; and by an additional 10 percent on the attainment of age 65; and there shall be no percentage requirements for total-disability ratings in the cases of unemployable veterans who have attained the age of 70. The attainment of age 70 will not of itself warrant rating as permanently and totally disabled; in addition thereto disability

sufficient to produce unemployability will be required. Nothing contained in this paragraph will prevent a total-disability rating for such disabilities and combinations of disabilites, including loss of use of two extremities, or loss of sight of both eyes, or being helpless or bedridden, and other disabilities, as are assigned specific ratings of 100 percent for the severity in question, but if the disabled person is employable, compliance with the terms of the schedule for such ratings will be required. When total disability under this paragraph is under consideration the veteran will be required to submit a statement in affidavit form covering his employment, or unemployment, over a period of at least 1 year."

2. A disabled person meeting the regulatory or schedular requirements for 100-percent ratings is entitled to a total-disability rating regardless of employment. Similarly, cases which do not meet the regulatory or schedular requirements, but which, in the opinion of the rating agency, represent total disability on the average basis, i. e., whose employment represents highly exceptional effort or ability to overcome the handicap of disability, are entitled to central-office consideration under R. & P. R–1142, and should be so submitted.

3. The unemployability of the individual may be established, with age, constitutional defects, limitation of occupational experience, and ability, particularly limitation to manual labor, as important contributing factors. In such cases, it is important to ascertain the exact relationship between the particular manifestations of disability and resumption of work in the field of previous employment, or of other types of employment. As a requirement for total-disability rating, it must be established to the satisfaction of the rating agency that the disabilities are the principal cause of the continued unemployability.

4. Such inferiorities as mental deficiency, psychopathic inferiority, etc., do not of themselves indicate disability, either partial or total. When the medical-industrial history and other evidence points to mental deficiency or psychopathic personality as important factors, it is essential to insure complete psychiatric examination, and, if indicated, social-service report. When neuropsychiatric disease, mental deterioration, failing memory, and concentration (as with cerebral arteriosclerosis) are superimposed upon such conditions, the whole extent of social and industrial inadaptability, partial or total, in accordance with the rating schedule, and paragraph 1 of this service letter, will be ascribed to the disease factor. Similarly, when injury or disease, as fracture or arthritis, is superimposed upon physical defect, the whole subsequent limitation of occupational activity resulting from the defect and the superimposed disease or injury will be ascribed to the disease or traumatism.

5. It is the policy of the Veterans' Administration to resolve the benefit of all reasonable doubt in favor of claimants, to the end that every veteran who is unable to secure and follow substantially gainful employment, with disability as the cause of such inability, will be given full consideration. Rating agencies will exercise great care in the determination of total disability and permanent and total disability to make sure that all claims are properly rated, based on the facts found. Any case in which unemployability is established, but in which the above-prescribed requirements for total-disability ratings, in service-connected cases, or for permanent total-disability ratings in non-service-connected cases, are not met, will be referred to the central office, after proper development, under R. & P. R–1142.

6. Pending promulgation of the first paragraph above as a regulation, this service letter, dated April 2, 1940, will be cited as authority for ratings under its terms.

FRANK T. HINES,
Administrator of Veterans' Affairs.

At this point I desire to insert a letter which I have just received from Mr. Millard W. Rice, legislative representative of the Veterans of Foreign Wars, relative to this proposition.

The matter referred to follows:

VETERANS OF FOREIGN WARS OF THE UNITED STATES,
Washington, D. C., April 5, 1940.

The Honorable JOHN E. RANKIN,
Chairman, House Committee on World War Veterans' Legislation, House of Representatives, Washington, D. C.

MY DEAR MR. RANKIN: Another milestone has just been passed by the Veterans' Administration in its adjudication of veterans' claims, by the issuance of its service letter of April 2, 1940, providing for more liberal standards for determining the existence of a permanent and total disability.

One of the most progressive far-sighted steps taken by the Veterans' Administration in a long time, this service letter will, in our opinion, make it possible for several scores of thousands of unemployable disabled World War veterans—industrially totally disabled—to be rated by local rating agencies as permanently and totally disabled.

Such permanent and total ratings for non-service-connected disabled World War veterans will entitle them to the present disability pension of $30 per month, under Veterans' Regulation No. 1 (a), Part III, which we sincerely believe ought to be increased by this Congress up to at least $60 per month, the same as totally disabled veterans of the Spanish-American War have long received. Additional thousands of veterans suffering with service-connected disabilities will also thereby be enabled to be rated as permanently and totally disabled, thus entitling them to disability compensation in the sum of $100 per month.

This service letter, in effect, provides that where a disability, or a combination of disabilities, in connection with the veteran's own inabilities, render him unable to secure or follow a substantially gainful occupation, then, subject to certain varying minimum requirements as to major and minor disabilities, dependent upon his age, he shall be regarded as permanently and totally disabled. In other words, disability, plus unemployability, will henceforth ordinarily warrant a rating of permanent and total disability.

Thousands of unemployed and unemployable disabled veterans have previously been unable to establish that they were entitled to a permanent and total rating. The liberalized procedure authorized by this service letter should result in the favorable reconsideration of these claims.

I am indeed pleased to know that you had in mind to insert this valuable service letter in your extension of remarks in the CONGRESSIONAL RECORD, so that these needy veterans and their dependents may have a better chance to find out about their rights.

The V. F. W., as you know, by reason of our presentation before your committee and our personal conferences with you, has long insisted upon the necessity for and desirability of a liberalized definition of permanent and total disability, to be determined on an individual basis, rather than on an average basis. This service letter goes about as far as we think it can go under the present limitations of law, toward making this possible, and at the same time lessens very much the necessity for so providing by a change in the law.

Attached is copy of a letter addressed to the Administrator of Veterans' Affairs by Mr. Joe D. Chittenden, director of the national service bureau of the V. F. W., expressing our appreciation for and intense intesest in this service letter.

We appreciate very much the interest which you have repeatedly manifested in our efforts to have a greater measure of justice extended to the distressed unemployable disabled veterans who will be favorably affected by this service letter.

With kind regards, I am

Respectfully yours,

MILLARD W. RICE,
Legislative Representative.

Opinion of Circuit Court of Appeals in H. J. Heinz Co. Against National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10 (legislative day of Monday, April 8), 1940

TEXT OF THE OPINION OF THE COURT

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the opinion of the United States Circuit Court of Appeals, Sixth Circuit, in H. J. Heinz Co. against N. L. R. B., decided April 3, 1940.

In accord with the rulings of the second and fourth circuits, this court holds that an employer's refusal to enter into a written agreement with the representatives of his employees, when the actual terms of bargaining had been orally agreed upon, is a violation of section 8 (5) of the National Labor Relations Act.

The same result was also reached by the ninth circuit in N. L. R. B. against Sunshine Mining Co., decided April 4.

The only decision to the contrary is that of the seventh circuit in Inland Steel Corporation against N. L. R. B., January 9, 1940. Even in that circuit, however, a more recent decision holds that the employer's refusal to reduce to writing the terms already agreed upon may give rise to a "well-nigh inescapable inference" that he is violating the act by refusing to bargain collectively in good faith—Fort Wayne Corrugated Paper Co. against N. L. R. B., decided March 28.

In other words, five circuit courts of appeals throughout the country have upheld the incontestably sound interpretation of the act by the Labor Board on this issue, and no circuit now holds to the contrary. These decisions are especially significant coming at this time, since the Smith amendments, pending in the House, would avowedly establish as the law of the land the isolated and discredited ruling in the Inland Steel case.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[United States Circuit Court of Appeals, Sixth Circuit. No. 8187. *H. J. Heinz Co., petitioner,* v. *National Labor Relations Board, respondent.* Petition for review of an order of the National Labor Relations Board. Decided April 3, 1940]

Before Simons, Hamilton, and Arant, circuit judges.

Arant, circuit judge:

This is a petition to review and set aside a final order of the National Labor Relations Board, which directed the H. J. Heinz Co. to cease and desist from dominating or interfering with the administration of the Heinz Employees' Association, refusing to bargain collectively with the Canning and Pickle Workers, Local Union No. 325, and interfering with the rights of its employees guaranteed in section 7 of the National Labor Relations Act; and also requiring petitioner to disestablish the association, bargain collectively with the union, upon request, embody in written form any understanding reached, if requested to do so by the union, and post the usual notices of compliance.

The Board's order is based upon its findings of fact and conclusions of law that petitioner had violated sections 7, 8 (1), 8 (2), and 8 (5) of the act.

Petitioner contends that the evidence does not support the Board's findings, that some of its findings do not support the conclusions of law based thereon, and that, in some respects, the order transcends the Board's powers. The Board takes issue and, pursuant to section 10 (e) of the act, has petitioned this court to enforce its order.

The union and the association began drives for membership among petitioner's employees in April of 1937. The former organization was later chartered by the Amalgamated Meat Cutters and Butcher Workmen of North America, which is affiliated with the American Federation of Labor; the latter is not affiliated with any other organization, and its membership is confined to employees of petitioner's Pittsburgh plant. By May, each organization claimed to have been chosen by a majority of petitioner's employees to act as sole bargaining agent. On May 21, Kracik, international representative of the Amalgamated, met with Riley, a director of petitioner in charge of manufacturing, and gave him a copy of a contract proposed by the union; and Riley agreed to discuss it with representatives of the union. On the morning of the 24th, representatives of the association asked Riley for an appointment to negotiate a contract, and he met both groups on that day.

The meeting with the union representatives was held first. Riley demanded proof of the union's authority, but they were unwilling then to reveal the union's membership. Though the advisability of holding an election had been discussed, no method of proving the union's authority had been agreed upon, when Riley acceded to a request that the union be given 24 hours in which to prove the extent of its membership.

When Riley met representatives of the association he likewise demanded proof of its authority, and the representatives offered to exhibit petitions signed by a majority of the employees; but Riley declined to examine them, stating that he did not wish to know which employees had joined either group. He informed the association's representatives that the union also claimed to represent a majority of the employees, and suggested to them also the advisability of a secret election. However, no decision was reached as to how the conflicting claims should be resolved.

That night the union voted to strike, effective immediately. During the following 4 days the mayor of Pittsburgh tried in vain to obtain the consent of petitioner and the two organizations to an election. The union would not consent to an election if the association's name was to be on the ballot, because it claimed that petitioner had interfered with and dominated the formation and administration of the association.

The association was then requested to present its petitions for examination, and on the morning of May 29 petitioner publicly announced that they had been signed by 1,383 of its 2,000 employees and that it would collectively bargain with the association. Negotiations during the next 3 days resulted in an agreement with it covering wages, hours, and working conditions, the terms of which were incorporated in a bulletin mailed to each of petitioner's employees on June 1. The strike, however, prevented the operation of the plant.

On June 4, all parties agreed, in writing, to an election to be conducted by the director of the National Labor Relations Board for the sixth region. The names of both organizations were to be on the ballot, and petitioner agreed to recognize and commence negotiations with whichever received a majority of the votes cast, within 10 days after results of the election were announced. A stipulation was entered into, however, that the holding of the election would not prejudice the rights of any parties who had filed affidavits before the Board, the purpose being to allow the union to prosecute charges, already filed with the Board, that the association was a company-dominated union.

The election was held on June 8, and the union received 1,079 of the 1,882 votes cast. The plant reopened and petitioner entered into negotiations with the union.

Six or seven meetings were held between June 17 and 28, petitioner being represented generally by Donald W. Ebbert, an attorney, and by Riley and Shinabarger, both directors, and the latter an assistant to one of the vice presidents. The subject of discussion at these meetings was a proposed contract relating to wages, hours, and working conditions, that had been submitted by the union. The introductory paragraph was as follows:

"This agreement, dated the _____ day of _____ 1937, between the H. J. Heinz Co. (hereinafter referred to as the 'Employer'), and the Canning & Pickle Workers Local Union No. 325, of the Amalgamated Meat Cutters and Butcher Workmen of North America, or its successor (hereinafter referred to as the 'Union') * * *"

The only objection to this paragraph expressed by petitioner's representatives was the phrase "or its successor," which the union agreed to eliminate. The parties could not agree, however, upon the proposed closed-shop and pay-increase provisions.

On June 26, Wilner, the union's attorney, requested that a higher official attend the next meeting, because Riley and Shinabarger had stated that their actions required approval of the other directors. Anderson, a vice president, attended the meeting on June 28, but said little, though the meeting lasted an hour and a half. When Wilner asked him for a statement, he replied that, according to the reports he had received, nothing new had been discussed; and added that the directors had full confidence in Riley and Shinabarger; and there was evidence that he stated that they had full authority to act for petitioner, though this was denied by petitioner's witnesses.

Feeling that an impasse had been reached, the union solicited the aid of Federal and State intermediaries. At another meeting on July 1 petitioner refused to offer more than the 10-percent increase previously proposed and the union representatives departed saying they would submit petitioner's proposals to the union that night. Shortly after the meeting adjourned, however, Riley sent for Kracik and told him that petitioner would not enter into a signed agreement with the union. That night the union accepted petitioner's counterproposals which, as previously agreed, were to go into effect as of July 1.

At a meeting on July 2, Wilner voiced objection to petitioner's refusal to enter into a signed agreement. Riley stated that it was petitioner's policy not to enter into such agreements with unions, and that it did not believe that the act required it to do so. It was finally decided, however, that Wilner and Ebbert should prepare a memorandum embodying the terms agreed upon. On July 14 Riley, Shinabarger, and Ebbert met with union representatives to discuss the memorandum, which, according to Wilner and Ebbert, correctly expressed all the terms on which an agreement had been reached. Certain further changes were agreed upon, however, and Ebbert undertook to embody them in a final draft to be posted on petitioner's bulletin boards the following day. On the following day, pursuant to agreement, Ebbert sent Wilner a copy of the corrected memorandum, dated July 15. It was entitled "Notice to All Employees," and the first paragraph read as follows:

"Following the recent election held under the supervision of the National Labor Relations Board, in which the Canning and Pickle Workers' Local Union, No. 325, was selected as the collective-bargaining agency for our employees, we have had meetings with a committee from that organization and after several weeks of negotiation, have agreed with them as follows:"

The memorandum concluded as follows:

"The wages, rates, and other matters hereinabove set forth shall remain in effect until further notice."

And the typewritten signature of petitioner appeared at the end.

Upon being notified that the memorandum had not been posted as agreed, Wilner telephoned Ebbert and was informed that Anderson had objected to certain phrases in the memorandum and thought it should be submitted to Howard Heinz, president of petitioner, then absent, before it was posted.

On July 23 or 24, Ebbert informed Wilner that Heinz wished to rewrite the memorandum and no further action could then be taken.

On July 29 or 30, Ebbert submitted to Wilner a bulletin prepared by Heinz that differed materially from the July 14 memorandum. The introductory paragraph read:

"According to the provisions of the National Labor Relations Act, we have bargained with the certified collective bargaining agency for our employees (not including, however, foremen, assistant foremen, who are paid on a monthly basis, policemen, outside truck drivers, office employees, or factory employees paid on a monthly basis) and the following understanding has been reached:"

The bulletin did not mention the name of the union, and petitioner's signature did not appear at the end. It contained a rewording of the July 14 memorandum and embodied changes in substantive provisions. On July 31, Wilner protested to Ebbert against petitioner's procedure, but added that he would present the bulletin of the union.

At the August 11 meeting, representatives of the union objected to the bulletin on several grounds, but particularly because the union's name was omitted and the details of the grievance procedure eliminated. Petitioner's representatives replied that Heinz had made these changes to shorten the bulletin, but consented to insert the union's name in the paragraph relating to grievances and agreed to a change relating to payment for overtime. The union representatives agreed that the bulletin thus modified should be posted. It was posted on August 15, but on August 17 Tasker, business agent of the union, wrote the following letter to Riley:

"This is to advise you that the notice you have posted on your billboard does not in our opinion constitute an agreement within the intent of the memorandum of understanding entered into by and between our union and you on June 4, 1937, nor is it evidence of bona fide collective bargaining within the meaning of that understanding or the National Labor Relations Act.

"Nevertheless, we realize that the concessions gained for the employees of the H. J. Heinz Co. were the direct results

of our efforts, and we are anxious to conserve for the Heinz employees the benefits which they so richly deserve and for which we strove so hard.

"We therefore do not object to you (sic) posting of the notice, but intend to lay this matter before the National Labor Relations Board in order to have that impartial agency determine whether or not you have bargained in good faith and whether you have done what our memorandum of understanding of the 4th of June 1937 and the law requires of you."

The foregoing facts, for the most part, are not controverted. Neither is it disputed that the union has been properly selected as the bargaining agent of petitioner's employees, nor denied that petitioner's business is of such nature as to subject it to the National Labor Relations Act.

Petitioner contends, however, that the Board's findings that it violated sections 7, 8 (1), and 8 (2) of the act are not supported by substantial evidence. But petitioner did at one time recognize and negotiate an agreement with the association, a signed copy of which was sent to each employee, accompanied by a communication in which, after stating that the plant could not be immediately reopened because of the strike, petitioner said: "We believe that the support of the members of the Heinz Employees' Association will be an important factor in securing free access to our property." And there is substantial evidence that Heinrich, general plant superintendent, discouraged several employees from joining the union, pointing out the benefits they had previously enjoyed and asserting that they would not fare so well if the union became established in the plant. There was also testimony that foremen Locke, Vajentic, Hayes, and Brooks and foreladies Schirer and Fisher had engaged in similar conduct antagonistic to the union. There was also substantial evidence that signatures upon association petitions were solicited by group leaders, timekeepers, and ordinary employees during working hours; that supervisory employees directed some of this solicitation; and that, on two occasions, foremen held departmental meetings for organization purposes. The Board found that petitioner, through its supervisory employees, had interfered with, restrained, and coerced employees in the exercise of rights guaranteed to them by section 7 and had interfered with and dominated the organization and administration of the association. Petitioner's chief criticism is that the Board did not believe its witnesses. Since, however, the Board's finding is based on substantial evidence, it must be accepted here. (29 U. S. C. A., sec. 160 (c); *Consolidated Edison Co.* v. *National Labor Relations Board,* 305 U. S. 197. See *National Labor Relations Board* v. *Waterman Steamship Corporation* (decided Feb. 12, 1940, — U. S. —.)

Petitioner also contends that, even if its supervisory employees did engage in the aforesaid activities, there is no evidence that it expressly authorized or ratified those acts; on the contrary, when they were brought to its attention, it claims that all foremen were instructed to remain neutral and not discriminate against any employee because of union activities. But there was no evidence that petitioner directed any supervisory employee to communicate its alleged neutrality to the employees. If petitioner had really wanted its employees to know that they might, with safety, join whichever union they desired, the bulletin boards were the obvious and, because direct, the most effective means of assuring them of its impartiality. There was abundant evidence that the ordinary employees feared the disfavor of those from whom they were accustomed to taking orders. Since they were justified in believing that these supervisory employees were acting as petitioner's representatives, petitioner is responsible for what they did. (*National Labor Relations Board* v. *A. S. Abell Co.*, 97 F. (2d) 951 (C. C. A. 4); *Swift & Co.* v. *National Labor Relations Board,* 106 F. (2d) 87 (C. C. A. 10). Cf. *National Labor Relations Board* v. *Swank Products, Inc.,* 108 F. (2d) 872 (C. C. A. 3); *Cupples Co. Manufacturers* v. *National Labor Relations Board,* 106 F. (2d) 100 (C. C. A. 8).)

We are of the opinion that petitioner violated sections 7, 8 (1), and 8 (2) of the act, though there may have been neither express authorization nor ratification.

Petitioner contends that the Board's order that it withdraw recognition from and disestablish the association is not warranted by the finding that it dominated and interfered with the organization and administration of the association because it contends that the pro-association activities were limited to the organization period, and ceased some 5 months before the Board's complaint was filed; that not more than nine of its supervisory employees were shown ever to have participated; and that the election results revealed the ineffectiveness of their activities.

We are of the opinion that the Board's order should be enforced.

Section 10 (c) of the act empowers the Board to order such affirmative action as will effectuate the policies of the act. The record supports the Board's view that disestablishment of the association is necessary to assure petitioner's employees that they are free to exercise the rights guaranteed to them by section 7. We doubt if any employee would infer from mere negotiation with the union, purusant to pre-election promise and the mandate of the act, that petitioner's favor had been withdrawn from the association. As long as employees may reasonably entertain a belief that petitioner's favor can be won by abandoning the union for the association they will not be free to exercise the rights guaranteed to them by section 7. If the Board has reasonable ground to believe that such a situation exists, it may direct the employer to employ whatever means it regards as reasonable to bring home to the employees that, as far as their employer is concerned, they are entirely free to exercise all the rights guaranteed in section 7. The fact that even here petitioner seeks to justify its refusal to enter into a written contract in part upon the ground that a large proportion of its employees voted for the association indicates that it still accords the association recognition in violation of the act and shows that the Board did not abuse its discretion in directing the disestablishment of the association. See *National Labor Relations Board* v. *Falk Corporation* (decided Jan. 2, 1940), — U. S. —, 60 S. Ct. 307; *National Labor Relations Board* v. *Greyhound Lines,* 303 U. S. 261; *National Labor Relations Board* v. *Newport News Shipbuilding & Dry Dock Co.* (decided Dec. 4, 1939, — U. S. —, 60 S. Ct. 203; *National Labor Relations Board* v. *Fansteel Metallurgical Corp.,* 306 U. S. 240. Cf. *National Licorice Co.* v. *National Labor Relations Board* (decided Mar. 4, 1940), — U. S. 11; *Federal Communications Commission* v. *Pottsville Broadcasting Co.* (decided Jan. 29, 1940), — U. S. —.

Petitioner also attacks the Board's conclusion that it had engaged in unfair labor practices within the meaning of section 8 (5) by not bargaining in good faith with the union, as shown by (1) refusal to enter into a signed agreement with the union embodying terms agreed upon; (2) withholding from the union the essential status of an equal during the negotiations; (3) repudiation and change of the terms of the July 14 bulletin after they had been approved as final by persons represented to have authority to act for petitioner; (4) adoption of dilatory tactics, manifested particularly by Anderson's refusal to post the July 14 memorandum, by rewriting it and refusing to incorporate in the August 15 bulletin the agreed procedure for settling grievances, to the terms of which it had no objection.

We are of the opinion that there was substantial evidence to support the findings upon which the Board based its conclusion that petitioner had violated section 8 (5). And we think this is so irrespective of petitioner's refusal to enter into a written agreement.

Does section 8 (5) require the employer to embody terms agreed upon with a union in a written contract?

The seventh circuit recently considered this problem in *Inland Steel Co.* v. *National Labor Relations Board* (decided Jan. 9, 1940), — F. (2d) —, and concluded that no written agreement is required by the act under any circumstances. It construed the language of the act literally and rejected the historical argument that Congress must have intended that any understanding arrived at be embodied in a written agreement because such had long been the general practice and because Congress must have been familiar with the old Labor Board's practice of requiring written contracts under such circumstances.

The opposite conclusion was reached by the second circuit in the case of *Art Metals Construction Co.* v. *National Labor Relations Board* (decided Feb. 26, 1940), — F. (2d) —, Judge Hand, writing for the court, said:

"The argument on this point rests upon the admitted truth that the act does not force the parties to come to any agreement at all; for, although an employer must honestly negotiate with his employees collectively, that is as far as he need go. But if, the argument runs, he is forced to make it a term of any oral agreement, that it shall be put into writing, he loses that absolute freedom in negotiation which he had at common law, and which Congress meant to reserve to him. *Inland Steel Co.* v. *N. L. R. B.,* 108 Fed. (2) (C. C. A. 7). It is indeed true, and for that matter a truism, that a stipulation in an oral contract that it shall be put into writing is one of its terms, and that if an employer must put it in, he is not free pro tanto. But he is no longer wholly free anyway; before the act he was not obliged to bargain with his employees collectively; he was at liberty to refuse to negotiate with them at all, or otherwise than severally. The act impaired that freedom; it meant to give to the employees whatever advantage they would get from collective pressure upon their employer; and the question here is, What are the fair implications of that grant? They should include whatever is reasonably appropriate to protect it, and no one can dispute that a permanent memorial of any negotiation which results in a bargain is not only appropriate but practically necessary to its preservation; it is hardly necessary to observe that without it the fruits of the privilege are exposed to the sport of fugitive and biased recollection. The purpose of a contract is to define the promised performance, so that when it becomes due the parties may know the extent to which the promisor is bound, and it is the merest casuistry to argue that the promisor's freedom to contract includes the opportunity to put in jeopardy the ascertainment of what he has agreed to do, or indeed whether he has agreed to anything at all. The freedom reserved to the employer is freedom to refuse concessions in working conditions to his employees and to exact concessions from them; it is not the freedom, once they have in fact agreed upon those conditions, to compromise the value of the whole proceeding, and probably make it nugatory."

The fourth circuit followed Judge Hand's reasoning in *National Labor Relations Board* v. *Highland Park Manufacturing Co.* (decided Mar. 11, 1940 (— F. (2d) —).

We are in accord with the reasoning and the conclusions reached by the second and fourth circuits, and therefore approve the Board's conclusion that respondent violated section 8 (5) by not embodying the understandings reached in a signed agreement.

However, if the view of the seventh circuit were accepted, it does not follow that the Board's order is invalid. We are of the opinion that the order is more obviously justified by section 10 (c), which requires the Board when it has found an employer guilty of an unfair labor practice to serve an order "requiring such person to cease and desist from such unfair labor practice and to take such affirmative action * * * as will effectuate the policies of this chapter."

The act nowhere in terms confers upon the Board the power to require an employer to post any notice, yet its power in this respect is now well established. See *National Labor Relations Board* v.

Greyhound Lines, supra. In *National Labor Relations Board* v. *The Falk Corporation* (decided on Jan. 2, 1940) (— U. S. —) an order to post notices promising to cease and desist was upheld.

Discussing the Board's power to require the posting of such notices, Mr. Justice Black said:

"The court also modified the Board's order by omitting the requirement that the notices to be posted in the plant contain a statement that the company would 'cease and desist' from its unlawful activities. As stated in the first opinion of the court below, the purpose of the Board in requiring the company to publish notices assuring its employees that it would 'cease and desist' had been 'to convey to the employees the knowledge of a guaranty of an unhampered right in the future to determine their own labor affiliations.' Knowledge on the part of the men that the company would cease and desist from hampering, interfering with, and coercing them in selection of a bargaining agent, which the Board found the company had done successfully in the past, was essential if the employees were to feel free to exercise their rights without incurring the company's disfavor. But the notices as permitted by the court's modifying order not only failed to assure the men that the company would cease its unlawful and coercive practices but—backed with the prestige of a formal court order—told the men that Independent, while in terms disestablished for the time being, was still available for selection by the employees. Thus the modified notices neither renounced the company's unlawful practices nor promised their abandonment, and left as a candidate the Independent toward which the unrenounced unlawful activities of the company had been directed. We think the plant notices as modified by the court's order fell far short of conveying 'to the employees the knowledge of a guaranty of an unhampered right in the future to determine their labor affiliations.' "

The employees' need of assurance probably always justifies an order to the employer to post notices that he will bargain collectively with a particular union, etc., and the Falk case makes it clear that under some circumstances he may be required to post a notices that he will cease and desist from unfair labor practices found by the Board, though it may be doubted whether the Court meant to lay down the rule that the posting of such a notice can be required in every case. The Board might abuse its discretion in this respect, but the Supreme Court saw no abuse in the Falk case.

Petitioner's refusal to execute a written agreement at the request of the union may well have left the employees suspicious of its good faith and with a sense of insecurity that does not ordinarily exist when neither party has reasonable ground to doubt the other's good faith. We are of the opinion that the sense of insecurity engendered by petitioner's strange unwillingness to execute a written contract embodying terms that it would have its employees believe it had orally agreed to in good faith, required the Board to exercise the power conferred in section 10 (c). There was no abuse of discretion in the order as made. *National Labor Relations Board* v. *Highland Park Mfg. Co.*, supra.

In view of the conclusion we have reached as to this matter, we deem it unnecessary to consider the other grounds enumerated above, upon which the Board based its conclusion that petitioner had violated section 8 (5).

Petitioner denies the Board's power to require it to post notices in the form ordered. We are of the opinion that the Board did not abuse its discretion in this respect. See *National Labor Relations Board* v. *Falk Corporation*, supra. Cf. *National Licorice Co.* v. *National Labor Relations Board*, supra.

The order of the Board will be enforced.

Senator Harrison's Management of Trade Agreements Extension Act

EXTENSION OF REMARKS

OF

HON. FREDERICK VAN NUYS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 10 (legislative day of Monday, April 8), 1940

LETTER FROM JOSEPH P. TUMULTY

Mr. VAN NUYS. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed by J. P. Tumulty to the editor of the Washington Post and published in the Washington Post of today, entitled "Trade Agreements."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 10, 1940]

TRADE AGREEMENTS

TO THE EDITOR OF THE POST.

SIR: It was an act of the finest sportsmanship and the highest magnanimity on the part of Senator BARKLEY when, as Democratic leader of the Senate, he congratulated Senator HARRISON on the manner in which he directed to a successful conclusion the recent Senate action on the Trade Agreements Act. Evidently Senator BARKLEY, an experienced legislator himself, realized the many barriers and opposing obstacles that confronted Senator HARRISON and so appreciated the skill and patience with which he brought this historic piece of legislation to a happy consummation.

Here is Senator BARKLEY's generous estimate of Senator HARRISON'S work:

"I am sure that not only the Members of the Senate, but likewise the American people, appreciate his skill, diligence, patience, and persistence in fostering this legislation. Personally, I want to thank him."

With characteristic modesty, Senator HARRISON, upon the floor, in acknowledging the words of his coworker, Senator BARKLEY, conveyed his thanks to the Senator in this informal way:

"I want to thank the Senator, but let it go at that. It is through now."

The tribute of Senator BARKLEY reminds the outside world and those who sit on the sidelines watching the progress of legislation here in the Capital, that too often are we inclined to forget that high type of leadership that brings legislation of this unusual character into a safe harbor. And while it is altogether fitting that tribute should be paid to the President and Secretary Hull for their vision, courage, and statesmanship in the matter of reciprocity, at the same time it is unfortunate that in the stories of the passage of the Trade Agreements Act, there is little mention made of the leadership displayed throughout the debate by the chairman of the Senate Finance Committee, Senator PAT HARRISON, of Mississippi.

It should never be forgotten that without that careful and tactful direction of Senator HARRISON this piece of legislation, for which the President and Secretary Hull so valiantly fought, might have failed of passage. Only a man who could have drawn to himself the greatest loyalty of the members of his own committee, the great Finance Committee of the Senate, could have accomplished this result.

Throughout the debate on this great measure, with infinite patience he maintained his fine poise and yet, without bitterness or rancor, met the onslaught of the opponents of this measure. Indeed, his kindness, tolerance, frankness, and understanding of the other fellow's point of view make his leadership in any matter of legislation always irresistible.

J. P. TUMULTY.

WASHINGTON, *April 9.*

Internal Revenue Collections and Federal Expenditures

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

COMPARATIVE TABLES BY PAUL O. PETERS

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tables:

Comparative table showing internal-revenue collections from 1923 to 1929, inclusive, with Federal expenditures for the same years, compared with years 1933 to 1939, inclusive [1]

(Compiled by Paul O. Peters, Syndicate Trade Press, Washington, D. C.)

Year	Total collections	Ordinary and postal expenditures	Debt retirement	Surplus or deficit	Per capita debt
1923	$4,539,963,406	$3,827,455,452	$402,850,491	$309,657,461	$200.10
1924	4,584,993,480	3,621,626,743	457,999,750	505,366,987	186.86
1925	4,379,740,162	3,662,636,809	466,538,114	250,565,239	177.82
1926	4,622,575,491	3,757,431,624	487,376,051	377,767,816	167.70
1927	4,812,516,430	3,657,151,664	519,554,845	635,809,921	156.04
1928	4,735,982,077	3,796,898,776	540,255,020	398,828,281	146.69
1929	4,730,197,803	3,995,807,064	549,603,704	184,787,035	139.40
COMPARATIVE 7-YEAR PERIOD, 1933–39 [2]					
1933	$2,667,328,104	$4,446,170,986	$461,604,800	−$2,245,452,980	$179.21
1934	3,702,287,216	6,539,846,959	359,864,093	−3,255,393,297	213.65
1935	4,431,262,504	7,642,508,160	573,558,250	−3,782,966,866	225.07
1936	4,781,299,971	9,333,266,241	403,240,150	−4,952,928,957	261.20
1937	6,020,041,374	9,173,327,654	103,971,200	−3,252,539,719	281.82
1938	6,970,295,278	8,354,008,904	65,464,950	−1,449,625,881	285.43
1939	6,413,778,701	9,953,501,256	58,246,450	−3,600,514,405	308.34

[1] The total of debt retirements for this 7-year period was $3,424,277,975.

[2] The total debt retirements for this period amounted to $2,025,949,893. However, the deficits more than doubled the per capita public debt.

Compiled from reports of the U. S. Treasury Department and annual reports of the Secretary of the Treasury, Apr. 5, 1940.

TABLE 2.—*Showing internal revenue collections, by States geographically grouped, from Mar. 1, 1933, to Jan. 1, 1940, with comparative Federal expenditures in each State from Mar. 4, 1933, to June 30, 1939, and a break-down showing collections and expenditures per capita based on population estimates for July 1, 1937*

[Compiled from official statistics by Paul O. Peters]

States	1937 estimated population 129,257,000	Revenue collections		Federal expenditures	
		Total	Per capita	Total	Per capita
United States	129,257,000	$28,135,913,585		$22,959,583,609	
NEW ENGLAND STATES

NOTE.—Collections for Hawaii, for the period indicated, amounted to $63,757,677. Expenditures, Hawaii, were $79,855,488.

Collections for the Philippines, $2,686,155; expenditures, $19,118,389.

Collections for Puerto Rico, covered into insular treasury; however, the Federal Government expended $121,424,576 in the island in addition to the revenues the island retained.

Kansas Republican State Convention

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 10 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. ALFRED M. LANDON

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. Alfred M. Landon before the Republican State convention at Wichita, Kans., on April 4 last.

There being no objection, the address was ordered to be printed in the RECORD as follows:

Four years ago the Kansas Republicans honored me with their votes for nomination to the highest office in the gift of the American people. I have always been conscious of that honor, and since that time have given freely of my time and energy in the interests of the Republicans who, by their ballots, bestowed their trust in me.

Now, today, in 1940, the Republican Party faces an entirely different situation with vastly better prospects than it had in 1936. Already there is a new spirit. A growing realization of the New Deal's tragic failures is becoming more and more fixed. So the situation in 1940 calls for entirely different strategy than in 1936.

Since 1936 our strength at the political grass roots has been multiplied many times. Every politician and newspaperman knows the political strength that goes with control of the statehouses and courthouses and city halls in our form and practice of popular government. In 1936 we had scant foundation on which to build our party tickets at the top. In 1936 the Republican organizations were in collapse in practically every State. There was very, very little on which to build.

For that reason National Chairman Hamilton's trip across the country was necessary in the summer of 1936 to rebuild the party organization at the base. Even before the convention we had discussed the need for rallying, and had made plans for rebuilding the party organizations in most of the States. I accept sole responsibility for that trip. The party's mechanical difficulties of 1936 were many and enormous. In 1936 we were fighting a rear-guard action.

Now, in 1940, these difficulties do not exist. As a result of the 1938 Republican victories, the local party organizations have a fighting morale and a new spirit. The greatly increased Republican vote in every congressional district has strengthened Republican beliefs and is inspiring to all of us. Our victories in many of the congressional and gubernatorial contests could have been even more remarkable and significant if the 1936 defeatist attitude hadn't lingered in our ranks.

This is our year. The trend is our way. You can beat a man, or a ticket, but you can't beat a trend. Victory awaits us unless we deliberately reverse this trend by our own blindness. The problems of business, agriculture, and the workingman must be solved. And the Republican Party must show it is prepared and ready to solve them. Many of us do not seem to realize that the Republican Party is so favorably situated. We should recognize this fact and not jeopardize our solidarity.

We have the opportunity and the duty to save our country in this great crisis, as we have done many times in the past. And we must go forth fighting to save it. This will not be done by the mere election of a Republican President. It will be done by the election of a man who all of his life has been accustomed to facing the realities of unpleasant facts—to grapple with them and to beat them. It will be done by the election of a man who can actually get men back to work; by the election of a man who will not tolerate around him a large and influential communistic group who demoralize business and prevent employment by assuming that the capitalistic system is finished and can no longer perform its historical function. We must elect a President who will willingly subject himself to the restraint of democratic processes, and thus restore the order on which all progress and prosperity and peace ultimately rest.

In order to save the country we must elect a man who will carry out the mandate of the American people and make collective bargaining work, who can make a floor for wages and a ceiling for hours of labor, who can devise a sound farm policy and make it work. Our new President can make all of these work by profiting from the mistakes the Roosevelt administration has made.

We must nominate a man who believes that the essentials of all these must be maintained—but in the interests of their maintenance

knows many changes press for consideration; who has the wisdom and the understanding to realize that when government takes away financial assistance from one industry, fairness and justice require that it cut all, simultaneously, including the high protective tariff. The farmer must not be the only one called upon to take the cut. We must have a chief executive who will deal intelligently and vigorously with the centralization of economic wealth and power.

Above all, we need a man who can do the job that Mr. Roosevelt has so conspicuously failed in, of organizing and welding the conflicting interests of the country so that we can all pull together.

One thing is certain: Nothing is going to be done by this administration in Washington now to straighten out the financial mess in which we find ourselves today. This administration will leave to the new president and the next Congress the painful and unpopular job of paying the fiddler after the dance is over and the cake has been eaten. Always, in our theory of government, the administration in power, whether it be city, State, or National, is charged with the responsibility for the finances of its unit of government.

It is plainly evident now that the Republican Party is left alone to rescue the fiscal structure of our Government. We must fight to put the country on a sound fiscal basis. Unless this is promptly done, we, as a people, will suffer harder times than we have ever known. All of us, except the Communists, will lose whatever kind of America we believe in, by a continuation of the present soft-money fiscal policy. Every day brings us nearer calamity. So all of us have much to gain, individually and collectively, by changing to a sound-money fiscal policy.

The great defect and weakness of the New Deal lies in the loose fiscal policy based on—in familiar language—attempting to eat your cake and have it too.

All social legislation is threatened by a loose fiscal policy. I don't view a sound social program as incompatible with a sound financial program. But I do view the unsound fiscal policies of the national administration as incompatible with a durable, successful, social policy. The loose fiscal policies of the national administration are an ominous threat to every piece of legislation written for the laborer, the farmer, youth, or old age.

There are children in this country going on 10 years of age that have never lived under a national government with a balanced budget, or whose fathers have never had a steady job.

Therefore I say that every piece of New Deal legislation is threatened by loose finances, loose administration, and loose language. Therefore a Republican victory is important to all those interested in the social progress attempted. Even the most enthusiastic supporter of these policies of the New Deal cannot be indifferent to the dangers caused by maladministration.

Surely the President is aware that one-third of the Nation is ill-fed, ill-clad, and ill-housed today. How much longer are the people of this country to be called upon to suffer the tragedy of 10,000,000 unemployed because the President has been so busy planning that he has failed to exercise the leadership needed to get these men back to work?

Not only has the Chief Executive failed to organize, to fuse, to weld together the conflicting interests of the country, but he has contributed to the confusion by his off-hand, impulsive, "puckish" statements. Keeping the country guessing may be good fun for the President, but it is no fun for the millions who are out of real jobs because the employers of the Nation, who might employ them, are kept guessing.

The continual launching of trial balloons, his habitual failure to realize that a President's every word weighs a ton, would keep any policy from succeeding—his own spending-to-save, or any other. The President's impulsive private expressions have contributed much to scorching business recovery and reemployment. The President has never learned that the words he utters cannot be limited to a small area.

Really, as a matter of fact, I think his continually conflicting and ofttimes drastic comments have been more upsetting than his drastic changes in the Government. Business can adjust itself more readily to drastic changes in government than it can to the steady stream of conflicting and ofttimes sensational words of the Chief Executive. Business does not consider the President's words are just idle chatter. The result has been that during the present administration business, large and small, has never been sure of the ground under its feet. Every time business has started ahead, the President has come out with a blast that stopped it. Every time the wheat market started up, we have had depressing statements from Washington to stop it.

Thus the disorder and noisy atmosphere which the President himself creates is the greatest handicap to his own strenuous efforts. The President never has appreciated the wisdom and the necessity for order in public affairs, as against the short cuts that his exuberant hastiness leads him to take. And he is bringing the same disorder to the National Democratic Party that he has brought to the country.

Seven years of confusion—legislative confusion, judicial confusion, and business confusion—make for the greatest tangle of our history. The result is 10,000,000 discouraged, heartsick, unemployed. Surely this is a direct reflection on the Chief Executive's ability to govern this country. But even today he doesn't realize that he could be to blame. When he is faced with failure, he looks around for someone else to blame. And he has been just as ready to place the blame on his fellow Democrats, who have tried to give him sober counsel, as upon anyone else.

For these reasons the tide has been running with us since 1937. Prior to that date it was running the other way. Also there is another very customary reason for this political change favoring us. In 1934 the business index was rising. In 1936 the business index was still rising. It couldn't do anything else, of course. There was only one way it could go, and that was up, because Mr. Roosevelt started in 1933 at the bottom. The result of the 1936 election was only a natural thing. Something to be expected. A search of our history to find the case of a President being beaten for a second term on a rising index would be in vain. Americans have a simple rule for judging political leaders. That simple rule is: Are times good or bad?

If times are prosperous, and there is ample opportunity for an average man to make a decent living, we want the party in power to remain in charge. When these conditions do not prevail, out the party goes. This rule was applied to the Democratic Party in 1896, when William McKinley was elected. It was applied to the Republican Party in 1932, when Mr. Roosevelt was elected. It doesn't matter what party is in power, if it doesn't give us prosperity and jobs it is always turned out. That is the way it has been in the past, and that is the way it is today. The 1938 election reflected such a trend, and, as I have said, you don't beat a trend.

When an administration puts billboards up all over the country with the slogan "Vote for Roosevelt and continue prosperity," when it makes its theme song Happy Days Are Here Again, the American people, after they have given the administration a fair trial, say "Show me." And that is especially true of an administration that blames its own party, as Mr. Roosevelt has blamed his fellow Democrats, for this failure. Instead of the green pastures we heard about in 1936, we are in the green stagnation of the slough of despond.

The Chief Executive has failed in his greatest task—of getting men back to work. He has tried to do many fine things, but, according to the administration itself, there are just as many men out of work today as when the President took his first inaugural oath.

We all know what we want in America. We want a return of good times. A return of prosperity. When I was running for the presidency in 1936 there were a great many people that felt the New Deal had not had sufficient opportunity to show what it could do. A great many people in 1936 thought Mr. Roosevelt deserved another chance; that he would really do better in his second term than he had done in his first term. It is obvious now that Mr. Roosevelt has not made good. In 1936 the New Deal slogan was "Are you better off now than you were a year ago?" When the American people ask themselves today Mr. Roosevelt's own question of 4 years ago, the answer must be "No."

Our Republican Convention must not be of the boss-ridden kind that the Democratic Convention will be. It must be one in which the voice of the people will prevail. We must not permit one man, or any group of money-raisers, to pick our nominee. Let us not be led into a smearing campaign within our own party, with the encouragement of the opposition. Let us consider the merits of the candidates judiciously and without heat, and without use of those smear labels the New Deal dynamite gang would so willingly furnish us. Let us select the strongest man from among our many strong men, and with him at our front go into battle.

We Republicans have good material. Better than in many times past, when we have won. Many in the party appear to be seeking a superman for our nominee—and that is understandable; the next President will face superproblems. But we make generals from colonels who have shown outstanding ability. Our candidates are men who had demonstrated outstanding ability in the work thus far assigned to them, and have shown the capacity to move forward.

Because the New Deal has made such an abject failure in its handling of domestic issues, it is obviously seeking to make the issues of the 1940 election those of foreign policy. Not because its record on foreign policy is good, but because its record on domestic policy is so bad. Let's not be led onto a battlefield of the enemy's choosing.

The New Deal is "busted" on the home grounds. Its leader walked out on the home situation, and is seeking to recoup its fortunes overseas. The New Deal has not been able to restore anything like prosperity. Even with the help of a great European war, it has been able to achieve only a series of spurts and setbacks, and the spurts have been short-lived. Its policies can accomplish no more in the future than they have in the past; less, even, because we are now at the bottom of the fiscal barrel. By the irresponsible fiscal policies of the Roosevelt administration we are going so heavily into debt that, sooner or later there is the horrifying possibility of unlimited inflation, and inflation is the hall entrance to chaos. When the middle class—sturdy, thrifty, capable of indignation and organization at the same time, are plundered and robbed, it is they who turn into the streets and overthrow government. It is not the legislation of the New Deal that is drawing us toward this, but it is the loose debt-making habits of our present administration.

In short, to sum it all up, the Republican Party must favor government policies that will stand for neither unrestrained plutocracy nor irresponsible democracy.

I firmly believe that the election of a Republican President will increase jobs and good business. It will mean another era of Republican prosperity. The Republican Party is best equipped to take charge, to put the country back on a sound footing, to protect its liberties, and to produce another era in which people can look ahead with hope and confidence. We have done it before. We are prepared to do so again.

International Law of the "Altmark" Case

EXTENSION OF REMARKS

OF

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 10 (legislative day of Monday, April 8), 1940

LETTER FROM DR. PHILIP C. JESSUP

Mr. DANAHER. Mr. President, on February 26 the junior Senator from Indiana [Mr. MINTON] introduced into the RECORD a letter from Mr. James W. Ryan discussing the case of the *Altmark*. Recent events within the last few days, it seems to me, require that another view be correlated with that already stated. Happily, such an expression was submitted by Dr. Philip C. Jessup, of the Columbia University School of Law, in a letter which appeared in the New York Herald Tribune on February 22 of this year. I ask unanimous consent, therefore, that Dr. Jessup's letter be incorporated in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 22, 1940]

IN FAIRNESS TO NORWAY—PROFESSOR JESSUP DISCUSSES THE INTERNATIONAL LAW OF THE "ALTMARK" CASE

In fairness to Norway, who can defend her neutrality only by appeals to law, I believe that certain points in the *Altmark* case deserve to be brought out. Our sympathies for the Allied cause against the Nazis should not blind us to the just rights of a small neutral. The facts may not as yet be entirely clear, but some legal rules have been discussed in the newspapers and over the radio and these rules may be examined.

First. The status of the *Altmark*.

The British Government asserts, and the Norwegian Government appears to agree, that the *Altmark* was to be treated as a war vessel. Since a war vessel is customarily armed, it is immaterial what guns the *Altmark* carried.

Second. Were the British privileged to effect a rescue in Norwegian waters?

It is elementary that a belligerent may not commit any act of hostility in neutral waters. Citations are unnecessary to support this basic proposition restated in article 2 of the Thirteenth Hague Convention: "Any act of hostility, including capture and the exercise of the right of search committed by belligerent warships in the territorial waters of a neutral power, constitutes a violation of its neutrality and is strictly forbidden." When, in 1764, a British captain recaptured a prize in a Norwegian port, he was dismissed from the service by the British Government and the value of the ship and cargo was restored to the King of Denmark-Norway "from under whose protection they had thus been illegally removed." If there was justification for the British naval forces disregarding this basic rule in the *Altmark* case, it must flow from some special circumstance.

Third. Did the *Altmark*, as a warship, have a right to be in neutral Norwegian waters?

There can be no doubt about an affirmative answer to this general question. Although a neutral is privileged to exclude belligerent warships from some or all of its ports or waters, it is not obligated to do so. The Thirteenth Hague Convention states an accepted rule in article 10: "The neutrality of a power is not affected by the mere passage through its territorial waters of warships or prizes belonging to belligerents." Belligerent warships may also be given by the neutral the privilege of a limited stay in port. The most difficult problem is to determine whether the use of Norwegian waters for transit by German warships has become so frequent and prolonged as to be equivalent to the use of those waters as a base for belligerent operations. More facts must be available before that question is answered dogmatically. One is reminded of the discussions in 1918 concerning the passage of German submarines through Norwegian waters. At that time and under those circumstances the United States took the view that such use of Norwegian waters might justly be considered to make them a "base of naval operations." (Foreign Relations of the United States, 1918, supp. I, vol. II, p. 1783.) The Norwegian Government did not at first accept this view but eventually closed its waters in response to the diplomatic pressure of the Allies.

Fourth. Does the presence of prisoners of war on board the *Altmark* affect the case?

One of the leading English treatises on international law declares: "The extraterritoriality which, according to a universally recognized rule of international law, men-of-war enjoy in foreign ports, obtains even in time of war during their stay in neutral ports. Therefore, for example, prisoners of war on board do not become free by coming into the neutral port, so long as they are not brought on shore" (Oppenheim, 5th ed., 1935, vol. II, p. 591).

In 1855, during the Crimean War, a British warship put into San Francisco accompanied by a captured Russian vessel, the *Sitka*, in charge of a British prize crew. There were two prisoners on the *Sitka* whose release was sought by serving a writ of habeas corpus on the British officer in command of the prize crew. The officer disregarded the writ and left the port. The matter was referred to Attorney General Cushing for an opinion (VII Op. Atty. Gen. 122). He fully upheld the action of the officer commanding the *Sitka*. He examined and declared the right of a warship or prize to come temporarily into our ports or waters. Having found the presence of the *Sitka* lawful, he declared she was, as a public ship of a foreign state, "exempt from the jurisdiction of the country." "So long as they [the prisoners] remained on board that ship they were in the territory and jurisdiction of her sovereign. There the neutral has no right to meddle with them." The situation would have been different had they landed. It is believed that the Attorney General's view was sound when delivered and is sound today. It seems to cover Norway's duty in regard to the *Altmark's* prisoners. The case of the *Appam* during the World War was quite different, inasmuch as that ship was brought into an American port by the German prize crew with a view to laying her up here indefinitely. So far as can be judged by the very sketchy press reports, in the case of the *City of Flint*, the German prize crew voluntarily put ashore the British prisoners who were on board. This was done when the *City of Flint* touched at Tromso for 2 hours on her way north to Murmansk.

Fifth. What is the duty of a neutral in regard to suppressing breaches of its neutrality?

Especially since the famous dispute between England and the United States over the *Alabama* claims, it has been agreed that the neutral's duty is relative and not absolute. In the language of The Hague Convention, the neutral has a duty to "use the means at its disposal" to prevent violations of its neutrality. If the United States, with its great Navy, failed to prevent a hostile act in its territorial waters, it might be chargeable with a failure to observe its neutral duties, whereas a similar failure on the part of Nicaragua or Norway might involve no liability.

Sixth. Was the British action justified as a measure of reprisal?

The subject of reprisals in international law is not free from difficulty. Its complete examination here would require too much space. Two grounds for reprisal have been suggested—first, that the *Altmark* used her radio in violation of the Norwegian neutrality rules; and, second, that Germany had committed prior violations of Norwegian neutrality, especially by sinking ships inside Norwegian waters. Clearly a reprisal against Norway would have to be predicated upon an illegal act of Norway, as through a failure to live up to its neutral duties. The first ground would not seem sufficiently serious to justify so vigorous a reprisal, even if it be assumed that Norway was to blame for not preventing the use of the *Altmark's* radio. According to the Norwegian account, there was prompt protest and no repetition of the offense. The international tribunal which decided in 1928 the case of the *Naulilaa* incident (a dispute between Portugal and Germany) declared that "one must certainly consider as excessive, and consequently illicit, reprisals out of all proportion to the act which has motivated them." In regard to the sinkings, Norway's fault could be involved only in regard to acts in Norwegian waters, and not in regard to acts on the high seas. The Norwegian Foreign Minister is reported to have said that his government had no knowledge of the alleged German sinkings in Norwegian waters and had received no reply to a request addressed to the British Government to supply information relative thereto.

The *Altmark* case does not involve a weighing of German and British infringements of international law. German protests are not under discussion here. It is especially incumbent upon those of us whose fundamental sympathies are with Great Britain to be fair in our consideration of the case of a small neutral state.

PHILIP C. JESSUP.

NEW YORK, *February 21, 1940.*

The Moral Implications of Democracy

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ADDRESS BY RABBI CHARLES E. SHULMAN

Mr. CHURCH. Mr. Speaker, under leave to revise and extend my remarks, I include the following address delivered by my very good friend Dr. Charles E. Shulman, entitled "The Moral Implications of Democracy," before the Executives' Club of Chicago on Friday, February 2.

Rabbi Shulman is pastor of the North Shore Congregation Israel in Glencoe, Ill. He is the author of several books, a man of exemplary character, and a distinguished scholar. I hope his address will be extensively read.

Mr. Chairman and gentlemen, because of the limited time at my disposal, I should like to proceed directly to the subject announced—the moral implications of democracy. And I should like to do so with a question that must be in the minds of many of you: What is wrong with the world in which we live? I suppose that the youngster in the third grade who tackled this question, to the surprise of his teacher, spoke some of the truth without benefit of any analysis. The teacher happened to be teaching geography, and asked the pupil what the shape of the world is. He answered, "My dad says that it is in very bad shape."

The adult mind has been struggling for some time to discover why it is in very bad shape. We have enough food in the world to feed all of mankind. There is not much doubt about that. Mass production has seen to it that the earth yield far more than it ever yielded in pre-scientific times. There are certainly enough educational means to make men gentle, sympathetic, tolerant, good humored, and peaceful. But there is very little peace in the world, and shocking numbers of people in all lands on earth are woefully ignorant of the nature of the world and of man. The instruments of transportation are such as were never conceived of by the great Kings of Egypt and Babylon. They never believed that it would be possible to fly through space at great rates of speed. Americans two generations ago would not have believed this, either. They thought that the railroad train was a miracle when it first appeared. Yet the airplane, which transports human lives to the far corners of the world, drops bombs upon defenseless individuals in the types of war which nobody desires and nobody understands. The instruments of communication which we possess are infinitely superior to anything known in the past. The microphone, through which a man casts his voice, can transport human sound to the far reaches of the earth. But this same microphone used on behalf of cynicism, unrighteousness, and dictatorship can delude nations and individuals, and, in the words of Isaiah, call day night and night day, white black and black white, and confuse and destroy the minds of men through the technique called propaganda. Despite the material benefits which accrue to us by virtue of the inventive genius of man, despite the physical changes which characterize our present-day civilization, men are still hungry, untutored, unhappy, and plagued by wars of every description. If individuals do not readily grasp the significance of the changes that have taken place in the social order, it is because they have oftimes mistaken a part of civilization for the whole. It would be a naive person who would underestimate the importance of economics in the life of man. One cannot talk ideal philosophies to a hungry person. He needs bread. And not until his elemental needs are satisfied will he be in position to rise to the challenges of a newer day. Hungry souls are not usually convinced that justice and ethics exist in a social order.

It would be the part of the short-sightedness to overlook the tremendous influence of the machine upon our present-day life. Only one phase of machinery, the automobile, has succeeded in transforming a rural population into an urban population. In Jefferson's time 95 percent of this country consisted of a farming element. Today the good roads and the mechanical improvements have brought the farm land within the precincts of the city and made the farmer more dependent than ever upon urban life and culture. He who travels across the continent may note the appeal which even the smallest town holds for the farmers and their families who congregate therein on Saturday evenings.

Specialization has also contributed a great deal to the changes in our time, for it has produced a type of competition which demands more from every individual striving to win for himself a position in the social order. All these changes are the normal and inevitable accompaniment of worlds in transition. They are the variants which mark the different civilizations in history.

There is one constant factor within civilization, however, that has not received the consideration that it warrants. This factor is character. Character insistently demands knowledge of what it is that man is striving for in his world. It is the essential element which religion has preserved throughout the centuries on behalf of the free and abundant life of man. It emphasizes the spirit of man. Because of character, slaves become free men and ordinary mortals become prophets.

America came into being because of character. It was sustained by character, and today it bases its hopes of continuance on the character of individuals who shall know the difference betwen right and wrong and shall strive to build their lives in conformity to an ideal above the economic, the technical, and the political in the social order. Without it, it is difficult to see individuals as free people who have hopes, dreams, and aspirations to fulfill. Without it, the schemes involving salvation are temporal and unsatisfying, for, in the last analysis, where there is no character there is no true civilization.

At the University of Chicago is a remarkable institution known as the Oriental Museum. There it is possible to witness the achievements of the ancient world. The glory that was once Egypt is displayed before the modern visitor that he may see and understand the lessons of the past. Egypt had a great civilization. One who beholds the remarkable ornamental works of the great Pharaohs of old may well marvel at the capacity of those ancients. The modern world, no doubt, is very much indebted to them for their contributions. But Egypt died. It had no character. The Pharaohs who ruled the entire world of their day could build the Pyramids that still constitute one of the wonders of the world. They invented the paper upon which we write. They contributed to so many of the externalities of civilization. But they had no respect for human life, and because they did not grasp the meaning of this supreme value they perished. Only one man among all of their kings, Ikhnaton, who ruled fifteen hundred years before the Christian Era, had any idea of a social order composed of gentler human beings. He reigned for a period of 18 years, and his memory was forgotten. When the mighty Alexander the Great came to Egypt 300 years before the Christian Era he could not find a single trace of the ethical teachings of Ikhnation. The Egyptian monotheist was lost somewhere among the mummies in the tombs and catacombs of the Pharaohs.

Greece has contributed much to the ages. The art and architecture of our time are definitely traceable to the genius of ancient Hellas. The science we know in our day was definitely influenced by such men as Euclid, whose geometry is still in use in our public schools of the present, and Archimedes, who said, "Give me a foot and I will move the world" as he invented the lever, a tool so necessary to scientific progress. The Greek philosophers speculated on the nature of the world and of man and laid the foundations for the philosophic studies of the future. The Greek dramatists plumbed human emotions to their very depths as they wrote their great plays. It was Aristotle who analyzed the meaning of the purging of the human emotions which can follow the witnessing of a great stage play. His idea, which he called katharsis, followed his statement that when man witnesses something far more tragic than he himself can endure, he is enabled better to endure his own sorrows. But Greece, too, died. There is nothing in contemporary Athens that carries any specific relationship to the life of Pericles and Socrates and Plato. Greece died because it lacked character. While Plato's Dialogues could record in beautiful language the qualities of virtue, they could not adequately gage the full stature of man. Plato could plan a model republic that would require human slavery. No state, no educational institution, no culture could survive without taking adequate account of the humblest and the lowliest of the creatures within the social order.

Rome, too, was a great nation, a great power in its day. The laws of this country owe their inspiration to the Roman genius for law. The world empires of the present have modeled themselves after the Roman institutions of antiquity. The Pax Romana was something to conjure with in the ancient world. So far-flung was the result of the Roman genius for organization that a Roman student in distant Byzantium could present a piece of paper signed by his father in Rome and receive for it the tuition necessary for his education. It was a practical application of the negotiable instruments law over 2,000 years ago. The roads which the Romans built exist to this day. It is over these very roads that the European dictators now transport their troops in battle array for the latest of the long series of wars that have plagued the world of the west. But Rome, too, disappeared after its brief day of power. It, too, lacked character. After every battle which the Romans won there were the inevitable crucifixes dotting the highways and bearing the tortured prisoners dying in agony on the crosses. That was the Roman method of gaining revenge and striking terror to the hearts of those who did not bend the knee to its power.

There was only one people in the ancient world which emphasized character above all else in daily life. That was the people known as the children of Israel. The genius of the Hebrew prophets imbedded itself in the Christian civilization of the west and gave that civilization the hope of continuity. Whenever men hold fast to the spiritual values which portray the innate dignity of the individual, they have a chance to outlast the vicissitudes of time. Whenever they forget those values, they become mortal. The secret of Israel's survival is to be found in its emphasis upon man as a creature but little lower than God in the scale of values. Three centuries before the Christian era this idea was already firmly fixed in the social structure of the life of Palestine.

A story preserved from those times tells how Alexander the Great came to Palestine and how his curiosity was aroused by a case at law which he saw conducted on a street in Jerusalem. The purchaser of a field had found a crock of gold buried on the land and had sought to return it to the purveyor. The purveyor had refused to accept it. Each of the litigants claimed that he had no right to the discovered treasure, the buyer stating that he had purchased only the field, the seller claiming that he had sold everything to the bottom of the earth. The judge inquired of the purchaser whether he had a marriageable daughter. He asked the seller whether he had a marriageable son, and on receiving the affirmative answers to both questions, he decreed that the son and daughter be married and the treasure be given to them as a present. Alexander the Great informed the judge that justice in Macedonia was quite different from that of Palestine; that in his own country he would, under similar circumstances have destroyed the litigants and confiscated the money for his own treasury. The judge, with flashing eyes, turned upon the mighty monarch and asked: "In your country does the sun shine; in your country does rain fall from heaven; does the earth yield corn and barley; do flowers and trees bloom; in your country are there dumb animals such as the oxen and sheep and goats? Then it must be for the sake of those dumb animals that the sun shines and the rain falls from heaven and grass and flowers and grains spring from the earth. It surely cannot be for the sake of human beings who tolerate you and your type of justice."

American life on these shores is essentially the first experiment in the history of the world to put the Bible into practical everyday use. Up to the establishment of our form of government, men had hoped for justice and had suffered disappointment. They had dreamed of Utopia and had never witnessed that tranquillity and cooperation which could produce a commonwealth. The Declaration of Independence constitutes one of the most interesting documents in the world and also one of the most religious documents known to men. The utterances in that Declaration match well in insight the truths voiced by the prophets of history. The still, reflective statements are in strange contrast to the shrill cries of the revolutionaries of modern times who claim that they are creating a state of brotherhood while they deny brotherhood; who claim they are helping inhabitants of every country to live better while denying those inhabitants freedom of voice, freedom of conscience, and freedom of choice of life. The essential difference between Valley Forge, the symbol of the American Revolution, and Moscow or Berlin, lies in the maturity of the American idea and the immaturity of the European idea. I have been deeply impressed with this difference for some time as I have observed the critics of America tell us what is wrong with our country.

They have failed to see that the greatness of our form of life lies beneath the soil upon which the produce of our land grows; lies beneath the foundations of the skyscrapers in the cities and beneath the foundations of the schoolhouses where our young are taught. It is imbedded in the altars of every church and synagogue in this country. It is implicit in the tranquillity of every home. The greatness of America is its respect for the dignity of each human life—each human life, and not merely a few human lives. That dignity is conferred upon man by the greatest gift and title within the power of heaven and earth to bestow. It is the certificate of citizenship with its implication of equal, inalienable rights. This is the heart and core of democracy. It endures primarily in its moral implications. It is related to the structure of economics, the art of politics, and the efficiency of technics, but it is over and above all of these things. And when it is a vital force in our social order, it stamps our national endeavor with a spirit unique among the nations of the world.

The earliest settlers upon our shores were not impressed so much by the material greatness of our land as they were by its spiritual potentialities. Europe in those days had all the best of the external forces of civilization. The founding fathers of this Republic valued freedom above the goods of life, and every immigrant that has come to these shores since their time has considered America as something greater than towering skyscrapers and fast-rushing trains and the abundant granary of the West. If newcomers forget that our country is a place where human beings are permitted to be themselves, it may well be that we help them to become disillusioned with the dream and the hope because we overlook the moral implications of our democracy and become weak in our allegiance to those eternal values that guarantee the existence of civilization. Great as our achievements have been in recent years, they have not yet reached their limits. If we can remember the spirit which led men to exchange the comforts of Europe for the unknown wilderness of a continent destined to bear the fruits of freedom, if we can properly evaluate the truths by which the generations who preceded us have labored and lived, we can realize that we have not yet come to the end of our resources. Men may be unemployed, factories may be stilled, farms may be barren, and business may be at a low ebb. These distressing situations are, however, but a part of our national life. Human ingenuity under the blessings of freedom and peace originally created the material world we know. Human ingenuity can rebuild the external machinery of civilization which it once built. The moral values of democracy constitute the stay and support to tide men over their discouragement and to give them that faith which will sustain them until their material energy is renewed. In the meantime, we must not allow our citizenship to fall into the pit of cynicism and hopelessness; we must not permit the despair of night to settle over us as it has already settled over so many European lands and brought to them revolutions of nihilism and destruction. We must bear in mind what Vachel Lindsay, the poet, of Illinois, wrote in his challenge to the spirit of our times:

"Let not young souls be smothered out before
They do quaint deeds, and fully flaunt their pride.
It is the world's one crime its babes grow dull,
Its poor are oxlike, limp, and leaden-eyed;
Not that they starve, but starve so dreamlessly;
Not that they sow, but that they seldom reap;
Not that they serve, but have no gods to serve;
Not that they die, but that they die like sheep."

Contemporary Europe, despite its protestations regarding free men and free soil, has yet to travel extensively before it approaches those dreams and visions which made us a nation over 150 years ago. The so-called efficient dictatorships delude themselves in the belief that they have discovered the formulas which can make men happy. The corporative state of Italy, the Aryan state of Germany, and the class state of Russia have only succeeded in substituting evils for the evils which they had originally attacked. They can never have the good will of their citizenship so long as they despise the human equation in that citizenship.

There is an oft-repeated story to the effect that the Italian dictator entered a cinema theater incognito and quietly took an aisle seat in the last row. Suddenly his own picture was flashed on the screen and the whole audience dutifully arose and shouted, "Duce! Duce!" While watching the spectacle he suddenly felt the hand of the proprietor touching him on the shoulder and heard the whisper, "You had better get up, too; I don't like him any more than you do, but get up. It's safer."

Dictatorship is fairly easy to maintain. By controlling the press, the radio, and all other instruments of communication, by terror and concentration camps and force, it is possible to dominate completely the lives of thousands or millions of people. Democracy, on the other hand, is a difficult thing to maintain. It is a cooperative venture in living. It requires intelligence, understanding, and faith on the part of every individual within a democratic society to keep its vitality and health unimpaired. Democracy is higher neighborliness applied to all parts of the land, to people whom we may not know or meet, but who, nevertheless, share the common aspirations, joys, and sorrows that are inherent in the general social order. Only the moral evaluation of government can bring people to a sufficient state of imagination and realization of the commonness of life that is pursued over the entire continent. The Bible clearly strikes this note in such phrases as, "Behold, how good and pleasant it is for brethren to dwell in unity," and "That each man may dwell safely under his own vine and fig tree and there be none to make him afraid." The Hebrew expository literature of Talmudic times contains a remarkable parable that is very applicable to our times. Jewish sages of old, seeking an answer to the question why Moses was not permitted to enter the promised land, said that Moses pleaded with God on Mount Pisgah. "For 40 years, O Lord," he cried, "I led this people in the wilderness. I fought their battles and bore with them in their stubbornness of heart. Why dost Thou deny to me the crowning desire of my life? Why must I stand aside and see others enter the land of promise?" And God, they said, replied to Moses in these terms: "At the burning bush I commanded you to go to Pharaoh to plead for your people. You replied that you were heavy of tongue. You doubted yourself, and I forgave you that. You then asked my identity before Pharaoh. You doubted your God, and I forgave you that, too. But when you struck the rock in the wilderness you doubted your people. That I cannot forgive." There is no promised land for those who have no faith in humanity. There is no fulfillment for those who doubt the capacity of individuals to hope, to aspire, and to dream common dreams of self-realization. I have seen on the European continent the things that destroyed civilization. Europeans have lacked moral force; they lacked faith in their fellows. Germans began to discriminate against one segment of their population—the Jews—and soon they were attacking all segments of their population—Christians and Aryans as well as the small minority upon which they first centered their hatred. Russians attacked the kulaks, only to find that in this practice they were destroying the other segments of their population. The Italians began by persecuting the democrats and lovers of freedom, and soon they made life difficult for all the elements in their land. Lack of character killed Egypt, Greece, and Rome. It was the cause of the breakdown of the nations before the French Revolution. Lack of character is destroying Europe today. We may well be grateful for the great souls who had the character to found a nation which has resisted the pitfalls of time for over 150 years. Our gratitude may perhaps best be expressed in the dedication of our own lives to the continuation of that character that shall sustain us here in days to come.

Prosecutions Under Alien Agent Registration Act

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

LETTER FROM THE ATTORNEY GENERAL OF THE UNITED STATES

Mr. THILL. Mr. Speaker, agents of foreign principals and of foreign governments are required to register with the Secretary of State under the act approved June 8, 1938 (52 Stat. 631), entitled "An act to require the registration of certain persons employed by agencies to disseminate propaganda in the United States, and for other purposes," as

amended by the act approved August 7, 1939 (Public, No. 319, 76th Cong., 1st sess.). I feel that many Members of Congress are interested in being advised concerning the number of prosecutions which have been started under the aforementioned act. Accordingly I am inserting the following letter from the Attorney General, Robert H. Jackson, which presents pertinent information relative to prosecutions under the Alien Agent Registration Act:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., April 2, 1940.

Hon. LEWIS D. THILL,
House of Representatives, Washington, D. C.

MY DEAR MR. CONGRESSMAN: This will acknowledge receipt of your letter of March 26, 1940, inquiring with respect to the number of prosecutions instituted under the act requiring registration of agents of foreign principals, and requesting information concerning the pending cases thereunder.

An investigation into the activities of such foreign agents was conducted by the Department of Justice before a Federal grand jury in the District of Columbia. During the course of the investigation eight individuals and companies were indicted, and of these six have pleaded guilty and have been sentenced. Other corporations under investigation at the time filed registration statements with the Department of State before indictments were returned against them.

Three of the individuals indicted were Morris Liskin, Raphael Rush, and Norman Weinberg, president, vice president, and secretary-treasurer of the Bookniga Corporation. The charge against these individuals was that the Bookniga Corporation was an agent of a Russian organization known as Mezhdunarodnaya Kniga for the sale and distribution of propaganda material in this country, and that the officers of the Bookniga Corporation aided and abetted the corporation in willfully failing to file a registration statement. The indictment also contained a count charging the above three individuals with conspiring to violate the laws of the United States. Morris Liskin, the president, has pleaded guilty to the substantive count and the other two officers have filed pleas of not guilty and are presently awaiting trial. The Bookniga Corporation was not indicted inasmuch as it had been dissolved some months before the indictment was returned.

An indictment was also returned against Bookniga, Inc., a corporation which succeeded the above Bookniga Corporation, and Boris Nikolsky and I. A. Ilyin, both officers of the successor company. The charge made in this indictment was that Bookniga, Inc., like its predecessor, was an agent of Mezhdunarodnaya Kniga for the distribution of propaganda, and that although it had filed a registration statement, the statement failed to disclose material facts regarding its relation with its foreign principal. The corporation, Nikolsky, and Ilyin have all pleaded guilty and have been sentenced. The remaining two parties indicted were World Tourists, Inc., and J. N. Golos, sole stockholder and an officer thereof. They were charged with failing to register as an agent of the U. S. S. R. Travel Co. of Moscow, for which they acted in disseminating propaganda with respect to the Soviet Union. Both pleaded guilty to the charges and have also been sentenced.

The foregoing briefly summarizes the Department's activities in investigating agents of foreign principals. The only prosecutions pending at the present time are those with respect to Raphael Rush and Norman Weinberg, who, as above stated, have been indicted and are awaiting trial.

With kind regards,
Sincerely yours,

ROBERT H. JACKSON,
Attorney General.

People Now "Wise" to New Deal

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1940

ARTICLE BY FRANK C. WALDROP

Mr. THORKELSON. Mr. Speaker, I want to compliment Colonel McCormick on the article which appeared in the Times-Herald on Tuesday, April 9, 1940, for he states facts as they should have been stated a long time ago.

It is encouraging to see the press coming out fearlessly and freely, expressing itself in support of the rights that the people reserve to themselves in the Constitution of the United States.

Business should not apologize to the Federal Government, for it is the people of this Nation who rule and who should, because of the power they wield, force the Government to retrench and observe the orders and laws given to it in the Constitution.

This Republic was never intended to be run by a dictatorial government. It was instead supposed to be administered by a representative government elected by the people to preserve, protect, and defend the people's rights. What are those rights? Those rights may be said to be not only the written rights, as expressed in the Constitution, but also the additional unexpressed rights which the people reserved as their own and which they never intended to give to the Government.

These rights are for business to conduct its own affairs without Federal prosecution, persecution, and meddling. I grant that some corporations might have exceeded those rights, but that in itself is not sufficient cause to destroy the Government of this Republic or to destroy the rights of the people. When I speak of business, I include all the people, agriculture and labor as well, and their rights are so intimately interwoven with the Nation's industrial structure that we must consider all of them as one group.

Let this great group of patriotic American people now unite, join hands, and, shoulder to shoulder, go forward and push this Nation out of the communistic mire which has been disseminated by the internationalists, a people who profit only by the deaths of nations.

It is indeed with great pleasure that I request the unanimous consent of the Congress of the United States to insert this article in the CONGRESSIONAL RECORD. It is a good article; it is well written; and it is a declaration by the people of this Nation that they will from now on assert the rights which rightfully belong to them.

I now present the article by Frank C. Waldrop:

[From the Washington Times-Herald of April 9, 1940]

COLONEL MCCORMICK SEES COUNTRY GOING REPUBLICAN WITH A WHOOP—PEOPLE NOW "WISE" TO NEW DEAL, HE SAYS

(By Frank C. Waldrop)

The country has found the New Deal out and is going Republican this fall with a whoop.

Furthermore, Mr. Roosevelt has no intention of trying to block the change by running for a third term. If he were, not even son Jimmy would have had the nerve to go into the slot-machine business.

WAR FEARS TO FADE

Once the election is over, the Nation's business will surge with prosperity because we will all be free of the fear that an administration given to dabbling in Europe's affairs, in order to take our eyes off its failures at home, will wind us up in Europe's senseless and unheroic war.

Such is the view of Col. Robert R. McCormick, publisher of the Chicago Tribune, a visitor here yesterday.

The tall, quick-moving colonel has a gift for crisp language, and he used it.

JOB HOLDERS WANT THIRD TERM

The only people who want Mr. Roosevelt for a third term, he said, are the satisfied political job holders and they can't fool the country any longer about their character.

Said the colonel:

"Everybody's found the New Deal out; even in Wisconsin, the nuttiest State in the Union, next to California.

"The preaching of hatred and discord to keep the people divided and under the thumb of a political gang has been found out.

"And some things about that gang have been found out.

"Former Governor Earle, of Pennsylvania, had to be shipped off to Bulgaria as United States Minister, to avoid prosecution.

"Roosevelt's leading political supporter in New York, Jimmy Hines, is on the way to the penitentiary. Judge Manton is already there.

"The Governor of Illinois—nobody knows whether he is even conscious. And the second most important Democratic politician in Illinois—nobody knows whether he committed suicide or was murdered. The attorney general's office has done something with the evidence. But that doesn't fool the people."

HOLDER OF POLITICAL SECRETS

He was referring to the case of F. Lynden Smith, Illinois director of public works, who was found dead in his bathtub on March 9, after he let it be known that he would not permit himself to be made the victim of a political blow-up.

The coroner refused to classify his death as either suicide or accident, and all that four pathologists could report was "coronary thrombosis." Smith's family immediately demanded a thorough investigation, and it was learned that he had hidden records of party slush funds and had accumulated sensational political secrets.

The present struggle in Illinois is to bring those secrets into the open.

M'KINLEY CAMPAIGN RECALLED

But, whatever happens in that case, Colonel McCormick feels, the country has definitely turned its face away from the Democratic Party.

"I remember as a boy, in 1896, the gloom and uneasiness around the country before election," he recalled. "Then McKinley went in and it was all cleared up. Everything went ahead. It will be that way again this time."

As to the probable candidates in either party, Colonel McCormick had no predictions. The Democratic Convention will be "bought and paid for" before it even begins, he said, but who will be the nominee is something else. Jimmy Roosevelt's abandonment of all consideration for what might be said about his own life, in a campaign with his father running, is a most significant sign that Mr. Roosevelt will not try again.

FOR G. O. P. NOMINEE

Among the Republicans, Colonel McCormick said, there are several excellent candidates, and the Tribune has taken the position that it will support the nominee. It is not expressing any preference in the primaries.

Once the election is over, the country will undergo a tremendous change for the better, and events abroad will not be so threatening to us because the United States foreign policy will not be so dangerous a course toward war.

As for the situation abroad, the colonel summed it all up in the phrase:

"Chamberlain ought to die of old age."

There is nothing heroic in this war on any side, he said. And none of the leaders has any real support from the people.

If any one of them had the sense to figure out a way to climb down they would all do that right away, and give the people what they really want, which is peace.

At any rate, whatever goes on in Europe is none of this country's worry, and the country is wise to insist on a foreign policy that safeguards our neutrality instead of giving any politician latitude to meddle abroad in order to divert our attention from his failures at home.

"Ditching" the Flag Raising Means More Than a Few Extra Seconds

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

EDITORIAL FROM THE BEVERLY HILLS HIGHLIGHTS

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial appearing in the Beverly Hills Highlights, a paper which is published by the students of the Beverly Hills High School, Beverly Hills, Calif., entitled "'Ditching' the Flag Raising Means More Than a Few Extra Seconds."

[From the Beverly Hills Highlights of March 13, 1940]

"DITCHING" THE FLAG RAISING MEANS MORE THAN A FEW EXTRA SECONDS

Every morning at 8:10 a group of boys wearing black sweaters with white maltese crosses assembles at the flag pole. They are not there because of any compulsion; they are there because they wish to do honor to the ensign of the United States, the Stars and Stripes.

Any morning a careful observer would notice that as the knights assemble and the flag is fastened there is a rush by some students through the nearest door. As the bugle notes echo, a student in this group feels that he has an accomplishment to his credit.

Fortunately this student is in the minority; but let us see exactly what he has accomplished and if it is to his credit.

He believes that a mass of brick and mortar can separate him from the flag. He says it is a question of time, for he still has several details to attend to. Paramount, he fails to see that these details would be nonexistent without the ideals for which the flag stands.

There is no secret policeman to force him to watch the flag rise, but his actions and attitude at 8:09 would be different if he realized what might happen to him if another flag—and another governmental system for which such a flag stood—floated on high in place of Old Glory.

The Origin of Our Two Major Political Parties

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

ADDRESS BY FRED TAYLOR WILSON

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on the origin of our two major political parties, delivered on April 1, 1940, by Fred Taylor Wilson, American historical writer and lecturer, at Ward-Belmont College, Nashville, Tenn.:

Alexander Hamilton and Thomas Jefferson are from a historical standpoint looked upon as the respective fathers of the Republican and Democratic Parties.

The original seeds, however, out of which those two parties came may be found in the two original groups which favored and opposed the ratification of the Constitution of the United States in 1788.

Out of the group known as Federalists, which sponsored ratification, came the party first known as the Federalist Party, but known today as the Republican Party. That group believed in a strong central government, and the transfer of power from the several States to a national government. It was supported by the wealth and power and culture of that day. Its leaders believed that such union of the States, alone, would save the new nation which had only recently been born. Those who opposed that party, known then as anti-Federalists, believed more nearly in the supremacy of the individual States, and saw great danger in the losing prestige of State government. The farmer, mechanic, the small-business man, and the rural sections of new America were not strong then for the new National Government.

Hamilton had a more important part in the launching of our new ship of state than did Jefferson. It was Hamilton who first suggested, by letter, a stronger union of the States. It was Hamilton who wrote the resolution calling for the convention, which, contrary to its instructions, wrote our present Constitution. Although the plan of Hamilton for a Constitution was not adopted, his masterful pen and eloquent tongue did more than any other one individual to secure its ratification. On the other hand, Jefferson, at this formative period in our history, was serving abroad as Minister to France, and did not return to America until 1 year after Washington became President. Jefferson, the great Virginia democrat, had, early in life, shown his democratic leanings. It was Jefferson who led the successful fight for religious freedom in Virginia, and who destroyed the special privileges of the aristocracy in Virginia. All of which was in keeping with the Declaration of Independence written by him.

The break between Jefferson and Hamilton came early in the administration of Washington, who had been elected on a nonpartisan ticket, in which only 10 States took part. Their first major conflict was over the financial system championed by Hamilton. It was Hamilton who fathered that system and successfully sold it to the new Congress, and in so doing provided for a tariff system to meet the expenses of the new Government. Madison, the House leader, of Washington, and a major maker of the Constitution, left his former ally, Hamilton, and joined the political group led by Jefferson, largely on account of the fiscal policies of Hamilton. In that first Congress were 12 original anti-Federalists. The two Senators from Virginia, the home State of Washington, belonged to that group.

It was in 1792, the year of Washington's reelection as President, that Jefferson and his followers under the name of the Republican Party became an active force in our American political life. So rapid was the growth of this new party which drew about it every element of opposition to the party that had written the Constitution and established the new Government, that John Adams 4 years later as a Federalist candidate, was elected President as the successor of Washington by only three electoral votes. Adams was unfortunate as President. The brilliant Hamilton, then a private citizen of New York, dominated the Federalist Party and even the Cabinet of Adams. So great was Hamilton's influence and the division in his party, that Jefferson easily won over Adams in the year 1800. Though the contest was decided by the House of Rep-

resentatives, the sentiment was strongly anti-Federalist. The passage of the Alien and Sedition Acts and other unpopular legislation hastened the decay of the party championed by the privileged few.

Jefferson now became the undisputed political leader of America. For 24 years he and his two Virginia neighbors and political apostles, Madison and Monroe, dominated the political scene. Federalism made its last futile fight for the Presidency in 1816. Four years later Monroe was reelected President, receiving all but one electoral vote. During that period of our history, the party of Jefferson, known originally as the Republican Party, was called the Democratic Republican Party.

The campaign of 1824 was again largely a nonpartisan campaign. It was the first time the people at large had voted in a Presidential election. Although Jackson had won a majority of the popular and electoral votes, John Quincy Adams was chosen by the House of Representatives for President.

It remained for the year 1828 for the name Democratic Party to be first used in a Presidential campaign. Upon a ticket bearing that name Jackson defeated Adams for reelection who ran on a ticket then known as the National Republican Party. It was upon the same party ticket that Clay 4 years later met his defeat against Jackson for reelection.

A new political picture presented itself in 1832. Federalism was dead. The National Republican Party, its successor, was dying, and out of it was to come 2 years later the short-lived party known as the Whig Party. It was the first time national conventions had met, adopted platforms, and nominated candidates for President.

That Democratic Party was the one which lives today. The Whig Party, born in 1834, in its 20 years' existence elected two Presidents of the United States, William Henry Harrison in 1840, and Zachary Taylor in 1848, each of whom was a war hero, elected without a political platform and each one destined to die before he had finished his first term. The Whig Party was a party of expediency and compromise and was doomed to die. In the North it was antislavery, in the South it was proslavery. When the Missouri Compromise was repealed in 1854, it meant the end of the Whig Party, the lineal successor of the original Federalist Party.

Out of the tomb of whiggism came the Republican Party as we know it today. It was first organized in 1854 and rapidly drew to its ranks the various antislavery groups which had grown up during the previous 20 years. Included in that group was the Free Soil Party, whose champion and leader 6 years before, in the campaign of 1848, had been Martin Van Buren, the former Democrat upon whose Dutch shoulders Andrew Jackson had thrown his political mantle when he left the White House 17 years before. So by a strange twist of fate, Jackson's hand-picked successor was one of the founders of Jackson's rival party of today.

It fell to the lot of Lincoln, first elected in 1860, to serve as our first Republican President. Since that time the party of Lincoln has won in 13 of our 19 quadrennial elections for President. The Democratic Party, the party of Jackson, first won after Lincoln 24 years later, and has won in only 5 national contests since Cleveland's first election. In one of those contests, Cleveland was again elected and the other four contests were those in which Wilson and Franklin Roosevelt were each elected for 2 terms.

It just happens that all three of our martyred Presidents, Lincoln, Garfield, and McKinley, were Republicans. No Democrat has yet died in the Presidential chair.

Many minor parties have arisen and fallen during our political history. The first to be organized was known as the Anti-Masonic Party, which opposed Jackson for a second term. More than one antislavery party rose and fell. The Greenback Party was a factor in the campaign of 1880 and 1884. The Populist Party existed from 1892 to 1904. Two of the minor parties, the Prohibition and Labor Parties, which first appeared in 1872, exist today. The Socialist Party, also still alive, first appeared in 1896.

Thus we see that the Democratic Party of today is the lineal descendant of the original anti-Federalist group and that the party known today as the Republican Party is the lineal descendant of the original Federalist group, whose first opposing party was also known as the Republican Party.

A well-known radio commentator recently declared that there was but little fundamental difference between the Democratic and Republican Parties of today. The Republican Party in 1936 made a plea for the larger rights of the State and able champions of the Democratic Party of today speak of its program as the new federalism.

We are now about to nominate again our candidates for President. It is safe to assume that the next President will belong to either the Republican or Democratic Party. Party lines will be closely drawn and each political group will search for defects in the armor of its rival. It must be agreed, however, that despite the great political rivalry which divides our parties, the leaders in all of them are fundamentally interested in what they believe is for the best interest of the American people.

Whoever may be chosen as the captain of our ship of state for the coming 4 years will have behind him the prayers of all patriotic Americans as he pilots us into the troubled waters of a future freighted with problems of destiny.

Booker T. Washington

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 10 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. JAMES A. FARLEY AT TUSKEGEE INSTITUTE, ALABAMA

Mr. HOLT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a fine speech delivered by Hon. James A. Farley, Postmaster General, at the exercises of founder's day and the first-day sale of the Booker T. Washington commemorative stamp at Tuskegee Institute, Alabama, on April 7, 1940.

West Virginians are glad to say that Booker T. Washington began his formal education in our State while he was living and working at Malden. Booker T. Washington procured a copy of Webster's Blue-Back Spelling Book, mastered the alphabet, and began his climb to success. He said at that time:

There was not a single member of our race anywhere near us who could read.

An elementary school for colored children was started at night. It was there he got the idea of night schools for the colored people. He acquired a wonderful education, but, not satisfied at his own gain, he started to spread educational facilities and opportunities to other members of the colored race.

West Virginians are appreciative that the Post Office Department has honored Booker T. Washington for his great work.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As I walked across your campus today and saw the bronze monument to Booker T. Washington, I realized how very eloquent is that upright figure of the freeman removing the scales from the eyes of the slave. No other memorial that I know of is more simply expressive of the life and character for which it stands. I believe the inclusion of this Booker T. Washington stamp in the series of famous Americans reflects the admiration which all Americans have for the figure in that statue.

I think, however, that there is a testimonial even more symbolic of his work. Every one of Tuskegee's 130 buildings is a monument to Booker Washington's faith and achievement. When he first looked upon this spot, 59 years ago, only an ancient church and a tumble-down cabin confronted his eagerness. Every one of the 2,000 faces of your student body—the thousands of faces of students that have gone before you, and the thousands of faces of workers throughout the Nation brightening up at the mention of their Booker T. Washington—these are monuments also. When Washington first opened this school, only 30 students were enrolled—hesitant, wondering, almost as skeptical of his experiment as the neighboring citizens.

The "Tuskegee Idea" itself is a heroic monument. From the mind of one man it grew as an idea into a school and then into a method of education which is a modern ideal. Not only for the people of his race has it brought hope, but it has brought hope for all people who labor to make their existence more securely a part of the society within which they live. Tuskegee is Booker T. Washington's monument. The life of a single successful graduate is a more enduring memorial than the finest slab of exquisite marble.

All of you, I am sure, are familiar with the story of the life which, told in the frank simplicity of Up From Slavery, has become known to all the world. The modest one-room cabin in which—true to this country's tradition—Washington began his climb; the salt mines of Malden, W. Va., where young Booker first heard of the marvelous normal school for Negroes; the fire for knowledge which bore him across the long and hazardous 500 miles to Hampton and through his famous entrance test of room cleaning. Years of the most conscientious and sacrificing application to work, study, and then teaching followed. And throughout this experience the

mind and force of character of this fine, young colored student, who once did not know how to sleep with two sheets, was formed and asserted itself.

"I want to see education as common as grain and as free to all as sunshine and grass," said Booker T. Washington. If ever an individual, other than a minister of the gospel, was "called," Washington was called to start the proposed Negro Normal School at Tuskegee. What did it matter that the tiny cabins in which he boarded 'round would often be so full of people that he would have to go out of doors to dress? What did it matter that funds and buildings and crops had to be raised by sheer physical effort? Washington was first in the plowing, the wood chopping, and in the hearts of his fellow pioneers.

That a Negro, in the social and emotional turmoil of southern reconstruction, could establish a teaching institution which from the outset has consistently been educating the Negro for self-development and leadership is in itself a model for the further advancement of the race. Washington built from the ground up. He believed in the dignity of labor, the persuasiveness of the deed. "The work of Tuskegee," explained your distinguished Major Moton, "is not the training of men and women as mere units of industry, but rather the training of the individual, indeed, to be self-supporting, but at the same time to be a contributing element of community life."

The aim of this school—from Booker T. Washington to President Patterson, inclusive—has been not only to make mechanics and farmers out of men but to make men out of farmers and mechanics. The record of service, of responsible citizenship which the American Negro has compiled, stems very largely from the influence of this training of mind, heart, and muscle which several generations of your leaders have acquired here. Washington, himself, is the perfect example of building a man for character and educating him for service.

I cannot help comparing Tuskegee with educational institutions where the classroom and the world outside are as separate as night and day. In our educational system today the fact has been too often forgotten that this Nation was fashioned with men's hands, the frontier was rolled back with the sweat of men's brows and their working together in a common cause. There is a quality inherently wholesome in your methods; something practical and vital to the continued rolling back of the frontiers of ignorance and oppression. There is something distinctively American in Tuskegee's determination that you will make a better world.

Booker T. Washington's place in history as fountain head of the era of Negro development has been chronicled and eulogized many times. He has been called the Negro Moses. Certainly this earnest "Mr. B. T." raised his people from the depths of the wilderness and into the sight of their promised land. With his doctrine of economic advancement and independent efficiency, he organized and gave direction to the forward movement of his race. He utilized its native optimism and energy. Above all, he gave his race a firm self-respect upon which to build its towers of the future. Through years of opposition and struggle and sacrifice, he gave the great boon of sensible education to his people. Fighting the influence of the past, he taught the importance of owning one's home and working one's own farm, of good health and clean living. He taught that merit, no matter under what skin, was in the long run recognized and rewarded. He proved that the road to cooperation lay in successful doing.

Washington told of a colored man who had learned to grow cotton with 14 bolls on a stalk which before had grown but 2. "In the old days," the man in his own language explained, "I lived in a little log cabin on rented land and had to mortgage my crop every year for food. When I had nothing, in my community they used to call me 'old Jim Hill.' But now that I am out of debt and have the deeds for 50 acres of land, and live in a nice house with four rooms, painted inside and outside, and now that I have some money in the bank and am a taxpayer, in my community they call me Mr. James Hill." That farmer was a living example of Booker T. Washington's theory.

But the Negro Moses was also a Solomon. Washington's equally great service lay in his interpretation of his people to the white men. Until racial oppression and strife were done away with, neither race could benefit from the help of the other. "There is no defense or security for any of us except in the highest intelligence and development of all," he said. When the white man realized the Negro's talent and capabilities for work and adjustment, false ideas would not persist about the Negro's backwardness. Washington knew that every independent Negro farmer, banker, businessman, editor, and the like meant another step toward revealing the true character of his people. He believed that time and patience alone would do the necessary work. So he counseled and practiced moderation.

Through crowded years he traveled incessantly through both the North and South interpreting the intellectual, cultural, and economic growth of the Negro. He gave speeches, wrote numerous articles and letters. As an educator, he presented the problem as truly as any preacher, and he taught the gospel of righteous understanding between peoples as the solution. Every success made the hard fight a bit easier. But there could never be relaxation in his intense crusade. Each step opened the way for future steps. Each victory needed following up to save it from turning into a defeat. Success was never a bequest; it was always a conquest. Washington's life was inevitably the pursuit of happiness for his people.

Described as one of the most notable speeches ever delivered to a southern audience, both as to the character and the warmth of its reception, was the address of Booker T. Washington, principal of Tuskegee Institute, at the Cotton States Exposition in Atlanta in 1895. On that occasion he called attention to the large percentage of Negro population in the South and he emphasized the fact that anything affecting the material or moral welfare of this section must necessarily include his people. Washington drove home his point with an illustration that became famous.

A ship lost at sea for many days suddenly sighted a friendly vessel. From the unfortunate vessel came cries, "Water, water, we die of thirst." A third and fourth signal for water was answered by the friendly vessel, "Cast down your bucket where you are." The captain of the distressed vessel, at last heeding the injunction, cast down his bucket and it came up full of fresh, sparkling water from the mouth of the Amazon River.

There is certainly food for thought in this story. It teaches a doctrine of confidence and portrays the opportunity for self-help which surrounds us, both as individuals and as a nation. I wonder if the philosophy taught in this story could not be very useful to all of us today.

Washington could not be tempted by the offers for fame and fortune with which he was flooded after the triumphant expression of his creed at the Atlanta exposition. Indeed, there is a parallel in his refusal to accept personal gain with that of Robert E. Lee. Refusing easy rewards, that famous leader of the Southern Armies once said: "I have a self-imposed task that I must accomplish. I have led the young men of the South into battle and have seen many of them fall under my standard. I shall devote my life now to training young men to their duty in life." Not one word of that declaration need be changed were the speaker Booker T. Washington.

Today, Negro progress can be traced in a large measure to the humble but determined beginnings of this man's work. Besides the material and cultural improvements, such far-reaching institutions as the National Negro Business League, the National Negro Youth Week, the various Negro farmers' and students' conferences and commissions continue to spread his work of advancement. Extension teaching and the Booker T. Washington School on Wheels; the Jeanes, the Rosenwald, and other funds carry on Washington's idea that any education worthy of the name must reach the masses. The very existence of the gifts from such men, together with the innumerable small contributions from white and colored supporters alike, indicate with what respect the memory of Booker T. Washington is held today.

There's a story about an elderly colored lady who wanted to visit Tuskeegee. "If I come," she asked, "will I see Uncle Booker?" "Yes, Mr. Washington is giving a speech," she was told. "I don't care nothin' 'bout no speeches. All I wants is jest to set way back in some corner where I can peek out and look at Uncle Booker." Could any human being want a finer tribute from an appreciative soul?

To see "Uncle Booker" was to be immediately impressed by his calmness and evident sincerity. Tall, straight, with a prominent forehead and piercing eyes, his glance and figure used to dominate this very auditorium. The Nation was impressed with his simplicity, his infinite patience, and his religion of hard work. He believed that nothing worth having ever came except as the result of hard work. But he was cheerfully optimistic, believing that his people would continually grow in self-expression and in understanding from their neighbors. Everywhere, he was completely unselfish in carrying out his self-appointed task. Perhaps he was too much so because the spirit was always stronger than the flesh.

I prefer to remember Washington as an honest man—courteous, far-seeing, loving man and nature to the point where he could never bring himself to hate. He was a thinker, a builder, a counselor, a philosopher of humanity, and a good citizen, all in one. In the larger sense he was an American statesman.

The sentiment I now feel in contributing to this celebration in his honor can best be expressed in the thought of the famous journalist, Henry Watterson: "Few men, since the war of the sections, have exercised such beneficial influence and done such real good for the country, especially the South, as Booker T. Washington."

This stamp, issued today, to the memory of your revered leader is of the 10-cent denomination and concludes the group of five famous educators in the American series of stamps for men and women preeminent in literature, arts, and sciences. It is the first stamp in the history of the Nation to be issued commemorating one of your race and I take a great deal of pleasure in being here today and dedicating it to the humanitarian work, the noble ideals, and the practical teachings of Booker T. Washington. May this honorarium be an inspiration to my good friend Dr. Patterson and his staff of notable associates in carrying on the splendid progress already achieved at Tuskegee Institute.

In conclusion, may I add that no words of mine, and not even this stamp which is being issued in his honor, can ever equal the human homage of the Negro race for its devoted leader. Two Washingtons have held high places in this country's history. One was called the Father of His Country; the other, Booker T. Washington, was certainly a father to his people.

God Give Us Men!

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

ADDRESS OF HON. CHARLES A. PLUMLEY, OF VERMONT, BEFORE THE REPUBLICANS OF ARLINGTON COUNTY, VA., AT THE WASHINGTON GOLF AND COUNTRY CLUB, TUESDAY, APRIL 9, 1940

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I include my address given last evening before the Republicans of Arlington County, Va.:

SENATOR LUCAS SAYS

In an address before a meeting of Young Democrats at Philadelphia the other evening my friend Senator LUCAS, of Illinois, said that: "Mr. Dewey, New York district attorney, has charged the present administration with having a fundamental lack of integrity, a cynical disregard for the principles of common honesty, a calendar of unpunished crime, broken covenants, disloyalty to the Constitution, abuse of power, intimidation, coercion, extortion, and larceny."

"Tom Dewey, district attorney of New York," said Senator LUCAS, emphasizing district attorney, "indirectly challenges the honesty and integrity of the President of the United States, members of his Cabinet, and all the policy-making officials of the Government, and in his Chicago speech he challenged openly the honesty of Harry Hopkins."

EXPERIENCED PROSECUTOR

My only comment is that listeners to and readers of Senator LUCAS' statement will do well to remember that as district attorney Mr. Dewey has had considerable experience in drawing indictments, and has been unusually successful in his prosecutions of those higher-ups against whom he has made presentments to a jury of the people, because, with almost uncanny ability he has been able to adduce the necessary factual evidence to prove and to sustain his charges.

Instead of criticising men, like District Attorney Dewey contemptuously referred to as heretofore suggested, who have the forthrightness and courage of their convictions to call a spade a spade and not an agricultural implement, we might well say with Josiah Gilbert Holland:

"God give us men. The time demands
Strong minds, great hearts, true faith, and willing hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking."

GENERAL JOHNSON TELLS THE TRUTH

Those who resent criticism of the New Deal by the Republicans will find small cause for comfort or rejoicing in the speech General Johnson delivered to the Democrats at the Jefferson dinner in New York.

The General said that in his opinion the depression and distress in this country is wholly unnecessary and could vanish overnight, but doubted whether it would ever vanish if the reins of government were left "in the hands of the same cockeyed, non-Democratic crew of business baiters, wand-waving wizards, drunken-sailors spenders, Janizaries, do-gooders, and experimental theorists. Almost all it would take to restore prosperity would be to get rid of this crew."

He referred to a recent statement made by him to the effect that the New Deal was such a contradiction of traditional Democratic principles that neither Thomas Jefferson nor Andrew Jackson would recognize it.

"The way to satisfy discontent is to remove the causes, not to set class against class, or to build a political monstrosity by Federal hand-outs to quiet the complaints of discontented groups.

"Neither our political nor our economic system can long endure the cost of billions of annual hand-outs.

"Let's get rid of the interlopers and usurpers. * * * Let's throw out these strange doctrines which have defiled the temples of our political religion. Let's return to the faith and house of our fathers * * *."

Those are some of the things that Republicans have been trying to do for many moons. It is encouraging, to say the least, to have the cooperation of so stanch a Democrat as General Johnson. Any attack that any Republican might make on the New Deal and its policies would be reckoned as ineffective and partisan. When General Johnson tells the truth the seed should not fall on barren ground. He talks about something with which every Democrat, and Republican, and new dealer knows he is familiar.

WHAT IS TRUTH?

The truth is that when the devil led Christ up onto the mountain and promised him the world, which was not his to give, he had nothing on perpetual-candidate Roosevelt, "The More Abundant Life," or on the New Deal platforms. It is time to wake up! It is time to put a stop to the career of carousal and reckless experimentation by these New Deal exponents who have undertaken to change the direction of the Nation's thought; distorted Democratic ideas, stimulated a thirst for revenge; aroused class hatred; asserted the continuance of an emergency which does not exist; stretched the commerce clause of the Constitution; used taxation for purposes of punishment or regulation, and both; restricted the use of the mails; pled the general welfare as justification for enlarging and increasing their own power and extending their bureaucratic, dictatorial acts.

HERO-WORSHIP FANTASY

It is time for the American people to get over their hero-worship fantasy and to hold third-term candidate Franklin D. Roosevelt responsible for what his program has accomplished, or failed to accomplish in the field of Federal activities since March 4, 1933. He may try to hide behind the New Deal program and New Deal policies with his bedtime stories, but whether he likes it or not, many of us are sick and tired of having new pseudo emergencies conjured up to distract attention from New Deal failure. We do not propose to let them or him longer fool the people, or slide out from under the record and his responsibility for the Roosevelt program.

The President demanded and received of a subservient Congress the legislation with which he set his program in motion. He asked for it. Let him take the responsibility and let Congress be justly criticized for its abject and humiliating surrender. He appointed subordinates, who as his agents have carried out his program. They are his stooges and marionettes, not yours.

He kept them in office or left them out on a limb, and then sawed off the limb, running true to form. He is the one who first asked for the immense blanket appropriations. He issued the Executive orders setting up the host of confusing alphabetical agencies.

Thanks to him and his policies we are on the road to inflation and dictatorship, at the end of which road I fear is loss of the individual freedom for which mankind has fought from the beginning of history.

UNSOUND AND DANGEROUS

As days pass, more realize that the policies of Franklin D. Roosevelt are uneconomic, unsound, and dangerous, and say so. It is time to stop pussyfooting and to place the responsibilities directly where they belong.

Will the people of Virginia stultify themselves and vote for a continuance of this socialistic, fascistic, communistic New Deal? Such action you can neither justify nor explain, now or to posterity.

If by common consent, hypnotized by the spending of money as if there never were to be a day of reckoning, you sell your birthright for a mess of pottage—if by lack of appreciation, and a disinclination to advise yourselves as to what confronts you, you keep silent, suffer the Constitution to be nullified, and your rights to be taken away from you, just so certainly as the sun rises and sets, the principle of liberty will surely and steadily be destroyed, despotism will crown itself with power, and it will then be too late to recover the liberty at whose loss we all have connived.

SUPINE SURRENDER

I will not be a party to any such supine surrender. I am opposed to and have opposed the continuation in power of any administration so un-American as to undertake to tell the wage earner what he may earn, how long he may work; the farmer what and how much he may produce on his own farm; the merchant at what price he may sell his goods; the manufacturer what addition he may make to his plant, how much he may produce; to control the flow of capital and savings; to enter into business in competition with private citizens.

The new dealers at the behest of Franklin D. Roosevelt have not only betrayed their party, but the people as well. They have obliterated State lines; usurped the prerogatives of Congress, in whom is vested the sole power to impose taxes and regulate the value of money. Do you realize that—the right to impose taxes, in his discretion, has been granted the Secretary of Agriculture and the authority to fix the value of money has been transferred to the President, a power so great over the lives of men it has never been enjoyed save by complete despots. And this is America! It is time to wake up. "The liberty of a people," said Edmund Burke, "has many times been lost in a night." He who loses it, loses all. Human rights and property rights are inseparable.

ROOSEVELT NEW "DEAL-IRIUM"

We must get away from the Roosevelt new "deal-irium" and back to the American way of doing business. We must stop reckless spending, reduce the national debt, and balance the Budget. "When the next bubble bursts let it not be forgotten," says Lewis W. Douglass, "that the responsibility lies directly at the door of the present administration. A balanced Budget is the heart of the entire system."

All of us are opposed to inflation in any and every form. As American we insist upon the limitation of governmental projects to essential governmental services with emphasis on economy and efficiency. We would protect the farmers' income under a safe, sound, and permanent agricultural program.

All of us, I take it, would put a stop to and correct the encroachment of the Federal Government upon the jurisdiction of the States, and would encourage regional compacts between the States. The sensible plan to be adopted is to supplement private relief by public relief only so long as the national emergency requires. Such relief should be administered free from political control and put an end to the graft and greed and the consequent corruption which has besmirched the present relief program. None of us can reasonably do otherwise than to favor sensible social welfare legislation.

All real honest-to-God Jeffersonian Democrats, as well as the Republican Party, stand for these things, and others equally meritorious and beneficial to the people.

HISTORY REPEATS

As the President has said, "History repeats itself." To save themselves, to restore confidence, the people of these United States have in days gone by called in and on the Republican Party. History repeats itself. The call for such constructive leadership grows stronger and louder day by day, as people—the common people—the real backbone of the Republic the country over come to realize how deep in the slough of national financial debauchery and despond, how severe the civil destruction into and through which by this socialistic, undemocratic, un-American administration, we are being so blindly led. They see Government-enforced pauperism and conflicting programs which will not lead to a substitution of the pay roll for the relief roll.

History does repeat itself, but the present administration attempts both to ignore the traditions of our Government's history and to become essentially paternalistic.

THE END OF THE ROAD

This Nation will have ceased to be when the legislative powers are surrendered to executives who are only too willing to accept them, when the judiciary strives to find reasons for upholding laws enacted at the behest of noisy minorities; when the plain language of Federal and State constitutions is given new and strange meanings in order to meet assumed emergencies; when debasement of the currency is adopted as a "sound" financial policy; when the sovereignty of the individual States is disregarded and local self-government becomes an obsolete phrase; when individual initiative is discouraged; the lessons of experience cast aside, and personal liberty, in great measure, becomes a thing of the past; when men are denied to buy and sell the products of their labor in the open market place; to fix the price of goods in which they deal by bargain with their fellows; when the farmer is forbidden to sow and reap, on the land he owns, according to his own best judgment; when every detail of business life of the citizen is ordered by officials not of his own choosing; when written agreements and contracts cease to have a binding force even upon Government itself. All these things are involved in, will be the ultimate end and result of, and are a part of the policy and program of the new dealers; those who temporarily wear the mantle and sail under false colors in the name of the Democratic Party. The President cannot successfully deny or defend his position by any means other than by pointing to a program of excessive expenditure of your money and mine, and this is no defense.

THE DOCTRINE OF TYRANTS

It is time for all of you to put the responsibility right where it belongs; I do not subscribe to the doctrine that "the king can do no wrong." As Senator BAILEY has said: "The doctrine of immunity of the sovereign is the doctrine of tyrants, and its very character is tyrannical—precisely the same tyranny which was exercised by the tyrants from whose foul breasts this doctrine arose, and it contains within it the same power of oppression that they exercised by means of it." That's that, and that's so.

According to one of the President's speeches we are all either of that handful of bloated plutocrats who oppose him and his policies, or we are one of the stooges and dupes. Maybe so, but we have a lot of company. The President needn't fool himself; he isn't fooling the people any more or longer. Millions have grown to distrust and fear him. The taxpayers are beginning to know what he and his policies are costing and will cost them; the housewives know that the cost of living has gone up; stockholders by the millions fear his programs of strangulation and spoliation; insurance policyholders and their beneficiaries, depositors in savings banks and other institutions established to encourage thrift, feel and know that he and the policies for which he stands jeopardize the ultimate security for which they have sacrificed the savings of a lifetime.

PEOPLE WANT A CHANGE

The American people want a change, and they are going to have it. They are sick of being forcibly and continually doped with reform medicine when what they want is a chance to recover. They are startled and horrified by the financial abandon of a government which, in 3 short years of peace, spent more money than the aggregate amount spent by all the governments in the history of the United States for a period of 120 years.

They must be sick and tired of Executive domination. They should be sick and tired of bluffing, bulldozing, and political chicanery.

I tell you the majority of the American people should be not only irritated but disturbed and more than disturbed by their President's assaults upon personal liberty, our freedom, and our dignity and should resent his persecution of and bitter insults to the worthy and honest citizens who have the courage and patriotism to disagree with his political policies.

They know his promises are forever broken and his pledges, platform, and party are repudiated. The President and his aides and abettors have ignored or broken practically every pledge of the platforms on which he was elected. He has repudiated his party and stultified himself.

He promised to preserve a sound currency at all hazards; to balance the Budget annually; to enforce the antitrust laws; to abolish useless offices and commissions; to remove the Government from all fields of private enterprise; to stop the deficits. The conduct of public utilities or banks, of insurance, of business, of agriculture, of education, of social welfare, and a dozen other important features—in these Washington must not be encouraged to interfere, so he said, on March 2, 1930, over the radio, and, believe it or not, Washington under Roosevelt has interfered with every single one of the things mentioned in that speech.

The Budget is unbalanced; the dollar devalued; the antitrust laws suspended—pledges and promises broken ad nauseum—and he and his nonelected advisers have put the Government into practically every field of business endeavor in direct competition with private enterprise. If they have missed anything or any line I cannot recall it.

THRIFT A FORGOTTEN WORD

Thrift, industry, economy are no longer regarded as essential to the well being of our people. With millions unemployed we were advised that factories and workshops, mines and quarries should be closed in order that a scarcity of their products might enhance their price. With hundreds of thousands of the poor suffering the pangs of hunger, it was made an offense against the law to plant more than a modicum of crops in order that food might not become too cheap. Not too much milk must be produced, though the pale faces of undernourished children haunt the dreams of those who came in contact with the poor. Millions—yes, billions of dollars, representing wealth dug from the earth and wrested from the sea, brought to public treasuries by the tax gatherers, are being wasted in an unprofitable expenditure, in an attempt to create a prosperity as unreal and unsubstantial as the dreams of an opium eater.

The gigantic debts so created will bear down and burden generation after generation yet to come. It is time to stop.

MORE TAXES

Government spending necessitates taxes. Increased spending means increased taxes. Deficits entail mounting debts. These, in turn, spell heavier burdens for taxpayers. Not without reason has Franklin D. Roosevelt been called "Franklin Deficit Roosevelt."

It is high time that he crossed the Rubicon and made up his mind either to recommend complete Government control of all industry and business under dictatorial powers or else to stop nagging and harassing and impeding economic progress. His years of socialistic experimentation have demonstrated his incompetence and failure. This is the basic misfortune of our tragic era, and we must realize it and save ourselves by electing a Republican to succeed him, save us and the country from the ruin that impends.

Franklin D. Roosevelt's New Deal policies have created and are still creating a permanent class of idlers, and undertakings as definitely undesirable as the real achievement of these relief projects is pitifully small. He has done nothing tangible to increase permanent employment. He has not, even at the cost of billions, removed all the employables from the relief rolls. His program has hampered, instead of forwarded, intelligent unemployment relief. This grandiose buffoonery has successfully debauched the self-respect of the American people, and piled up huge debts for the forces of recovery to surmount.

Why, do you realize that the mounting public debt has reached the stage where the present generation will never be able to meet it? We are going to have inflation to meet the governmental expenditures; we are going to have repudiation, or we are going to have taxes.

Inflation to meet a deficit cannot be controlled and would bring unquestionable disaster.

Repudiation, to me, is impossible.

The only recourse if we are to permit the President to continue the spending program is taxes, taxes, taxes.

Yes; let's think it over. We know that the debt and deficit already incurred is stupendously staggering. It runs into the billions and billions. Our great-grandchildren will not live long enough to see it paid. What a burden we are imposing on our children and on posterity. What a price they will have to pay for our orgy of spending. No wonder they are rising in revolt against such a program. What is there in it that can appeal to red-blooded, virile, young patriotic Americans? They know that they must face the necessity of paying off the debt we have incurred. They know that the door of opportunity will be closed to

them, and that under the present program they will be reduced to a mere cog in the machinery of a planned economy regimented, colonized, Russianized, working for the state and not for themselves.

YOUR MONEY

We are the Santa Claus. We will have to pay, or else our children will.

It is your money that is being spent. Can you be bought and sold with your own money? And one thing above all others we should remember, namely, that real estate, as always, will have to bear more than its share of the tax burden. The farmers and other real-estate owners and their descendants will have to meet the bill.

In this two-party Government of ours the Republican Party is the party of opposition to these theories and this program that has been forced upon us.

There are none of us who do not favor and approve of some of the measures constituting a part of the so-called New Deal. Proper control of market speculation; the regulation and limitation of private profits in the manufacture of munitions or in preparation for war; the elimination of child labor and sweatshops; some rational plan for unemployment insurance and relief for debt-harassed home and farm owner. But measures looking toward satisfactory solution of the problem just enumerated were under consideration long before the days of the "brain trust" of the New Deal.

In conclusion may I say I am not an alarmist, but I am concerned that the permanency of our national life and its integrity are involved in some of the governmental policies we are asked to countenance and approve. I am sure that the preservation of our liberties and the perpetuity of our form of government is the tremendous stake at issue and which must be met. The questions confronting us are too momentous and serious to be the football of partisan politics. They transcend all questions of tariff or trade agreements; strike at the very root of all our American institutions. They are steps toward a change in our form of government. This is the issue involved.

THE RIGHTS OF CITIZENSHIP

It has been well said that never before in the history of our country has it been so necessary for every citizen to exercise intelligently the rights of citizenship. Our country is faced with a crisis more serious than any depression; by a question more basic than unemployment, prices, or heavy debts. The continuance or the discontinuance of the freedom we have enjoyed, the loss of liberties that are ours; the abolition of the traditional American order; the absolute change in form of our established Government under our written Constitution and our laws is the issue that confronts us.

The next time we as citizens cast our votes we shall be voting, not for a man, not for a party, not for a remedy, nor any group of remedies, but for or against the continuance of the American form of government.

Whatever the adventures we undertake, the goals we seek to reach, we are trustees for the future of America, and in our responsibility we must not fail. We have an inheritance to safeguard, to transmit; a system of ordered liberty in which statutes and theories of social experiments must yield to the Constitution; in which the people are governed by law and not by man, and in which human rights are deemed to be sacred and inalienable. Many free countries have lost their liberty and ours may lose hers, but if she shall, let us Virginians and Vermonters joint together in spirit with Lincoln when he says: "Let it be my proudest plume, not that I was the last to desert, but that I never deserted her."

The Fruits of Labor—Pensions for Our Aged

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

Mr. IZAC. Mr. Speaker, a few days ago a petition was placed on the desk to discharge the committee from further consideration of H. R. 8264. I was glad to sign this petition, and I am now asking those of my colleagues who have not yet signed to join with us in an endeavor to write into the laws of our country an old-age pension plan founded on principles of right and justice.

From the dawn of civilization the peoples of the world have paid homage to a practice which even we of this modern age as well as those who have gone before have ever believed most honorable and commendable. They have bestowed on the elders of the race a love and respect which was characterized by a deep solicitude for their welfare. And as long as was within their power they cared for the material needs of the aged.

With the coming of the depression 10 years ago the burden formerly gladly assumed by the younger members of society for the care and shelter of their elders became so great that no longer was it possible for the individual, frequently deprived of the opportunity to work, to carry the load of supporting even those of his immediate family, not to mention the fathers and mothers of more advanced years.

Even those who through thrift and perseverance had built up a reserve of savings against the rainy days of a declining life suddenly found themselves shorn of their savings and deprived of the comforts their long years of effort had promised to provide. Into this situation, pregnant as it was with the possibility of disaster for the older citizens and despair for all, the administration and we of the Congress advanced with a program of relief and measures for social security. Commendable? Of course. But adequate? Hardly. And in one particular above all others have we failed. We did not take care of the present generation of older people who no longer have the opportunity to engage in active pursuits and therefore no chance to build up an annuity as provided for by the Social Security Act.

It is true we have made it possible for those States so desiring to match a Federal contribution. But this at best is most inadequate. In my own State of California some of those above the age of 65 receive the maximum allowable but the vast majority receive far less. And in other States the payments are but $5 and $6 per month for each old person. There is no uniformity.

Discrimination is prevalent throughout the country, and in effect there are as many kinds of old-age pensions as there are counties—some 3,000. And the net result is that millions of our people beyond the 65-year minimum do not receive any old-age pension or do not obtain sufficient to provide a decent living.

But are we to rest content with such a condition? By no means. We can at least strive for a solution of the problem, and we are doing so.

A few years ago Dr. Townsend, of our own State, advanced a solution that was both novel and revolutionary. Of course it was condemned by those who see no value in anything new. Of course it was opposed by those who have a motive in keeping the people in economic subjection. Of course it was damned by the rugged individualists as being contrary to the American concept and as something borrowed from Europe.

In fact only recently we who share this same philosophy with Dr. Townsend and those other national humanitarians who are not satisfied with a $5-a-month pension for our older citizens, have been characterized in a national magazine and by a prominent politician as being crackpots and Marxists—which latter means simply Communists.

I prefer to think of a movement like this as the height of Americanism, as it is the goal of Christianity. But if to make the dreary way of our aged a little pleasanter, if to gladden the hearts of millions by giving them some of the comforts to which old age is entitled, if by trying to do some of these worth-while things we leave ourselves open to the charge of being Communists, then by all means let us accept the epithet. Nineteen hundred years ago they resorted not alone to epithets but they scourged and crucified a Saviour for advancing a new philosophy of which this is but a part. Christ taught us the Golden Rule. Here we find a place for its application. And any plan which incorporates such fundamental ideals as opportunity for youth, employment for maturity, and respect for old age, is basically sound.

The Townsend plan was not only basically sound but was humane as well, and it progressed apace, until now in the light of greater experience and more thorough research we have evolved an almost foolproof legislative vehicle for the enactment into law of this selfsame principle. It is known as the General Welfare Act. It is House bill 8264. It embodies the principles of the Townsend plan.

Let me point out some of the more striking provisions of the bill. It pays its own way as it goes. And it does this not by taxing the wages of the poor, but through exemptions,

it levies only on the gross income or receipts above $3,000 per year. The rate is 2 percent and therefore not oppressive. It takes nothing from the pay envelope of the worker but really taxes money where money is—the only just tax.

It pays the proceeds of this tax to all above the age of 60 years, regardless of their station in life and irrespective of State boundaries.

It assures to the aged relief from labor and provides the youth with the opportunity to labor.

It banishes the dole and the pauper's oath. It gives to each alike, without subjecting the recipient to the third degree of the social investigator. Instead of having to institute a suit in the courts to compel the city, the county, or the State to administer fairly what the Government contributes for old-age assistance, this new bill will bypass all other administrative agencies and permit the Federal Government to levy the tax and apportion the benefits direct to each citizen without any intervening medium.

As the veteran of our wars receives each month his pension check from the Veterans' Administration, so could the old-age pensioner receive a check from an appropriate Government agency at a minimum of administrative overhead.

Now, my friends, let me say in conclusion that it is only after 150 years of the life of this Nation that we have accepted as our national policy any plan of old-age pensions whatsoever. So I will not condemn the only effort of this century and a half to do justice to our old people. But rather will I, by my voice and my vote, seek to better the start already made.

That is why I have consistently supported every effort to liberalize the provisions of the Social Security Act and, likewise, to bring to the floor of the Congress any and all types of old-age pension plans. Some gave promise of fulfilling only the humanitarian requirements. Others, such as the bill I am discussing, House bill 8264, seek to meet the needs of the older people and at the same time to provide a plan of recovery as a solution to our economic unbalance.

I commend this bill to your favorable consideration. It may not be perfect, but if once adopted we can perfect it in the light of trial and experience. And remember that it possesses those features that must make it acceptable to all who profess a love for their fellowman, and who are not immune to the sympathetic reactions of the highest of human impulses.

Philippine Buying of American Goods

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 10 (legislative day of Monday, April 8), 1940

ARTICLE BY WALTER ROBB

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an article which appeared in a recent edition of the Washington Evening Star, with regard to the increased Philippine buying of American goods.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star]

PHILIPPINES INCREASE AMERICAN BUYING 11 PERCENT IN YEAR—FOREIGN GROUP PROVES SMALL PROBLEMS FOR ISLANDS

(By Walter Robb, Chicago Daily News Foreign Correspondent)

MANILA, P. I. America sold the Philippines $100,000,000 worth of manufactures last year, 11 percent more than during 1938. Every State, very probably, was the origin of portions of these goods. Two 50-car trains a day may be visualized hauling them to the seaboard. Some two-fifths of the goods started from farms, too; the Philippines are primary buyers from American farms, but through mediums of factories and dairy plants where they are processed into food products.

Though a year's sales that total $100,000,000 are not colossal, they are substantial. In the Philippines, too, they have a secondary value. They help freight ships to the Far East—China, Japan, the Philippines, the East Indies, and Indo-China. This is the longest voyage American goods have to make in reaching world markets, but it commonly disposes of about 10 percent of all goods America sells overseas.

It seems on the whole that the Philippine market for American goods is well worth cultivating. It responds so rapidly, demand always rises. And no European minorities confound it, the Philippine population being almost wholly indigenous—foreigners are a few of the merchants and industrialists—the Chinese about 200,000, all friendly to the United States; the Japanese, about 35,000 and seemingly as friendly as their Chinese neighbors who have no business or social dealings with them.

But there are a few foreigners here whose teeth have recently been set on edge. They are Spaniards, of all political complexions. England is the provocation. Chamberlain probably won few real friends among Franco supporters by his Spanish war policy; but he did lose the friendship of the liberal Spaniard who wanted the constitution to succeed. These enthusiasts lost heart when England induced France to close the Pyrenees border. They say that made them lose, that Spain's loss was but the beginning of losses for all democracy.

But Spaniards are few here and the Commonwealth insists that outwardly men must be neutral.

Philippine Independence

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 10 (legislative day of Monday, April 8), 1940

ARTICLE FROM THE NEW YORK TIMES

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD a newspaper article from the April 2 edition of the New York Times, concerning the Philippine independence question.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 2, 1940]

FILIPINOS SEEKING CONCESSIONS HERE—QUEZON IS EXPECTED TO URGE REVISION OF INDEPENDENCE TO PERMIT TRADE TREATIES

MANILA, April 1.—With the Philippines Civic League taking the initiative, a movement for reexamination and possible revision of the Tydings-McDuffie Independence Act is growing here.

Manuel Quezon, President of the Commonwealth, is believed to be preparing the ground to seek new concessions from Washington in the direction of increased Philippine autonomy, particularly a change in the law to permit the Filipinos to consummate trade treaties with other nations.

His thrice-repeated statement that independence in 1946 was the only proper course, because the United States would not accept the minimum requirements of Filipinos for continued relations, is construed as a broad hint to Congress that he is formulating proposals.

He broached the subject to the assembly in January, elaborated on it in a talk to students last week, and took it up again Saturday night in addressing the law school of the University of the Philippines.

On the third occasion the President said that he was not opposed to reexamination in theory but only in practice, because he did not believe that Washington would accept the only terms upon which the Philippines would forego independence in 1946, namely, absolute freedom in economic equality with the United States.

He said that those who favored reexamination to afford the Philippines protection while danger existed were impractical because, if reexamination were had, the Philippines might continue their dependence upon the United States and could not break away later when danger was no longer present.

He conceded that it was possible for an outside power to conquer the Philippines, but he expressed confidence that ultimately the Filipinos could throw off a foreign yoke. And he predicted that they might be able to defend themselves with their own army 25 years hence.

In an editorial commenting on the situation, the Manila Daily Bulletin says:

"In view of the trip to Washington that Mr. Quezon is planning this summer, it would be advantageous to him to know in advance of reaching the Capital the reaction of Congressmen to the proposal to give the Commonwealth power to conclude commercial treaties."

Speaking for the reexaminationists, Assemblyman José Romero, a leader of the Civic League, says:

"There are those who feel that the President is being a little too pessimistic and who note that responsible leaders in America, like Senator KEY PITTMAN and former High Commissioner Paul V. McNutt, have stated that American-Philippine relations could be rediscussed.

"But it is now up to our friends in America to convince the American people of the plausibility of the new arrangement upon the basis set forth by Mr. Quezon."

Salvador Araneta, another league leader, says:

"Reexamination simply means a restudy, and if there is a man who has kept himself restudying the question it is President Quezon himself."

Hearings on Bill H. R. 1, To Curb Interstate Absentee-Owned Chain Stores

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

Mr. PATMAN. Mr. Speaker, hearings on H. R. 1, a bill to curb interstate absentee-owned chain stores, commenced before a subcommitee of the Ways and Means Committee of the House March 27, 1940. The proponents finished their direct testimony yesterday, April 9, and the opponents commenced their testimony this morning. I presume that when the subcommittee finishes the hearings that the printed copy of the hearings will be presented to the full committee with the recommendations of the subcommittee, of which the gentleman from Massachusetts, the Honorable JOHN W. MCCORMACK, is chairman. Then I presume that the full committee will vote favorably or unfavorably on the report of the subcommittee. If the bill is reported to the House with a favorable report, no rule will be necessary for its consideration, since it is a tax measure and can be brought up for consideration before the House without a special rule.

FIRST WITNESS FOR OPPOSITION

This morning Mr. E. C. Sams, president of the J. C. Penney Co., testified for the opposition as their first witness. The opposition was doing the usual and customary thing by putting its best foot forward, since the J. C. Penney Co. is the "cleanest of the interstate chains." It is less vulnerable in many more ways than any other of the 20 interstate chains that are seriously affected by this bill.

Mr. Sams referred to each of the 1,554 stores of the J. C. Penney Co. as a junior department of the J. C. Penney Co., and praised a system that could operate so well under the corporate laws. He referred to the local store manager as the corporation's "man Friday."

He insisted that there were only two groups affected by this legislation, H. R. 1, and they were the middlemen, the retailers and wholesalers on the one hand and the large corporate chains on the other. Also insisted that the bill was for the purpose of helping the middleman. He was absolutely wrong. I would not sponsor a bill that was not in the public interest. If it is in the public interest and also happens to be in the interest of the individuals and corporations now in business, that is no reason why the motives of the ones sponsoring the bill should be questioned.

SUPPOSE EACH SIDE HAS A SELFISH INTEREST

For the sake of argument only, let us admit that each side has a selfish, greedy interest, and then decide which should be the winner if the general welfare is to be served.

One thing is certain: Both forms of distribution cannot survive. It will be either independent competitive business—the kind that helped to build this great country of ours—or it will be this new kind of business conducted by interstate absentee-owned chains. If the interstate chains win, it will be impossible for an individual or a group of individuals to go into competition with them because they will not have enough capital to start out and compete with the established interstate chains. Therefore the interstate chains will have a monopoly—just as much so as if they had a patent right or an exclusive franchise. This monopoly will be like the farmer's fence—"pig taut and bull strong." This monopoly will tell the farmers, manufacturers, and all producers what they will receive for what is sold to this monopoly. This monopoly will, in turn, tell the consumers of this Nation what they must pay. This will lead to either socialism or a dictatorship. The people will not stand for a private monopoly.

On the other hand, if the interstate chains pay an invader's tax, are stopped in their tracks, and are required over a reasonable period of time to reduce their operating units to a reasonable number in order to promote equality of opportunity, the independents now in business—retailers and wholesalers—will continue in business, but they will not have a monopoly. Any individual or corporation with a small amount of capital could go into competition with them.

Therefore, if the independents are driven out of business, there will be a monopoly of the price-fixing kind, and if the interstate chains are restrained and the independents are given a chance there will be competition, which will give the consumers the lowest possible price.

MERITS OF THE PENNEY CO.

Mr. Sams, for the J. C. Penney Co., boasted about his company—

First. Patronizing local banks, carrying over 1,500 accounts, and thereby keeping the dollars from rolling down the concrete highways to New York City.

Second. Borrowing money from local banks outside of New York City.

Third. Their managers taking an interest in local affairs.

Fourth. Not selling anything as a loss leader.

Fifth. Paying high wages, giving long vacations, and fewer hours a week to work for their employees.

Sixth. Making the manufacturers with whom they deal earn three and one-half times as much in net profits as they earned before taking J. C. Penney Co. business.

I wonder if all these other interstate absentee-owned chains will be able to live up to that reputation. The committee members will probably find out.

Mr. Sams said that the stock of the J. C. Penney Co. was widely distributed. Mr. Sams was given permission to file additional remarks so I presume that he will file a statement showing the number of stockholders in each State and the number of shares of stock held by each. This would be interesting information and is absolutely necessary if his statement relative to wide distribution of stock ownership is corroborated with the best evidence. If the statement is not filed we will be forced to presume that it cannot be corroborated with the best evidence.

On cross-examination by a member of the committee, Mr. Sams admitted that they did not carry any insurance locally; that they carried their own insurance. That is, they owned the company that carried it.

I am sure that he would have admitted the same thing about printing and probably other things if the question had been asked.

CAN HALF THE STORES AND EMPLOYEES DO NECESSARY BUSINESS?

If Mr. Sams' contention is correct that the interstate chain-store system is the best, I wonder how many stores and employees of such stores would be necessary to do all the business in this Nation that J. C. Penney is engaged in? I wonder how many stores and employees would be necessary to do all the grocery business? the drug business? the variety-store business? the tire business? the shoe business? the printing business? and other similar lines of business? And if we adopt the same principle I wonder how many banks and employees of banks would be necessary to do all the banking business? the insurance business? the law business? and the service that is required in the medical profession? If we carry the absentee-owned and the remote-control system still further, to its

logical end, how many ministers of the gospel can be eliminated through the use of the radio? How many teachers in schools and professors in colleges and universities can be eiliminated through the use of modern means of communication? How many offices can be eliminated by consolidating counties and States? After we have eliminated all the surplus, according to the mechanized, interstate chain, absentee-owned system, what will we do with the people thrown out of work through this stop-watch efficiency? Will they look forward to a career in the W. P. A.? Will they be required to live on relief or a subsidy?

Would it not be better to have a competitive system, give everyone an opportunity to work, and permit the premiums and rewards to go to those who have earned them?

FARMERS HURT

If the farmers' purchasing power is destroyed, the Nation suffers. Anyone who knows simple arithmetic can determine for himself the annual loss to farmers by reason of the interstate chains abusing their mass purchasing power.

My testimony before the committee, using information furnished by the Department of Agriculture, is conclusive that the farmers are losing $3,000,000,000 a year by reason of the conspiracy among the representatives of the interstate chains. This means a loss of more than $20,000,000,000 a year in national income.

FIFTY-THREE PERCENT OF BANKS CLOSED IN 12 YEARS

During the period of the greatest growth of the interstate chains more than 53 percent of our banks closed their doors.

The following table from official sources is self-explanatory; it is from June 30, 1921, to June 30, 1933:

Number of all classes of active banks, by States, June 30, 1921 and 1933

Information furnished by Comptroller of the Currency, Mar. 22, 1940.

CONGRESSMAN WATCHMAN FOR THE PEOPLE

I am not surprised that so many banks were forced out of business during this period of time. Congress is entitled to the blame. All Members, including myself, are guilty of the failure to take the necessary action to prevent concentration of wealth and control of wealth to the extent that a few men controlling a few banks control the corporate wealth of the Nation as they do today.

Just before the twenties the concentration of ownership and control commenced and it continued on until the end of 1932. The so-called wise men from the east, New York City, sent their representatives far and wide and purchased the electric-light plants, the telephone companies, the gas companies, the water plants, the ice houses, the picture shows, and in the South the cotton-oil mills. All the money-making businesses bought with bookkeeping money on the credit of the entire Nation caused the dollars to take wings and fly overnight to New York City. Why should there be so many banks under such circumstances? The people have paid and are paying for these properties and canceling the mortgages upon their own homes, other property, and liens upon their incomes that were used to buy these properties with. An idiotic system, but in the hands of clever, selfish, and greedy men they got the job done. The surprising part is that the people stand for it.

LAST PILLAR OF STRENGTH IN LOCAL COMMUNITY

The principal pillars of the community have been knocked out by absentee owners. The last line of defense of the local community and the last pillar of strength is the local retail stores and the same interests are trying to get control of them. If they could be bought out like the other pillars of the community were purchased I presumed that there would be not a murmur in opposition.

The large banks want big business. It is better for them. It creates business for them. The independent merchant who was formerly the best customer of the local bank cannot obtain a loan from a New York bank and a local bank cannot safely grant a loan because of the threat of interstate chain-store competition.

Think this over; it is a serious problem.

MUST CAPITAL BE FROZEN IF SIZE OF RETAIL COMPANIES FROZEN?

Capital can be thawed out by stopping the interstate chains. At the present time capital is frozen insofar as small business is concerned because no one will make a loan to a business that is in competition with the interstate chains. If the interstate chains are frozen where they are, and cannot change a location of a store, then an ambitious, competent person with a small amount of capital could obtain a loan to go into business for himself. The one making the loan would have the assurance that as soon as the business was established a New York chain could not go into competition with the one obtaining the loan, and, by the use of cutthroat tactics, selling below costs, and other methods made possible through the ownership of a number of stores, destroy his business.

There is no logical relationship between stopping bigness that has reached the harmful stage and the free flow of capital.

Inter-American Bank

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. VOORHIS of California. Mr. Speaker, the proposed inter-American bank has been the cause of some discussion and, I am sure, a great deal of thought on the part of many people.

With Europe at war, it is of especial importance that everything possible be done to bind into closer unity and understanding the nations of the Western Hemisphere. In attempting to do this, however, it is important that we do not set up an agency which might become, in the course of time, more powerful than the governments of the various nations themselves. Especially would I be opposed to any move, however earnestly conceived, which might take from any government the opportunity of exercising full control over its own monetary and credit system.

There are some features of the proposal for this inter-American bank that must be considered carefully from this point of view.

In the first place, the convention proposed to be signed by representatives of the various nations provides that Congress shall grant to this inter-American bank a 20-year charter, and that—

> The United States agrees not to repeal or amend this charter except upon the request of the bank pursuant to a four-fifths majority vote of the board of directors of the bank.

Presumably Congress will have to act on such a matter as this and will be able to have something to say about it, but the idea of chartering an international bank and agreeing to make the charter irrevocable and unchangeable is one which anyone familiar with international banking operations in the past must view with suspicion, if not with alarm.

In the second place, the bank and all its assets and its bonds are to be tax-exempt, and while there is a saving clause to the effect that this exemption shall not extend to taxes levied by any government upon its own nationals, it is apparently entirely possible for an American, for example, to purchase bonds of the bank, register them in some other American nation, and be forever free from the possibility of having taxes levied by his own country against the income derived from them.

Third, the convention sets forth that "foreign exchange and precious metals shall be so made available to the bank on a basis as to amount, rate, and all other factors, no less favorable than the most-favored treatment extended under any circumstances by a high contracting party to any government, including its own, or to any political subdivision, individual, partnership, association, corporation, or other organization entity of whatever nature." It is difficult to foresee just what all the consequences of such a provision might be, but one wonders what would happen under its terms if the United States should at some future date decide to make some internal monetary use of the gold it has accumulated at so handsome a price in recent years. Would the inter-American bank be able to demand the use of an equal quantity of gold on which to issue an international medium of exchange?

It is a fact well known to monetary students that one of the most effective means used by international financiers in the past to profit at the expense of whole populations has been the power of controlling the movement of gold from nation to nation where those nations' currencies were tied to gold. In this way the monetary base of one country could be sharply reduced and that of another country sharply expanded. Those who knew what was to happen could traffic in these currencies to their own handsome profit. The consequences for the people, on the other hand, have been disastrous.

What assurance have we that the setting up of this bank may not open the way for a return to the gold standard and the consequent possibility of control by the directors of the bank over the currencies and hence the destinies of the nations involved?

Finally, one wonders why—if we are to plan to put our gold to use by making foreign loans—we have not long since put it to use in helping to get our own people back to work. It will be hard to explain why gold loans are to be made to other nations when none have been made, for example, to our own States; and the fear naturally arises that here again is another case of focusing attention on the international scene to the exclusion of our own problems, which cry aloud at the moment for the most earnest attention.

It may be that I am more concerned over this enterprise than future events will justify. But unless and until the fears I have expressed in this speech are proven groundless I will earnestly hope that no representative of the United States will sign the convention setting up this bank.

Churchill Now Confesses Conferring With Griffin—First Lord Denies Charging Him With "Vicious Lie"

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1940

ARTICLE FROM THE NEW YORK ENQUIRER

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks, I wish to include therein an article appearing in the New York Enquirer of Monday, April 1, 1940, relative to an interview between Mr. William Griffin, editor and publisher of that paper, and Hon. Winston S. Churchill, First Lord of the British Admiralty. The article follows:

[From the New York Enquirer of April 1, 1940]

CHURCHILL NOW CONFESSES CONFERRING WITH GRIFFIN; FIRST LORD DENIES CHARGING HIM WITH "VICIOUS LIE"

Winston S. Churchill, First Lord of the British Admiralty, has backed down from his lofty position of denying all in the million-dollar suit for slander brought against him by William Griffin, editor and publisher of the New York Enquirer, and now admits that Griffin did confer with him in London, England, in August 1936.

This reversal in the attitude of Churchill now puts the British Cabinet member in the position of repudiating news stories carried in such prominent American newspapers as the New York Times and the Philadelphia Evening Bulletin. Last September these newspapers carried outright denials by Churchill that he conferred with the New York publisher or had ever even met William Griffin. The matter contained in these news stories gave rise to Griffin's suit against the head of the British Navy.

COURT CIRCLES AMAZED

Supreme court circles expressed amazement over Churchill's confession in court on Thursday last in his answer to Griffin's complaint, that he had met and conferred with Griffin, in view of the explicit manner in which Churchill expressed himself last September, when the New York Times and Philadelphia Evening Bulletin quoted him as having stated, in a trans Atlantic telephone conversation, as to a statement attributed to him by the New York publisher:

"It is an absolute untruth. It is a vicious lie. You have my authorization to deny it in the strongest terms. I never heard of Mr. Griffin."

Griffin declared today that, despite his victory in Churchill's vital confession of Thursday last, he will prosecute the suit vigorously against the British Admiralty chief to obtain complete exoneration and redress.

SENATE DISCUSSES CASE

International attention has been focused on the case. It has been the subject of close attention and grave discussion on the floor of the Senate, because of the position occupied by Churchill

in the present European war scene and because of Churchill's amazing statement to Griffin in their conference in London in 1936 that America should have minded her own business and stayed out of the World War, and that if she had done so the Allies would have made peace with Germany in the spring of 1917, thus saving over a million British, French, and American and other lives, and preventing the subsequent rise of fascism and nazi-ism.

Churchill's answer makes him liable for the full amount of damages claimed by Griffin for the Briton's "endeavor to destroy my reputation for truth and veracity."

Before Churchill answered the suit he was liable for damages only to the extent of his interests in this country, which were attached by Griffin on October 10, 1939.

GRIFFIN TO REYNOLDS

In a letter written late in January to United States Senator ROBERT R. REYNOLDS, of North Carolina, a member of the Foreign Relations Committee, in reply to a telegram from the latter, inquiring into the status of the Griffin-Churchill suit, Griffin said, in part:

"Churchill has not alone cruelly wronged me, but has also ungratefully and ruthlessly affronted the United States of America, the Nation which he and his Government are now working day and night to drag into the present European war, for the salvation and aggrandizement of the British Empire, just as he and his Government labored to beguile it into taking part in the World War."

Raising the question of why Churchill had failed to either disavow the story carried by the Philadelphia paper or to confirm it, Griffin said in his letter to Senator REYNOLDS:

"For instance, to cite one of his thrusts, he has raised the question of how it is to be proved that it was actually his voice which was heard over the telephone by the Evening Bulletin of Philadelphia. The utter absurdity of this maneuver is shown by Churchill's rigid refusal to disclaim the interview with the Philadelphia newspaper—the easiest thing in the world to do, if it is untrue, and a thing which in honor, in law, and in conscience it is incumbent upon him to do. But he steadfastly refuses to disavow the interview—for a reason which is perfectly obvious.

"As has been pointed out, the Evening Bulletin, of Philadelphia, is a very prominent American newspaper. Had its interview with Churchill in which my suit originated been false, Churchill would have owed it to himself, not to speak of me, to disavow it in the strongest terms.

"He has not disavowed it.

"He has allowed it to stand, with all the injury it inflicts upon me, and instead of disavowing it has sought to bar the man whom he has wronged from vindicating himself in open court upon American soil.

"In order to accomplish this outrage against justice, Churchill has had recourse to obstructive tactics which have no bearing upon the merits of the case and are designed solely to save him from the consequences of his slander by the operation of legalistic hide-and-seek."

Dwelling on the lack of success attending the Churchill tactics, Griffin pointed out in the same letter:

"So far his wrigglings have availed him nothing. The progress of the case shows conclusively that our American courts may be relied upon to treat Churchill's strategy with the scorn it deserves, and that an American citizen need have no fear of being denied the redress, by due process of law, which I seek."

Griffin is represented in his suit by William J. Rapp, of 70 Pine Street. Churchill is represented by Leve, Hecht, Hadfield & Clarke, of 50 Broadway.

The defendant, Churchill, on order by the court, was compelled to pay the costs and disbursements of the appeal. The payment was made by the defendant in cash rather than by check.

In the earlier stages of the action Churchill had moved to have the court vacate Griffin's attachment of Churchill's property here, but Supreme Court Justice Wasservogel declared, in admitting as evidence an affidavit from Carl W. McArdle, of the Philadelphia Evening Bulletin, the reporter to whom Churchill talked over the trans-Atlantic phone:

"The court is constrained to receive this affidavit, and reading it in conjunction with the other papers submitted in support of the warrant believes plaintiff has sufficient facts to support his cause of action. Under the circumstances the motion to vacate the attachment is denied."

As the case is summarized, the developments to date have been in the following order:

Supreme Court Justice Lloyd Church granted to Griffin a writ attaching all of Churchill's property in this country. Griffin put up a $20,000 bond to cover costs of the action.

Churchill's attorneys sought to knock out the writ of attachment and have the case dismissed before Justice Isidor Wasservogel, who decided against them and gave Churchill 10 days in which to answer the Griffin complaint.

Churchill appealed the Wasservogel decision to the appellate division of the supreme court. The appellate division unanimously upheld Justice Wasservogel in his decision in which he refused Churchill's plea to dismiss the writ of attachment (such dismissal would have ended the suit), and the appellate division then ordered Churchill to file an answer to Griffin's complaint within 20 days. Churchill complied with the order on Thursday, and in his answer admitted that Griffin had conferred with him at his home in London, but denied that he (Churchill) had stated in regard to the statements attributed to him by Griffin: "It is an absolute untruth. It is a vicious lie. You have my authorization to deny it in the strongest terms. I never heard of Mr. Griffin."

One of the important pieces of evidence presented by Griffin to the court, while Churchill was still maintaining his stand that he had "never heard of him," was a photostatic copy of a telegram sent to Griffin by Churchill inviting the publisher to visit the Churchill home, during Griffin's stay in London in 1936. The telegram was sent to Griffin at the Savoy Hotel, London, and read:

"Could you come to see me at 5 o'clock at 11 Morpeth Mansions, Westminster, on Wednesday?

WINSTON CHURCHILL."

The telegram was later referred to on the floor of the United States Senate by both Senators LYNN J. FRAZIER, of North Dakota, and ROBERT R. REYNOLDS, of North Carolina, during speeches by those Senators in which they strongly upheld Griffin's demand that Churchill either substantiate or retract his slanderous statements.

Amendment of the National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. FRANK W. FRIES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

EDITORIAL FROM THE PHILADELPHIA RECORD

Mr. FRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Record of Saturday, March 9, 1940:

[From the Philadelphia Record of March 9, 1940]

A TERMITE TRIO TACKLES THE WAGNER ACT

It is not surprising that three of the five members of the House N. L. R. B. investigating committee should recommend 21 amendments ripping the Wagner Act from stem to stern.

From the very first, the tone of the committee has been hostile to labor. When the committee was set up Representative E. E. Cox, of Georgia, shouted in the House that "the Labor Board and all its army of wreckers must go." Representative HOWARD W. SMITH, of Virginia, conservative Democrat and foe of the N. L. R. B., was chosen to head the inquiry .

In the face of such a set-up, the wonder is that the majority of the committee did not recommend wiping out the Wagner Act completely, and putting all labor leaders in jail.

Chairman MARY NORTON, of the House Labor Committee, makes clear that the report of SMITH and two of his four colleagues does not reflect the sentiment of the House of Representatives, or its Labor Committee.

Mrs. NORTON put her finger on the soft spot of the probe when she asked why the Smith committee wants $50,000 more to continue its probe, if it has completed its findings sufficiently to turn in a report. She concludes that this is not a final report, and adds:

"I feel that no action should be taken by the Labor Committee until we have the final report of the Smith committee. I think we ought to have the full facts as they develop them before we proceed."

Some facts are clear enough now. One, that the Smith committee, regardless of hearings or findings, is out to kill the N. L. R. B.

That's obvious in the proposed amendments. Else why rip out the power of the Board to enforce its decisions? Why limit sharply the scope of the Board's activities in preventing strikes? Why bar the Board from settling controversies between the A. F. of L. and C. I. O.—a proposal which would invite no end of jurisdictional strikes? Why divide even the feeble powers the committee would give the Board, so that its efficiency would be doubly diminished?

No; there's no secret about these amendments. They are sabotage. They would defeat the very purpose for which the Board was created: to settle labor disputes so as to reduce the number of strikes and stoppages in production.

The Smith committee ignores the great record of the N. L. R. B. in reducing the number of strikes in the country by 50 percent. It dishonestly omits any mention of the fact that out of 12,619 complaints filed with the Board, only 667 have been decided against employers. It makes no mention of the truth—that the Federal courts have upheld nearly every N. L. R. B. decision taken before them.

In view of the recent exchange of letters between Raymond Clapper and E. T. Weir, in which the finance chairman of the Republican Party hastened to say he believed in labor's rights—

It is worth noting that both Republican members of the Smith committee voted to cut the legislative intestines out of the Wagner Act.

This shows, more clearly than words or argument, where the Republican Party stands on labor. Its position is precisely where it was before the New Deal.

Then, as now, the G. O. P. talked prolabor.

But now, as then, the G. O. P. votes antilabor every chance it gets.

It's the votes that count.

Fortunately, the Smith report is nothing but a report. We do not believe the House, faced with the question, will undercut the rights of labor it guaranteed only 3 years ago.

Coolidge Made a Speech

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

ARTICLE BY WILL ROGERS

Mr. BURDICK. Mr. Speaker, the late Will Rogers, while overflowing with humor in most everything he said, yet was most effective in bringing out in its true light any subject that he attempted to discuss. In 1930 he published a statement entitled "Coolidge Made a Speech," and it is so filled with facts in regard to the Indian question that I have asked permission of this House to insert his speech in full:

COOLIDGE MADE A SPEECH

Well, all I know is just what I read in the papers, or what I see as I go about the country watching Calvin open dams, or close 'em up rather. You see he wasn't going to go over into Arizona and do that at all. I think he kinder felt like it might be construed as a political move, for future reference. So the committee got the bright idea of wiring President Hoover and getting him to ask Mr. Coolidge. Well, Mr. Hoover did and as he did he wired the Arizona committee back that he had wired Mr. Coolidge asking him to go. Well, of course, that put it up to Mr. Coolidge, and if he hadn't gone the committee would have known that he was really disobeying the wishes of the President. It was pretty slick on Mr. Hoover's part in doing this, and anyhow after Mr. Coolidge got there I think he was glad he went.

It really was a wonderful sight away out in the mountains and desert, and here was this huge affair that they not only had to spend millions on, but had to spend a tremendous sum to get roads in there, to get in on, and bring all the thousands of tons of stuff to be used. The Indians made it look mighty picturesque. One of the tribes, the Pimas, is supposed to get some of the water for they are supposed to own the reservation just below the dam. I am going over there pretty soon when the thing gets going good and see just exactly how much land the Indians really own that is watered by this.

It's as I told you before, the Apache Indians owned the land the dam is built on. But to be above a dam is very little comfort to you in the way of getting some water out of it. You got to be down hill from it. Living above a dam is just kinder like being a Democrat—you are living and voting, but you are not deriving any of the benefits.

You know as you saw all those Indians you couldn't help but think of the old days. Here were the old warlike Apaches that fought to hold all they had, and most of them wound up in jail, but there was a Washington that fought for his tribe against invaders, and wound up with a flock of statues and a title of Father of his County. And yet I expect if the truth was known the old Apache chiefs went through more and fought harder for their country than George did. But George won, that's the whole answer to history; it's not what did you do, but what did you get away with at the finish?

That's why your disarmament won't get anywhere much, it's just because all those nations know that they are important in world affairs just in proportion to their military strength. Is there any reason in the world why Japan should be the power she is, and China, with its millions and resources that go to the four corners of the earth? But that is just the trouble. China has stood for so much from other nations that they are not classed as one of the big shots. Why? Because they concentrated on peace and not on war. So Japan is at London now, and China can't even make a Rotary convention.

Spain discovered half the world, her ships were on every sea, but she let her navy run down and wound up in the class Z league. Look at Holland; great country, big as England, and they have colonies, but do you ever hear of them when they talk of what the big powers want? No; you would think they were Rhode Island. Why? No navy, and some of the rest of them the same. We don't rate their culture, we don't rate their achievements, their art, their literature, their integrity, their population, their size, in fact nothing but how big is their navy? Brazil is bigger than all England, France, Italy, and Japan, and has more national resources than all of them combined. Yet she couldn't get to a chamber of commerce membership rally. Same old answer. No navy. They all know that.

So you can see why there won't be any tall sinking done by any of these babies that are up there on top now. It would be a marvelous thing if all of them could see that there was to be no more war and go ahead and do away with their arms of defense. But unfortunately they have all studied history and they know that these ideas we are talking about now are not new; they have all been gone over before, and they just can't hardly bring themselves to believe that this is going to happen.

So, it's as I said at first, we were out there on Indian land dedicating a dam to get water for white people to come out and use and gradually take more Indian land away. There is going to be nothing different. It started with Lief Ericson in 996, then skipped over Columbus in 1492, for he couldn't find this country in four trips. Then came the Spanish settlers, then the *Mayflower* was the last straw.

They didn't have any ex-President at the dedicating at their taking land from the Indians but they got it just the same, and they have kept right on doing it up to last week. So, you see, history repeats itself, the same as it has in wars.

It would be wonderful if people would quit fighting; it would be wonderful if people would leave the Indians alone and let 'em do what they wanted to. But what a chance? I don't blame Arizona, mind you. You can't blame anybody. It's just the way we are bred, that's all. If we see anything we want, we take it. The more so-called civilized we get, the more we kill and take. But I bet many an old Indian got many a quiet laugh out of the speeches of good fellowship there that day that were meant to be serious.

Extension of Facilities of Housing Act to Rural Areas

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

RESOLUTION OF THE GENERAL ASSEMBLY OF SOUTH CAROLINA

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the General Assembly of the State of South Carolina:

Concurrent resolution expressing the appreciation of the general assembly of this State to Hon. Franklin D. Roosevelt, President of the United States, and Hon. Nathan Straus, Federal Administrator of F. H. A., for an audience accorded, and the consideration given to Hon. Burnet R. Maybank, Governor, Hon. J. Roy Jones, and Hon. Edgar A. Brown, a committee appointed pursuant to Senate Resolution 1272, with reference to extending facilities of the Housing Act to rural areas

Whereas, pursuant to Senate Resolution 1272, a resolution with reference to the rural housing bill now under consideration in the National Congress, a committee composed of Hon. Burnet R. Maybank, Hon. J. Roy Jones, and Hon. Edgar A. Brown, appeared before Hon. Franklin D. Roosevelt, President of the United States, and Hon. Nathan Straus, Federal Administrator of the F. H. A., in an effort to secure for rural areas some of the benefits of the United States Housing Act as now applied to cities and metropolitan areas; and

Whereas this committee received such cordial hearing; and

Whereas it is considered that if the purpose of their visit could become an actual realization, the rural areas in the United States, including South Carolina, would soon become dotted with beautiful and livable homes, thus resulting in permanent development and lasting good: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the General Assembly of South Carolina wishes to go upon record approving Senate bill 591 now pending in the National Congress, the purpose of which is to extend and enlarge the facilities of the United States Housing Act of 1937, making available loans to aid in the construction and improvement of residences in rural areas, and especially do we wish to record our appreciation of the very cordial reception accorded the committee from this State by the President of the United States and the Administrator of the Federal Housing Administration Act.

It is a source of great gratitude to the representatives of the people of this State that Hon. Nathan Straus, Federal Administrator of the F. H. A., was found to be in deep sympathy with building up the rural areas and agricultural sections of this great Nation, and of extending the conveniences and comforts of city life now enjoyed by our city brethren to the farmers of the Nation, and to all those who live in rural sections and without the metropolitan areas; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States and to the Federal Administrator of F. H. A., and that a copy be also sent to each of the Senators from this State, and the Members in Congress from the State.

Jurisdictional Disputes

EXTENSION OF REMARKS

OF

HON. FRANK W. FRIES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

ARTICLE FROM THE MACHINISTS MONTHLY JOURNAL

Mr. FRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Machinists Monthly Journal for March 1940:

[From the Machinists' Monthly Journal for March 1940]

JURISDICTIONAL DISPUTES

(By General Vice President Eric Peterson)

Jurisdictional disputes have been, are now, and will continue to be the source of costly controversies to workers and employers—not to say anything about inconvenience to the public. As long as there is no disposition on the part of the organizations comprising the American Federation of Labor to face facts, recognize realities, and approach this troublesome question with the view to working out a practical solution, just so long will jurisdictional disputes be an admission that organized labor is unable or unwilling to regulate its own affairs. Such an admission constitutes a standing invitation for outside interests to advocate regulation by courts or Government agencies.

The building trades organizations, in recognition of the need for elimination of jurisdictional strife in the building industry, have formulated a program designed to reduce to a minimum the stoppage of work caused by conflicting claims. However, the plan adopted does not apply to A. F. of L. organizations denied affiliation with the building and construction trades department. In some respects it tends to further aggravate the jurisdictional issue inasmuch as certain building trades unions now have an understanding among themselves which provides for a division of the work required in the installation and erection of machinery, which work is recognized by the A. F. of L. as coming under the rightful jurisdiction of the I. A. of M.

In the railroad industry jurisdictional questions have, for a long time, plagued the organizations comprising the Railway Employees' Department of the American Federation of Labor, but, unlike the building and construtcion industry, the differences between the railroad organizations have seldom, if ever, resulted in a stoppage of work and resulting inconvenience to the traveling public.

It has been recognized by several of the railway employees' department affiliates that the time, effort, and funds spent on the handling of jurisdictional disputes could be better devoted to more constructive work. Much time and thought devoted to working out a practical method for the settlement of jurisdictional controversies finally culminated in the plan recently approved by all of the organizations except the electrical workers, the essence of which is that impartial referees shall decide the jurisdictional questions that cannot be settled through direct negotiations. The agreement in full is reproduced in this issue on the president's page.

Just how successful the programs of the building trades and the railway employees department will be depends on the sincerity and integrity of participating organizations and their willingness to abide by decisions rendered. At least the plans adopted represent a reasonable approach to a problem that for years has retarded the progress of trade unions in the United States of America.

Many long-standing jurisdictional disputes are recorded in the convention proceedings and executive-council minutes of the A. F. of L., and it must be obvious to the informed trade unionist that no adequate machinery exists within the federation for the settlement of such disputes. Refusal on the part of affiliated organizations to abide by decisions rendered by federation conventions and the inability of the federation to enforce its decisions have brought about a situation that no longer can be ignored or excused.

Expansion of their original jurisdiction by many of the numerically strong organizations, without any regard for charter rights of other A. F. of L. affiliates, has reached a stage where the law of the jungle instead of reason and logic, rules; and when they condescend to explain their position, they point to the C. I. O. menace as a justification of their violation of trade-union principles and codes.

Some of the worst offenders have outdone the C. I. O. in forcing on our members compulsory membership in plant unions, organized in many instances from the top down, and completely under the domination of the employers. Such tactics might be condoned if they resulted in better working conditions and higher wage rates than could be negotiated by the I. A. of M., but without exception, the beneficiaries of this high-handed benevolence have been compelled to accept wage rates and agreement provisions less favorable than those prevailing in shops and plants covered by agreement with our organization. The right of the I. A. of M. to represent machinists and machine-shop workers as the collective bargaining agency in many plants—a right guaranteed by the N. L. R. A.—has been completely nullified by the high-handed piracy of these self-constituted purveyors of benevolent labor despotism, and in this nefarious activity they have been aided and abetted indirectly by the between-convention policy makers of the A. F. of L. The N. L. R. B. has an understanding with the powers that be that representation cases involving a dispute between A. F. of L. organizations shall not be accepted by the Board, and the reason given by the Board is that this type of case involves a question of jurisdiction which must necessarily be settled within the A. F. of L.

In the face of the Federation's inability to enforce its jurisdictional decisions—and the status of the Teamsters-Brewery Workers' dispute, as well as the Machinists-Carpenters' controversy, are good illustrations—it necessarily follows that the law of self-preservation will compel our organization to do one of two things: viz, follow the example set by the organizations that justify their piracy as an enforced defense against the C. I. O., or adopt a policy that will pave the way for a Government agency to decide our representation cases.

Neither course is desirable, but unless organizations committed to a policy of "might makes right" are willing to play the game fair or agree to cooperate in the establishment of a jurisdictional tribunal and abide by its decisions, our membership probably will be called on before the end of the year to decide the course the I. A. of M. shall pursue. It is unthinkable that we should continue to pay per capita tax for the questionable privilege of having our jurisdiction violated and ignored and our rights under the N. L. R. A. nullified. It will be much more in keeping with the traditions of the I. A. of M, to safeguard our charter rights and promote the organization's interests by the same militant activity that earned for us the name of the "Fighting Machinists."

Illiteracy in the United States

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

Mr. LANDIS. Mr. Speaker, those of us who wish to eliminate illiteracy in these United States wish to know why so many of our children are not being educated in good public schools today. We have assumed that education was free in this country, at least up to a certain point, and we have complacently believed that our school system was excellent, almost above reproach.

Free education is an ideal. It is not an actuality in all parts of our country. Why? Because even when the public pays for the schools and the teachers it still costs money to go to school. There are many families today which are not getting the children to school for such reasons as these: Because the children have no decent clothing to wear; because transportation to and from school is too difficult; because there is no money for books and supplies; because the children have chronic nose and throat difficulties which slight operations would cure; because the children need glasses, or treatments for defective hearing, and there is no money to pay the doctors; and because there is no way of providing the children with school lunches.

Perhaps you will not believe that this problem could be as large as I say it is. Then let us look at some family income figures. In this country, in 1935–36, 87 percent of

our families had incomes below $2,500; 65 percent had less than $1,500; 42 percent less than $1,000; and 14 percent less than $500.

A family of five, living in some rather remote mountain or rural section of the country on an annual income of $200, $300, or $400 per year is not going to find it easy to provide the children with clothing considered suitable if the youngsters are to go among other children. The same thing may hold true with poor families in the cities. The supplying of lunches, books and supplies, and transportation may be insurmountable difficulties.

When the matter of secondary education is under discussion, the lack of adequate family income is a still greater complication. Today at least a third of our American children are not able to attend high school, and fewer than 50 percent actually graduate. As in the case of those who wish to attend college but have not the means to do so, the principal reason for pupils quitting high school is lack of money. In recent years aid of $5 per month per pupil from the National Youth Administration kept a quarter of a million boys and girls in high school. Only $5 per month, but what a difference it made.

In December 1937 out of approximately 223,000 N. Y. A. aided junior and senior high-school pupils, about three-fourths came from families having no more than $1,000 per year income, and it was usually less. Forty percent of these pupils came from families where the annual income was $499 or less. The size of these families was large by present-day standards. Over 50 percent of the pupils aided by N. Y. A. to attend junior and senior high school came from families of six or more members.

The advisory committee on education, after reviewing the work of the N. Y. A. in aiding youths to continue in school, concluded:

> There are presumably at least a quarter of a million young men and women receiving aid to whom, on the average, less than $5 a month makes all the difference between going to school and not going to school. Yet this quarter of a million constitutes only three-fourths of all applicants for school aid, and there are probably many more youths whose circumstances would warrant aid, although their need is not so great.

In other words, our free education is really free only under certain conditions. Of course, we want it to be free and we want it to be effective, truly preparing our boys and girls for life. Is it meeting our 1940 needs? The fact is that it is not. The year 1940 sees us in the midst of a complicated mechanical civilization, where democratic institutions are in peril. It sees us struggling with unemployment problems, aggravated by the millions leaving or graduating from school each year and seeking entrance into the ranks of wage earners. The situation is very different from that which we knew even 25 years ago. A preparation which may have been adequate in 1915 is sadly deficient today.

I believe, with the educational policies commission of this city, that boys and girls today must be educated to be efficient wage earners in the public schools; that the vocational training of 1940 should begin in the primary grades, where pupils should learn habits of industry, punctuality, neatness, care of tools; that an up-to-date 1940 school should provide prevocational training, consumer training, civic education, training in mechanical skills, and practical courses in everyday sociology and economics.

Because all surveys and studies point clearly to the fact that there will be an increasing demand for highly skilled workers, I believe that we must plan now to educate the child of average ability until he is 19 or 20. The average boy and girl in 1940 needs schooling through junior college and should be ready for a definite job or jobs when he or she leaves school. I believe that we need more junior colleges. I believe that more communities should embrace the cooperative part-time programs in diversified occupations, for which the Federal Government will advance one-fourth the needed money. This training, whereby high-school students in junior and senior classes get experience in the business world before graduation, has apparently been a success in cities where it has been given a fair trial.

As for any illiteracy anywhere, let us do away with it once and for all. It hampers our progress as a nation when we have even a few persons among us who cannot read newspapers and magazines, advertisements, safety signs, directions. Let us encourage all States to set 10 years' schooling as a minimum requirement. Let us urge that States enforce this requirement and in no case evade it by providing loopholes such as the issuance of work permits to children of 14 or 15. Certainly this country is not too poor to provide good, free education. Let us give whatever Federal grants-in-aid are needed to enable States to provide really free and truly adequate education to all the children of our land.

Politicians and Bagmen

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING LEDGER

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Ledger of April 9, 1940:

[From the Philadelphia Evening Public Ledger of April 9, 1940]

POLITICIANS AND BAGMEN

While there are many points of similarity between the current campaign for the Republican nomination for President and that of 1920, there is one great variation. In 1920 there were two classes interested in the control and victory of the Republican Party. One was the politicians and the other was made up of the moneyed interests.

In 1920 Senator Boies Penrose, of Pennsylvania, was the dominating figure in Republican politics. His predecessors had included such astute leaders as Penrose's mentor, Senator Matthew Stanley Quay, of this State, and Mark Hanna, of Ohio. They were all politicians only, and worked in the interest of the men who produced the millions needed for success at the polls.

The men who handed over whatever sums the politicians demanded were the heads of great businesses and the families with untold wealth. They knew how to make money and were smart enough to know also that it took a very different stripe of man to be a master politician. So the rich men kept out of politics.

This year the situation is very different. For the last few campaigns the men who forked over the gold have also tried to run the political end of the party. The result has been a situation such as exists today in Republican politics.

The men of money know how to make money, but they are not politicians. The result is that there are no outstanding figures who can see the whole field and guide the party destinies in the right direction politically.

There are men in Congress and in the service of the Republican Party elsewhere who could steer the proper course if they only had the backing that was accorded Quay, Hanna, and Penrose. But, as long as the bagmen insist on being political leaders also, the political situation will continue in the doldrums where it is now floundering.

Tribute to the Fighting Sixty-Ninth and Father Duffy

EXTENSION OF REMARKS

OF

HON. JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

TRIBUTE BY GEN. DOUGLAS P. MACARTHUR

Mr. FAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a tribute paid by Gen. Douglas P. MacArthur, former Chief of Staff of the United States Army, to the One Hundred and Sixty-fifth Infantry, the old

Sixty-ninth, to its chaplain, Father Francis P. Duffy, on the occasion of a reunion and showing of the motion picture, the Fighting Sixty-ninth, at the Waldorf-Astoria, New York City, January 24, 1940. As a fellow veteran of the old Sixty-ninth, I am happy to present it:

No greater fighting regiment has ever existed than the One Hundred and Sixty-fifth Infantry of the Rainbow Division, formed from the old Sixty-ninth Regiment of New York. I cannot tell you how real and how sincere a pleasure I feel tonight in once more addressing the members of that famous unit. You need no eulogy from me or from any other man. You have written your own history and written it in red on your enemies' breast, but when I think of your patience under adversity, your courage under fire, and your modesty in victory, I am filled with an emotion of admiration I cannot express. You have carved your own statue upon the hearts of your people, you have built your own monument in the memory of your compatriots.

One of the most outstanding characteristics of the regiment was its deep sense of religious responsibility, inculcated by one of my most beloved friends—Father Duffy. He gave you a code that embraces the highest moral laws, that will stand the test of any ethics or philosophies ever promulgated for the uplift of man. Its requirements are for the things that are right and its restraints are from the things that are wrong. The soldier, above all men, is required to perform the highest act of religious teaching—sacrifice. However horrible the results of war may be, the soldier who is called upon to offer and perchance to give his life for his country is the noblest development of mankind. No physical courage and no brute instincts can take the place of the divine annunciation and spiritual uplift which will alone sustain him. Father Duffy, on those bloody fields of France we all remember so well, taught the men of your regiment how to die that a nation might live—how to die unquestioning and uncomplaining, with faith in their hearts and the hope on their lips that we might go on to victory.

Somewhere in your banquet hall tonight his noble spirit looks down to bless and guide you young soldiers on the narrow path marked with West Point's famous motto—duty, honor, country.

We all hope that war will come to us no more. But if its red stream again engulfs us, I want you to know that if my flag flies again, I shall hope to have you once more with me, once more to form the brilliant hues of what is lovingly, reverently called by men at arms, the Rainbow.

May God be with you all until we meet again.

Control of Stream Pollution

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

EDITORIAL FROM THE GRAND RAPIDS PRESS

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids Press of March 20, 1940:

[From the Grand Rapids Press of March 20, 1940]

STAND BY THE AMENDMENT

The Barkley antipollution bill, carrying the Mundt amendment prohibiting "new sources" of pollution from discharging waste into the navigable waters of the United States and streams tributary thereto, is now in conference between the House and Senate. By refusing to accept the House amendments the Senate made it possible for pollution interests to launch a new attack on effective pollution control, which means an attack on the Mundt amendment, since that is the chief control feature of the measure.

Typical of this attack is a letter sent out by the natural resources division of the United States Chamber of Commerce, opposing the Mundt amendment, stating:

"The amendment is a departure from the principle to which the chamber is committed, viz., that in any measure to control pollution the basic principle of maintaining State and local initiative and responsibility rather than Federal control should be preserved. Moreover, it creates a situation where part of the pollution problem would be dealt with by the Federal Government and part by the States—an obviously complicated system to impose on any industry or community."

It happens, of course, that the streams of the country, meandering from one State to another and along State borders, actually present a Federal-State problem. The chamber's protest on this score is without substance. More than that, in seeking the elimination of the Mundt amendment, the chamber is saying, in effect, that it favors new sources of pollution.

Conservationists throughout the country dropped their opposition to the Barkley bill in return for this one amendment to ban future pollution. But apparently they can't even have that, if the interests represented in this protest have their way. The Izaak Walton league, which led the fight for the Mundt amendment, meets the United States Chamber of Commerce statement with the words:

"We will let the public be the judge whether the United States Chamber of Commerce is in favor of controlling pollution or whether it is actually in favor of protecting industrial polluters against any control over their pollution, actual or potential."

It is clearly the duty of House conferees on this measure to stand by this amendment. To do otherwise would be to break faith with the real conservation interests of the country.

Civil Service Board of Appeals

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 11 (legislative day of Monday, April 8), 1940

RADIO ADDRESS BY HON. JAMES M. MEAD OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me last evening over the Columbia Broadcasting System in regard to a bill introduced by me to create a Civil Service Board of Appeals.

These being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen, I wish to thank the Columbia Broadcasting System for this opportunity to speak to you of one of the many problems pending before the present Congress.

Before discussing the merits of my bill to create a civil service board of appeals, I would like to dwell upon circumstances which, in my judgment, led to the necessity for this legislation.

At the time of the establishment of the civil service, there were about 15,000 employees placed within its classifications.

Today, and I quote the December 1939 figure, barely a half century since its beginning, the number has reached 660,694, a large proportion of whom are in the Postal Service.

During 20 years of service in the House of Representatives, it was my privilege and opportunity to become familiar with the problems of our civil-service employees.

As a member of the Post Office Committee, and later as chairman of that committee in the House, and today, as a member of the Senate Committees on Civil Service, and Post Offices and Post Roads, I enjoy constant contact with the problems confronting the civil-service employee in his relations with Uncle Sam, his employer.

The young man or young woman who enters the classified civil service, in some instances, does so at a financial sacrifice, for often private industry presents opportunities for more profitable employment.

But those opportunities are surrendered in the expectation that a career in the Government, while lacking the comforts of more attractive salaries, will, nevertheless, afford a measure of security through the assurance of continued employment.

By virtue of thrift and with gradual increases in his salary, a civil-service employee can give his children a good education and he can enjoy ordinary recreations and luxuries.

In his declining years—after he retires—he will have sufficient income from his retirement fund, set aside from his earnings over the years, to support him.

Each session Congress has under consideration some legislation which directly affects his welfare. His appointment to the service, his supervision while in the service, his separation from the service, all are governed by the Civil Service Act and by civil-service rules and regulations.

The law and rules to which I call your particular attention tonight relate to the removal from the service of merit-system employees.

Let me state the conditions under which they may be removed:

1. Removal must be for such cause as will improve the service, and for reasons given in writing.

2. The person affected must be given notice of removal and of any charges preferred against him.

3. He must be furnished with a copy of the charges.

4. He must be afforded a reasonable opportunity to personally answer removal charges in writing, and, if he wishes to, may submit affidavits in his own defense.

Now, from the foregoing, it would appear that an employee in the classified civil service is amply protected from the whims and caprices of superior officers.

However, those safeguards are often more apparent than real, for the significant reason that no examination of witnesses, nor any trial or hearing is required, except in the discretion of the person making the removal.

From this, we must draw the blunt conclusion that the human equation can, and does, enter into the employment fate of civil-service employees.

Adequate opportunity for redress, or for an impartial hearing, is not available to them as the law now stands.

Furthermore, we must remember that people in supervisory positions in the Government are like all the rest of us. They are subject to all the human frailties. Sometimes they discriminate, err honestly, or permit personal prejudices to guide their decisions. Most of us are guilty of such faults occasionally, and, therefore, this is not a damaging indictment.

But, when an employee is unjustly discharged, without an examination of witnesses, without a trial or hearing, and without redress, then we have created a most deplorable situation.

We have ruined his career, robbed him of his security, and wrecked his personal and economic future.

Now, again, let me emphasize that I do not condemn the heads of departments, or the supervisory officials of the Government, nor do I mean to imply that they are arbitrary and capricious in their disciplinary actions relating to employees under them.

I do wish to point out, however, that the law, as it exists today, in my opinion, could be improved, and dangers inherent in the present method of disciplining employees could also be removed.

Under existing procedure, it is the head of a department, and not the Civil Service Commission, who determines proper causes for removal.

The Commission's authority to investigate removals is restricted to cases where it is alleged that the required procedure has not been followed, where inequitable penalties have been imposed, or where political or religious discriminations have been exercised.

The Commission cannot investigate the sufficiency of the reasons for a removal made without due cause.

Whether or not the reasons are sufficient is a question for final determination by the appointing officer, and cannot, under existing law, be made the subject of appeal to, or inquiry by, the Commission.

In removing a newly appointed employee, who is serving the probationary period before achieving a permanent status after the first 30 days of service, it is not necessary, under existing rules, to prefer charges. The only requirement is that he be furnished with a written notification, setting forth, in full, the reasons for dismissal.

As to reductions in work or pay, while the act requires that reasons for such action be officially recorded, it does not require, or, for that matter grant, the privilege of answer by the unfortunately affected person.

You can readily understand how abuses can creep in under a system which gives to one man too much arbitrary power to suspend, remove, or discipline his subordinates.

A classified civil-service employee, once removed from the service, is at a disadvantage thereafter in his effort to earn a livelihood for himself and his family.

His training is of a nature peculiar to Government work, and only with difficulty can he quickly compete with those in private enterprise.

If his removal has been unwarranted, he, naturally, becomes embittered, and his pride and morale are injured.

Employees in constant fear of discrimination and prejudice cannot do a good day's work.

However, if they know that they have the right to appeal their grievances to an impartial tribunal, they are bound to be happier, more comfortable, and more efficient.

My bill proposes to create a United States civil service board of appeals of three members, composed of, first, a representative of the United States Civil Service Commission, who shall be permanent chairman of the board.

Second, one representative appointed by the organization, or union, representing the employee involved, or he may be a representative appointed by the employee himself.

Third, one representative who shall be selected by the other two members of the board.

Such a Board will insure an unprejudiced bar, to which an aggrieved employee can look for justice.

This board would consider and adjust complaints of Federal employees—when such protests are properly submitted—provided an effort has first been made to reconcile the differences between the employee and his superior.

If a department or agency of the Government dismisses an employee, he may follow the procedure set forth in the bill, and thereby, make appeal to the board within 90 days.

The board will have authority to hold hearings, to review the records in the case, and to investigate the facts.

Under such regulations as it may prescribe, it will, by a majority vote, determine the final action to be taken.

If the board does not agree with the Department's dismissal action, it shall order the employee restored to his position, or to a comparable position in another department.

If the board finds that disciplinary action which has been taken has been unwarranted, it may direct reimbursement to the employee of the salary he lost during the period of his removal, reduction, or suspension.

I am requesting a Senate committee hearing on this bill, and, in the meantime, I shall welcome any counsel and advice you may wish to offer me. Our effort must be to improve, extend, and encourage the merit system. This legislation commends itself to me as a helpful step in that direction.

Mobilizing for American Progress

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, April 11 (legislative day of Monday, April 8), 1940

ADDRESS BY H. W. PRENTISS, JR.

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by H. W. Prentiss, Jr., president of the National Association of Manufacturers, on the subject of mobilizing for American progress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Less than 4 years ago, I sailed one hot summer evening from the Russian port of Leningrad and found myself the next morning in the beautiful Finnish city of Helsinki. Our ship had traveled only 200 miles; we were in the same latitude; the climate was the same; and Finland certainly had no greater natural resources, indeed far less, than Russia. But what a contrast. In one city, a people shabby, dejected, gloomy; living in relative poverty and oppression. In the other, a people neat, happy, and smiling; living in good houses on clean, well-kept streets.

Why the difference? Was there not something basic, something fundamental in this appalling contrast? I am convinced that there was; that this surface difference found its roots deep in the hearts of the people and in their institutions.

The Russians, enslaved in a totalitarian state, were—and are—without freedom of speech, press, or worship, or the other civil rights which we in this country cherish so highly. They are told by political bureaucrats where they shall work, how much they may earn, and what they shall do.

On the other hand, the Finns exercise all the civil and religious rights of a modern emancipated people, self-governing, free to express themselves in private enterprise as each and every individual citizen may see fit. What a contrast of principles, practices, and institutions, of standards of living, and of human welfare, between these two nations.

Of what avail are principles after all, you may well ask. Yes, the Finns, like the Czechs, were overcome by the brutal force of a totalitarian state. But even in defeat their inspiring defense against overwhelming odds stands as a monument to the spiritual power that lives in a free people.

THE TRIPOD OF FREEDOM

How fortunate we are, you may be thinking, to face no such menace. We can protect ourselves against outside attack, and surely our liberties are not threatened from within. We treasure our freedom of speech, our right to worship as we please, our freedom to read and hear and say what we wish. No one is proposing that we abandon these hard-earned rights; no one would get far if he did. What need we fear?

As a matter of fact our danger does not lie in any direct attack upon these traditional attributes of a free people. Even the Communist and Fascist and Socialist groups among us prate about their devotion to representative democracy, and insist upon the preservation of civil and religious liberties, at least so long as they themselves are not in power. Oh no, they would not touch those two legs of the tripod of human freedom. The attack always is against that other leg of the tripod, economic freedom, the institution of private enterprise.

Throughout the ages, these three institutions have gone hand in hand. They are inseparable. When one goes, all go. The same basic concept underlies them all—a religious concept common to Protestantism, Roman Catholicism, and Judaism alike, the sacredness of the individual. On that spiritual concept rests the free man's right to participation in government; in other words, representative democracy. On it rests man's right to be free to worship, to read, to think, write, and speak, as his conscience directs, and to enjoy other traditional civil liberties. On that concept also rests the right of man to determine for himself the course of his economic life—the right to use his individual initiative in private enterprise. In other words, the spiritual principle of the sanctity of the individual soul is the foundation of our entire American system of government, economics, and civil and religious liberty.

NATIONAL ECONOMIC PLANNING AND ITS IMPLICATIONS

Continued economic hardship, however, may cause some of us to lose faith in the economic system under which America has built, on an industrial foundation, the greatest, the most prosperous, the freest civilization this world has ever known. Such doubters may become easy prey for the siren songs of would-be economic planners who offer themselves and their panaceas as the solution for all our current national problems.

Why not a little economic planning? Where is the threat to our liberties in that? The idea of planning makes a strong appeal, because we are a great industrial Nation and see the necessity of planning ahead as individuals and corporations in regard to our respective industrial and economc problems. But many of us have not stopped to realize what happens when the planning and decisions of millions of private individuals are replaced by the national planning and sweeping decisions of a group of people—no better, no worse than the rest of us—calling themselves government.

Once you have national economic planning, what becomes of representative democracy and civil and religious liberty in general? Naturally, if a few people set apart as "government" were planning presumably for the greatest good of the greatest number, they could not for one moment tolerate the throwing of any individual monkey wrenches into their carefully laid plans; otherwise their program would soon be brought to naught. Hence, even though the planners would be reluctant to take such action, inevitably they would simply have to control every opinion-forming agency, radio, press, school, and church.

In other words, under national economic planning, you would have here eventually just what you see in the dictator-controlled countries of Europe today—the suppression of all teaching except that which is in line with the general ideas of the government; censorship of the press; the end of freedom of expression; and the destruction of religious liberty. We should have sacrificed our liberties—and for what? Security? No. Unfortunately, the "state" is made up of fallible human beings just like you and me. Nobody can know it all. Everybody makes mistakes. Fortunately our mistakes as individuals do not have national consequences, but if a national "planner" made a bad mistake it might result in a national catastrophe.

How can nations avoid stumbling into communism or fascism or national economic planning—state socialism? A study of modern history shows that the economic tyranny which presages the end of human liberty always begins during some great period of political and social unrest, frequently resulting from economic hardship. Those whose judgment and advice were sought in the preceding era of prosperity are discredited in every way possible and, under the guise of emergency, the state intervenes actively in the management of agriculture, industry, banking, and commerce. Panacea after panacea is produced, and soon the whole economic picture is so confused that no one can see clearly the way out. Then, when the public is discouraged and disheartened, and uncertain whether there is a way out, those in authority point out that economic science is hard to understand, anyhow, and that the wise course is just "to leave it to us. We will plan everything for you. All you have to do is relax and wait for prosperity."

Unfortunately, we can see at least the beginning of that pattern operating in this country today. Understand, I do not charge that all those who have been trying so zealously to discredit American businessmen and who have been plumping for Government intervention in every form of productive enterprise are aware of the inevitable outcome of such a policy. But that great liberal, Justice Brandeis, has warned us that "the greatest dangers to liberty lurk in insidious encroachments by men of zeal, well-meaning but without understanding." It makes little difference whether such people are seeking collectivism or whether they are stumbling into it; the effect will ultimately be the same—the death of private enterprise, and the consequent loss of our civil, religious, and political liberties. Reasonable umpiring on the part of Government is right and proper, but Government umpiring is quite a different thing from national economic planning.

MOBILIZATION FOR UNDERSTANDING

So tonight I call upon every member of the National Association of Manufacturers and upon every other patriotic industrialist to join in a vast mobilization for understanding of our American system; to take enough time from their businesses to buttress the foundation of private enterprise upon which this Nation has been built.

And I bespeak for them a sympathetic and cooperative reception from every public-minded citizen and from every group that desires to help end a decade of economic stagnation and thus again start America on the path of social and economic progress wherein our personal liberties will be secure.

Briefly, we propose to ask every patriotic industrialist to pledge himself to become an outspoken advocate of the free institutions and traditional ideals of America. We want him to miss no opportunity to broaden the appreciation and understanding of the importance of free enterprise as one of the inseparable foundations of personal freedom. We want him to pledge himself to be ever on the alert against attacks on the tripod of freedom in America and to hold himself in readiness to meet such attacks with all the vigor and intelligence which he commands. We want him to discuss the principles of a free society with his wife, with his children, with his business associates; with clergymen and educators and civic leaders; before patriotic societies, service clubs, and young peoples' organizations; to discuss them, in fact, with every true American with whom he comes in contact.

All of these who should be, and in general are, firm exponents of personal freedom can be important opinion-molding agencies. Through them this movement to create a better understanding of American private enterprise can spread far beyond the limits of our own contacts.

THE GOAL OF AMERICAN PROGRESS

Our country and its institutions are fundamentally sound. With economic understanding, backed by the irresistible force of unity of purpose, virtually no goal is too ambitious for us to seek. Industry's dream for America is more and better food, shelter, clothing, and transportation; more education; more cultural opportunity; more leisure for everybody. It seeks, moreover, to set up reasonable safeguards against the four specters that haunt the minds of every human being—the specters of sickness, unemployment, old age, and death. Industry recognizes, however, that physical comfort is not enough; that no man lives by bread alone; that to be truly happy a man must have intellectual, political, and spiritual freedom.

Such is industry's objective for America. It is difficult to comprehend that it will not have unanimous support. Yet there are those who will not admit that business can really have a patriotic purpose. We shall be accused of engaging in a gigantic campaign in the selfish interest of industry alone and of being actuated by political motives.

DEFENDERS OF FREEDOM OF ENTERPRISE

Yet no sincere individual, eager to help preserve our American liberties, can possibly justify the denial to industry of the right to champion free private enterprise. Every other one of our fundamental liberties has its own defender. The church properly rises up in arms at every attack upon religious liberty; academic freedom cannot be questioned without drawing the immediate fire of educators everywhere; a free press finds militant support among the newspapers of the Nation. Freedom of speech is defended by those who desire to talk publicly; the right to vote, the right of free assemblage—all such rights find support from among those who exercise them. Must private enterprise, so equally essential to human liberty, remain undefended? Industry says "No." Concurrently with our constructive program for patriotic cooperation and mutual understanding, the National Association of Manufacturers, directly or with the help of manufacturers participating in this mobilization, will also endeavor, courteously but decisively, to refute every false accusation of substantial importance that is made publicly against industry. In this, too, we want the support that I know the people of this Nation will give to any group which has the courage of its convictions in a cause vital to the public interest.

Again, I invite every public-spirited manufacturer to join with us in this patriotic crusade for the maintenance of economic and personal freedom. In fact, we would appreciate the counsel of every person who feels deeply on this subject and will take the time to write the National Association of Manufacturers, 14 West Forty-ninth Street, New York City. Even though we may not be able to respond to every such communication, you may be sure that all suggestions will be considered carefully. For, though this program is of and by industry, it is with and for the people of the United States.

TOWARD REALIZATION OF AMERICAN IDEALS

The realization of the American ideal of a constantly rising standard of living; the preservation of the spiritual freedom in which the full social value of individual initiative and enterprise alone can be made effective; the maintenance of a civilization in which all men are recognized as persons, with rights that no rulers or classes or majorities may annul—all these objectives are at stake as we face the future of free private enterprise in the United States. As patriotic Americans we must take to the oars vigorously if we are to hold our course steady in the conflicting social and political currents of the chaotic world in which we live. As manufacturers, we must always come into the court of public opinion with clean hands and fully discharge our responsibilities of social stewardship. As citizens we must help keep America true to her basic principles and ideals. To the attainment of that objective let us enlist ourselves and all who share our purpose, with faith that we cannot fail.

Crawford Williamson Long Commemorative Stamp

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 11 (legislative day of Monday, April 8), 1940

ADDRESS BY POSTMASTER GENERAL FARLEY

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and informative address by the Honorable James A. Farley,

Postmaster General of the United States, which he delivered at Jefferson, Ga., on April 8, 1940. The occasion was the first-day sale of the postage stamp issued to commemorate the first use of ether in performing a surgical operation, when it was used during an operation by Dr. Crawford Williamson Long.

A statue of Dr. Long was placed in the Hall of Fame of this Capitol in the year 1926 as one of the two statues permitted the State of Georgia. Official recognition by the Post Office Department of the justness of Dr. Long's claim to the honor of this great discovery is gratifying to thousands of Georgians and to lovers of truth and justice everywhere.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It affords me a great deal of pleasure to visit your distinguished State again. Your gracious hospitality and your heart-warming friendship always make me feel perfectly at home among you. I am sure that such cordiality to the visitor within your gates springs from your love and pride for your State, its history, its traditions, and the famous wonders of benevolent nature. Your beautiful Nacoochee Valley, described so interestingly in Indian folklore, the mountain peaks, not many miles from where I am standing, your majestic Stone Mountain, the largest exposed mass of granite in the world, your internationally known springs, with their healing waters, are included in your many endowments of Mother Nature.

In the affairs of the Nation, Georgia has always assumed and maintained a commanding position in the sisterhood of States. I am reminded that you were one of the Original Thirteen Colonies, budding into statehood with an area larger than that of any other State east of the Mississippi River, a veritable empire in itself. Moreover, three of Georgia's citizens were numbered among the signers of the charter of man's freedom, the Declaration of Independence. Indeed, your renowned statesmen and national leaders, in all walks of life, have occupied preeminent places in the building and development of our Republic.

It is both significant and fortunate that the humanitarian whose work we are gathered here to commemorate should have come from your own red hills of Georgia, for ever since James Oglethorpe launched at Yamacraw Bluff in the New World a haven for the oppressed of the Old World the sons of Georgia have carried on that tradition of sympathy and helpfulness for their fellow man.

I am most happy, too, that on the very day when the distinguished lover of nature, John James Audubon, is similarly commemorated in St. Francisville, La., that the town of Jefferson and the State of Georgia should acquire this 2-cent stamp in the series issued for famous Americans. It will remain, I am certain, an eminent memento of your State's greatest benefactor of humanity—the first man successfully to use ether anesthesia—Dr. Crawford Williamson Long.

It is a long way back to that spring day of March 30, 1842, when the settlement of Jefferson was but a rural community encircled by extensive plantations of "king cotton," many miles from a railroad. But let us glance briefly at the first surgical operation to be performed painlessly under the kindly influence of ether.

The patient, James Venable, who stated that he had delayed having this operation because he feared the pain, steps into Dr. Long's modest surgery. While a group of students look on curiously, Venable lies down on the couch; Dr. Long, using an ether-soaked towel, puts the patient quietly to sleep. A needle thrust into his arm brings no reaction. Dr. Long then takes his surgeon's knife and proceeds to operate. The wound sewed and bandaged, Long removes the towel and Venable regains consciousness. The only way he can be convinced that an operation has taken place is by showing him the tumor removed from his neck.

Today, this procedure seems commonplace; it is routine. We forget to marvel at man's greatest conquest—his triumph over pain. Throughout the ages men have tried to free the operating table from the curse of torture. Ancient and medieval peoples alike sought in vain for drugs and for all the "drowsy sirups of the world" to soothe their physical pain. But it remained for Dr. Long, as with a magic wand, to discover the formula and develop the process that was to drive away the shadow of pain and bring surgery into the daylight of modern accomplishment.

Because of this quiet country doctor from Georgia's ruddy hills, the mantle of suffering was removed from the surgeon's knife. And men of all races, creeds, and classes must be forever united in generous gratitude to the discoverer of anesthesia.

Dr. Crawford W. Long was born, as you know, in Danielsville in November 1815. He studied at Franklin College—now the University of Georgia, where the State motto, "Wisdom, justice, moderation," must have impressed itself deeply upon the young man's mind. From the age of 5, when Crawford held his sister's almost severed fingers in place until help arrived, a career in medicine was ordained for the boy. "My profession," Long said later, "is to me a ministry from God."

He studied at Ben Franklin's University of Pennsylvania, then the best medical school in the country, and graduated equipped with unusual surgical skill and judgment. Then came the great decision of his life.

Here was an alert young doctor, well-trained, personable, ready to practice his time-hallowed profession. New York, Boston, Philadelphia, were his for the asking. But Crawford W. Long, like that great beloved son of Virginia, Robert E. Lee, decided to go back to the native soil of his home State and to pass his life among his own people. And here he practiced his art, according to the ethics of the physician, "with purity and with holiness."

Returning to Jefferson, the young man took up the duties of a country doctor of the old school. His sensitive fingers and friendly manner soon built a thriving practice, and the hoofs of his old gray horse, Charley, beat out a familiar rhythm in the lives of his neighbors. Crawford Long was a true southern gentleman—homey, genial, with a warm circle of friends who played whist and read with him the newest books of Dickens, Longfellow, and Washington Irving.

They often watched the traveling lecturers on chemistry demonstrating the hilarious effects of laughing gas on members of their audiences. Or they would go to one of the fashionable "ether parties" which your grandfathers and grandmothers probably used to enjoy.

Long had remarked that members of these parties never seemed to notice the knocks they got while under the influence of the laughing gas or ether. Logically, if either relieved the pain of bruises, perhaps it might relieve other pain as well. The successful experiment with Venable in March 1842 gave Crawford Long a practical demonstration that his theory was right.

Naturally, his discovery provided Dr. Long with a great sense of exultation—but also a sense of grave responsibility. The experience was against all medical teaching and varied were the opinions of his colleagues. Perhaps not all patients could be put to sleep in this way; perhaps this anesthesia was not due entirely to the ether; perhaps the effects would wear off too quickly to permit a major operation. There were a thousand skeptics. Long had been educated against rendering a premature judgment. So he waited for more opportunities, more patients, before publishing his results.

But Jackson County, 98 years ago, was small and inaccessible. News traveled only by word of mouth. There was no medical society; there was no hospital; there were but a few scattered patients and a major operation was a rarity. So Dr. Long had all too few chances to test his method. He was perfectly candid. There were no secrets about his work. He sought no patent or financial reward. To help his patients was of first importance, and to obtain recognition for his service to the field of medicine was secondary.

Whoever said that "character is the only exact measure of anyone's might in the world of action," would have labeled Crawford Long a mighty individual. A faithful physician, Long was also an ideal husband, father, friend, and citizen. He was the personification of southern good manners; quiet, gracious, modest, with a high reverence for womanhood. Life to him was something mellow, to be enjoyed in one's home or one's garden.

Admired by all women for his charm and striking good looks, and respected everywhere among men, Long never hesitated to assist an old friend. His daughter admitted, "There was nothing of which he was afraid, but he would always dodge a bee." I'm not so sure he always did. Talking, once, with friends, he used the phrase, "an aching void." One bright fellow commented, "Doctor, how can that be? No void can ache." Whereupon the good doctor calmly replied, "Have you ever had a headache?"

But the evenness of disposition of this man was remarkable. When he finally submitted his claim for recognition, he wrote: "Should the society say that the claim, though well-founded, is forfeited by not being presented earlier, I will cheerfully respond, 'So might it be.'" Such modesty was hardly suited to win his battle. Yet, never in all the years of struggling did his disappointment turn to hatred. Indeed, he hesitated to share his sorrow for fear of making others unhappy. Dr. Long's aim was always to make others well—and happy.

What was the effect, then, of the unfortunate War between the States on this true physician whose only wish was to benefit his fellow beings? Long at first opposed secession; but when Georgia left the Union, he once more went with his State. Throughout the 4 years of the conflict he contributed freely of his medical services, behind the lines as well as on the battlefields. The trials of economic and military warfare he bore without complaint.

One dramatic incident stands out. When Sherman's advance menaced Long's home, he galloped from the front to remove his daughter, Frances, out of danger. In a glass jar he placed all the documentary evidence pertaining to his discovery. Since its loss would certainly end whatever hopes he retained, he admonished her to take the greatest care of the jar during her escape.

"I will die before I surrender it," the excited girl exclaimed. While Long rode back to the lines, Frances hid the precious jar under her numerous petticoats and sped off to safety.

After the war Long went back to help his people mend the soil of the shattered South and the bodies of its despondent citizens. He had the strength and courage to overcome his poverty and rebuild his practice and his position in the community. Always he searched for medical truth. He was one of the first physicians to believe that fresh air and diet would help tuberculosis. He was in the forefront of his profession in using quinine and in treating typhoid. And he died as he had lived, at the bedside of a patient to whom he had just administered ether.

Certainly, the world was made richer for this man's life. Even had he not been the discoverer of anesthesia, Crawford Williamson Long's intense ambition to do good would stand as a monument to his profession. His unselfish devotion to duty—in the face of successive obstacles and disappointments—throw a welcome spotlight on man's all too often forgotten humanity to man. "The mills of the gods grind slowly, but they grind exceedingly fine," is a familiar

quotation. Today the world acknowledges Dr. Long's benefaction to mankind. Now, through this commemorative stamp, his fine face, his distinguished name, and his great contribution to humanity will be known to millions more who will honor and bless him.

"The measure of true greatness," said your Dr. Garnett Quillian, of Atlanta, "is determined by what one does, the spirit in which one does it, and its usefulness to the world." Dr. Long's work stands alongside that of Jenner, Lister, and Louis Pasteur. His spirit of faultless humility reminds us, perhaps, of that great Frenchman. Dr. Long's contribution in overcoming the tyranny of pain is of immeasurable value. Surely, I would not be far wrong in thinking that his service to humanity deserves its own memorial in the far-flung heavens of man's achievement.

This stamp carrying the image of Dr. Long, first issued today, is of the 2-cent denomination, and is red in color. I commend it to you as a well-deserved national tribute to one of your best-loved and most-famous sons; its color is most appropriate in symbolizing the red old hills of Georgia, which you have so widely memorialized in song and legend.

In conclusion, may I refer again to the words of Dr. Long, embodying the noblest concept of duty and responsibility in the heart and mind of man—words which are chiseled deeply in the marble base of the Crawford Long statue in the Capitol at Washington for countless thousands to see and consider—"My profession is to me a ministry from God."

The War in Scandinavia

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 11 (legislative day of Monday, April 8), 1940

ARTICLE BY HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, pursuant to the permission granted me during the course of my remarks today, I ask to have printed in the Appendix of the RECORD an article by Hugh S. Johnson, from the Washington Daily News, of Thursday, April 11, 1940, on the subject of The War in Scandinavia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, April 11, 1940]

ONE MAN'S OPINION

(By Hugh S. Johnson)

The most cockeyed reaction to the outburst in Scandinavia is that it sets the "isolationists" back on their heels. It doesn't even bear on the question.

I hate sloganeering labels, yet I would rather be called an "Americanist" than an "isolationist"—although I sincerely believe that they are the same thing; and, if they are, "what's in a name?" But what is sauce for the goose ought to be the same for the gander. There are only two sides to this question. My suggestion is addressed to the amateur military kibitzers who insist on our taking partners in this dance of death, and who call people of my opinion "isolationists" because they believe in arming our own dugout to whatever extent is necessary and staying in it. My suggestion is that these people proudly label themselves "interventionists"—and, since they glory in their opinions, be proud of the descriptive title which far more aptly distinguishes them than the word "isolationist" describes our train of thought.

It is absolutely fair to label them as "interventionists." But maybe it isn't fair to do so without distinguishing between two clear classes of them. One group presses for American intervention on purely idealistic grounds. They are the do-gooders. They think "The Son of God goes forth to war." They want to send other people and other mother's sons or other people's money into this bloody shambles to maintain "decency on earth."

Even that statement might, on the surface, seem to carry an element of unfairness. Some of them are willing to embark themselves and their own sons on such a crusade. But whatever unfairness springs from this is only superficial. There is ample opportunity for this kind to do this right now. All they have to do is to go across the Canadian border and enlist. If they want to sacrifice their treasure as well as their blood, the British and the French treasuries will accept it with gracious notes of thanks.

But most do-gooders and "great liberals" are not considering personal sacrifice. They get, if they do not seek, the crown of public approval of their bleeding hearts without bearing any cross or personal sacrifice to achieve it. They ask a vicarious sacrifice. They want to make "the Government" do it—which means to make everybody do it whether everybody agrees with them or not.

But there is another and entirely different school of interventionists with whose reasoning I have full respect even if I can't agree with their conclusions. They say that we ought to get into this war on the Allied side to lick Hitler as the cheapest means of self-defense. Of course, they do not dare say, in the present state of public opinion, that we ought to send troops and ships; but, as the President has said and undoubtedly believes, only measures less than war but more than words.

The more realistic among them well know and privately admit that these are mere "mealy mouthings"; that modern war is more deadly on the economic side than on the military side; that you can't wage economic war without getting into bloody war. But they insist, nevertheless, that this is our best war strategy—come what may.

I respect that approach because it is fundamentally American and realistic. But I question its amateur and deadly conclusion. It threatens to sprawl our military and naval defense all across the world and so to fritter and destroy our strength. If this war proves anything, it proves that no nation can depend on the alliance or protection of any other. All wars prove that dissemination of fronts and forces is fatal. Every military principle demands that we put ourselves in a position to defend ourselves on this hemisphere against any combination of enemies and get the hell out of the other hemisphere in both Europe and Asia. We can't do that on the policies of the interventionists of either class. They are both counselors of evil and danger.

"Return to the American Way"—Republican Campaign Speeches

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 11 (legislative day of Monday, April 8), 1940

EDITORIAL FROM THE MONTGOMERY (ALA.) ADVERTISER

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Montgomery Advertiser of April 10, 1940, under the heading, It Is a Campaign Year, in which is discussed a certain feature of some Republican campaign speeches.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Montgomery (Ala.) Advertiser, April 10, 1940]

IT IS A CAMPAIGN YEAR

Editor Charles Michelson of the Democratic Clip Sheet begins a piece by remarking that "one of the stalest and most tiresome in the whole list of banalities with which the speeches of Republican orators are filled is that the country must 'return to the American way.' It must be got back to the good old-fashioned American methods and, of course, the only reliable agent that can be found to turn the trick is the G. O. P."

The first thing to be noted about this slogan is that it is an appeal to go back, says Editor Michelson. "No hint here of going forward in the energetic American way, by improved means, to better things, but always the refrain, 'Backward, turn backward, O Time in thy Flight.' Back to the good old days when we Republicans were running things."

Because this is a campaign year one does not expect his partisan pamphlets to be rigidly bound by the old-fashioned rules of logic. The people like their political thunder and lightning loud and brilliant. And knowing this Editor Michelson proceeds to roar at the iniquitous Republican Party in the following charming manner:

"But another more important feature, which is not mentioned by Republican propagandists, is the specification of the exact American ways to which they are inviting the people of the country to retrace their steps. There have been many kinds of American ways in the history of the Nation, many ways fully entitled to be called American because indorsed by use and public sentiment. Travel by stagecoach; sulphur matches, candles, kerosene lamps, snuff taking, and public spitting were once unprotested American ways. We don't suppose it is to these things the Republicans wish the public to revert.

"If they don't mean that, what do they mean? Let them be specific. Coming closer to the present, in the last part of the last century and even in the first years of the present century virtually the only way of settling bitter strikes was to call out the militia or the Federal troops and shoot down the strikers. It was then the 'American way,' because it was generally practiced and was opposed only by those being shot at and their few sympathizers. Is this an American way to which the Republicans want to go

back? Do they want to abolish all the enlightened labor legislation over the years up to and including the Wages and Hours Act and the Labor Relations Board, so that we may return to those sanguinary methods?

"Perhaps they only mean that they want to return to the more recent time of 'normalcy' under the Harding administration, to Teapot Dome, and Daugherty, and the looting of the Veterans' Bureau. It may be unfair to suppose they want to go back so far, but they surely have some definite thing in mind when they ask us to follow them back to the 'American way.' If it isn't any of these 'American ways' practiced by publicly approved officials, then they must want back those splendid days of Coolidge and Hoover. In the 'American way' as understood then, the 'free enterprise' of banks to fail and ruin their depositors, of corporations to water their stock and defraud their shareholders, of promoters to peddle worthless securities was unrestrained.

"Under those 'American ways' the aged and the unemployed were protected in their inalienable right to get work or starve, the privilege of farmers to sell their wheat for 32 cents, their corn for 19, their hogs for 3, and their cotton for 5 cents was unchallenged, and the claim of the destitute and hungry on the sufferance of private charity was rigidly upheld.

"We are asked to go back, back to some good old 'American way,' which because of the source of the appeal must also have been a Republican way, and we are entitled to know what one. The list is open. Let the Republicans pick a number."

The Republicans have picked their number. They want to go back—into power, and be party No. 1 again.

Booker T. Washington

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 11 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, AT COLLEGE HILL STATION, NEW YORK CITY

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by me at the exercises in connection with the first sale of the Booker T. Washington commemorative stamp at College Hill Station, New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, honored and distinguished guests, ladies and gentlemen, I deem it a rare privilege to be here this morning and to share with you the pleasure of participating in these splendid commemorative ceremonies. I know that this occasion is the source of great joy and satisfaction to all who are familiar with the life and the works of Booker T. Washington. It is likewise a source of encouragement to the colored people of America to realize that one of their own has finally been recognized and honored by the leadership of our representative democracy. Such deserved recognition is truly representative and should be encouraged in every field of human endeavor.

Postmaster Goldman, whose leadership and cooperation has helped to make this demonstration the splendid success it is, deserves our commendation.

I am especially pleased with the favorable reaction of the country to the series of famous Americans postage stamps now being issued by the Post Office Department.

Every phase of American life is recognized—author, poet, scientist, inventor, composer, and the educator.

In this last caption the great and outstanding work of Booker T. Washington, not only among his own people but as a noted American educator, is fittingly commemorated on a postage stamp that will always be recognized as a symbol of peace.

Washington's heroic work at Tuskegee is world-wide in its merited recognition. It is a factor in bringing deserved recognition to a race that never before attained such greatness in so few years. He advanced the cause he loved. He won the admiration of every race.

This national tribute can only serve as an inspiration not only to the Negro citizen but to every American as well. April 7, founders' day at Tuskegee, is an appropriate date and place for the first-day sale of this stamp, because it was there that Washington devoted his tireless energies and his love for his people, which have had a lasting effect upon our country. Tuskegee stands as a monument to his memory and the efforts which he lived to see realized, the advantages of cultural education which brings with it the heritage all of us enjoy as American citizens—life, liberty, and the pursuit of happiness.

The popularity of this stamp is evidenced by the prediction of Post Office Department officials that this will be the largest first-day sale of a 10-cent stamp in the history of the Post Office Department, and I have been eagerly awaiting the first-day sale of the Booker T. Washington stamp. It will be a distinguished addition to my collection of famous Americans.

Now that the President of the United States the Honorable Franklin D. Roosevelt, as well as the Postmaster General, the Honorable James A. Farley, have given this well-merited recognition to Booker T. Washington, I trust that the Congress of the United States will lose no time in the enactment of the anti-lynching bill now pending in the Senate. The adoption of this measure will be an act of justice which has been delayed and postponed altogether too long now. By the issuance of this commemorative stamp and by the enactment of this legislation, the cause of culture, education, justice, and humanity are advanced. I urged the issuance of the Booker T. Washington commemorative stamp; I will vote for the Gavagan-Wagner antilynching bill.

What the Constitution Means to Us in the World Today

EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

ADDRESS OF MISS MAURINE JACKSON, BOONVILLE, MO.

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an oration, What the Constitution Means to Us in the World Today, as written and delivered by Miss Maurine Jackson, Boonville, Mo.—Miss Jackson having been awarded an all-expense trip to Washington, D. C., as provided by me, in cooperation with the American Legion.

The address follows:

We, the people of the United States, enjoy today freedom and liberties which are granted by no other government in the world. We are guaranteed by our National Constitution a democratic government which gives our people the power to decide just what their legal rights shall be. Therefore, our Constitution should mean to us today a protection of individual liberties and participation in Government. The aim of democracy is to express the common will.

In a totalitarian state the people do not govern themselves. The head of the state is a dictator who has seized the reins of government and who can hold them only so long as the armed forces of the state are loyal to him. But the main body of our Constitution provides for three branches of Federal Government which may act as check and balance upon each other; thus the citizens are guarded against unwise and corrupt officials who may try to take away these guaranteed rights of the people.

European dictators deny their people freedom of religion, speech, press, and assembly on the basis that these stand in the way of efficiency. For those who disagree with the government of the totalitarian state, there is no access to the agencies of communication. These are used as propaganda tools of the government, and only one point of view is allowed. Personal liberty in the totalitarian state is clearly expressed by Mussolini: "The only freedom that can be seriously considered is the freedom of the state and the individual within the state." According to this statement individuals are never free to act as individuals, only as part of the state.

In a democracy personal liberty is carefully safeguarded. The government is the servant of the individual. Amendment I of the Constitution prohibits Congress from interfering with personal freedom of the people. Therefore a citizen may, without Federal interference, criticize the Government in speech and in writing, and may take part in meetings of protest against it. The only limit that need be placed on free speech is that it shall not directly give rise to an unlawful act. If he is accused of breaking the law, amendment I assures him of a prompt and public trial by jury. If belonging to any party, race, or group in the minority, he is entitled to protection should the majority try to interfere with his rights.

The framers of our Constitution saw clearly the value of unlimited discussion of all matters. Undoubtedly they realized the fact, that the very lifeblood of a democracy is well-informed public opinion; also they realized that free speech is a safety valve by which the grievances of persons or groups may be harmlessly aired.

The dictator gives no intellectual freedom to his people; he abolishes independent thought and tries to weld the millions of

separate human minds into one. Thus, many of the most distinguished scholars of Russia, Italy, and Germany are now in exile, or have been liquidated.

Articles I, II, and III and also the amendments of our Constitution provide for public rule; and government by the people is government for the people. Participation in government adds to the interest in life and sharpens the intellect. The individual character is elevated in that democratic rule broadens the sympathies and cultivates a civic consciousness.

In many respects, the Bill of Rights is the foundation stone of our American democracy. Under its provisions, American citizens may resist abuses and inequities which the people in Germany, Russia, and Italy must endure with no murmur of complaint. In a democracy the law is designed to protect the individual; the law of a totalitarian country is nothing but a means of regulating the people in serving the state.

Our Constitution does not create liberty—it merely gives liberty a voice. The preservation of human right will always depend upon the watchfulness and zeal of those who love freedom; thus the rights and privileges of citizens involve corresponding duties and obligations.

In these troubled times when the isms of the old world challenge the principles of democracy everywhere, the words of Abraham Lincoln point the way to the preservation of American constitutional democracy. Heed them we must—ignore them, and we too may awake to find liberty only a record of history. Our duties and responsibilities are clear. "Not with presidents, not with office-seekers, but with you is the question: Shall the Union and shall the liberties of this country be preserved to the latest generation?"

The Jeffersonian-Jacksonian Democratic Party

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

ADDRESS OF GEN. HUGH S. JOHNSON BEFORE THE NATIONAL DEMOCRATIC CLUB OF NEW YORK

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following able, fearless, and sound American address delivered by Gen. Hugh S. Johnson, a Jeffersonian-Jacksonian Democrat, before the National Democratic Club of New York on April 6, 1940:

We are met to honor Thomas Jefferson, the father of the Democratic Party. I'll bet he would be glad to see many of you, but I doubt if he would recognize what passes for sons of his in Washington. For old times sake I'm glad to foregather with anybody who ever even used to be a Democrat. But I marvel at being asked to speak to a Democratic club. Gee whiz! I'm a Democrat.

You ought to ask such battle-scarred party veterans as Harold Ickes and Henry Wallace, who probably never voted the Democratic ticket in their lives before 1932—and maybe not then—or the vaudeville team of Corcoran and Cohen, who, if they did support the party before 1932, were not important enough or responsible enough to have it make any difference. My information is that they were Hooverites.

But you asked for this. I didn't. You were specifically warned when I was asked to come here that I am not a linguist. I can only talk like a Democrat and not like the mangled "whatizitz" made over by the bright young men of the Washington palace guards.

I couldn't express my idea of what has happened to the Democratic Party any more plainly than I did in a recent column:

"There used to be a Jeffersonian-Jacksonian Democratic Party which was usually a majority. It consisted mainly of the agricultural South and West as a balance to the industrial East plus what it could win in the East. It was organized not to exploit but to prevent exploitation, not to regulate but to prevent regulation. It sought to direct fundamental national policy rather than to force handouts from the Federal Treasury. If it was against anything, it was that. Its foremost slogan was: 'Equal opportunity for all; special privileges for none.'

"That grouping in the first half of the last century was almost unbeatable. Then the Civil War came. It split the West from the South and poured so much blood and bitterness into the wound that for two generations western farmers voted for Republican high tariffs against their own interests, largely because the South was against the tariff. All the Republicans had to do was to go out to the great open spaces, wave the bloody shirt, and orate about mother, Bible, home, and flag, and the farmers forgot their interests and voted the regular ticket.

"That split made the Democrats generally a minority party until 1932 when the reunion of the West and South was accomplished largely on the Democratic promise of adequate farm relief. The Republicans had been leaning in that direction, too, but they were not quick enough. Mr. Roosevelt swept the prairies on a policy of recreating the majority South-and-West party of Jefferson and Jackson.

"New advisers flocked around him. Many were not Democrats, but they knew which side was up for them. They reasoned that western agriculture alone was too weak a reed to lean upon—that it was Republican by heredity and could be taken back by G. O. P. promises as it was taken away by Democratic promises.

"They invented the idea of building upon the basic Democratic minority, especially the solid South, by organizing and attracting through Federal hand-outs every discontented group in the country, regardless of previous political leanings, regardless of general policy, regardless of anything but political power and victory. They took the Negroes, the unemployed, part of labor, part of agriculture, the Townsendites, and the organized so-called youth groups—all the pressure blocs who are in politics for themselves first and the country afterward. They took them and they can keep them as long as they can subsidize them out of the public Treasury or until somebody else promises to subsidize them more. It is like the Cave of Adullam where King David of Jerusalem once hid and, according to Holy Writ, 'Everyone that was in distress, and everyone that was in debt, and everyone that was discontented gathered themselves to him and he became a captain over them.' From there they raided the rest of the people. These are the Adullamites and not the chosen Democratic people, and I warn you right now that I am not an Adullamite.

"It is a strange collection whose divergent demands have created the incredible inconsistencies of this administration. Grouped together, these organized discontents could never alone win any election, but added to the South, which is in political bondage to the Democrats, they swing the balance handsomely—notwithstanding that almost every policy forced by this grouping is such a contradiction of traditional Democratic principles that neither Thomas Jefferson nor Andrew Jackson could recognize it stripped to the buff in a nudist colony.

"It is formidable while it can be kept in line, but it is in no true sense a political party. It is a monstrous demagogic contraption, assembled with hairpins and hay wire, and stuck together with spit."

I am not here pleading that the Democratic Party dig up the bones of Andy Jackson and go back to all the Democratic policies of 1835. I fervently agree with Thomas Jefferson who said, "You may as well expect a man to wear still the coat that fitted him as a boy as that civilized society should ever remain under the regimen of its barbarous ancestors."

I want to see the Democratic party keep ahead of the necessity for social legislation. In a 12-year fight, I helped to invent and sell to it the idea—the necessity—of granting economic equality for agriculture. Maybe my old Blue Eagle was no aquiline Joe Louis. He certainly was picked to death by a sick chicken. But he first put into effect almost every principal social advance of this administration—maximum hours and minimum wages, abolition of sweatshops and child labor, collective bargaining and independent labor representation, a tribunal rather than conflict to settle labor disputes, and an effort, at least, to inject some decency into the welter of cutthroat methods in industrial and commercial competition.

Those things were in the bible of the liberalism of the old Democratic Party—the Chicago platform. I am, therefore, not here to apologize to so-called fourth New Deal liberals for either the true party or myself being reactionary. Our party always was the liberal party in this country. Democrats invented and did these things, and every other social advance, while fourth new dealocrats talked about them. But none of these early doings of necessary things tried to set class against class in this country, to wreck the economic system that made this country great, to build up any crazy-quilt Cave of Adullam political monstrocity by Federal hand-outs to quiet the complaints of every discontented group in the Nation.

I object to that for two of many reasons. In the first place, the way to satisfy discontent is to remove the causes—not to lard its symptoms with subsidies. In the second place, neither our political nor our economic system can long endure the cost of billions of annual hand-outs to purchase dissident groups and to make the Nation safe for the Democratic Party.

We have spread rich salve on the symptoms of our disease, but, as to every single cause of discontent, we have improved not one. Agriculture still remains in the economic "dog house" with its condition impaired rather than improved. Unemployment, which is the prime cause of all the other separate discontents, remains at about the same despairing figure. I go a step further. I think that the very cost and uncertainty of this method of salving symptoms has prevented and delayed a cure. The cure is for our business system to go back into normal activity. That salve has cost us twenty billions and increased our debt and taxes to a danger point. There is no relief in sight. That debt, those taxes, and this political program of further spending—debt, taxes, class hatred, and continued threat to the very basis of our tried and proved economic system—these evils are of themselves the proximate and removable cause of our national distress. Their removal is the cure of that distress and of every important dis-

content for which we have opened the Federal Treasury, mortgaged our future, and made our lagging economic failure a reproach and a laughingstock for most of the world.

This disastrous approach to such a problem is utterly inconsistent with every traditional principle of the true Democratic Party. Never in the history of politics was there a simpled, sounder, or more honest political platform than that adopted in Chicago in 1932. It was of the very fiber and substance of the Jeffersonian and Jackson tradition. And it worked. It worked as no political formula ever worked before in an economic field.

In this administration's first glorious hundred days, when it was brilliantly, faithfully, and courageously putting that platform into execution, our business and employment index went from the lowest point to the greatest advance in the shortest time in the economic history of this or any other country.

In the latter half of that year, under experiments advised by strangers to our Democratic faith, we began the shameful violation of every principle and promise of that platform—and we have been churning in economic futility and failure ever since.

This great party of ours doesn't need to be a big 90-percent dog wagged by half a dozen puppy tails of every radical group in this country. As between us and the Republicans, there is and there never can be in the minds of the American people any question but that ours is the liberal party—and this is a liberal age. There is no room for three parties in this country and there are not enough discontents in the Cave of Adullam to make a major party. They have no other way to go but toward this party of liberalism. Furthermore, there is no place else where it would be better for both them and the country for them to go. Any courageous and forthright Democratic leadership should recognize and act upon this simple fact, and not compromise with principle, cower and give down every time a minority pressure bloc or a Huey Long makes a noise like going third party or Republican.

Ours is a two-party system and not a system of political blocs in any party. That is rooted in the very foundation of our constitutional, parliamentary, and legal systems. Hitler could take over Germany principally because in the Reichstag there were no less than 26 separate political parties. The ridiculous parliamentary farce in France in the very presence of deadly danger is caused by a similar multiplicity of parties. The dignity and success and Strength of the mother of parliaments, Great Britain, happens because there, as here, there have been decades of devotion to the two-party system.

In England this insistence has gone so far that the minority in Parliament rejoices in the official but amazing title of "His Majesty's most loyal opposition," and its leader is paid by the Government £2,000 a year so long as he keeps his lead—£1,400 more than any other Member of Parliament. A substantial party of opposition is plainly necessary to liberty. It is frequently boasted by the Nazis that there is neither opposition nor unemployment in Germany. Neither is there in a penitentiary.

The two-party system is of the essence of democracy, because it is the only way to insure the sole object of democracy and free and liberal institutions—majority rule. You can't get majority rule on continued policy with twenty or half a dozen parties—or even three. It creates the logrolling monstrosity of horse trading, in which perhaps almost insignificant minority blocs can make the great groups of the people's representatives jump through hoops by throwing their influence this way or that on closely divided questions in return for some other concession not supported at all by the great body of the electorate. It is a frustration of democracy and of our most treasured standards.

This is especially true in a three-party system, and as we have seen—and the point I am trying to make is this—it is dismally true in a two-party system where one of the parties is in truth controlled by a collection of conflicting pressure groups fastened like ticks on the body of a traditional American political party. These groups take continuously, but they rarely give. It is hard to defend the charge that our great historical party has sold out not only itself but the country to minority groups of the most special privilege ever known in our history. We have erred from simple lack of courage to fight the issues through on principle rather than political pap. What does the party get from its burden of fellow travelers?

It seems worth noting to me that in getting its battles fought and mostly won in Congress and the country this administration has had little help from some of these strange new fish in the Democratic puddle. They make the policies, but they can't put them across. The old-line Democratic leaders have to swallow every nauseous dose they brew and sell it to the Congress.

It is these veteran Democrats who have borne the heat and burden of all these close contests—not the Schwellenbachs, the Peppers, and the Mintons, nor yet the Ickes, Hopkinses, Corcorans, or Wallaces. It has been the Pat Harrisons, the Joe Robinsons, the Jimmy Byrnses, the Georges of Georgia, the Cordell Hulls, and, saddest of all, the loyal, faithful Farleys. They have carried the fight and torch and all too often gotten kicks in the pants for their pains. Certainly our genial Jim, for all his smiling face, used to seem to sit down tenderly as though he would like an air cushion. Now he is not so careful, but that is because of the callouses. But, above all, how can we excuse the submergence of the guy that got more votes than any Democratic Presidential candidate before his time—the man who for a generation stood as the leading standard bearer of liberal legislation in this country, the captain who laid Franklin Roosevelt on the doorstep of the Democratic Party, the "happy warrior," Alfred E. Smith—and I would like to know where he is tonight. He is still alive, but he is as far forgotten as Jefferson, for whom a great monument is being erected in Washington by the new dealers—tons of granite to keep that mighty hero from rising from his grave and driving them into the Atlantic Ocean.

The good Lord knows that I have no wish to give aid and comfort to the Republicans—much as they need it. They haven't shown anything yet to convince me that they have advanced much beyond the God-awful platform and me-too policy of the 1936 Cleveland convention. I haven't seen anything to indicate that they will put up a much stronger candidate than Governor Landon, and there is no word in the English language adequate to describe anything less formidable than all that.

The way matters are going now, Mr. Roosevelt, whether he takes himself out of the race or not, will be nominated by acclamation after some stampeding cross-of-gold and crown-of-thorns speech in the convention. Then, if the Republicans repeat their campaign of 4 years ago—nothing but criticism plus imitation New Deal—half of the party saying one thing and the other half saying the reverse of that and neither saying much—it will be 1936 over again in the election as well as the campaign, and they certainly have shown nothing different from that to date. It looks to me like another certain Republican defeat.

That's why I am sure that the Republicans are not going to get much aid or comfort out of my kibitzing and probably unwelcome advice to my own party. No; I am not much afraid that it is not going to be a Republican defeat. My concern is whether it is going to be a Democratic victory or just a triumph for a few fourth New Deal Adullamites, making a true jackass out of the grand old Democratic donkey, riding him to a victory they could not themselves possibly achieve, and then turning him loose for another 4 years to browse and fatten among the boulders and thistles of some barren back yard while they do Heaven knows what more of the same to the peace and prosperity of this country.

I think I am as good a Democrat as anybody in this room, but I'm not an Adullamite and I'm sick of being a sucker Democrat. In this I am not speaking from any yen for personal political preferment. I've got a job that I wouldn't trade for any on the political roster. But I am a citizen of the United States before I am a Democrat. In my opinion, further continuation of depression and distress in this country is totally unnecessary. I am convinced that it could vanish almost overnight with an administration of Democrats in Washington. I greatly doubt whether it will ever vanish if Democrats win and then again step aside to leave the reins still in the hands of the same cock-eyed non-Democratic crew of business baiters, wand-waving wizards, drunken-sailor spenders, janissaries, do-gooders, and experimental theorists.

Almost all it would take to restore prosperity would be to get rid of this crew. If Jim Farley, or Jack Garner, or Cordell Hull, or any other old-school Democrat got in there, they wouldn't even wait on inevitable action. Beginning the day after election, there would be the greatest exodus of economic pansies out of Washington since the Pied Piper did a job as exterminator for Hamlin, and business activity would resume like a flood.

They have gutted the Treasury and increased to the breaking point the burden of debt and taxes on the whole people. Worst of all, by these very actions they have built strong barriers to business recovery. In this terrible world war in which some of them yearn to embroil us our fiscal strength is so seriously threatened that if we are sucked in we can hardly hope to escape, before the end, bankruptcy and a totalitarian control of our democracy as complete and ruthless as anything that exists in Europe.

There is no help to humanity in that. We have maintained a plateau of safety—a refuge and a tower of strength for democracy in this country. This course is abandoning it to dilute our strength with the world's weakness and to get down in the gutter and wallow in the world's distress.

I wouldn't want to trust this problem to Republicans because I believe that there are too many among their seats of the mighty who want to turn the clock back beyond the principles of the truly liberal social advance of the great Democratic platform of 1932. I don't believe that can be done either without volcanic upheavals in another way retarding our long-overdue prosperity and threatening our peace.

There is no doubt in the world that necessary social advances have increased our permanent cost of Government to somewhere between six and seven billion dollars. But, in my opinion, all that it is necessary to do to bring reemployment and prosperity back to this country is to adopt a simpler rule. Do what government must do as economically as possible rather than this disastrous recent policy that it should be done as extravagantly as possible on the theory that excessive spending is of itself a virtue and a cure. That change in fiscal policy, plus a vigorous attempt to encourage our economic system to work rather than to abuse, browbeat, and put it under suspicion as an antisocial, barely tolerated, and almost criminal racket. That economic system is all we have to rely on. The only alternative to it known to man are communism and fascism, and neither has ever worked to anything except the destruction of human freedom and the reversal of every faith and tradition that we regard as peculiarly our own.

These two policies are the way out of our valley of despair—and they are the only way. The Democratic Party should be the leader in adopting them. Simply these two—governmental economy and the utmost in freedom of private enterprise consistent with the

public peace and welfare—these meet all the increased social requirements of our twentieth-century civilization, and yet are of the very essence of the democratic faith and principles of both Jefferson and Jackson. Their application has changed, and must change, with changing conditions, as Thomas Jefferson said, but the fundamental truths change no more than the multiplication tables, the procession of the equinoxes, or the mortality rates.

Let's get rid of the interlopers and usurpers in the Democratic Party. Let's throw out these strange doctrines which have defiled the temples of our political religion. Let's return to the faith and house of our fathers, and there let us—the Democrats and no strangers—be master in that house. Let's do these things, not merely as an act of party expediency but as a valiant deed in defense of the very security of our country and the welfare and prosperity of the citizens of every party, faith, and creed.

Expansion of Fort Knox

EXTENSION OF REMARKS

OF

HON. EDWARD W. CREAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

PROTEST FROM CITIZENS OF MEADE COUNTY, KY.

Mr. CREAL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following protest of the citizens of Meade County, Ky., to the proposed expansion of Fort Knox:

The citizens of Meade County are protesting against the proposed expansion of Fort Knox, Ky., for the reason that, in their opinion, the taking of the proposed land from Meade County will destroy the county as a political unit of the State of Kentucky and base their opinion upon the following facts, to wit:

Total acreage of Meade County is	192,640
Total acreage to be taken, approximately	52,000
Acreage remaining	140,640

Out of this acreage the Government now has approximately 3,000 acres in Otter Creek Park area, and approximately 7,500 acres in present Fort Knox Reservation, when deducted from the above figure will leave a balance of 130,140 acres of land in Meade County.

Total assessed value of the real estate and tangible personal property in Meade County is	$2,443,725
Approximate assessed value of the real estate and tangible personal property in the area proposed to be taken is	$869,660
Total revenue for county and school purposes	$53,088
Total approximate revenue received from the area proposed to be taken	$18,011
Total population of Meade County, 1930 census	8,042
Approximate number living in the area to be taken	3,000
Balance	5,042

Number of schools in the proposed area to be taken, 8 graded schools and 1 high school, total enrollment 531, total teachers 20.

Number of churches in the proposed area 10, with a total congregation of approximately 1,600.

Meade County is operating a rural-electric cooperative to which the Federal Government loaned $185,000 to construct a total of approximately 181 miles of line with a total of 512 customers. The average revenue for the entire county is $3.50 per consumer per month. In the area proposed to be taken by the proposed Fort Knox expansion will destroy 64.4 miles of line, together with the substation, 196 consumers who pay an average of $4.05 per month, which will readily show that the proposed area to be taken is the most highly developed section of Meade County. Without this area the R. E. A. cannot operate and meet its obligations.

The bonded indebtedness of Meade County is as follows:

Road and bridge bonds secured by a 20-cent special levy now outstanding	$101,000
School bonds paid from general school fund	36,000

Without the revenue in the area proposed to be taken, the road and bridge and school bonds will be in default.

In the area proposed to be taken are the following towns:

Muldraugh: Situated on United States Highway No. 31–W with a school and two churches with the approximate population of 300 persons.

Garnettsville: Situated on Otter Creek at or near the entrance of Otter Creek Park, with one school and one church, population of approximately 50 persons.

Grahampton: Situated on Otter Creek on Highway No. 60, an old settlement in which are located 3 churches, 1 school, and one of the oldest cotton mills in the South which employs about 30 persons; the total population of the town is about 100.

Flaherty: Situated on State Highway No. 64, in which are located one graded school, one high school, and the largest church in Meade County. This town draws from more than one-half of the entire proposed area and is a very prosperous town and church community; many of the residents have lived in this community all their lives, and it is situated in the center of the best farming section of Meade County. There is also located in this town the only flour mill in Meade County and is in the center of the wheat district.

Big Spring: Located on State Highway No. 333 at the intersection of Meade, Breckinridge and Hardin Counties. This town is an old settlement and is the trade center for a large community, including the Big Spring Valley, which is noted for its land fertility.

There are four community graveyards in this proposed section, including the largest graveyard in the county and a number of private graveyards, where loved ones of Meade County people are buried.

From the above information it is clear that without the area which is proposed to be taken from Meade County for the Fort Knox Reservation, Meade County cannot exist as a governmental unit; there could not be sufficient revenue collected from the remainder of the county to maintain roads, schools, and the necessary governmental expenses. The local R. E. A. cooperative could not survive without the revenue secured by it in this area.

In addition to the revenue problem, the proposed area takes the most highly developed farm land in Meade County and will scatter several old and established communities, destroy their churches and schools which they have been a lifetime building, without any possible remuneration, and will necessarily force them to move and leave their acquaintances and friends behind and seek to begin life anew in some other community.

The citizens of Meade County do not mean to be unpatriotic and are willing to share their part but do not feel like having their county destroyed when there is other land bordering and adjacent to the present reservation in other counties which can be taken and will not destroy either Meade or the other counties.

The reasons given above are assigned by Meade County, why all the proposed extension at Fort Knox should not be taken from Meade County, which is the smallest of any adjoining counties adjacent to Fort Knox.

The Transportation System

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

ADDRESS BY HON. CLARENCE F. LEA, OF CALIFORNIA

Mr. COLE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of the gentleman from California, Hon. CLARENCE F. LEA, before the Maryland Motor Truck Association, Inc., Baltimore, Md., March 27, 1940:

Mr. Chairman and gentlemen, I congratulate your association in being able to reelect as your president Mr. McComas, who so well represents your progressive and virile industry. Your president has also made a notable contribution to safe operation of the highways of our country.

I take pleasure in appearing before you at the central point of Maryland, with whose six Representatives in the House I have been so closely and pleasantly associated for a good many years.

I take particular pleasure in being at the home city of Congressman COLE. For a good many years Mr. COLE has been a member of the Interstate and Foreign Commerce Committee of the House, of which I am chairman. I have had a fine opportunity to know of his worth. He has given to our committee and to the country a service that is invaluable. Able, industrious, conscientious, practical, and courageous, he gives that type of service that the Nation so much needs. I would rejoice if we had more men like him in Congress.

Baltimore is one of the great commercial centers of our country. It is typical of our transportation system. Here the rails, the trucks, the busses, and water transportation meet and interchange their traffic.

We can visit the markets of your city and find a supply of every human need. The products of the truck patches of Maryland, California, and Florida find an equal place on your market stands. The factory products of the world are here. Our transportation system reaches out into the remote sections of the country and even to the rest of the world and makes Baltimore a market for their products.

IMPORTANCE OF TRANSPORTATION

From an economic standpoint the people of our country are engaged in three great enterprises: Production, transportation, and consumption.

In production we have the creative forces to supply the needs, the things people want.

In consumption we have the people using the things they want.

In transportation we have the connecting link between the producers and the consumers of the Nation. The function of transportation is just as essential as that of the producer. The speed, efficiency and economy of transportation greatly affects all values, labor, materials, and property alike.

For all time transportation has been a first consideration in the location of population as well as in progress. Rivers and harbors once determined the centers of population and the locations of markets for the exchange of goods, banking, and other enterprises. Naturally enough these economic centers drew to themselves activities such as education, arts, sciences, and other accompaniments of modern civilization.

America is a land of broad distances, widespread productive areas, and rich in its distribution of natural resources. It is occupied by people of higher consuming ability than any other great country. Its transportation will always be a dominating phase of our progress. Needless to say, as we deal with this problem, wisely or unwisely, we help or injure our country accordingly.

OUR TRANSPORTATION FACILITIES

Our transportation system consists of 3,000,000 miles of highways, reaching into every section of the land. They accommodate every form of highway traffic, including 30,000,000 motor vehicles. These private cars, trucks, and busses form a service in transportation that was beyond the dreams of the people of a generation ago.

We have 20,000 miles of domestic waterways. In the intercoastal traffic the ships serve half the population of the Nation. In the inland country we have thousands of miles of waterways penetrating the productive and industrial sections of the Nation.

We have railroad lines with a mileage extending 240,000 miles of routes and using 400,000 miles of tracks. There are 27 States in the country each of which has over 4,000 miles of railway lines.

Thousands of miles of pipe lines serve oil and gasoline to large areas in the Nation.

PLIGHT OF CARRIERS

The main reasons for our transportation problems are apparent. The first of these is the depression. That has reduced railway income by $1,000,000,000 a year and that of other carriers proportionately.

NEW TRANSPORTATION AGENCIES

The second of these is the difficulty of adjusting to new types of competitive transportation that have developed in the last 2 decades. Twenty years ago the Panama Canal had not become a factor in our intercoastal trade. Today it provides competitive transportation between the two coasts to 65,000,000 people living in the areas adjoining our shore line.

Twenty years ago pipe-line transmission of oil and gasoline was insignificant. Today a hundred thousand miles of pipe line perform a service for which they receive $138,000,000.

Twenty years ago the highways were little more than feeders for rail and water transportation. In the last two decades $11,000,000,000 has been spent in providing hard-surfaced roads for America. Thirty million vehicles use those highways. The development of the internal-combustion engine created one of the greatest economic adjustments any country ever experienced. Millions of horses and mules were taken from the American farms and supplanted by motor vehicles and tractors. Last year we spent on private passenger automobiles over $11,000,000,000.

Since 1920 the rail carriers have introduced economies that reduced the cost of their operations hundreds of millions of dollars a year. Reduced freight rates, increased cost of labor, materials, taxes, and other charges have wiped out those savings.

Today we have a surplus of transportation facilities, so far as the present needs are concerned. A turn for more favorable business conditions would reduce these surplus facilities. We cannot wisely dispense with the present surplus at this time and thereby create a shortage for the future, when better conditions will require the use of part, or all, of these facilities.

Regardless of surplus facilities created by the depression, we may reasonably expect that the rail carriers must suffer further reduction of facilities to meet their new competitive conditions.

For some purposes the trucks give better service than the rails. The truck has invaded the rail territory, taken, and will, doubtless, keep part of their traffic. We cannot complain against the innovation of a new type carrier. To forsake the old method in favor of a new and better one is just a rule of progress. It is our duty to give to a new form of transportation that place to which its economic advantages entitle it, and to maintain a like regard to the advantages of the older forms of transportation.

COMPETITION

Competition is part of the history of transportation in this country. One hundred years ago there was rivalry between the highway and water carriers and the infant railway industry. The railroads came in competition with the Erie Canal, which had been built by New York at a heavy expense. The public demanded that it should not be made unprofitable by parallel railroad competition. New York passed a law preventing a competing railroad from carrying any property except baggage of passengers. In 1848 New York compelled railroads running parallel with the canal to pay tolls.

In subsequent years the railroads, grown stronger, undertook to destroy water competition. They tried to do that by getting control of boat lines and by reducing competitive rates to make water transportation unprofitable.

Finally, competition was chiefly rail against rail.

SURPLUS FACILITIES

In the early days of the Republic, before the railroad, canals were built greatly beyond what economic conditions warranted. It is commonly believed that this excessive construction was a factor that contributed to the panic of 1837.

Before the Civil War the wooden sailing boat was the chief contributor to the golden age of the American merchant marine. Later, the steel ship came along with the steam engine and finally took the clipper from the sea.

Following the Civil War there was a fever of railroad expansion. Construction outstripped the growth of the country. That overexpansion, too, brought penalties including intense competition between the rail carriers. In the late sixties cattle were carried from Buffalo to New York for $1 a car; 10 years later cattle were taken from Chicago to Pittsburgh free; and to Chicago from New York for $5 a car. Immigrants were carried from New York to Chicago for $1 a head. These low rates may have temporarily benefited the public, but no person contends that such traffic is to the advantage of the country as a transportation policy.

In recent years motor transportation increased by leaps and bounds. Many men enticed by a new enterprise were able to get into the business by small investments, frequently by installment buying, bought trucks and engaged in the business with which they were not familiar. The chaos which would have followed was in part averted by the Motor Act of 1935 although many motor carriers went into bankruptcy, or passed out of the business by failure.

RIGHTS OF INVESTORS

Somebody must own our transportation agencies before they can operate. The stocks and bonds of these carriers are widely distributed among the American people, much of them held by small investors. Generally speaking, the stocks and bonds of a well-regulated essential-transportation facility should be a reliable investment on a modest income basis. There is something wrong with our method of handling the problem if it is not. A man invests in a transportation agency the same as in any other business concern. He is actuated by two motives. One is his belief that his funds will be secure, and the other is his expectation of at least a reasonable return on his investment.

Without these two inducements to the investor, the industry will languish for the lack of proper financing. We have those who characteristically ignore the rights of investors, seem to have no interest in encouraging them, and have little concern even for the protection of their legitimate rights.

This attitude fails to recognize the basic principle of private ownership of property on which our Government is founded. The owner of money can invest in nothing but another's labor and another's property. However selfish he may be he cannot help himself without helping somebody else. He earns, he saves, he invests, and automatically he becomes an employer of labor. However selfish he may be by his investment he constructively contributes to public welfare. We justly throw restraints around his oppressive use of any power of wealth. That is a normal function of government—to restrain against unjust and oppressive action for the protection of the public.

The owners of the railroads have invested something like $20,000 for each man in their employ. That investment of $20,000 per employee has not made much of a return in recent years, but, nevertheless, it has been a real service to the country in maintaining that normal transportation so essential to the welfare of the Nation.

There is one thing about the railroads that we can recognize; in recent years they have been largely fruitless so far as their investors are concerned; they are very fruitful to the United States. They remind me of a situation of farmers in our orchard section in California. We have good orchards; the farmer, we will say, spends $100 an acre per year in taking care of one acre of orchard. He works hard and struggles and produces a good crop and at the end of the year finds he has made nothing.

There is no increase in the farmer's pocket, but there is a tremendous advantage to the community from what he has done—labor employment, purchase of materials, and aiding business to continue in that community. He has performed a great service in that community, though he is without reward, only an indirect reward for betterment to his fellow men.

These carriers today are pretty much in that same situation; they are of great service to the country but return little or nothing to the owners of the property. A practical solution of our transportation problems requires just treatment of the owners of the carriers. In the long run it is only a profit-making enterprise that can give good service to the public under private ownership. It is also true that only a transportation system economically justified is entitled to survive.

Just treatment of the owners of our carriers does not require the public to assume the burden of improvident investments; it does not require the support of a carrier whose services are no longer economically justified. It does not require unreasonable rates to maintain a carrier whose services are no longer required. It does require proper protection and regard for the owners of every carrier performing an economic service needed by the Nation. The carrier, like the laborer, should be worthy of his hire.

CARRIER REGULATION

Transportation for compensation is a public utility of this country. The established policy of the country is to regulate these utilities; to require reasonable rates; to require fair and equal treatment of persons and communities which they serve; and to require fair competitive conditions.

Competitive control has been necessary for the protection of the carrier against unfair competition as well as for the benefit of the public.

In 1920 we took another step forward in the protection of the carrier. We provided that an applicant for the construction of a new railroad must secure from the regulatory body a certificate of public convenience and necessity in order to operate such road. The applicant must show there will be a public benefit from the new line proposed. One purpose of such a requirement is to prevent excess and needless transportation facilities that are incapable of giving proper service to the public and interfere with established agencies in giving such service. It has as its purpose to give stability to the carrier; to give him a reasonable assurance of the continuance of the volume of traffic as long as he gives satisfactory service to his patrons.

The certificate of convenience and necessity is a benefit to the holder of the certificate, but the justification of it is the country's interest in reliable, efficient transportation. It is only a live business concern, a going concern, that can serve the public properly through a long course of years.

The certificate of public convenience and necessity has become a regular part of our regulatory system in the State and National Governments. The right of prior operators to the certificate by the grandfather clause under which they are permitted to continue without proving the public necessity of their operation. That is assumed from the fact that they are in business. The plan contemplates the exclusion of unnecessary facilities for the future rather than the past.

If we deny the opportunity to an essential transportation agency to secure its necessary traffic, it becomes unable to function properly. We discourage or prevent investment and in the end deteriorate public service.

LEGISLATIVE PROBLEMS

The transportation problem involves legislative difficulties as well as business troubles. Scarcely any change can be made in the law as to our carriers without effecting one or more groups who will fear that they are to suffer some injury by the change. Naturally, every group or section, which enjoys some special advantage under the existing status, complains against a change. Any affected group may become vociferous in its demands. In fact, we are living in an age of organized groups more or less professionally led for the purpose of influencing legislation. Frequently, such efforts are directed at the fears of Members of Congress that we will not be elected rather than at the merits of the problems involved. Some of these groups deserve to be called racketeering organizations. It is politically easy to follow the dictates of organized groups, particularly, where only the rights of the indifferent and disinterested public are involved. It is easier to yield than it is to go out and convince a disinterested public that you are right. Some times it costs a Member of Congress a few thousands of dollars and a lot of energy to go out and convince his constituents that he was right against an organized opposition. Some times it costs a Member of Congress that much to say, "no." Any way, these organized groups frequently selfish and aggressive, have an influence out of all proportions to their numbers.

PENDING LEGISLATION

We have transportation legislation pending in Congress which we expect will shortly be enacted. Among other things, that legislation provides for bringing water carriers under unified control with other carriers by the Interstate Commerce Commission. At the present time intercoastal and some coastal water carriers are under regulation by the Maritime Commission. Some are under regulation by the Interstate Commerce Commission, and the inland water carriers are practically without regulation. Today a shipment passing from one place to another in this country may, in part of its journey, be regulated by the Maritime Commission, in part by the Interstate Commerce Commission, and in another be unregulated. All the way that shipment may be in competition with our various types of carriers.

Regulated common carriers must take all shipments offered, run on schedules, charge uniform prices without discrimination as to shippers or sections. The unregulated water carrier acts under no such restrictions. He can charge what he pleases; he can refuse any load he pleases; and he is not required to keep schedules.

Water, highway, and rail carrier are each important inseparable parts of the transportation system of America. We can never have effective successful regulation that will give the country the inherent advantages of each of these types, and place their competition on a fair and just basis, unless we have unified regulation. The unregulated carrier in competition with the regulated common carrier works on a cutthroat basis, and is destructive to an efficient transportation system.

Some opponents of water-carrier regulation have tried to give a picture of the Interstate and Foreign Commerce Committee as unfair to water transportation. They would have you believe that the Interstate Commerce Commission is in some kind of a conspiracy with the railroads and the trucks to destroy water competition. They would have the farmer believe there is a conspiracy against him to raise the cost of freight on his produce on the inland waterways.

What are the facts? Five of the seven Members of the House of Representatives who are conferees on the transportation bill live in coast States, and share the deep interest of their States in the welfare of water transportation.

The Interstate Commerce Commission is the oldest, and probably the most-respected regulatory commission in the Federal Government. Through 53 years of service it has maintained a reputation for fairness, integrity, and intelligence, that is not surpassed by any other similar body in the Nation.

The men on that Commission are of high purpose. If water transportation is placed under their regulation it will place on them a responsibility to which you can be sure they will respond. They will have the high responsibility of exercising their power for rounding out and coordinating the transportation agencies of this country with a view of doing justice to them and in behalf of the best interests of the United States. It will be their duty to give water its proper place in our transportation system.

The fact is we are 53 years behind where we should have been in water regulation. Fifty-three years ago, when the Interstate Commerce Commission was first organized, Judge Cooley was its first Chairman. He was not only a great lawyer, but a great statesman. He then advocated that water transportation should be placed under regulation with rails in order that the interest of the country and of the water carriers themselves should be advanced and protected.

As I view the situation, inland-water transportation, especially in the Mississippi Valley, has suffered from a short-sighted leadership, the effect of whose policies has been to make inland-water transportation the stepchild of our transportation system. Living under a system of regulated transportation, they have insisted on no regulation for water. They have demanded regulation, if not punitive action, against water competitors and yet have refused to bring their water transportation within the benefits of a regulated industry.

They have inveighed against water regulation as something unfriendly and destructive. The proper motive of transportation legislation is not unfriendly to the regulated industry. It gives first consideration to the rights of the public, but as a part of that due to the public it insists on justice and fair dealing to the carrier.

The unregulated carrier is the maverick of the regulated system. He cannot claim its protection because he is not a part of it. Without abiding by its restraints he is ill prepared to claim its protection. He complains about injuries to his own business but yet claims for himself the unrestrained privilege of inflicting similar injuries upon his competitors.

The pending legislation proposes to take water carriers into the full fellowship of the transportation system of this country; make them subject to the restraints that are imposed in the interests of the public, and on the other hand giving them the protective benefits of legitimate regulation.

I do not hesitate to predict that after a few years of water regulation as proposed the inland water carriers, themselves, would not think of going back to the old cut-throat status of the present time.

Our intercoastal carriers have greatly suffered because of the lack of coordination and regulation as between each other, and with the rails. Nearly all our intercoastal ships are getting old. The returns from the business have poorly justified replacements. Even today it is said the business will not justify replacements of modern ships in this important trade. Bona fide operators have long suffered from unfair competition. Much of the time their earnings have been meager, frequently their balances in the red.

The great volume of traffic carried by water carriers, without harmonious regulation with land carriers, makes regulation ineffectual, and efficiency and economy improbable.

It is claimed that regulation will be unjust to the water carriers. All we seek to do is to make water carriers subject to regulation by a fair government commission on an equal basis with other forms of transportation.

It is asserted that the pending legislation discriminates against water carriers. No man can intelligently and carefully read the legislation proposed and assert such is the fact. I was interested to note that recently Commissioner Splawn, referring to the pending transportation bills, said:

"Any study of these bills must disclose to the unbiased mind that the Congress has refused to suppress one form of transportation in favor of another. It has recognized that we have, for the moment, too much transportation, but the problem is to conserve what we have, and to encourage the realization of the economies inherent in each form. It is recognized that each form has its place and must have fair treatment by the Government."

The unregulated carrier can under cut rates as he sees fit. He can take the cream of his competitors' freight, refuse to take the undesirable part of the load, and help to destroy the common carrier, who is giving the reliable service upon which the public is dependent.

One of the intercoastal lines cut the rates of its competitors 10 percent. It refused to take undesirable cargoes with the result, as it developed, that its average rates were higher than the regular carriers.

They say the rivers belong to the United States. They do. The Government improves a project, gives depth and width to accommodate the water carrier, and does it without cost to him. When

a stream throws up a sand bar across the river, the water carrier phones in to the Army engineers, and Uncle Sam comes down, cleans out the bar if it costs $20,000 or $100,000.

The flood comes along and eats out a bank, destroys the channel, Uncle Sam restores it if it costs a hundred thousand dollars or a million. A flood comes along and destroys the railroad track running along the river bank, and the railroad restores it out of its own funds, if it costs a million.

The railroad crosses a river on a bridge built at its own expense. The Army engineers decide that the bridge must be longer and higher in order that the water carriers may pass under it. The railroad makes the change in the bridge without expense to the water carriers and for their benefit.

Yet, under all these conditions, the water carrier is a private carrier. He charges the shipper for his freight just as any other private carrier. He competes with the privately owned carriers. The rail and the boat, each privately owned, are serving the public. Why should each not equally submit to that just regulation intended for the benefit of the public? We give the water carrier a free right-of-way, why should he not be subject to regulation by the Government that gives him his right-of-way?

It is claimed the Government has spent an average of nearly $200,000 a mile for improvement on 3,400 miles of the Mississippi River system. I am not complaining about that. I voted for much of it. I do insist, however, that an agency enjoying such benefits at the expense of the Public Treasury ought to be satisfied to submit to that fair public regulation with which its competitors are compelled to comply.

UNIFIED CONTROL

Manifestly each type of carrier, the rails, the trucks, the busses, the ships, serves a purpose in which it excels all other carriers. In other respects, they may be equally competitive. Each of these carriers has its inherent advantages that the country needs. No intelligent man, with a sense of responsibility to the country, would want to destroy any one of them, or to assign to any one of them a less function than the interest of the country requires.

What we need is an umpire for all types of carriers. Let them compete under fair rules.

Even the sporting world manages to choose a fair umpire for a prize fight or a baseball game. The United States is able to supply a fair umpire for its transportation agencies.

THE PROBLEM

We have surplus facilities in every line of transportation. Manifestly, that surplus is part of the problem under the depressed condition of business. We have the problem of adjusting our transportation agencies to this situation. We have abandonment of rail lines with losses to employees and the communities served. Many farming sections will be deprived of rail traffic for their produce unless we provide better transportation conditions. We have roads unable to pay the interest on their bonds or dividends. We have 100 roads now under the protection of the courts representing 30 percent of the mileage of the country.

Now, perhaps, to go into the abstract a little bit, should not there be some way that this great essential service to the American people can be conducted on a reasonable profit basis to all those who perform that service to the Nation? We should be capable of the leadership and the business conception that will make that possible, would make it a fact, that this great service to the Nation shall be done on a basis of fair compensation to those engaged in it. There is a useful work. There is or should be a reasonable reward to those who perform that service to the Nation.

RATE STRUCTURE

In all regulation we have proceeded on the theory the carrier is entitled to just and reasonable rates, but the rate structure today is largely built upon a basis of expediency. Very largely we have permitted the carrier to cut his rates to meet competition much in disregard of its reasonableness. In that process of beating down rates, not infrequently by the aid and pressure of shippers, we have largely deprived these transportation agencies of the real application of a doctrine of reasonable and just rates, even to themselves, and largely by their own efforts, as I see it.

We face a more difficult question when we attempt to adjust and coordinate rates between the various types of carriers—water, rail, and highway. The rate-making power must not be used to destroy any economic carrier. As I see it, there is a fundamental abstract principle involved. We must try to apply to these competing agencies of different types the rule of economic worth to the country. The country has a right to preserve the inherent advantages of each.

Some of these agencies have superior advantages for one class of traffic but not for another. We pass the difficult problem to the regulatory body of fixing rates that would have in mind the assignment to each particular type of agency that class of freight which it can carry to the best economic advantage to the United States; in other words, place competition on an economic basis of merit. That affords an abstract principle for discriminating between these different lines of transportation and fixing rates that will have the effect to some extent, at least, of allotting traffic to the different agencies, according to the economic advantage with which they can carry that freight.

We must give our regulatory body the necessary authority to regulate rates and to unify control of our transportation system. Then we will be largely dependent on that body to decide whether or not regulation is the final answer to our transportation problem. Upon that answer probably depends the continuance of the private ownership of our transportation system.

Notwithstanding other difficulties, the first difficulty of the carriers is the depression. In the past history of the country the rail carriers have several times shown a rather remarkable ability to recuperate, and it is not unreasonable to expect that a large part of that vitality still remains.

The main difficulty of our carriers, particularly the rails and intercoastal carriers, is the unfavorable balance sheets.

We have placed these two transportation agencies under Government regulation.

The American people are paying over $7,000,000,000 a year for common-carrier service—rails, highway, and water. The challenge is whether we have the intelligence and the ability so to regulate these agencies, so coordinate them that each shall become self-supporting. We have adopted a policy of reasonable returns; reasonable to the carrier and reasonable to the public. We have adopted the policy of restricting the carriers to the numbers reasonably necessary to accommodate the public.

Is it possible we do not have the genius, common sense, and ability so to regulate these essential agencies that they shall be self-supporting? I believe we do.

The Farm Problem

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

SAMPLE TALKS FOR USE OF STUDY GROUPS, BY GRACE McDONALD

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I include two study plans outlined by Mrs. Grace McDonald, of San Jose, Calif. These should prove interesting to all who are interested in the farm problem. The sample talks follow:

CITIZENSHIP OR THE DOLE FOR FARM LABOR—AN APPRAISAL OF THE NEW DEAL PROGRAM AS A BASIS FOR A PERMANENT SOLUTION

[One of a series of sample talks for use of study groups, farm and labor organizations, schools and political bodies, prepared by the Reporter plan, northern California]

(By Grace McDonald, director, San Jose)

Every mass migration can be traced to hunger. It is a serious business to pull up stakes and transport your family a thousand miles into an uncertain future. If there were any chance of a job or a living nearer home you wouldn't dare take such a chance. But there were no jobs at home for the quarter million out-of-State migrants who trekked to California in the last 5 years hoping to find an answer to slow starvation.

They came to California as a result of a number of converging events in their lives; dust, drought, floods; collapse of markets for farm products; mortgage foreclosures; misleading advertisements promising jobs in California's rich harvests.

Predominantly agricultural in composition and pioneer American in stock, this jobless army is augmented by the surplus labor of every State in the Union; men laid off through factory mechanization; W. P. A. cuts; boys graduating from high school for whom there are no jobs; C. C. C. boys; farm youth, still the farm's bumper crop.

Insofar as California's crops require 200,000 men and women to stand by for the peak season's harvest, the feeding, clothing, and sheltering of this many families is California's problem. The business of farming won't support more than 50,000 of these workers on an all-year-round pay roll. The rest come in for a sliding scale of jobs, not enough to stretch over the 12 months in the year without county, State, or Federal relief. Estimates of average composite earnings of California farm families range from $289 per year (S. R. A. figures) to $450 a year (Farm Security figures).

The taxpayer subsidizes California agriculture and will continue to do so until the huge money-making farm factories which employ more than one-third of the State's farm labor are made to come across with the same labor protection which the Government enforces on operators of mines, factories, and business establishments generally.

Testimony compiled by the La Follette committee investigating infringement of civil liberties against California farm workers organizing to increase wages in 1939–40 establishes the fact that 2 percent of the State's farms employ 35 percent of its labor. The testimony further shows that from 25 to 40 percent of all farm income in the State went to this minimum top group of farm

owners. Annual wage bills of some of these farm factories total $350,000. Two of them employ 3,000 workers during the year. One of them sells a million dollars' worth of products.

Agriculture has been specifically exempted from compliance with protective legislation, both Federal and State. It has also been exempted from compliance with the provisions of the National Labor Relations Act "which redeclared the right of workers to organize into free trade associations and opened the way for the unionization of steel, auto, radio, rubber, packinghouse, and other mass-production trades." [1]

In California alone the President's 1937 program would mean supplying homesteads on long-term leases for over 100,000 families.

According to the June 1939 report of the regional Farm Security administrator, "more than 40 individuals have been assisted to purchase farms in Merced, Tulare, San Joaquin, and San Bernardino Counties." [2] Federal appropriations under the Bankhead-Jones Farm Tenant Act of 1937 have been starkly inadequate in the face of a constantly mounting number of migrating dispossessed farm families.

A number of supplementary programs have been carried on by the Farm Security Administration, all of them valuable, none of them coping with the size of the problem.

Under the Emergency Relief Act of 1935–6–7 and the Work Relief and Public Works Appropriation Act of 1938, low-rental homes with land for kitchen gardens have been provided for 200 fortunate farm families.[3]

Under this same authorization one farm association, the Mineral King, near Visalia, has been established. Here 15 homes have been built for association members.

Farm corporations to lease farm properties near migratory labor camps are planned at six points: Winters, Gridley, Firebaugh, Thornton, Yuba City, and Indio. Lands will be leased to the corporations by Farm Security at an annual cash rental sufficient to pay a fair return on the Government's investment.

Obviously the great bulk of the homeless farm families has been untouched by Farm Security's constructive resettlement program. And even these feeble beginnings are in danger. The entire farm-tenant program, so eloquently launched by the President in 1937, is threatened with extinction. Only $25,000,000 was included in the President's 1941 Budget for the tenant program. House action removed even this paltry amount.[3]

With the limited funds appropriated for its grant program, Farm Security has met the most desperate needs of non-State migrants. Approximately 30,000 such families in 33 California counties have received F. S. A. grants.[2] In June 1939 there were 3,668 cases on F. S. A. grant rolls.

The Agricultural Workers Health and Medical Association, incorporated under State law and working in cooperation with the State department of public health, county health departments, the State relief administration, and the California Medical Association has placed nurses in strategic centers assigned to full duty with the migrants under Farm Security Administration. Approximately 16,000 cases have been taken care of in California by this association [2] (39,232 cases, February 1, 1940).

Mother and baby clinics have been established. Simple medicines and hospital care have been provided. Lunches have been supplied for the children in school and nursery school in 35 camps.

Probably the most far reaching of F. S. A. activities has been its camp program. A survey of California's rural-housing facilities for the 150,000 workers who follow the crops shows 5,000 labor camps, 300 auto camps, and an uncounted number of shack towns and rural slums.

THE BATTLE FOR THE LAND—GOVERNMENT AID, COOPERATION, AND A FRIENDLY RELATION TO ORGANIZED LABOR PROVIDE A WAY OUT FOR THE SMALL FARMER

[An analysis of the National Farm Program since 1933 applied to California for the use of farmers, labor organizations, schools, political bodies, and study groups, prepared by the Reporter Plan, northern California]

(By Grace McDonald, Director, San Jose)

Purchase of surplus milk in an arrangement with certain municipalities and its sale at reduced prices to relief families moved a peak of 127,000 quarts a day out of dairies in those localities in December 1938. Price was stabilized for milk producers and essential food supplied for the undernourished.

A new form of surplus commodity subsidy developed by the Department of Agriculture is the extremely popular stamp plan. Operating through existing grocery stores the plan stimulates demand for designated surplus products by giving relief clients a 50-percent increase in purchasing power for these surpluses.

As they flow to market at lower prices than other comparable foods the general public tends to increase its purchases of the particular product, thus giving the farmer this additional outlet. "By July 1," states Milo Perkins, "it is expected that between three and four million persons will be taking part in this dual effort to find a wider market for surplus agricultural commodities and to improve the diets of low-income persons in our cities at the same time." [4]

The stamp plan offers a potential annual market for over 300,000,000 pounds of butter, about 352,000,000 dozen eggs, over 25,000,000 bushels of wheat, in the form of flour, over 6,000,000 bushels of corn in the form of corn meal, about 140,000,000 pounds of rice, over 87,000,000 pounds of prunes, and about 227,000,000 pounds of dried beans. Pork products and cotton goods are latest additions for stamp-plan subsidies.[5]

Purchase of surplus commodities in California for the 5½ years ending June 30, 1938, amounted to $20,659,889.[6]

Attempts to develop new industrial uses for surplus farm products through the four regional laboratories of the United States Department of Agriculture is one of the most constructive, if less immediate, parts of the program.

Diversion of agricultural surpluses to industrial outlets is another job being subsidized by the Department. About a fifth of the surplus-commodity appropriation in 1939 was used to subsidize exports of cotton goods in an effort to hold the international market for the American farmer.

In the period between August 1938 and June 30, 1939, the Department spent $21,000,000 for the export of 70,000,000 bushels of wheat, reducing the potential carry-over and increasing the price received by United States wheat producers.

The budget on which Surplus Commodities operates comes from two sources. The act creating the agency provides an annual allowance equal to 30 percent of the gross customs receipts for the previous year. For 1940 this amounted to $90,000,000. Additional revenue comes out of the agricultural appropriation. For 1940 this was $113,000,000.

The drastic cuts proposed in the surplus-commodity appropriation for 1941 brought a storm of protest from all over the country. Under existing dislocations of domestic and international economy agriculture depends on Government subsidies. For the fiscal year ending June 30, 1940, the Government pumped a billion and a half dollars into agriculture.[7] Half of this went directly into farm income.[8]

In 1937 this infusion upped farm income by $336,889,000. In 1938 this was increased to $482,221,000, and in 1939 to $807,065,000. Yet farmers as a whole were $600,000,000 poorer in 1939 than they were in 1937.[9]

And in spite of Government efforts to halt foreclosures through moratorium, debt adjustments, and low-interest loans; in spite of the millions spent in export subsidies, parity payments, and surplus purchases, small farms continue to be gobbled up by the banks, insurance and land corporations.

The Department of Agriculture reports that 114,000 farms were lost through forced sales in 1939, and that more than a fourth of all mortgages held by Federal lending agencies are in default. Foreclosures during the second quarter of 1939 were the highest for any quarter in the past 5 years.[10]

If the small farmer is to win his battle for the land, this trend toward large-scale absorption of the little fellow must be stopped. Credit facilities must be expanded to meet the need.

During the 4 years ending June 30, 1939, the farm debt adjustment machinery of the Farm Security Administration assisted 101,296 individual farmers to reduce their indebtedness by close to $80,000,000. This is an average reduction of $20,000,000 a year, not nearly enough to salvage border-line farms.[11]

Efforts to extricate the small farmer from banker and processor control through the Farm Credit Administration will be speeded up with the Department of Agriculture having direct control over the Farm Credit Administration.

The Logan-Walter Bill

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of April 11:

[From the Washington Daily News of April 11, 1940]

THE LOGAN-WALTER BILL

Debate on the Logan-Walter bill, a measure of fundamental importance to our whole theory of Government, is scheduled to begin Monday in the House.

The purpose of the bill is to curb a fatal tendency as old as the history of governments—the tendency of bureaucracy to abuse the power it has and to grasp ceaselessly for more. Specifically, the proposal is to check and balance the lawmaking, the law-interpreting, and the law-enforcing activities of Federal administrative agencies.

There are more than 130 such agencies—departments, independent establishments, boards, commissions, authorities, bureaus, Government-owned corporations—each created to administer some statute or group of statutes. They are products of the complexity of modern life, of the inability of Congress to legislate in detail for the handling of the numberless problems that arise in relations between the Government and the people.

Congress enacts general laws. Then it delegates authority to administer these laws to the agencies. The agencies make rules, which in effect are laws. They interpret and enforce their own rules. And they sit in judgment on those accused of violating their rules. In them, then, are combined the three powers—legislative, executive, and judicial—which the Constitution undertook to keep separate in order that Americans might be free from the tyranny of government.

The administrative agencies are necessary. Without them we couldn't get things done. But those who man them are human beings, often fond of authority, often filled with more than ordinary zeal, and thus often more interested in getting things done than in seeing that justice is done. So it is that the records of many of these agencies are filled with examples of abuse of bureaucratic power. And so it was, long before the New Deal multiplied the number of agencies and the duties assigned to them, that the need for regulating the regulators began to be discussed and studied.

The Logan-Walter bill is a product of years of such study and discussion. It provides for a uniform procedure of public notice, public hearings when requested, and judicial review of exercise of lawmaking power by administrative agencies. It provides also for a uniform procedure of appeal to the courts from exercise of the agencies' quasi-judicial power, with a requirement that the courts shall be given a complete record from which they can determine whether administrative findings are supported by substantial evidence.

The coming debate in Congress may reveal need for amendment of the bill in some respects. But its principle is thoroughly sound. It is designed to expedite administrative processes, to reduce their cost, and to insure that ours shall continue to be a government by law, with the part men must take in it increased in real effectiveness but safeguarded against abuse.

Appropriation for Bituminous Coal Division

EXTENSION OF REMARKS

OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

Mr. BATES of Kentucky. Mr. Speaker, I desire to express my opposition to any reduction in the appropriation recommended by the Committee on Appropriations for the Bituminous Coal Division, as set forth in H. R. 8745, Report No. 1709. It seems to me that we should not abandon a patient, in this case the bituminous coal industry, before recovery unless all known remedies have been exhausted. This industry has been called a sick industry; it has been palsied from overproduction; it has been said to be bleeding to death from cutthroat competition, and wasting away from unsound conservation methods. Certainly at this juncture, when we have been assured that the minimum prices and marketing rules and regulations provided for in the Bituminous Coal Act of 1937 are about to be put into effect, we should not fail to render aid to the industry in its efforts toward stabilization by refusing to appropriate necessary administrative funds which the industry, through taxation, has put into the Federal Treasury.

If this act of Congress was an instrumentality which was costing the taxpayer money to administer, and if it had been given a fair trial and had proved to be technically or otherwise unsound, perhaps I might hold a different view. However, this is an act which, in its first inception, was proposed by a majority of capital and labor in the industry. Exhaustive hearings were held by both branches of Congress, beginning in 1935, on the underlying principles, as well as the methods of stabilization, as finally approved in the act of 1937. Through no fault of the act itself these principles and these methods have not been given a forthright demonstration by which to prove that this is the way to stabilize the industry.

Conditions within the industry have not improved since the first hearings, to which I have referred, were held. The industry suffers as much today from cutthroat competition as it did in 1935. Overproduction is as potentially great today as it was then. Competition with other fuels which are unregulated tends to increase rather than diminish the efforts of the industry to stabilize the underlying price structure.

A program of conservation of the great natural resource represented by the coal deposits in 34 States in this Union cannot be successfully brought forward without a measure of stabilization which will encourage those engaged in the production of bituminous coal to assist in such a program. Many operators have told me of their efforts to lower production costs by increasing their output, but the trouble is that all such increases are made at the expense of conservation and uneconomic methods of distribution, to the end that while individual costs may be somewhat lower the industry as a whole is retarded by such business methods.

The destruction of capital in the coal industry, as the records will show for years past, has been great, and through such destruction of capital, labor has been unable to earn a living in accord with the accepted American standard, much less a reward in the form of savings above this standard.

There are 2,000,000 or more people directly affected by what happens in the bituminous-coal industry, and there are many more indirectly affected. My plea is for these people, and it is a personal plea because many thousands of them live in the State of Kentucky, and I am personally interested because the welfare of my friends and my neighbors means as much to me as my own welfare. That, of course, is a personal viewpoint. However, I am not overlooking the fact that what affects my neighbors in a far Western State, for example, affects me as well. Therefore, from a national viewpoint, the welfare of the bituminous-coal industry affects each and every person living in these United States. The well-being of the industry is necessary from the standpoint of national defense, from the standpoint of the economic welfare of the country, from the standpoint of the conservation of natural resources, and, last but not least, from the standpoint of the right of those engaged in the industry to enjoy the American way of life by having a fair return on capital investment and fair standards of living conditions for those who labor in the industry.

I believe, and I have believed, that the purpose which Congress had in mind when passing this act, can be successfully concluded when a fair trial has been had of its provisions. It strikes me that since the reorganization which

included the administration of this act within the Department of the Interior, splendid advances have been made toward putting into effect the minimum-price provisions of the act. In making this statement, I do not mean, either by implication or inference, to assume a critical attitude of the previous administration of the act. I realize that regulatory acts are subject to vicissitudes not normally encountered in the administration of other types of acts, and in my opinion the job as a whole has been well done, and it could only be done through experience, and the final results will be satisfactory to all concerned. The coal industry, generally speaking, desires that the minimum prices receive a fair trial. There are some elements in the industry who oppose this method of stabilization, but these are in the minority. Up to this time there have been about 14,000 producers who have joined the Bituminous Coal Code, and who are actively participating in the plan for stabilizing the industry. These producers are looking forward to minimum prices to prevent the huge losses of money the coal industry has suffered every year since 1925. Labor is looking forward to this stabilization with a hopeful and confident attitude.

As I stated at the outset, the industry is paying for the administration of this act. An overwhelming majority of the members of the industry want its provisions to go into effect. I sincerely hope that this House will not finally be placed in the position of failing to provide funds, and in a proper amount, to successfully continue the administration of the act, the provisions of which will very shortly, I believe, vindicate the judgment of Congress.

The Third Term "Tradition"

EXTENSION OF REMARKS
OF
HON. THOMAS F. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1940

Mr. THOMAS F. FORD. Mr. Speaker, as a Member of this House I have sat patiently in my seat for day after day and listened to Members on the Republican side of the House bitterly denounce the President of the United States for, as they say, and without one iota of evidence, seeking a third term as President.

They call upon high heaven to witness the admonitions of the founding fathers against a third term in spite of the fact that there is not one word in the Constitution that by the cunningest misreading or tortuous twisting could be made to appear as proscribing a third or any other number of terms for a President that the people happened to want.

Is it possible that the gentlemen who are so opposed to a third term fear that the people are incapable of making a choice in this important matter?

Or is it just barely possible that they fear, and with good reason, that the great majority of our people love, respect, and have such complete confidence in Franklin D. Roosevelt that they will reelect him?

Would it not seem reasonable to suppose that if they were so sure that the people were opposed to a third term, these same gentlemen would welcome Franklin D. Roosevelt's renomination?

It is often asserted that President Washington was opposed to a third term.

All that is wrong with that assertion is that it is not true.

In his book, Roosevelt Again, JOSEPH F. GUFFEY quotes a letter written April 28, 1788, on this subject:

In this letter to Lafayette, April 28, 1788, Washington, discussing the advisability of the same person for President, after he should have served a certain course of years, wrote this:

There are other points—

He wrote—

on which opinions would be more likely to vary. As, for instance, on the ineligibility of the same person for President after he should have served a certain course of years. Guarded so effectually as the proposed Constitution is in respect to the prevention of bribery and undue influence in the choice of President, I confess I differ widely myself from Mr. Jefferson and you as to the necessity or expediency of rotation in that appointment. The matter was fairly discussed in the Convention, and to my full convictions, though I cannot have time or room to sum up the arguments in this letter. There cannot, in my judgment, be the least danger that the President will by any practical intrigue ever be able to continue himself one moment in office, much less perpetuate himself in it—but in the last stage of corrupted morals and political depravity, and even then there is as much danger that any other species of domination would prevail. Though, when a people shall have become incapable of governing themselves and fit for a master, it is of little consequence from what quarter he comes.

Under an extended view of this part of the subject I can see no propriety in precluding ourselves from the services of any man who on some great emergency shall be deemed universally most capable of serving the public.

This was the final judgment of the Father of his Country, the first President, who is dubiously honored as the founder of the third-term tradition.

Nothing could be more explicit. The letter states the argument for the third term more clearly, more concisely than it has ever been stated before or since.

The matter was fairly discussed in the Convention. * * * It was finished business in 1788. Not only fairly discussed, but "to my full convictions." Washington was satisfied with the outcome.

It might be further stated that Jefferson, who was one of the most strenuous objectors in the beginning, finally in a public utterance said, "I find it has scarcely an objection in America," meaning more than two terms for the President.

In view of the statements of both of these distinguished founding fathers, it is readily apparent that the third-term tradition is largely the vaporings of the superheated imaginations of our distinguished opponents on the Republican side of the House.

Are Americans Rapidly Becoming Nation of Panhandlers?

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1940

EDITORIAL FROM THE DE KALB (ILL.) DAILY CHRONICLE

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the De Kalb Daily Chronicle, De Kalb, Ill., dated April 9, 1940, entitled "Says That Americans Are Rapidly Becoming Nation of Panhandlers."

[From the De Kalb (Ill.) Chronicle of April 9, 1940]

SAYS THAT AMERICANS ARE RAPIDLY BECOMING NATION OF PANHANDLERS

Yesterday some friend left on our desk a copy of a little weekly paper from Carroll County, Ark. In it was an editorial that we deem worthy of reproduction. It says:

"Are the people of this Nation becoming plain, ordinary panhandlers—beggars from Government? Individuals, towns, cities, and States have their hands out for Federal alms.

"By accepting these alms they are gradually giving up individual, civic, and States' rights and building a Federal overlordship that will make them mere pawns of Government."

We like to talk about our democracy and pity the people of countries where liberty has been crushed, when we ourselves are giving up our freedom for a mess of Federal hand-outs that are mortgaging our future for generations to come.

Civic organizations have become beggars, great industries have become beggars, cities and States have become beggars at the public trough. Then after accepting public charity and injecting Government into their local and personal affairs, they cry because Government in business is being so rapidly extended that it is wiping out free enterprise.

Don't blame anybody but yourself when you feel the jaws of officialdom close on you if you have countenanced or accepted Federal alms for projects which would have been handled by courageous, intelligent, and self-respecting citizens in the past.

This country hasn't changed fundamentally in spite of all the theoretical prattle to the contrary; opportunities are still countless for young and old.

What has changed is our backbone and our pride. We are becoming a Nation of sissies who cry for help at the slightest provocation and want to be coddled as incompetents.

By our actions we are admitting that we are no longer capable of self-government or private management of our own affairs. We are asking for political dictatorship, and we will have no one but ourselves to blame if we get it.

Every time there is some tough nut to crack we now beg for Federal funds to care for the problems or losses involved, which, in most cases, are due to our own laziness, greed, or neglect. We want the Federal Government to do our irrigating; we want the Government to control our crops; we want the Government to build our dams; we want the Government to build our houses; we want the Government to carry our insurance; we want the Government to loan us money; we want the Government to build our schools, bridges, parks, etc., and do everything that we as free men and women used to take pride in doing ourselves. And then we cry our eyes out about taxes and new laws, regulations, and restrictions.

Anyone with a thimbleful of brains knows that when you borrow money the lender gets in the driver's seat. When you become a beggar, the giver controls your actions. When you beg or borrow from the Government, you give up your birthright as a free citizen—you begin to exist for the Government, rather than the Government existing for you.

This is the position of the people of the United States today. They have begged and borrowed themselves well on the road toward national bankruptcy and political dictatorship.

There can be no compromise with the totalitarian philosophy—you either accept it and become public wards or you kick it out and remain free.

Who Are the Disseminators of Hatreds?

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

Mr. THORKELSON. Mr. Speaker, as I glanced over the Washington Post, April 8, 1940, my attention was attracted to an editorial entitled "Dies and Democracy." This editorial, similar to others, was, no doubt, intended to confuse the public, or at least those who cannot be bothered to understand. I say this, because it is not fooling the rest of us.

Should the Dies committee take this article seriously, its investigators would waste much time looking for a particular type of foreign agent, when they should instead look for those who financed the Bolshevik Revolution in Russia in 1917, 1918, and 1919. The names of these may be found in the Intelligence Department's reports.

These "sugar daddies" of socialism, radicalism, and communism occupy luxurious offices in Wall Street and operate through the judges of the courts in the temple of the money changers. It is from these temples the disseminators of racial hatreds set forth, under a cloak of charity and pious benevolent philanthropy. From these temples of mammon also come the false teachers who revile those who are opposed to communism and to destruction of our Government, in order to shield themselves.

The word "democracy" is, I grant, often used innocently, but it is ill-advised, as we are yet supposed to be a democratic Republic. The word "democracy" is used maliciously by these defamers, who are in reality the progenitors of socialism, radicalism, and communism. These subversive activities, as I have already said, are carried on under a mantle of charity and tolerance by ranting prophets of a professed unchristian creed.

Let it be understood that there is no similarity whatsoever between a democratic republic and a socialistic democracy. The government of a democratic republic is an orderly representative government elected by the people. The government of a democracy is oligarchial, nonrepresentative, and ruled by force. A democracy cannot exist as such, for its must, to maintain order, finally yield to the rule of a despot. There are three such democracies in Europe, namely, Russia, Germany, and Italy, each under the leadership of a dictator.

TWENTY-THREE YEARS AGO

It was 23 years ago, March 17, that Leon Trotsky sailed on the steamship *Christianiafjord* from New York City, accompanied by Voskoff, Chudnowski, Muchin, and other Russian Socialists. After having spent 3 hours in a prominent office in Wall Street, he took with him at least $10,000 which had been subscribed by his own sympathizers to start a revolution against the Russian Government. Many of these associates came to see Mr. Trotsky off. He was held in Halifax, but was released by the British Government April 27, 1917, when prominent Government officials in the United States interceded to bring about his release.

On April 17, 1917, another group of 34 radical agitators sailed for Russia from Vancouver. Among them were the following: Bucharin, Volodarski, Zorin, Manson, Utsap, Onkled, Michaelson, Lentberg, and Stahl.

These internationalists reached Russia through Finland and over German railroads under the military protection of the Imperial German Government, which had been dominated by internationalists since the days of Bismarck. After reaching Russia they were joined by other revolutionaries who, under the leadership of Lenin, Trotsky, and Bela Kuhn, saturated the soil of Hungary, Crimea, and Russia with the blood of innocent men, women, and children. Under the leadership of these men many crimes were committed, including the massacre of the Czar and his family. I have already covered this in other remarks, so I shall not repeat it again.

I have a list of over 60 internationalists who were engaged in disseminating communism throughout the world. I refrain from giving their names, as it will serve no purpose. Yet it is well to know that many of them are recorded, as I have already said, in intelligence reports.

What should be of interest to us is the fact that many of them located in England, France, Germany, Sweden, Finland, and the United States were engaged in promoting communism and sabotage of the Russian Government. They furnished the money and war equipment to destroy property and murder people who were helpless and with malice toward none. Many of those who furnished the money are still alive and living in the United States, and even appear before some of the congressional committees in the capacity of experts on monetary problems.

It is my opinion that American people are more than tolerant, and these remarks are inserted in the RECORD not with the intent to do an injustice but, instead, to light the road of loyalty to this Republic. When everyone subscribes to those principles which are set forth in the Constitution all race distinction will disappear as we all become true Americans.

The point I wish to make is that Russia under the leadership and rule of Lenin, Trotsky, and Stalin is a full-fledged proletarian democracy. Germany is a national socialistic democracy, and Italy is a so-called national Fascist democracy. The difference in the three democracies may be found in the racial characteristics of their rulers.

The rulers of Russia are socialist at heart. They preach socialism and employ communism to further their own interests, which is to establish an international world union.

Germany is a democracy composed of National Socialists of the Teutonic type, who have united under a selected leadership to establish room in which they and their families may live in reasonable comfort.

Italy is the most innocuous democracy. It is based upon socialism, modified to a great extent by the temperament of the people who are still ruled by the Royal House of Savoy and directed by a dictator. In this Fascist state, the rights of business, although restricted, are recognized, at least individually.

We use the word democracy when in reality we should use the words democratic republic of these United States. It is upon this point I dissent and take issue with those who deliberately attempt to replace the Republic with a government similar to those to which I have referred.

England is a democratic monarchy, which unfortunately has fallen into the hands of the internationalists who now rule the British Empire by the power of money and a pseudo nobility.

The United States is, since the adoption of the seventeenth amendment, a modified democracy which will, should Congress modify or relinquish its power of impeachment, revert to a true democracy with a dictator. It is for this reason I have advocated that we return to a true republican form of government, as set forth originally in the Constitution of the United States.

The hands-across-the-water attitude or "Let America fight for England to the last American" is not, in my opinion, the sentiment of the average American but is instead a sentiment held by the internationalists because of racial or financial relationship with the Bank of England and the British nobility. The average American is intently interested in the United States and in developing our own industries as we have in the past. We owe no debt to any nation in the world, but we do owe an obligation to posterity and to our country. That obligation is clear and may be summarized in consolidating the North American Continent and the adjacent islands into a western empire that will forever be able to protect itself against all foreign attacks, no matter from what point such attacks may come. When such empire is established and when the United States becomes a unified empire of North America surrounded by water, we will, indeed, be well protected from attacks over land and sea.

Strife which is raging today is not a battle between people. It is instead a war to control the world's gold supply and to use this gold as a power to club nations whose people prefer to remain free and independent into submission, so that sovereign governments may be destroyed at the expense and the formation of a superworld government. It is, of course, a hopeless dream of the international financier, for I am positively sure that our own people and the people of other nations will not submit to such domination.

It was with this thought in mind that I was particularly interested in the article which appeared in the Washintgon Post, April 8, 1940, which I shall now quote in part:

As the Dies committee investigation of subversive activities continued, two facts stand out with increasing clarity. First, there is a real need for information concerning the work of Fascist and Communist groups in this country. Secondly, the method now being used to obtain that information is crude and distasteful to a vast number of American citizens.

I agree in substance with this article, as there is a real need for investigation of those who subscribe to socialism and employ communism to sabotage or destroy sound governments and society in general. I have yet to see one Fascist, but I have seen many of the others. The manner in which the Dies committee obtains information is not crude or distasteful to the real Americans, but it is distasteful to the Communists and to those who sympathize with that tribe. It is well to bear in mind that the Dies committee is a congressional recognition that the Department of Justice and other law-enforcement bodies have failed in their obligated duty to the Government. It is unfortunate that the Dies committee is hindered instead of helped by the courts in complying with the wishes of Congress, for the Communist and his sympathizers have already declared that they do not believe in the fundamental principles of this Government, and are, because of such declaration, enemies of the United States. They are engaged in sedition, against which we have laws that should be enforced.

Undercover political organizations have no place in a democracy * * * when any faction resorts to secret devices and intrigue it takes an unfair advantage of the system under which it is permitted to operate.

I agree with this statement, for no individual or group has any right to operate its own intelligence service, bureau of propaganda investigation, nor to engage in any other similar activities which are the duty of the State or the Federal Government. With this in mind, I shall ask the author of the editorial in the Post to express his opinion on the two letters which I shall quote in part:

NON-SECTARIAN ANTI-NAZI LEAGUE TO
CHAMPION HUMAN RIGHTS INC.,
New York City, September 1939.

Now that war is being waged against Hitler, the fight against nazi-ism must go on with even greater energy and determination.

Recently Nazi-inspired incitements to racial hatred in our country have become so serious that our league is now leading the fight against the so-called Christian Front and others. We must be constantly on guard against the great danger that may soon confront the American people by a unified front of all those who directly oppose democratic government and rule their own people through barbaric dictatorships.

In order to be fully efficient, our bureau of propaganda investigation has been increased fivefold to expose Nazi lies and ties. Hundreds of thousands of our leaflets, What Is the Coughlin-Inspired "Christian Front"? are distributed weekly at Coughlinite and other street mass meetings. Our legal committee is constantly in action against their organized thuggery and violence. That our work is successful is best proved from the lips of the enemy, as, for example, when Fritz Kuhn testified before the Dies committee that "the Non-Sectarian League is persecuting me."

Prof. JAMES H. SHELDON,
Chairman, Board of Directors.
SIMON M. GOLDSMITH,
Treasurer.

Why all this venom against the Christian Front and against Father Coughlin? Surely Father Coughlin is a Christian, and his only offense is to denounce those who are Communists or engaged in communistic activities. However, I shall proceed to the second letter and quote from the printed letterhead:

OUR PURPOSE

To champion human rights.
To foster the principles of justice and liberty.
To foster the principles of American democracy for the United States.
To combat religious and racial discrimination and oppression.

Whose rights are to be championed? I do not believe human rights are in jeopardy in the United States.

Justice and liberty are guaranteed in the Constitution, to all people who subscribe to that document.

Who but the Communists desire to foster the principle of democracy in the Republic of the United States?

Whose religion and what race is subject to discrimination and oppression? Why does not the league state to whom it refers?

These are the purposes set forth on the letterhead, and I shall now quote the names that embellish the margin of the letter:

Chairman, National Advisory Council, New York: Prof. Nelson P. Mead.

Vice presidents: Bishop Francis J. McConnell, Rabbi Leon Fram, Dr. S. William Kalb, John Frederick Lewis, Jr.

Treasurer: Prof. Max Winkler.

Chairman, executive committee: Dr. B. Dubovsky.

Chairman, board of directors: Prof. James H. Sheldon.

Directors: Michael G. Alenick, A. D. Caesar, Abraham Cahan, Jerome Count, Prof. George S. Counts, Prof. Paul H. Douglas, Morris D. Forkosch, A. Gallen, Miss Ethel Haase, Mme. Irene Harand, A. I. Harkavy, Arthur J. Harvey, Sidney Hillman, Prof. Jacob H. Hollander, Rabbi Edward I. Israel, Rev. Stephen M. James, Robert G. Jones, William Leege, Samuel S. Leibowitz, Rev. Donald G. Lothrop, Dr. Gerald Machacek, Jacob Malmuth, Irving Maness, Anthony Massimiano, Mrs. Louis Myers, Nathaniel Nathan, Henry Portnow, Ezekiel Rabinowitz, Abraham M. Rose, Mrs. Katherine Hayden Salter, Prof. William P. Sears, Jr., Gerhart H. Seger, Miss Tony Sender, B. Shelvin, Leo Spanglet, Dean William E. Taylor, George Tomascik, Joseph White, Max Zaritsky, David Zimet.

This list of names, which was longer last year, contains the names of many of our professors and educators who spend their time educating people in communism instead of in the fundamental principles of this Government.

I shall now quote from the body of the second letter:

MARCH 1940.

The Nonsectarian Anti-Nazi League is the American organization concentrating upon the fight against the pro-Hitler movement. Our department of investigation maintains a staff of experienced investigators which uncover and discloses the activities of the subversive groups in our country. We have been able to aid officials of our Government in prosecuting leading members of these groups.

In order to carry on our Nation-wide activities, we must raise a fund of at least $250,000 this year. For this reason we appeal to you, as one of our supporters, to stand by us again, as you did in the past, by contributing generously and, if possible, increasing your former contribution. Your support is needed now more urgently than at any time in the past.

For your convenience we are enclosing a statement and a return envelope. Please mail your contribution today.

Accept our gratitude for your cooperation and support.

Sincerely yours,

Prof. JAMES H. SHELDON,
Chairman, Board of Directors.

It is evident from these two letters that the Non-Sectarian Anti-Nazi League to Champion Human Rights is not championing the rights of Americans but some other human rights. It is further evident from the letter that the Non-Sectarian Anti-Nazi League conducts, first, a bureau of propaganda investigation; second, a legal committee; third, a department of investigation; and, fourth, a staff of experienced investigators. In other words, the Non-Sectarian Anti-Nazi League—a private organization which was organized in 1933 by the late Samuel Untermyer—is operating as an independent unit within the United States, investigating anyone the league believes is subversive; a strange attitude, indeed, for the greater number of the names on the margin of the letter are recorded as radicals or Communists in Elizabeth Dilling's Red Network. Many of the same individuals are also recorded in congressional hearings as members of radical groups in the Communist Party. This group is investigating its own designated subversives. And who are they? They are the patriotic American citizens who are opposed to the Communists, and therefore to the Non-Sectarian Anti-Nazi League.

This league is also connected with the Anti-Defamation League, which was clearly evidenced in the presence of Mr. Birmingham as a representative of the F. B. I. in its investigation of the Christian Front. I may say that Mr. Birmingham's selection by the F. B. I. to investigate the Christian Front is not a surprise when we consider Mr. Birmingham's employers.

Now, what are the facts? The Non-Sectarian Anti-Nazi League has no right to carry on its own bureau of investigation, a bureau of anti-defamation, a bureau of propaganda investigation, and legal committees to help the Federal Government. When our own Justice Department employs investigators such as Mr. Birmingham, Mr. Prince, and others, it is, if nothing else, an admission of the incompetence of its own investigators. And, if this is true, if the F. B. I. is incompetent, it is time for Congress to take action and supply this Department with efficient help.

What could we expect this group to investigate? No one except those it has designated subversive. And who are they? In brief, they are every American citizen who is opposed to communism and sabotage of our industries and our Government. It is the groups that are labelled Nazi and Fascist, anti-Semitic and anti-racial by the Non-Sectarian Anti-Nazi League. This league, which sails under the slogan of "champion of human rights" is, in fact, a champion of no human rights excepts its own.

The Federal Government should investigate the Non-Sectarian Anti-Nazi League and its affiliated organizations. As recorded in its own letters, there are between 700 and 1,000 groups which spend their time spreading hatreds and venom in order to confuse the public. Some of the membership in this league may be innocent, but whether innocent or guilty, their names embellish the letterheads to lend nonsectarianism to a league which is narrow and clannish. This league stands for rights of its own, bitterly opposing those who believe in the rights of the majority.

We need no civilian groups to sponsor the rights of the American people, because they reserve that to themselves in the Constitution of the United States. If the membership of the Non-Sectarian Anti-Nazi League will subscribe to the fundamental principles of this Republic as set forth in the Constitution, they can join the majority of the American people in setting the Nation right.

The procedure which the league follows now can only be condemned, for it aids in retarding recovery; it spreads dissension, hatreds, and animosities in its pseudo-pious advice to which the membership does not adhere in fact or principle.

You will note that $250,000 was to be raised in September 1939 and in March 1940. The Internal Revenue should investigate who contributed this money and the purposes for which it was spent. It costs considerable money to conduct a number of bureaus and 700 to 1,000 organizations. Who is paying the expenses of these groups? Who is paying for the propaganda investigation, for the legal committees, and for the investigation of Christian organizations? Who is paying for the experienced investigators who uncover and disclose the activities referred to in the letter? What right has any private organization to aid officials of our Government in the prosecution of leading members of Christian groups? It appears that the Non-Sectarian Anti-Nazi League holds our own Justice Department incompetent, or it would not feel obliged to supplement its activities.

I am wondering just how the Justice Department would deal with the Christian Front or other Christian organizations if they maintained the same kind of investigating organizations and legal staffs. It appears to me that the Non-Sectarian Anti-Nazi League hopes to rule this Nation through its own intelligence department and Cheka, and in such attitude the league not only does not obey the law, but transcends the laws of the Nation.

It is the duty of the Justice Department to abolish all organizations which are conducting private investigations of the American people, for such snooping and persecution is not only illegal but will, if continued, lead to internal strife.

I shall now again quote from the editorial in the Washington Post:

So there is ample reason to ask the Communists, the Nazis, the Silver Shirts, and every similar group operating in this country to lay their cards on the table.

To this I may say that it is equally important for the Government to ask the Non-Sectarian Anti-Nazi League to lay its cards on the table, for it is the most subversive group of all.

It becomes increasingly evident, however, that Mr. DIES is conducting an inquisition as well as an inquiry into subversive activities. His so-called raids on Communist headquarters arouse resentment in the minds of many people who have no sympathy with the aims of this deluded faction.

I recall the various individuals who testified before the Dies committee early last year—members of the so-called Fascist groups—and I want to say at this point that all American groups are labeled Fascist by the Non-Sectarian League for Human Rights.

The gentlemen who appeared before the committee to testify to subversive activities were required to answer "yes" or "no" to questions interpolated by the committee's counsel. They were not permitted to testify to the information that they had in regard to communism or other subversiveness, but were instead restricted, as I have said, to answering questions proposed by the committee. Even a Member of Congress was denied the right to interject a question when he sat with one of the gentlemen who appeared before the committee.

What is the situation now? The Communists have not been prosecuted, and one of them who was found guilty is still out on bail pending appeal. The other members of the Communist Party who have appeared before the committee bluntly state that they are not going to answer any questions; and, in addition to that, they appear with their personal attorney, who intercedes for them when necessary. This right was not allowed other members of pro-American organizations who appeared before the committee. What a vast difference between the treatment of patriotic Americans and Christians and the treatment of the Communists. Even the courts side with the Communists. Of course, that is no more than what may be expected when we observe the personnel of some of the courts.

This article also refers to the proposed bill of the gentleman from California, Representative JERRY VOORHIS, which is to require political organizations affiliated with foreign governments to register with the Secretary of State. Personally, I believe the bill is useless, because organizations with evil intent in mind are not going to register with the State Department or anyone else. It will, therefore, only apply to those organizations which may be selected by, say, the Non-Sectarian League; so this act, like others of the same kind,

may be employed to prosecute the innocent instead of the guilty. However, if a law of that kind is passed, the Non-Sectarian Anti-Nazi League should be the first to register with the State Department.

I have selected this article as an example of information which appears in the press. The people should bear in mind that all information in the Nation's press appears from one angle alone, namely, the angle of the internationalist. It is not an American angle and it does not express American opinion, but expresses, instead, an unassimilable alien philosophy.

Attempt is now being made to beat the tom-toms of war and get the people excited enough to rally forth to their own destruction. No doubt incidents will be provided for the sole purpose of arousing popular sympathy toward the British Empire. I would advise the people to pay no attention to what is happening in Europe, for those nations understand each other much better than we understand them. The present war is not a war of the people, but is, instead, a strife in which the people will be sacrificed in order to establish a super world government over which the internationalists can reign unmolested and free. It is to establish a world government that will live upon the earnings of all the people in the world and use the people to bludgeon those nations which want to be free. It is a grand attempt to swing the Star of David over the North and South Poles so that it may radiate along the meridians of the world.

If the State Department or the Executive permits any incidents to happen at this time for the purpose of agitating public opinion favorable to entrance into this war, all those so involved should be impeached by the Congress of the United States for the common defense and for the general welfare of our own people.

If our Army is to be employed, let it be in consolidation of the North American Continent and adjacent islands, so that we may establish a great empire of North America protected by water on all sides.

Darwin is right. It is the survival of the fittest. And bearing that in mind, let us assure that we will survive by protecting ourselves at home, for we will, in such procedure, be in a position to render greater aid to those now engaged in an unnecessary war that can only end in destruction of a Christian civilization which has brought light into the world.

Communism in School Textbooks

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

Mr. THOMAS of New Jersey. Mr. Speaker, Communist leaders gave the answer themselves to why the Dies committee is making a study of the inroads of communism in some of the textbooks used in our public schools and colleges. In answer to recent criticism of why the Dies committee is making such a study, I need go no further than to quote from an article written by William Z. Foster, Communist leader, appearing in the magazine The Communist—issue of September 1938. The reference is as follows:

(d) Communist professionals also have the very important task of advancing and even revolutionizing the techniques and theories of their respective professions. They must take up the intellectual cudgels against the reactionaries on all fronts. Thus, our teachers must write new school textbooks and rewrite history from the Marxian viewpoint; our scientists must organize more effectively the battle of the materialists against the idealists in every branch of science; our doctors must introduce new methods into medicine (the American Medical Association is not only reactionary politically but also medically); our lawyers must challenge prevalent musty capitalist legal conceptions and rewrite our legal history; our writers must bring forward class-struggle themes in literature and the theater, etc. In short, our Communist professionals must develop a powerful Marxist-Leninist ideological front against the reactionaries and their Trotskyite-Lovestoneite stooges in every field of intellectual and artistic endeavor.

THE PARTY'S WORK TO DATE

Our party has already done very considerable work along the foregoing general lines among the professions.

The Road We Are Traveling

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

ADDRESS BY HON. JAMES W. WADSWORTH, OF NEW YORK

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me before the Maine Republican State convention at Portland, Maine, on April 4:

Mr. WADSWORTH. Mr. Chairman and members of the convention, the managers of this convention have done me a great honor in inviting me to come here and speak to you about the issues which confront the Nation and are of especial interest to all loyal Republicans. I have grave doubts as to my ability to fill the bill, for when you come to think of it, the story of the last 7½ years is of such a pattern as to defy the analytical ability of the most observant and informed mind. I cannot boast possession of such an intellect. I tell you frankly that it is beyond my power to catalog, much less to analyze, all the events which have thundered to our attention since the day Franklin Roosevelt entered the White House. Those events have occurred with such startling rapidity and have been accompanied by such a continuous blast of organized propaganda as to deafen the hearing and muddle the thinking of many of us. The best I can do, after watching this thing for more than 7 years, is to give you my estimate of trends. I mean by that to explore the road which America has been traveling under Roosevelt and to identify, if I can, the goal at the end of the road. Were I to attempt to go into details, to explain every measure proposed by the New Deal, and to follow each of them through to its logical conclusion, I would soon exhaust my own capacity and your patience. The best we can do is to discover the philosophy of the New Deal as expounded by the President and his inner circle of advisers. And after all, the motive, the intent, and the goal are the elements which we should see and understand clearly before we make up our minds whether or not this thing should be permitted to go on for another 4 years.

If I shall recite to you my personal reaction and some of my votes in the House of Representatives, I shall do so not to defend myself, but rather to indicate how I and many other Republican Members of the Congress have reacted to this extraordinary situation, dating back to the beginning of Franklin Roosevelt's administration. It ought to be understood that none of us was prepared for what was coming, that none of us enjoyed an opportunity at the beginning to estimate just what this New Deal meant. It came to us as a complete surprise, as it did to all the rest of the country. Neither we in Congress nor the public generally had any warning, and as a consequence the Republican Members of Congress and a large number of Democratic Members were compelled to consume a good deal of time and a lot of thought, some of it groping, before we came to understand just what the New Deal meant. I think it fair to say that now, after an experience lasting through 7½ years, a large majority of the Members of Congress, regardless of their political affiliations, has awakened to the realities and has a pretty clear conception of where Roosevelt would lead the country.

In achieving that conception and explaining how we reach it, we must look back to March 4, 1933, when Mr. Roosevelt stepped into the White House, pledged up to the hilt to establish rigid economy in the conduct of the Federal Government. I remember very vividly, and so do you, his first moves and his first public utterances based principally upon his campaign pledges. In the Presidential campaign of 1932 he had denounced extravagance, he had pictured bread lines of the unfortunate unemployed resulting from such extravagance and excessive taxation. He was very eloquent, and if I may say so, very sound in his utterances upon that subject. He denounced the multiplication of Federal boards, commissions, and bureaus, the piling up of the Federal pay roll, the expansion of the Federal bureaucracy at the expense of the independent functions of the several States. He repudiated utterly any attempt on the part of the Federal Government to control agricultural production or to fix prices of the products of the farm. He demanded the curbing of Federal expenditures, the practicing of economy, to the end that the Federal Budget should be balanced. In this field he left nothing unsaid in denunciation of President Herbert Hoover.

Prior to that Presidential campaign of 1932, during the Hoover administration, the whole world was cursed with an economic de-

pression—a depression which every informed economist traced to the wholesale destruction of property, as well as lives, incident to the World War—the sort of depression which has followed every great war in the past and which represents the penalty which the human race must pay for the letting loose of wild passions and its indulgence in folly. Generally speaking, our people were desperate. Unemployment was increasing, governmental revenues were decreasing. Agriculture, industry, and commerce generally were in the doldrums. The banks were closing. In their desperation the people, as has been so often the case, were more than willing to reach out and clutch at any straw which might enable them to float ashore. In the campaign of 1932 Roosevelt offered them the straw. He bid them to be of good cheer. He promised that if he and his party were placed in power, the burdens of the cost of government resting upon the backs of the people would be lightened; that the Government would help lift them up and give them a chance to work their way out of their troubles. He painted a picture of hope and of happiness brought to us all by a beneficent government, in whose conduct common sense and the other old-fashioned virtues would prevail.

And so a desperate people elected him and greeted his entrance to the White House with glad cheers and with an optimism scarcely to be measured. Very well do I remember that week or 10 days immediately following Franklin Roosevelt's inauguration. He told us that what was to be most dreaded was fear—fear for the future of America—that we must abolish fear from our hearts and have confidence. He told us that under him the Government would be sound and secure; that it would restore confidence, cut down expenditures, refrain from additional taxes, reorganize the banking system (just then in a precarious situation). He said to all of us, "Be of good cheer. I understand your problems. I am here to help you rise up again." He said it to the industrialist; he said it to those engaged in commerce; he said it to the depositors of the banks; he said it to the farmer. In fact, he said it to all of our people who earn their living from day to day.

Never shall I forget those first weeks of the Roosevelt administration. The Congress and the people, regardless of political affiliations or prejudices, welcomed this prophet of a happy day, and with scarce a dissenting voice tendered him their unqualified support. I was a Member of the Congress at the time, and so enthused was I by these assurances from the head of the State that I secured a half hour of time on a national radio hook-up—I, a Republican—and in that speech urged my invisible audience to rally to the support of the Federal Government. To most of us in Washington those seemed to be desperate days, and the glad note of optimism and assurance uttered by Franklin Roosevelt seemed to us to shed a bright light upon our problems and assure us of a decent chance to work out of them. I confess very frankly that I shared that feeling. And I and many Republicans in the House and Senate demonstrated our faith by voting for the famous Economy Act, passed, as I recollect it, in May of 1933. There was an act intended to cut down drastically the expense of government. It was prepared by the President and his advisers. It was drastic, and in some ways unexpectedly severe. And yet most of us made up our minds that severity was needed. We stood for it. Indeed, we rejoiced in it, for to us it represented a courageous approach to the solution of a terrific problem.

Then came a bill to reorganize, in effect, the whole banking system of the United States, calculated chiefly to enable hundreds of banks which had been closed to reopen, and restore to the public the normal functions of a bank in the business world. Other measures came along in those first few weeks, all of them calculated to rebuild and restore. And we voted for them. As a matter of fact, they seemed to us to be in line with the promises of candidate Roosevelt as made to the country in the Presidential campaign of 1932. It turned out, later, that we were easy "come-ons."

It is difficult for me, and probably difficult for any other man, to identify the date in the spring or summer of 1933 upon which the scene began to change. Suffice it to say that following shortly upon the enactment of the Economy Act and other measures to conserve the resources of the people, Mr. Roosevelt abandoned completely the entire program, and we woke up one day to find that these measures meant less than nothing, and that he and his administration had determined to change the whole complexion of government—to change the relationship between the citizen on the one hand and the Government upon the other, to bring about a condition under which the citizen, instead of being master of his government, should become its subject. From then on economy was ignored. Worse than that, it was forgotten. Instead of being content with helping the banks get back upon their feet, the idea prevailed that the Government should be the master of the banks, and through them of all credit. Instead of reducing the number of boards and commissions, dozens of additional Federal agencies were created, armed with power which, in the aggregate, govern the life of the citizen as he attempts to earn his living. To thoughtful people it became apparent, month after month, that Roosevelt had come to Washington imbued with a philosophy of government completely new to America. And as bill after bill was passed conforming with the fast developing New Deal program, we found that the Government in Washington was, step by step, assuming to itself powers over the people never dreamed of. Through all these years we have seen evidences all too plain of the ultimate intent of Franklin Roosevelt and his people. Measure after measure has been passed, with one excuse or another, fortified by propaganda, each of them designed to knit in with the others a pattern of Federal bureaucratic domination. True, some provisions of some of those measures are justifiable, but if we will estimate them as a whole, estimate them in the aggregate, we cannot escape the conclusion that they are designed to transform our old-time Government into a new engine, destined, when fully equipped with power, to bring about the establishment of a totalitarian state in America. And let me remind you once again that the American people had no suspicion, when they voted in 1932, that such a transformation was in store.

During Mr. Roosevelt's first term and extending through the Presidential election of 1936 few of our people sensed the direction of this trend. Moreover, during that period, and especially during the Presidential election period of 1936, the wholesale distribution of Federal money in all the States and in nearly all the counties and cities and villages of the Union operated to dull the sense of the average citizen to what was going on and at the same time to tempt him to give it his support, and so it was for several years.

At this point I venture to call your attention to something which may throw some light upon Mr. Roosevelt's habit of thought and philosophy of government. If we go back over the years and search his public utterances, we find a curious and significant omission. Never once during this hectic period has Roosevelt used the word "thrift" or its equivalent, and, for that matter, never have any of his principal lieutenants used it. I submit that the omission of that simple word from the New Deal vocabulary is significant. It denotes a habit of thought. It helps to identify a philosophy. It suggests a change in the American way of thinking and of living—planned and encouraged by Mr. Roosevelt. The average American has lived in the belief that the best measure of security he could achieve for himself and his family must come from his own efforts. If he were wise, he tried hard to put away savings against a rainy day. He preferred to depend upon himself rather than upon Government, and in doing so he enjoyed a degree of satisfaction which in itself is a spiritual asset of great value. It is fair to say that the American pattern of life has, generally speaking, been built upon such a foundation. Thrift has always been regarded as a cardinal virtue. Those who practiced it have been admired. Those who did not have been urged to do so if, indeed, they were to achieve security and incidentally self-respect.

The New Deal offers no encouragement whatsoever to such a conception. Directly or by implication it preaches the doctrine that security from the cradle to the grave should be conferred upon the individual by an all-wise and all-powerful Government. The function of government in this field is made clear in some of the phrases which have come to our ears during the last 7 years. The President has often used the term "planned economy," and some of his lieutenants have used the phrase "a disciplined democracy." The farmer has been told that he must achieve security by reducing production. He must raise less food. Both the farmer and the industries and all the commercial interests have been told that the buying power of the people, which may be regarded as a partial measure of security, must be increased by means of enormous governmental expenditures. The huge expenditure is expected not only to improve our economic condition, to help bring security to the people, but also to be exceedingly popular among the voters as they go to the polls. The engineer whose hand has been at the throttle of this gigantic engine is confident that there will always be a considerable number of voters enthusiastic over getting more for producing less, and that they will be grateful for their security in such a way of life. However that may be, the phrases indulged in by the New Deal, and many of the policies put into effect, indicate very clearly what the President and his people are driving at. We have seen a long procession of legislative enactments, and another procession of enactments attempted but not as yet achieved, contrived to plan the economy of the people and to discipline them under governmental control—all of them in the interest of what they call security. If we will but concentrate our attention upon it, we will find it affords a vivid picture. And the element of thrift does not appear in that picture at all, whether it be thrift in government or thrift exercised by the individual. Mr. Roosevelt ignores it. I doubt that he knows the meaning of the word. I doubt that he knows how a dollar is earned or how earnings should be conserved. To him a savings account is utterly unimportant. He pays no attention to it. On the contrary, he adheres joyously to the tactics of the spendthrift and at the same time urges the people to bow to the will of a central government.

The two things go along together. With thrift ignored and despised, and spending increased to fantastic figures, it is expected that the individual will the more easily drift into a state of dependence; that he will acquiesce, finally, into becoming the disciplined subject of government. Thus, he is told, he will find security. Some of you may doubt that there is any such intention in the minds of the new dealers, but make no mistake about it, that is the road along which the American people are asked to travel today. Moreover, I fear they have traveled some distance upon it already. Now, let me call your attention to an element ever present in this philosophy of government. It is the element of force—force applied against the individual to compel his obedience to the plans of an imperial government. Obviously, if the Government is to plan the way in which people are to earn their living on the farm, in the factory, or in commercial pursuits, it cannot permit any individual or group to deviate from the path marked out for them, lest the whole plan of the Government break down. To save planned economy, obedience is demanded; and if obedience is lacking, then force must be applied to punish the disobedient. That is inevitable. In other words, our democracy, so-called, must be disciplined, and a bureaucratic government at Washington must

perform the function of a policeman. We must take it and like it. The adventurous man must sit still, for if he employs his energies and his resources outside the limits of the plan, the Government will penalize him in the event he succeeds. So he sits still—he is sitting still today—and multitudes are sitting still on the benches with him. If you doubt it, take a look at the 9,000,000 of unemployed, and this after 7 years of attempted planned economy, bolstered by spending, and supported in part by force. And take a look at the billions of dollars lying idle in our banks today. They are sitting still. Thus you may identify the penalty which we pay for the discouragement of thrift and the violation of economic law, as well as the laws governing human nature.

How any one can boast about our present situation passes my comprehension. We all know we are in bad shape. If we measure the recovery from world-wide depression achieved by other great self-governing nations prior to the outbreak of the present conflicts in Europe—let us say at midsummer of 1939—and compare their progress with ours, we find that we are far down on the list. We also find that none of them adhered to anything like a Roosevelt recovery policy. Some of them stepped over the line into dreamland for a moment, but drew back the instant they began to sense failure. For example, Great Britain, at the onset of the world depression, started in at pump priming through a public-works program and abandoned it in short order. And we have another example just across our border—the Dominion of Canada. Did Canada attempt to regiment her people, to tell them how to earn their daily bread? Did Canada set up a vast centralized bureaucracy at Ottawa? Did Canada indulge in pump priming? She did not. And yet, up to last summer she was far ahead of us on the road to recovery—there was no comparison. So far as I can ascertain, the United States is the only great self-governing nation upon the face of the earth in which the Government itself has denied the virtue of thrift, and insisted that debt, and more debt, and again more debt, is a matter of no concern.

Speaking of debt, the creation of the reckless spendthrift, I make bold to bring to your attention the relation of the present and future Federal debt to the great problem of the national defense. We Republicans are concerned about the national defense, so much so that just a few days ago the Republican Members of the House of Representatives joined unanimously in presenting to the House itself an expression of our concern. I quote a portion of that declaration. We said:

"Our concern is heightened and intensified by what we see going on all over the world today. Recent events strengthen our determination that we shall remain at peace, and secure in that peace. As we plan for security we mean security not only in the physical or material sense, but, taking the long view, the security of our free institutions. We are confronted, however, with a very difficult and serious circumstance, one which we must not ignore.

"To reach a better understanding of it we must reexamine the broad outline of our participation in the World War. Upon doing so we are reminded that when we entered that war, in April of 1917, the national debt stood at $1,100,000,000. In the 18 months of our participation we spent something in excess of $35,000,000,000. To meet that expenditure we raised about ten billions through taxes. We borrowed the remainder and came out of the World War with a national debt of twenty-six billions. That wartime financing was accomplished with comparative ease, for when we began it the Government owed very little.

"Compare that to our present situation. For 8 or 9 years the Federal Treasury has been running in the red. Through all of these years we have been spending much more than we have collected from taxes. The more we have spent the more we have borrowed. As a result, we have piled up a huge national debt. Present law provides that the national debt shall not exceed forty-five billions. It is now conceded that by the end of this fiscal year, June 30, 1940, the direct bonded debt will have approached forty-four billions. If our spending in the near future goes on at anything like the recent rate, the forty-five billion limit will be reached, the Congress will have to raise the limit, and we shall continue plunging along the reckless road.

"Let us remember, therefore, that should we be drawn into a war of first magnitude, we should have to start with a debt of at least forty-four billions, probably more, and then finance the effort on top of that debt. It is a prospect which must concern every thoughtful person in the land.

"No one at this time can foresee accurately the measures we might have to employ were we drawn into war, but all of us can visualize the danger to our institutions were we forced to resort to inflation, to confiscation, and ultimate repudiation. Could our free institutions survive such a strain? Similar institutions have perished in other lands within our time. Driven to such expedients it might well be that we shall have failed actually in our defense.

"Such a possibility should convince us that the most serious weakness in the armor of our national defense today is the existence of a national debt of $44,000,000,000. There it stands, towering, ominous. Much as we should like to, we cannot consider our problem solely in terms of soldiers and sailors, of divisions and battleships.

"To deny that a healthy economic condition is vital to our national defense would be absurd. Our ability to mobilize and maintain the resources of the country in a major effort depends fundamentally upon the strength of our national economy. True, we need soldiers and sailors, divisions and battleships, with adequate modern equipment, but to secure their effectiveness in a long, grueling struggle, and at the same time to preserve our institutions, we must mend our ways, we must put our house in order.

"It will not be an easy task. We have acquired a habit difficult to cast off. Many of our people, thoughtless of the consequences, laugh at debt and demand that spending shall go on. But it must be curbed, for we cannot go on this way and be secure in this troubled world.

"To put it simply, our plea is that the Congress, and others in high authority, reestablish thrift as a virtue in the conduct of government, as it is a virtue in the conduct of the individual."

I have tried to portray the fundamentals of this thing and to point out the dangers ahead—dangers which we must comprehend if we are to preserve our free institutions. Like you, I am rejoicing that the tide is turning, that in ever-increasing numbers the people are coming to understand. In the summer and autumn of 1938 the voters gave clear evidence that they were beginning to realize what is being done to them and to their future. Their awakening accounted for the extraordinary gains registered by opposition Republican candidates in the congressional and gubernatorial elections of that year. In many a great State we came back into power, and in the House of Representatives we have a thoroughly welded and powerful minority under the skillful leadership of Congressman JOE MARTIN—a minority which, joined by numbers of patriotic Democratic Members, who see almost eye to eye with us on these fundamental issues, has been able to repulse some of the totalitarian measures of the New Deal. And let me say here, all honor to those Democratic Members who, placing the country and its welfare above the enjoyment of favor and patronage, have voted as Americans. Yes, the tide is turning. Witness the special congressional elections of this winter. In them the trend of public thought is even more clear.

As we face this menace and prepare for the battle, let us Republicans, and all others of like mind, remember that, first of all, the battle is well worth waging. And then let us remember that we cannot win it unless we show courage—courage to stand up and be counted, courage to speak out, courage to resist temptation to pussyfoot in the hope that we shall capture a vote here or there. There can be no compromise. We cannot outbid the New Deal, even if we were so lacking in self-respect as to attempt such a thing. The underlying philosophy of it is wrong and must be rejected. And the best way to accomplish that would be to beat Roosevelt himself. I don't know how you feel about it, but I hope he runs. The issue then would be perfectly clear—the New Deal and the third term—two things which ought to be considered together. They are logical partners. An intelligent man said to me a few days ago that the rejection of the Covenant of the League of Nations and the endorsement of that rejection by the people back in 1920, was not the work primarily of any living American; that far more than any living American the Covenant was defeated by George Washington with his warning against entangling alliances. If we but do our part in the great contest of 1940, it may well be that Washington shall be our spiritual leader, and that close beside him will stand Thomas Jefferson.

The Price of Hogs

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

LETTERS FROM LLOYD A. HOWELL

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to submit several letters I have received from Mr. Lloyd A. Howell, of Iowa City, Iowa, regarding the price of hogs. These letters set out some very good observations on this most important problem that challenge our study and thought without further delay. I am placing them in the RECORD in order to bring the points to your attention as forcibly as possible and to make the letters and the points therein set out available to all Members.

IOWA CITY, IOWA, *March 23, 1940.*

Hon. THOMAS E. MARTIN,
House of Representatives, Washington, D. C.

DEAR TOM: For some time I have been hearing rumors from various farmers and railroad men that packers were shipping live hogs, also cured hams and bacon, from various Iowa points to

Canada, buying on a $5 hog market here and selling on a $9 hog market in Canada.

This may be old news to you and there may be some good reasons why packers can make this $4 profit which individual shippers cannot make, but I think it should be investigated.

I wrote to Winnipeg recently and received a reply from the Winnipeg Board of Trade answering my questions as follows:

1. What is the duty on live hogs from the United States into Canada? Answer: One-half cent per pound.

2. Is there an embargo on live hogs at the present time? Answer: No.

3. What is the average hog price at Winnipeg for the last 2 or 3 weeks? Answer: $9.10 top.

4. What is the name of a reliable packing-house company in Winnipeg? Answer: Swift Canadian Co.; Canada Packers, Ltd.; Burns & Co.; Western Packing Co.

He also wrote "Would add that there is a 30-day quarantine at boundary in care of health-of-animals branch of the Government, for which there is a charge of $1 per head per day."

There is no embargo on live hogs shipped by individuals, Tom; just a $30 quarantine charge on a $5-per-hundred hog.

Now, Tom, I think the United States packers are buying Iowa pork for $5 and selling it in Canada for $9, and I do not believe they are paying any $30 per head quarantine on those hogs.

I believe an investigation by the Secretary of Agriculture or some congressional committee would bring out publicity which would tend to raise Iowa hog prices and do us a lot of good.

If you think there is anything worth investigating in this matter, I'll be glad to send you the copy of the letter I wrote and the original reply from the Winnipeg Board of Trade.

Extending best wishes to you and your family, I am

Cordially yours,

LLOYD A. HOWELL.

IOWA CITY, *March 28, 1940.*

HON. THOMAS E. MARTIN,
House Office Building, Washington, D. C.

DEAR TOM: Thanks for your letter of March 25 enclosing Charles H. Elston's remarks taken from your experience printed in the Cedar Rapids Gazette of January 14, 1940.

I am enclosing copy of my letter to the Winnipeg Chamber of Commerce and original reply sent from the Winnipeg Board of Trade with the hope that you may be able to use this material in starting an investigation as to the present price of hogs.

The hog market yesterday at Chicago, with a top $5.25 and an average $4.90, is just about the lowest point in 6 years. With 65 cents freight, commission, and handling prices deducted, it means the average hogs sold in Chicago yesterday netted the hog raiser $4.35 per hundredweight.

	Chicago Daily Drovers Journal, Mar. 27, 1940					
	This week		Last week		A year ago	
	Top	Average	Top	Average	Top	Average
Monday	$5.55	$5.20	$5.35	$4.95	$7.70	$7.30
Tuesday	5.35	5.00	5.50	5.05	7.50	7.15
Wednesday	5.25	4.90	5.45	5.10	7.50	[1] 7.15
Thursday			5.55	5.20	7.40	7.05
Friday			5.50	5.15	7.45	7.05
Saturday			5.50	5.15	7.45	7.05

[1] Less 65 cents freight.

After deducting the 65 cents usual shipping charges, the average hogs sold in Chicago yesterday brought $4.35, as compared to $6.50 a year ago, which is a 33-percent drop in net income from hogs compared to a year ago. Looking further back, top and average hog prices on the same day for the last 6 years, are as follows:

	Top	Average
Mar. 27, 1940	$5.25	$4.90
Mar. 27, 1939	7.50	7.15
Mar. 27, 1938	9.10	8.80
Mar. 27, 1937	10.35	10.00
Mar. 27, 1936	10.80	10.45

It would be a fine thing if other Congressmen kept in touch with local conditions and prices as you have been doing, and no doubt many of them will be surprised to know that hogs now are bringing less than half what they were bringing in 1936 and 1937.

Of course, as you point out, many southern farmers are turning from cotton to corn and hogs, but $5 hogs in the United States and $9 hogs in Canada just does not make sense.

I am quite sure the packers are shipping both live hogs and finished pork products into Canada at an enormous profit, and at the expense of the hog raiser.

Anyone who could get hogs back up to their prices of 3 or 4 years ago, could get elected to any office in Iowa.

Cordially yours,

LLOYD A. HOWELL.

IOWA CITY, IOWA, *March 4, 1940.*

WINNIPEG CHAMBER OF COMMERCE,
Winnipeg, Manitoba, Canada.

DEAR SIR: Would you please send us the following information:

1. What is the duty on live hogs from the United States into Canada?

2. If there is an embargo on live hogs at the present time?

3. What is the average hog price at Winnipeg for the last 2 or 3 weeks?

4. What is the name of a reliable packing house company in Winnipeg?

Thanking you for the above information, I am

Yours very truly,

LLOYD A. HOWELL.

THE WINNIPEG BOARD OF TRADE,
Winnipeg, March 9, 1940.

MR. LLOYD A. HOWELL,
Iowa City, Iowa.

DEAR SIR: Replying to your letter of March 4, 1940, we are pleased to submit the following information:

1. One-half cent per pound.

2. No.

3. Nine dollars and ten cents top.

4. Swift Canadian Co.; Canada Packers, Ltd.; Burns & Co.; Western Packing Co.

Would add that there is a 30-day quarantine at boundary in care of health of animals of the Government, for which there is a charge of $1 per head per day.

Yours truly,

THE WINNIPEG BOARD OF TRADE.

Iowa City, Iowa, April 1, 1940.

THOMAS E. MARTIN,
120 House Office Building, Washington, D. C.

DEAR TOM: You can use all or any part of my letter in any way you see fit, and the figures are absolutely okay, and you will not have to back down on them.

For your additional information, I am enclosing two clippings from the Chicago Daily Drovers' Journal. This first clipping is from the paper of March 27 showing hog prices for the same days back to 1935.

Chicago daily hog prices

	Top and average hog prices as compiled by the Drovers Journal		
	Top	Average	Spread
Wednesday, Mar. 27	$5.25	$4.90	$0.35
Tuesday, Mar. 26	5.35	5.00	.35
Wednesday, Mar. 20	5.45	5.10	.35
2 weeks ago	5.55	5.20	.35
3 weeks ago	5.65	5.20	.45
4 weeks ago	5.50	5.15	.35
1939	7.50	7.15	.35
1938	9.10	8.80	.30
1937	10.35	10.00	.35
1936	10.80	10.45	.35
1935	9.10	8.95	.15

This second clipping is from the paper of March 30, which we received this morning and it shows the hog prices for the week ending March 30, 1940, the previous week and the same week in 1939.

Top and average hog prices

	Chicago top and average hog prices day by day this week, last week, and a year ago, as compiled by the Drovers Journal					
	This week		Last week		Year ago	
	Top	Average	Top	Average	Top	Average
Monday	$5.55	$5.20	$5.35	$4.95	$7.70	$7.30
Tuesday	5.35	5.00	5.50	5.05	7.50	7.15
Wednesday	5.25	4.90	5.45	5.10	7.50	7.15
Thursday	5.35	5.05	5.55	5.20	7.40	7.05
Friday	5.30	5.00	5.50	5.15	7.45	7.05
Saturday	5.30	5.00	[1] 5.50	5.15	7.45	7.05

[1] Nominal.

If there is any additional information along this line which you may want in the future, I will certainly be glad to get it for you.

Cordially yours,

LLOYD A. HOWELL.

Continuance of Farm-Tenancy Program

EXTENSION OF REMARKS

OF

HON. PHIL FERGUSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

LETTERS FROM OKLAHOMA FARMERS

Mr. FERGUSON. Mr. Speaker, the tenant farmers of the Eighth District of Oklahoma present the best argument yet made for an appropriation to carry on the Bankhead-Jones Farm Tenant Act. Every one of these farmers want the program continued, even on a small scale. The Members who argued the program was a failure because so few farmers could buy farms have their answer in these letters. I have received over 200 letters on this subject, all in favor of continuing the Bankhead-Jones Act and the Lee-Jones Act, to insure farm-purchase mortgages.

The letters follow:

DEAR MR. FERGUSON: I am very pleased to write regarding the continuance of the Bankhead-Jones Act. Here is my very candid opinion. I am hoping to be one picked this year and was not a bit at outs with the program for not being selected this past year.

You can tell your fellow House Members that there is many thousands who also voice the same opinion. Now, for instance, if I had a farm of my own, compliance with the A. A. A. performance would be smoother. I could also work with Farm Security better with trench silo, more or I'll say some feed could be planted at will and not be at the mercy of the landlord at every turn. My landlord, and there is countless like him, don't want alfalfa, trench silos, rowed feed, ponds, etc. Why I had to talk like a good fellow and with the help of the drought we convinced my landlord to stay with A. A. A. and get crop insurance.

We had a Farm Security meeting in Cherokee the 28th and one of the Dallas speakers told how the applications had increased for tenant purchase loans in Oklahoma alone. I think the past year's applicants totaled over 3,500. Doesn't that show we want more money to buy farms?

One thing I wish you would write and tell me is why it takes so damn long to get something like this through Congress and into action. At the Cherokee F. S. A. meeting the same question was asked about the continuance of tenant purchasing and the Dallas speaker or Lyle Hague, one or the other, asked to see the hands in favor and I know every tenant there raised his.

I further do not feel that it was any injustice to me because my application was not approved. Keep it up, Phil, if only on a small scale, until you can get those Eastern Senators and Representatives to jar loose for something really helpful for the tenant problem, as well as the Army and Navy that get 12 times as much every year as the Bankhead-Jones appropriations do. I tell you, Mr. FERGUSON, it means a feeling of security to many a tenant or sharecropper to own a farm and know he doesn't have to fear a move every 1, 2, or 3 years. And, by the way, PHIL, watch that Johnson Act and England. I would enjoy another letter from you like that regarding anything.

Yours truly,

ORVILLE A. MEYER,
Kiowa, Kans. (Alfalfa County, Okla.).

APRIL 1, 1940.

DEAR SIR: Will answer your letter of the 30th, and wish to say we certainly wish for the Bankhead-Jones Act to continue. We certainly are not at outs with the program, for if it never benefits us it may help someone.

So we hope you get your required funds, as we certainly would like to have something to look forward to in the future.

Respectfully,

EUGENE T. and MILLIE PIERCE,
Blackwell, Okla.

APRIL 2, 1940.

DEAR SIR: We are in favor of letting the good work go on. We understand that we could not all get farms at once. We are willing to wait for our turn. Hope you will do all you can for the ones without farms. We know the men have a job when they have a farm to care for.

Yours very truly,

CHARLES SHAFER,
Sandcreek, Okla.

APRIL 2, 1940.

DEAR SIR: Yes, I made application to buy a farm. I understand there were 152 applications in our county.

I do not feel that I have in any way been let down by the administration and am highly in favor of this program on a larger scale, as I am very familiar with the tenant situation and also the small chance of a tenant saving enough to get a farm in his name, as this is the end to which I have been working. Neither have I heard any of the applicants say they were not in favor of continuing this program.

Hoping to get another chance to make application, I remain,

Yours truly,

R. L. HORNING,
Wakita, Okla.

APRIL 2, 1940.

DEAR SIR: Received your letter today regarding my feelings about the farm-loan program. Well, it was all right I guess but it did not do me any good. I understand if a man is not married he had no chance of getting a loan to buy a farm. I am single but I take care of my mother. She keeps house and helps as much as she can. I am 30 years old and would love to have a home of my own and have a family of my own some day. You ask if I felt it had been an injustice to me my not getting one. No; I did not feel that it had. I must say I felt kind of disappointed at the time. I would like for it to be so more could own their own homes. I work hard, milk 10 or 15 cows, and do all my other work, too, but can't get much ahead renting. If I had a place of my own, I could raise more feed for my cattle, but all landlords want wheat, wheat, and I can't make it just on wheat. Yes, Mr. FERGUSON; I would like to see your bill passed. Maybe it would help others if it didn't me.

Yours truly,

RAY PETTYPOOL,
Jefferson, Okla.

APRIL 1, 1940.

DEAR SIR: I am very much in favor of the farm-purchase program and hope to see it continued and expanded.

I don't feel there was any injustice and was not disappointed because my application was turned down. Reason: I have a F. S. A. loan and should first prove I am capable of repaying same before I would be eligible to purchase a farm.

Yours truly,

CHARLES C. HORNING,
Wakita, Okla.

APRIL 1, 1940.

DEAR SIR: Received your letter in regard to my application to purchase a farm under the Bankhead-Jones Act.

I am very much pleased to be asked my opinion of the matter and personally I want to thank you very much. Yes; I would like very much to see the program continued. Although my application was not accepted last year I am very glad that some were accepted, and if the plan continues, I may get one in the future.

Personally, I do not feel that it has been an injustice that my application was not approved, and I am very glad for those who did get a farm. I would like to see the program continued even on a small scale because men who possibly would never be able to buy a home any other way could buy one, and I think such bills as this will help the workingman get a permanent job of his own.

Stay with it, Congressman FERGUSON, we are with you 100 percent and I sure hope the program continues, and hope that if it does that I may be one of those chosen ones to buy me a home.

I am a W. P. A. worker, but no matter what I do I always make the best of it—get all I can out of it and am thankful that we are free American citizens. Thanking you again, very sincerely, your friend and supporter.

WARREN W. HICKEY,
Renfrow, Okla.

APRIL 1, 1940.

DEAR CONGRESSMAN: In regard to your letter of March 29, I wish to say that I am very much in favor of continuing and enlarging the program so that more tenants might receive farms.

Personally I think that every applicant should feel all right toward the program even though they did not receive a farm last year. Most people do realize that the program must be limited but if continued will help a lot of people that probably would never be able to buy a farm otherwise.

I think, however, that it should be changed to the extent that a purchaser might be allowed to farm a little other land along with that he buys. As it seems to me that he would have a much better chance to pay and make a living at the same time. It seems to me that the success of the program depends on the ability of the purchaser to pay.

I do hope to own a farm home some day but do not care to tie myself down to something that would not allow a person to expand if the opportunity presented itself.

Yes; I feel that the committee in our county did justice to all applicants and worked a hardship on no one and I hope that you will do everything in your power to continue the program.

Yours sincerely,

EUGENE GRAHAM, *Byron, Okla.*

APRIL 2, 1940.

DEAR HON. REPRESENTATIVE PHIL FERGUSON: Sometime ago I tried to purchase a farm under the Bankhead-Jones Act, yet I was one of the applicants rejected because of limited funds. But let me state to you right here: My father died when I was a boy of 9 years of age; from there on I worked nothing else but farming, raised livestock, different kinds of grain, including 400 acres of wheat, until war broke out. I went over there; on return I had very little left to start out again. At the end of 1928 I lost my farm, my estate, since I had no opportunity to go back to farm, for which now I feel, with my three small sons, one daughter, and wife, as an undesirable family in this Nation.

Yet, I take my hat off my head to any so-called good farmers. My experience as successful farmer rates among the very best. Now, Honorable FERGUSON, whatever you do—fight! for the Bankhead-Jones Act. When you win you will make thousands of good, clean, healthy citizens. I see no better way for progress in our Nation.

Sincerely yours,

VICTOR S. SEDIVY,
Covington, Okla.

APRIL 3, 1940.

DEAR MR. FERGUSON: Yes, sir; I am one of the refused applicants for a long-time farm loan, but, however, I am not sore at the continuation of the program and I cannot see where it has harmed me in any way but has helped the ones that got it, as I believe it would me if I could have been fortunate enough to have gotten it.

For God's sake and the sake of the people at large of the good old U. S. A. discontinue the doling out money to the farmer for being dictated to and continue the farm-loan program when you know it will help some poor family to own a home of their own and the Government will get the money back with interest.

You vote for the continuation of this bill and the works-program bill for me. Fight for it if need be. I am for you 100 percent on these two bills. When you come back home come and see me. I am too hard up to buy gasoline to come and see you.

Yours truly,

ANTHONY D. ADAMS,
Ames, Okla.

APRIL 2, 1940.

DEAR SIR: I received your letter and was glad to hear from you. I put in my application for a farm last fall but was not approved but I think I was as capable as those that got farms but that don't discourage me. I am going to keep on trying. I am very much in favor of the bill. I want to get one of the farms this fall if I can at all. I want to tell you, Mr. Phil, that there has got to be something done to get people back on the farms. I want to see the program carried on as long as possible. One thing that has to be stopped is big farmers taking houses and farms off from these farms and plowing up everything and grubbing out all the trees and then goes the tenants to town and they have to get on W. P. A. or something or else starve. We need a family on each 160 acres and we need men who are willing to try and raise something besides wheat. We have got to have a few hogs, chickens, turkeys, milk cows, and sheep, a variety of stock, and raise some feed for them. We have some farmers who put everything to wheat then go to town and play pitch and dominoes. You know, Mr. Phil, that won't work at all. We don't need town farmers. We need men who are willing to stay on the farms and work. There is always something to be done. We also need gardens on these farms. I want to tell you, Mr. Phil, some of the farmers that borrow F. S. A. money kick of the record book and say the Government is telling us too much what to do. I want to tell you a lot of them need somebody to tell them and get behind them and see that they work. I am in favor of the wheat program but my landlord is against it so I cannot sign up. Our wheat in this part of the State is awful bad shape, looks like a 5-bushel crop and maybe none. I wish something could be done about hog market. They are very cheap. I hope you don't find this letter too long. I am just a plain old farmer, 38 years old, and have a wife and 3 kiddies and some day I hope we can have a family back on each one of these farms. I wish that sometime I could meet you and have a good talk with you. I have some ideas that might be worked out.

Yours truly,

HARRY WHITING,
Lamont, Okla.

APRIL 1, 1940.

DEAR SIR: Yours of March 27 at hand. I was rather disappointed on not receiving help under the Bankhead-Jones Act. Have been on the place for 15 years. It is up for sale to settle estate, and good farms with improvements on them are scarce. I can stand in my yard and count six places that have been stripped in the last 5 years. I understand the Bankhead Act was to help those that had no money. The lucky four in Grant County had from $3,500 to $5,500 on hand to pay on. Let me have that much and I won't need any help. I am not against the act, it is just the way some of the New Deal stuff is handled in Grant County. Would like to see it increased as it takes the owner-operated farms to hold the country together, but just a rider in the act when they leave the farm with any part of the purchase price unpaid refund their money and sell to someone else unless they are disabled enough not to go ahead and farm the place.

I am for it 100 percent and would like to see it go on as the owner farmers are the backbone of the country, for when you are a renter you have to line up with the landlord or look for another place. I have two landlords and they don't want to comply with the Triple A as there was so much crookedness in the first 3 years. Take the money for leaving the land lay idle then plant into wheat and get the wheat and parity payments too.

I was overseas with the other boys. The stay-at-homes got the start on us and it is darned hard to get a foothold again. Do your darndest to keep the act going. Maybe they will get around to me sometime.

Yours respectfully,

ALONZO P. CARPENTER,
(Grant County, Okla.), Caldwell, Kans.

APRIL 1, 1940.

DEAR MR. FERGUSON: In answer to yours on the other side of this letter. No, I am not at all sore. I was not one of the chosen ones but I sure will be if you fellows don't keep the program up, as it is the only way that we younger farmers can ever expect to own a farm of our own. I am for it strong.

I would like very much to see some kind of a graduated land tax put on, so one or two big fellows could not farm 700 to 7,000 acres of wheat, crowding 3 to 20 other farmers off the land, into town and W. P. A. I, myself, was one crowded off by a land hog 3 years ago and have not had a farm since that time although I still have all of my equipment and would like to find a farm to rent.

Still hoping you fellows will continue the program and I will be one chosen next year.

Yours,

FRED A. GEER, *Numa, Okla.*

DEAR SIR: Yours of the 29th of March at hand and contents noted.

Yes; I was one of the many that was temporarily turned down for a loan under the Bankhead-Jones Act. I understand there were around 150 applications for same and only funds enough for 5 in this county. Hats off to the lucky 5.

Now Mr. FERGUSON, I think that is the best thing that has been done in the way of relief, and hope for its continuation and that I may be one of the lucky ones, and thanks for what you have done.

Sincerely,

J. E. GERBER, *Driftwood, Okla.*

APRIL 1, 1940.

DEAR SIR: Your letter of March 29th received. I will say I still hope to see the time when I may purchase a farm on a long-term payment plan as a number of my friends have in this (Alfalfa) county.

Two of the five families who purchased farms are personal friends of mine. I am sure for them, hoping them success with their start.

Sincerely,

CLARENCE A. GERBER,
Cherokee, Okla.

APRIL 1, 1940.

DEAR MR. FERGUSON: I understood at the time application was made out that but a few would have the opportunity to purchase farms.

Am not on the outs with the program. On the other hand I would rather see the Government back capital to purchase farms for farmers in America than to back capital for a future war in Europe. The Government would at least have the farms for security instead of wounded soldiers, widows, and orphans to take care of. I would rather see the program continued on a small scale than to be discontinued. A little good is better than no good.

Respectfully yours,

E. C. TANNER, *Cherokee, Okla.*

APRIL 2, 1940.

The Wheeler-Lea Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

Mr. MANSFIELD. Mr. Speaker, a few days ago, by an extension of remarks in the CONGRESSIONAL RECORD, I invited attention to the disastrous results, as to freight rates, particularly in Texas and the Southwest, that would be brought about by the enactment of the Wheeler-Lea bill. The

momentous occurrences that are now happening in Europe clearly indicate the importance of waterways to the military safety of all nations. Legislation such as the Wheeler-Lea bill, restrictive to the development and use of waterways, would seriously cripple the national defense of this country at a time when we should be especially careful to avoid such a mistake.

Germany has just taken possession of the Kingdom of Norway in order to insure better transportation of ore from Norway to Germany. The mines in northern Sweden are connected by rail with the Baltic Sea but, due to the disadvantages of a long rail haul for transporting large tonnages, the longer water route from Narvik down the western coast of Norway into the Skagerrak to the gun foundries of Germany has been used. Since England threatened to close this route, Germany has launched a new war to protect it.

The newspapers are full of news about other pending campaigns to protect water routes carrying supplies into Germany. The Danube River is being used extensively. At any moment we are likely to hear of a military expedition to keep this route open. Another such waterway is that from Yugoslavia to Trieste. We read that the war is about to be extended into the Adriatic in order to protect this water route. These waterways are comparable to the coastal and inland waterways of the United States.

It would be well nigh foolhardy for the United States, during these critical times, to put on the statute books a law such as the Wheeler-Lea bill, making our waterways subservient to a railroad commission having the will to throttle waterway development and transportation in order to safeguard or enhance the profits of railroads.

The Wheeler-Lea bill turns over to the Interstate Commerce Commission the future of inland water transportation in this country.

Lest there be any lingering doubt as to the attitude of that Commission, the following passage is quoted from the opinion of Chairman Eastman of the I. C. C. in decision F. S. A. 17413, October 30, 1939.

It would be more economical for the Government not to construct and maintain the waterways, but instead to use an equivalent amount of money as a subsidy to the railroads in exchange for lower rates.

Address at Patent Sesquicentennial Dinner

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

ADDRESS BY HON. CONWAY P. COE, COMMISSIONER OF PATENTS

Mr. KRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by United States Patent Commissioner Conway P. Coe at the Patent Sesquicentennial dinner at the Mayflower Hotel on April 10, 1940:

In the President's proclamation inviting our people to commemorate the beginning of the American patent system he credits our patent laws with having afforded protection and encouragement to inventors. In that statement the President has recorded truths that I wish to make the theme of my brief remarks to you.

Man's inventiveness is eons older than any patent law. That faculty he had from the beginning. Some human contrivances date back to the remotest recesses of pre-history. The weapons with which he defended himself or obtained his food and clothing were devised in the depths of antiquity. Some of the utilities that primeval man fashioned still survive in their essentials, though refined in detail. The wheel and the boat are but two of these. Doubtless some of the inventions which the world has come to know in later centuries were anticipated in the pristine ages. For, during this vast stretch of time, there was no provision for the preservation and perpetuation of these fruits of human genius.

Throughout most of the 19 centuries of our own era such means of conserving ideas and discoveries were lacking. Had there been during all mankind's long career a way of transmitting, as there was for producing, the novel and the useful in mechanisms and methods our heritage from the past would surely be richer than it is. Until as recently as the impressive date we are recalling—April 10, 1790—there was no adequate procedure for assuring that the handiwork of one generation should descend to its posterity.

The American patent system has as its peculiar achievement and merit that it has bestowed permanent benefits upon the public in the very act of conferring a temporary reward and protection upon the inventor. That system has established a lasting treasury of the most precious of all human products, that is to say, useful conceptions. Whitney's cotton gin, one of the earliest inventions to be patented by this Government, has long since been outmoded. But Whitney's idea persists down to the present as the inspiration of each successive improvement in gins. Every inventor who has added to the utility and capacity of the gin has worked by the light of Whitney's vision. That is true also of all the classic inventions that have been prompted during the life of our patent system. Long after the originals have served their first purpose they have continued to beget a progeny of betterments, and that process continues.

Our material and social advance has been furthered not only by the development of new, but also by the improvement of old, inventions. The history of our national expansion, the growth of our population, the development of our national resources, the vast increase in our collective wealth, and the elevation of our standard of living are the story of our successful dependence on inventions. A few generalizations will explain and also, I feel, justify my statement. The first steamboats could navigate only a comparatively small mileage of our inland waterways. They were scarcely a reliable means of transportation. But inventions steadily improved them, and before long they were able to penetrate more deeply into the interior. Fulton's steamer plied the Hudson in 1807.

Ten years later a steamboat ascended the Mississippi as far as St. Louis. This new addition to the means of carrying freight and passengers brought many important gains. It aided in the settlement of such of our territory as bordered our midwestern rivers. But there still remained great reaches of country without white population or facilities of commerce. A few years later came the locomotive, made more efficient by American inventors. Railroads were soon traversing regions that must otherwise have remained the wilderness they had been for long ages. With the invention of the telegraph, trains could go farther and faster and more safely. They could take to the settlers in the West the wares they needed and bring to market the products of mines and forests and fields even beyond the Mississippi.

Steamboats, railroads, and the telegraph were only three of the inventions which won the West for us, in an economic sense. The reaper might be added to these. Even the revolver might be credited with a part in this conquest.

In the period between 1830 and 1860 there came a whole series of inventions that served the West and all other sections by fostering new industries, by providing markets, by enlarging employment, by increasing population, and by enhancing our national wealth, strength, and importance. What has come true since the Civil War is too apparent to need recital. The territory which we now know as continental United States had been under the the sovereignty of white men's governments for three centuries before the establishment of the American patent system. There were here and there settlements having the advantages of European civilization and culture. But, after all, the progress that was made in all that time was principally in degree, not in kind. Industries in the New World differed little in types and hardly at all in methods and mechanisms from those in Europe. The principal variances were those of climate and vegetation and animals, and these were owing not to man but to nature.

An inhabitant of one of the Colonies of North America, returning to England after half a lifetime of sojourn on this side of the Atlantic, let us say, in the second half of the eighteenth century, would have seen in Europe few novelties in the way of inventions arising during his absence. The implements and instrumentalities familiar to him before his migration to the Western Hemisphere would still have been in use, little changed. Suppose, however, that an English colonist who last knew America in 1790 could have been reincarnated and repatriated in 1850—only 60 years later. Whether the place of his resurrection were Boston, New York, Baltimore, or Richmond, he would have been dazed by the wonders that everywhere confronted him.

Now, I am not contending that man was endowed with inventive talents either by the American patent system or any other system. I have already been careful to say that these are the bounty of Nature. I merely accept and repeat the truth which the President has uttered in his proclamation, namely, that our patent system has encouraged and protected inventive genius and by that inducement and guarantee has served the common weal. It is to that policy and to that effect of our patent system that I believe we are indebted for the economic advances we have made in the last 150 years. Had there been since 1790 no greater incentive and requital for inventive abilities and activities than there were before that year, the succeeding 15 decades would have been as barren as the century and a half that preceded the inauguration of our patent system.

The philosophy and the ethics of our patent system fully realize the purpose for which it was instituted, that is, to promote the progress of science and useful arts by securing to inventors the exclusive rights to their inventions, and thus enable them to reap the gains which their contributions to the general welfare have

earned. I am quite well aware that to many people the word "monopoly," when used as the equivalent of the phrase "exclusive rights," which was written into the Constitution, connotes wrong and detriment. But if it is understood to signify only the creator's just claim to possession and enjoyment of his own creation, the term loses its harshness.

The American patent system has continuously fulfilled the expectations of its authors. It has recompensed inventors for bringing into being and use what had no previous existence and therefore not only without deprivation to others, but to the benefit of all. A myriad of inventions once temporarily protected by the monopoly of patents are now and for long have been common property and of general utility. Of these and others we might never have had knowledge or advantage but for the inducement and safeguards which our patent laws have provided. In short, patents have put a premium on invention and the products of inventive minds have become a precious patrimony shared by millions.

We owe so much to the patent system that we are bound not only to perpetuate it, but also to improve it. What we received from Congress in the act of 1790 was not a perfect formula. Several times since then the statutes regulating the grant of patents have been changed for the better. There is need for further constructive alterations. These should assure to the patentee a more prompt and decisive determination of his rights and concurrently a speedier and surer definition of the rights and obligations of users of patented inventions. After thorough canvass of the problems to be solved and study of the means of solution the Department of Commerce prepared and presented to Congress several measures looking to betterments. Five of these bills were enacted last August. Two others are still pending. One of these latter bills contemplates the establishment of a single court of patent appeals whose decisions shall have virtually final force and effect throughout the United States and its Territories. It is our conviction that the creation and functioning of such a court would obviate much of the delay, expense, and uncertainty which now attend the adjudication of suits concerned with the ownership, validity, scope and infringement of patents, and thus subserve the interests not only of patentees but of the whole public.

The other bill awaiting congressional action would also, if enacted, yield desirable results. Its purpose is to limit the effectiveness of a patent to a term of 20 years from the date of filing the application, but not to exceed the present statutory period of 17 years. If, after that bill were passed, an application for any reason protracted the prosecution of his application for more than 3 years, the life of the resulting patent would be correspondingly shortened. Should his delays, for example, consume 5 years, the patent issued to him would run for 15, instead of 17 years. The object sought by this amendment is to penalize and discourage deliberate procrastination by applicants who seek by that device to obtain an extra monopoly in excess of the statutory period of 17 years. For it must be remembered that the filing and pendency of an application in general operates to deter others from manufacturing, using or vending the particular invention awaiting patent. This gives to the mere applicant much of the benefit, though not the absolute lawful right, that ultimately accrues to him through the grant of a patent, if such be issued to him. If an application continues in the Patent Office for 10 or 15 years, therefore, the applicant's virtual monopoly, under present conditions, will run for 27 or 32 years.

I mention these proposals for corrective action for the reason that our commemoration of the sequicentennial of our first patent law should not only recall the blessings of the past but should equally insure new gains in the future, if we are to retain all we have inherited and bequeath something additional to those who follow us. We should, I feel, be not merely glad and grateful for all the patent system has given to us and the generations gone; we should be solicitous that those yet to come shall have cause for gratitude to those who are commemorating this anniversary. We should be moved by the spirit which marks our patent system—the incentive not simply to evolve the new, but also to perfect the old. Our obedience to that spirit will give greater significance both to the year 1790 and the year 1940.

Resolution Authorizing Studies of Productivity and Labor Costs in Industry

EXTENSION OF REMARKS

OF

HON. FRED A. HARTLEY, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

Mr. HARTLEY. Mr. Speaker, as a result of the great technical improvements being brought forth constantly in American industry, we are faced with the necessity of adjusting work conditions—namely, wages and hours—in order that the workers may have increasing leisure and higher living standards rather than increased unemployment and withering poverty. I believe that we are interested in bringing about these necessary adjustments in an orderly and peaceful manner and to this end we should have adequate information. If we have the facts and figures sought by this resolution labor can negotiate with employers with a sound base from which to work. If we are denied adequate information, there is little doubt that futile arguments and wasteful strikes will arise out of negotiations attempted with insufficient facts available.

The only comprehensive productivity study which has been made recently was that of the W. P. A., in cooperation with the United States Department of Labor, covering the period from 1910 to 1936. The 1937 census gave some additional information in a few fields of manufacturing, but since that date we have had no information on individual industries. It is needless to dwell on the possible results of a wage negotiation in 1940 which has to be based on facts gathered in 1937. The present factual data obtainable through the Labor Department are just not sufficient to meet current needs.

The prime importance of returning 9,000,000 unemployed men and women to work in American industry as an aid to sound recovery is acknowledged by labor and industry alike. Naturally the task is one of the greatest concerns of labor. It is estimated that there are 3,000,000 out of work today because of labor-saving devices introduced into industry in the past decade. Had it not been for corresponding adjustment in wages and hours, an additional 2,000,000 to 3,000,000 might have been unemployed. Work hours have been reduced from an average of 50 in 1929 to an average of 40 in 1939. Productive efficiency has expanded conspicuously since the early twenties, but the advance in physical volume of output has lagged far behind this expansion in productivity in nearly all fields. As a result, there has been a sharp decline in the hours of employment offered in industry. It is imperative that we have available up-to-date information on individual industries in order that we may know which ones are capable of making the necessary adjustments to provide more employment.

Another development makes it urgent that we have this information on productivity and labor costs at once. The war in Europe is having far-reaching effects on American industry. The growing demand for goods from Europe brought about striking price increases last fall. These occurred first in the wholesale market and are now being passed on to consumers in the retail market this spring. If war continues we may look for additional price advances. These increased prices must be met by the workers, and we are greatly concerned to see that wages are adjusted accordingly, in order that that standard of living which has been attained only after a long struggle may not be forced down again. The figures published by the Labor Department will show conclusively that American workers have an immediate problem to which to adjust in the rising prices brought on by war conditions abroad.

If war continues, we may expect still further price increases; if war ends, it appears that a widespread industrial readjustment will be necessary. In either case there is clear need for up-to-date facts if workers are to adjust to changing conditions without industrial strife and the resultant dislocation of the industrial machine.

It might also be pointed out that from the standpoint of economy this is the time to bring our information up to date and keep it so from year to year. We now have a good background and base on which to build. Consequently the expense involved would be much less now than it would be if the securing of this information were put off to some future time when this basic work would have to be redone.

American labor is willing to cooperate in the solution of the problems arising from technical improvements in industry and war conditions abroad, but it cannot solve them alone. Labor earnestly hopes that the Congress will assist in the efforts to maintain industrial peace by granting the request for means to secure the information on productivity and labor costs, which is essential for successful wage and hour negotiations.

Application for Loan From R. F. C.

EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

LETTER FROM CLOYD W. MILLER

Mr. LEWIS of Ohio. Mr. Speaker, the following is a letter which I received from Mr. Cloyd W. Miller, president of the Hickory Clay Products Co., of Mineral City, Ohio, who has been vainly trying for many months to obtain a loan from the Reconstruction Finance Corporation for the purpose of opening his tile manufacturing plant at Mineral City, Ohio, which will give employment to approximately 40 men who are now without jobs. The letter speaks for itself, and is as follows:

MINERAL CITY, OHIO, *March 9, 1940.*

Hon. EARL R. LEWIS,

Representative, 410 House Office Building, Washington, D. C.

DEAR MR. LEWIS: My letter of February 24, 1940, to you on this subject considered R. F. C.-N. L. R. B. collusion under the belief that N. L. R. B. was responsible for it, that it sponsored the idea, sought out R. F. C. officials to make the arrangement. But after Schram, chairman of R. F. C., testified to this, Madden, of N. L. R. B. denied it and said the overtures for collusion sprang from R. F. C., so we have heads of two powerful Government agencies making each other out a liar in effect. This contradiction is exceedingly important in itself and adds much significance to the conspiracy. Or is honesty an unimportant detail in attaining the ends of unselfish idealists for the wholesome good of the people? Who is telling the truth, Schram or Madden? The one who is not telling the truth ought to be dismissed from Government service. Confidence in Government is shattered as by a hurricane by this deal, but we are left with both of these officials, one discredited by an untruthful statement, but we do not know yet which one.

As for the veracity of Madden versus Schram, Madden said he lobbied in Congress for appropriations for N. L. R. B., an act probably indictable under Federal laws. He did not mince words. One may question the wisdom of Madden's zeal in carrying out the purposes of the N. L. R. B. Act, but he appears to be honest in his statements and beliefs about it.

If R. F. C. desired this collusion, what was its purpose? Why did it want to hold back money under the conditions testified to? To further the purposes of N. L. R. B. or for purposes not yet disclosed? I suspect the latter. R. F. C. must have had some ulterior motive or it would not have made overtures to N. L. R. B.; if the approach for this questionable deal came from N. L. R. B. without an ulterior use for it only an insane R. F. C. would have acceded to it. Did these men think it would never become public? If so, it is all the more vicious. Naturally N. L. R. B. would accept such a proffer of assistance, but in helping N. L. R. B. put the screws on borrowers, what would R. F. C. say to a borrower? Would it say bluntly, "There is a labor complaint filed against you, and we are going to hold up your loan money for the purpose of helping N. L. R. B. until the matter is settled"? Hardly. Rather, R. F. C. would act as if to help the borrower, to hold things in abeyance by the use of some insipid excuse, or it might imply to the borrower that it was not in accord with N. L. R. B. tactics, but its own trust required that the loan money be held up. R. F. C. would be a venomous snake in this situation which would hardly be relished by its subordinates. Being rats even for a Government agency is not pleasant.

It begins to be clearer to me why the subordinates in R. F. C. were so excited after Director Merriam gave me that private R. F. C. decision of July 5, 1939. It was bad enough to knife me in it behind my back, but to have it published was too much. The subordinates were almost hysterical; perhaps they were thinking that more of the inside workings of R. F. C. might become public, as they have. Schram said, "We ought to protect our subordinates," in referring to Merriam's act giving it to me. Protect them from what? Surely not from disclosing honest clerical mistakes which could easily be corrected and forgiven.

How much influence our labor record has had in R. F. C. in our case I do not know. I wrote my arguments, presented the facts, and made our case without reference to labor. Labor, I now suppose, has been a consideration in all R. F. C. cases. If our labor record was considered on the facts and truthfully, it should be a strong influence in favor of our getting the money we need. But who would now believe it was a favorable influence for us in R. F. C.'s deliberations? We had some labor trouble.

Having approached these R. F. C. directors as intellectually honest men with 25,000 to 30,000 words in our own behalf, I am left cold and clammy at this R. F. C.-N. L. R. B. collusion. I have believed these men were judges with integrity and honor. I did not hesitate to criticize them or their procedure because I had confidence in my Government. Men with iron in their veins do not object to criticism or publicity about their conduct of affairs; still R. F. C.'s Mitchell warned me against publicizing the record. The old bromide about molasses being better than vinegar implies I seek a favor. I seek none. I want my rights under this act. For months I have been appealing to men who have admitted guilt of a conspiracy which may have made all my work futile from the very beginning.

A conspiracy of this sort would naturally be demoralizing to the morale of any organization. This may account for the carelessness, inefficiency, and incompetency I have encountered in R. F. C., its refusal to negotiate with me or consider sympathetically and patiently the merit of our plans. The arrogant and dictatorial attitude which is displayed constantly is, in my opinion, the defense mechanism of a weak, incompetent, and cowardly Government agency.

Men capable of making a secret collusion deal of this nature for purposes not yet clear might not shrink at offering us $20,000 secured by everything I own, with the express design of rubbing me out financially and divesting the present ownership of this property of it. This would be the result of our acceptance of R. F. C.'s offer. Might this offer be the product of Corcoran's mind, who said, as quoted by Moley, "Fighting with a businessman is like fighting with a Polack. You can give no quarter." Corcoran said this behind the backs of businessmen, and I do not believe Moley would have published it if it was a mere wisecrack—it was thoroughly Corcoran; his studied philosophy for saving the country.

The security asked by R. F. C. for the $20,000 loan is $172,000 of property (R. F. C. appraisal) plus my personal endorsement worth $50,000 more. We offered $125,000 of security (R. F. C.'s appraisal) for a $35,000 loan which R. F. C.'s engineer-examiner reported to R. F. C. we need. He was enthusiastic about our plans and approved them. The repudiation by R. F. C. directors of its own engineer is inexplicable.

It will become increasingly embarrassing for the directors of R. F. C. to hide under the cloak of their discretionary power. This power itself makes it imperative that they justify their position on any matter to anyone. These men have missed the point—they are judges, not merely arbitrary dictators. Unfortunately they are legally answerable to no one, only indirectly to Congress. A perfect set-up for misuse of power which from an ethical point of view is demonstrated in this collusive agreement with N. L. R. B. The power of R. F. C. makes R. F. C.-N. L. R. B. collusion a matter of outstanding importance to the Nation. R. F. C. directors are discredited by it. Soft pedaling it, silence about it in Washington, disregard of it by Congress, will not revive confidence in men who have been guilty of this sort of thing. I suspect public confidence in this bank will be saved only by the resignation of the present board of directors. This collusion key fits the door to the house I have patiently built over a period of months. It throws much light even though I have no direct evidence as yet that this collusion or related considerations affected our case.

As serious as this situation is, I cannot help a wry smile at Madden for making a deal of this sort with R. F. C. One must know his men when he enters the racket field. I think Madden has guts though his passion for idealism may be proved unwise and unfruitful by events.

I am frequently asked, "Do you really want this loan?" Let me answer definitely, "Yes" for all time. This question bores me, it may imply that the questioner believes R. F. C. has favors to pass out, that a fix is in order, that the directors or subordinates must be played up, all sorts of silly things which ignore totally the merit of our case. It remains undisturbed and unassailable.

Sincerely,

CLOYD W. MILLER,

President, The Hickory Clay Products Co., Mineral City, Ohio.

Tragic Fate of Small Nations

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

Mr. PITTENGER. Mr. Speaker, we are concerned with what is going on in the rest of the world, and I think our State Department should have an expression from Congress in connection with its handling of the difficult conditions which now exist in other parts of the world.

The war lords are on the march again. Two days ago, without warning, the Nazi Government in Germany marched its soldiers into Denmark and has now proceeded to occupy Norway, and there are indications that they intend to occupy Sweden. I note a foreign newspaper dispatch which says that Holland will probably be next, and that the safety of all small countries in the world is at stake.

In 1939 the Nazi Government of Germany marched into Poland and, without cause or provocation, attacked the Polish people and laid waste to their country, bringing war and destruction to men, women, and children alike. This was the case of a powerful nation attacking a smaller one, and for good measure Russia joined in the program of plunder. And so Poland, noted for its high type of civilization, its literature, art, and other attainments, fell before the overwhelming odds of the oppressor.

Only a short time ago the little Republic of Finland was the victim of the aggressor. Its heroic defense against the communistic Government of Russia will go down in history as one of the great episodes which illustrates how courage and heroism measure up to situations which call for the noblest impulses of the human race.

Today we witness the spectacle of a powerful army led by Nazi leaders overpowering small and peaceful nations, such as Denmark and Norway, without any consideration whatever for their rights as neutrals, without regard for their rights under international law, and in violation of every principle of fairness, equity, and decency.

Let us note that when Russia attacked Finland noncombatants—men, women, and children who were not connected in any way with the Army—had their homes bombed and destroyed, and these people were either killed or wounded. This same condition may develop among the people in Norway and elsewhere.

If this were a case where some small country had gone out of its way to violate its duties and obligations to the Nazi Government of Germany, and to help its enemy, I would not comment at all.

But we have an entirely different situation. The people of Norway and the people of Sweden have been known for their outstanding qualities and leadership. Their civilization is of the highest type. They are recognized as honest and industrious. Those who have come to the United States hold the respect of all people with whom they associate because of these many good qualities.

We can and should extend to them our sympathy at this time and our hope that they and other small nations may be spared the ravages of war. The doctrine that might makes right, and this is the doctrine of the Nazi Government, is one that we cannot follow and it must be condemned by right-thinking people.

This philosophy that might makes right is probably the philosophy of other warring nations. What I say about the Nazi doctrine is applicable to them. They should and must respect the rights of neutrals, and are entitled to no consideration from this country when they violate the rights of neutrals. We want to keep the United States out of foreign wars, and although we sympathize with the small nations, at the same time, our policies must be such as to avoid involvement in the European conflict.

Favors to Foreigners, or a Program That Costs Nothing

EXTENSION OF REMARKS

OF

HON. GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Senator JOHN G. TOWNSEND, Jr., on the foreign-silver program entitled "Favors to Foreigners, or a Program That Costs Nothing," as follows:

How the American silver program hands out multiple gifts to foreigners, without any thought of reciprocity or corresponding benefit being extended to us by the beneficiaries, is a matter inadequately understood by most Americans. The foreigners who sell us their unwanted silver call our attention to the fact that they take our goods (i. e., our wealth) in exchange, and many Americans think that we, and not the foreigners, are the beneficiaries of such shell-game economics. Since 1933 about $1,000,000,000 has been handed over to foreigners in this manner. We may see how the program has worked by a glance at Mexico, at present the major beneficiary of our silver simplicity.

To go back to the beginning of the record, the President's proclamation of December 21, 1933, was the first concrete assistance extended to Mexico's silver-mining industry by the American Government. Under that proclamation and those which later modified it, all sellers of silver were benefited through the removal from the market of the entire American mine output of silver. Since the United States is the world's second largest producer of silver, this mopping-up move was of very material aid to the Mexican silver-mining industry. It was promptly reflected in the market price of silver, already greatly inflated through the activities of speculators looking for congressional action. The average official price of silver in New York in 1933 was 34.7 cents. Within a few days of the President's 1933 proclamation Mexican silver was selling at 45 cents.

The second and largest benefit which this Government conferred on Mexican silver was through the Silver Purchase Act of 1934. The first big step under that law was the President's nationalization of the silver then held here by speculators. Thereby the Government in one fell swoop mopped up about 113,000,000 ounces of silver, or more than half again as much silver as all Mexico's mines had produced in the whole preceding year.

Thirdly, as the Treasury enthusiastically entered the open market for foreign newly mined and demonetized silver on a scale never before dreamed of, the market price naturally soared, to the great and direct benefit of the world's chief silver-producing country—Mexico—whose mining activity the American buying program stimulated.

From 1934 through 1939 Mexico produced and sold 464,900,000 ounces of silver, an average of 78,100,000 ounces a year. In 1933 Mexico produced only 68,100,000 ounces of silver. To date, therefore, Mexico's silver production since 1934 has been 60,000,000 ounces greater than it would have been had its output continued only at the pre-silver-program rate.

Nor is this the whole extent of Mexico's benefit from the American Government's silver policy, since the reckless American buying pushed the so-called world-market price artificially high. In 1935 it reached 81 cents per ounce, when the ridiculousness of the program caused an administrative modification thereof.

In 1933, when silver was already high in price because of the London silver agreement and other artificial factors, Mexico's silver production yielded that country an estimated $23,875,000. Had there been no American Treasury purchases in the ensuing 6 years and had 1933 conditions continued, Mexico would have received for its silver during the period 1934–39 the sum of $140,010,000. In reality, and almost entirely because of the American silver program, Mexico was able to sell its silver output during those 6 years for an estimated $219,852,000. On this basis the conclusion is obvious that the American silver policy has presented Mexico with a gift of the difference between those two figures, or approximately $80,000,000, entirely without a quid pro quo.

This takes no account of Mexico's gains through other American programs such as the $35-an-ounce gold policy, which similarly involves no reciprocity on Mexico's part. In fact the present American gold policy today yields Mexico more dollars than the American silver policy.

In this era of billions, a mere $80,000,000 does not seem like much money to be giving away—some might call it throwing away—but it is still a sizable sum. In the W. P. A. that much money would support 135,000 needy Americans for a full year. On the same basis, the $1,000,000,000 we have spent for foreign silver would have supported 1,687,500 Americans on the W. P. A. rolls for a full year.

Citizens Cooperate With Census Enumerators

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

REPORT FROM THE DIRECTOR OF THE CENSUS

Mr. COCHRAN. Mr. Speaker, I have received from the Honorable W. L. Austin, Director of the Census, a most interesting report concerning the reception that census enumerators received in various parts of the country. It is clearly evident from this report that you cannot fool the

people all the time. Despite the campaign to discredit, for political purposes, the efforts of the Director of the Census to carry out his constitutional duties, the good people of this country proved they are willing to trust public officials by willingly answering the questions of the enumerators.

The spirit of cooperation spread to every corner of the country.

The report of the Director of the Census is so interesting I include it as part of my remarks. The report follows:

Reports from more than 500 of the 539 district supervisors of the 1940 census, sent to Washington Wednesday night after the first 2 days of census taking, indicate:

1. That the public generally was surprised at the mildness and simplicity of the inquiries.

2. That the public reaction from coast to coast is "excellent." From only 1 of the 539 districts was it described as poor. More than 400 district supervisors used the word "excellent," many more the word "good."

3. That the separate blanks, provided for persons who do not wish to give wage or salary information to enumerators, are used very infrequently.

4. That out of the millions enumerated not more than 1 person in every 10,000 offered any objection to any of the questions.

5. That many persons, when they learned the true nature of the questions, urged their friends to cooperate, and are otherwise helpful to census takers.

Following are excerpts from the supervisors' reports:

EXCERPTS FROM REPORTS OF CENSUS DISTRICT SUPERVISORS

Manchester, N. H.: Over 9,000 enumerated. Excellent reaction. Three mayors of four cities in district asked ctizens' enthusiastic cooperation. No opposition so far.

Concord, N. H.: Senior United States Senator BRIDGES photographed with enumerator for press. Very helpful. Governor Murphy's public statement also helps. Reaction excellent.

Superior, Wis.: Women having read unfavorable publicity met enumerator curtly. After hearing questions was so pleased phoned to dozen friends to assure kindly reception.

San Jose, Calif.: Citizen volunteered to explain simplicity of population schedule to neighbors after discovering public misled by false information over radio.

Trinidad, Colo.: Apparently very little aversion to answering income questions.

Pueblo, Colo.: Is that all? Why that's easy.

Emporia, Kans.: William Allen White's several editorials biggest help.

Wellington, Kans.: One reluctant citizen finally consented to hear questions. Told enumerator questions not what he expected. Citizen took time to get data and had enumerator stay for dinner.

Wichita, Kans.: General surprise at unobjectionable nature of questions, after adverse national publicity.

Chicago, Ill.: Wonderful cooperation from elite on Gold Coast. No outstanding antagonism whatever. One apartment manager called guests himself, informing them enumerator was calling. One night watchman stayed up, sacrificing sleep to give information. One woman, after seeing simplicity of schedules, said she would telephone newspapers and chide them for critical articles.

Gary, Ind.: Three foreign-born persons stated "Proud of being citizen, willing to cooperate in every way."

Indianapolis, Ind.: Surprise expressed by three out of four because questions are so few.

Denver, Colo.: Enumerators enthusiastic about public reception. One had three invitations to stay for dinner.

Waterbury, Conn.: Many wage earners are leaving factory wage statements at home with wives.

Sioux City, Iowa: No refusals, no objections, no resistance, everybody cooperating.

Prescott, Ariz.: Prospector from many miles out in mountains came to the office to make sure he was counted.

Oakland, Calif.: Public reaction excellent. Some citizens invited enumerators to lunch.

Glendale, Calif.: Many favorable gestures to enumerators. Several invitations to lunch, etc.

Los Angeles, Calif.: One apartment manager requested tenants to come to lobby to meet enumerator. Many women greatly surprised that questions are not of embarrassing nature.

Alhambra, Calif.: General reaction: "Is that all you want to know?"

Eldorado, Ark.: Plantation owner said he was glad his 110 tenants would tell story.

Fayetteville, Ark.: Scores of citizens filled out information in advance. Many surprised at mildness and brevity of quiz.

Birmingham, Ala.: Public reaction excellent. One person came to office to get enumerator's address and save him a return trip.

Phoenix, Ariz.: Reaction excellent plus. Salvation Army urging cooperation on street.

Riverside, Calif.: Excellent reaction. One man traveled 50 miles to bring correct information for enumerator.

Santa Monica, Calif.: Lady phoned office long distance to compliment enumerator.

Stockton, Calif.: Refusals are nil. Adverse publicity is apparently boomerang.

Wilmington, Del.: Three leading churchmen, after being enumerated, stated, "I see nothing wrong with these questions. After hearing radio had decided not to answer them."

Boise, Idaho: One enumerator invited to breakfast. Questions answered while eating.

Jesup, Ga.: One man said, "No good American wants to be counted out of the census of the American people." Enumerators reporting unusual courtesies extended. People feel no hesitancy in giving full reports.

Atlanta, Ga.: Auditor for public utility company came to office three times to make advance reports, as would be away from home.

Pittsburg, Kans.: Glad to give information.

Topeka, Kans.: Reaction excellent. Outstanding cooperation from Hon. Alfred M. Landon, who assured me his intention to cooperate fully and made appointment.

Prestonsburg, Ky.: City attorney spent most of April 2 advising general public to answer all questions.

Ashland, Ky.: Superintendent of schools volunteered use of maps to aid enumerators.

Kansas City: Public surprised at impersonal nature of questions after previous adverse publicity. One housewife offered to make coffee for enumerator.

Little Rock, Ark.: Public recognizes criticism of census questions as political claptrap, but did not know questions so few and so simple.

Idaho Falls, Idaho: Chamber of Commerce preparing telephone program to urge every citizen to cooperate. Public reaction excellent.

Bloomington, Ill.: Businessman whose family was leaving town called last Saturday and asked preliminary schedule.

Murphysboro, Ill.: Reaction excellent; no report of refusals or discourtesy.

Freeport, Ill.: Citizen was prejudiced before enumerator called, but can't see now why anyone should object to answering all questions.

Vincennes, Ind.: In one household man refused to answer questions. Wife embarrassed at husband's attitude and answered all questions.

Indianapolis, Ind.: Public surprised at simplicity of questions.

Des Moines, Iowa: Public reaction good; proud to be American citizen; happy to cooperate.

Washington, D. C.: At 9:30 a. m. received phone call from a woman who said it was raining and if we would like her to do so, she would come to our office and give the information.

Fort Dodge, Iowa: Three women lived in one house. Enumerator knocked. No answer. He stepped behind house. Woman came out back door, thinking him gone. He bowed politely, explained census, and went away with schedules filled.

Council Bluffs, Iowa: People saying this wasn't anything like the radio and papers said it would be.

Somerset, Ky.: Nearly everyone helpful. One drunk and one bank employee said did not have to answer.

Richmond, Ind.: Citizens eager to cooperate. Only objections relate to mortgage.

Seminole, Okla.: General reaction excellent. No resistance.

Chickasha, Okla.: One citizen drove enumerator to all of his tenant houses to assure complete coverage.

Oklahoma City, Okla.: Hotel manager volunteers to help organize all hotels for cooperation. Only two refusals.

Durant, Okla.: Only 1 out of 10,000 refused a part of the information.

Muskogee, Okla.: Citizens surprised to find there is nothing to the propaganda. Good cooperation.

Fort Smith, Ark.: One citizen leaving home made list of answers from newspaper and left them for enumerator.

San Francisco, Calif.: General attitude: "Where are the tough questions we were supposed to answer?" Public reaction cordial and cooperative, even cheerful.

San Diego, Calif.: Cooperation 100 percent. No refusals, no requests for confidential slips on wages.

Hartford, Conn.: Professional man after interview wondered what all hullabaloo in papers was about.

Willimantic, Conn.: Many farm households ready with complete farm schedules and answers to income and mortgage questions.

Augusta, Ga.: One citizen phoned to locate and secure return of missing neighbor to help enumerator.

Macon, Ga.: Many working people asking preliminary schedules to spare enumerators second visit.

Griffin, Ga.: One mill owner instructed all employees to get office figures on employment records in order to be prepared for enumerator.

Pocatello, Idaho: Rural reaction farmers excellent. Prominent businessman from whom cooperation not expected came to office requested enumeration.

Lexington, Ky.: Three heads of households volunteered to come to office and fill out schedules so enumerator could get a little sleep Wednesday morning.

Mobile, Ala.: General reply, "Is that all? We were expecting more."

Montgomery, Ala.: Five deaf mutes one household wrote own schedules separately for enumerator who did not understand sign language.

Batesville, Ark.: Numerous enumerators urged to stay for lunch.

Jonesboro, Ark.: People glad to give information for good of country.

Zanesville, Ohio: Few objections to salary questions.

Akron, Ohio: Reaction excellent. One citizen with many servants in household phoned to make appointment in order to be at home. Majority express surprise at lack of impertinence in questions.

Waverly, Ohio: It was reported one woman would refuse to answer. Enumerator reports she was cooperative and wanted to know where the questions were which had been so greatly publicized.

Youngstown, Ohio: Public agreeably surprised with questions. Were alarmed by radio publicity. One large steel concern made 10,000 copies of population questions to prepare employees for enumerators.

Mount Vernon, Ohio: Reaction excellent with no demand for separate income form and no refusals. One enumerator with 35 years experience said never had encountered such wholehearted cooperation.

Cincinnati, Ohio: Reaction good. Employer large establishment answered questions and then urged employees to do same cheerfully, because he thought them proper. Newspapers now cooperating.

Defiance, Ohio: People express surprise at few questions in face of certain exaggerations from Washington.

Niles, Ohio: Cannot recite one instance of lack of cooperation.

Marion, Ohio: Farmer transported enumerator 2 miles in woods to find householder and save enumerator another trip.

Ironton, Ohio: One refusal because relative was not appointed enumerator. Reaction excellent.

Toledo, Ohio: Excellent. Many cases of husband leaving income record for the wife to give enumerator.

Charleston, S. C.: No objections made by any citizen, though 10,000 enumerated.

Orangeburg, S. C.: One refusal on salary out of 18,000 enumerations. Do not anticipate trouble from propaganda.

Providence, R. I.: About 22,000 enumerated, reaction excellent. General surprise that questions are not more searching.

Sioux Falls, S. Dak.: Excellent reaction.

Rapid City, S. Dak.: Public in general answering questions gladly.

Knoxville, Tenn.: Excellent. Both daily papers printed fine editorials, and mayor publicly advised support.

Memphis, Tenn.: Thirty thousand enumerated, good reaction. Memphis city government giving active help.

Chattanooga, Tenn.: Reaction excellent. Fifteen thousand reported, and only three refused income questions.

Portland, Oreg.: Enumerators invited to tea, one furnished umbrella. Out of 35,000 reporting, no refusals of importance.

Eugene, Oreg.: Full cooperation. City has offered police protection to enumerator visiting hobo jungles.

Astoria, Oreg.: General surprise that questions are not objectionable.

Sheridan, Wyo.: After enumerator's visit to ranch home farmer pulled him out of mudhole to get back on highway. One-half district snowbound.

Parkersburg, W. Va.: Only 1 refusal reported by 1,300 enumerators. Less than dozen confidential income blanks used.

Walla Walla, Wash.: Many fine examples public cooperation.

Seattle, Wash.: Enumerators' only reported difficulty is desire of public to chat and offer coffee.

Wenatchee, Wash.: Citizen drove 20 miles to office to get individual blanks for family of seven so information would be ready because wife speaks poor English.

Salt Lake City, Utah.: Out of 9,650 reports, only 2 refusals. Good reaction.

Abilene, Tex.: Many persons call friends over phone and ask that they give full cooperation.

Austin, Tex.: Many expected inquisition and are pleased at actual questions.

San Antonio, Tex.: Reaction excellent.

Sherman, Tex.: No resistance. County Judge Jake Loy, president National Association of County Officials, says, "We are Americans, and are for, and behind, the census."

Newport News, Va.: Great number have all information written out in advance. Any resemblance to opposition fades when questions are read.

Corpus Christi, Tex.: Questions not as personal as general public led to believe.

Johnstown, Pa.: Public amazed at small number of questions. Reaction excellent.

Scranton, Pa.: Getting full cooperation of average citizen. Having difficulty in flood areas.

Harrisburg, Pa.: Ninety-eight out of each hundred people giving income data to enumerator, only 2 percent using mail method.

Pottsville, Pa.: Reaction excellent. Work retarded by flood.

Bethlehem, Pa.: One person called neighbors and spread news that questions were easy.

Lancaster, Pa.: One lady invited enumerator in and had card table specially set up for him.

Pittsburgh, Pa.: Reaction good. One large business firm requested forms and instructed employees. Once people understand reasons for questions, they answer.

Camden, N. J.: Reaction excellent. Naturalized German stated public should be glad to live in free country and not object to census questions.

Coatesville, Pa.: Glad to cooperate. Sensational radio publicity misled the public.

Philadelphia, Pa.: Public generally anxious to cooperate. One woman gave enumerator dozen eggs. Not more than a score of refusals, and these only on first visit.

Cleveland, Ohio: General reaction good. Mayor Burton made statement supporting census. Large foreign families giving full cooperation.

Butte, Mont.: Most everyone agreeably surprised at small number of personal questions asked.

Great Falls, Mont.: "Is that all of the questions? Why, I thought the questions would take at least an hour."

Omaha, Nebr.: Leading citizen states: "I will gladly answer all questions. All America needs these statistics."

Minneapolis, Minn.: Many comments as to simplicity of questions.

St. Paul, Minn.: Twenty-six thousand six hundred and eighty-five persons enumerated. Only one refusal. Housewife said husband advised her not to answer questions.

Grand Forks, N. Dak.: Many saying questions not as personal as they expected from adverse radio publicity.

Fargo, N. Dak.: Not 1 refusal out of 3,000 enumerated. Cooperation of citizens and committees very good.

Albuquerque, N. Mex.: Three prominent local business people contacted the office in person to advise they were planning on leaving the city and were anxious not to be missed in the census.

Deming, N. Mex.: Prominent farmer advised he was glad to give information, as he realized the need and value of census statistics for planning in the operation of his farm.

Jackson, Mich.: General reaction excellent. Newspapers throughout district now giving favorable publicity.

Bay City, Mich.: Lady enumerator in strange district caught in spring shower. Housewife insisted on furnishing rubbers and umbrella before allowing enumerator to proceed.

Detroit, Mich.: Thirty thousand enumerated. Just one refusal to answer income question. Ford industries prepared necessary information in advance to aid the enumerator.

Portland, Maine: Citizens answering all questions and calling neighbors to inform them questions not too personal.

Waterville, Maine: Excellent reception everywhere. Governor of State very cooperative.

Fitchburg, Mass.: Leading city officials have appealed to all people, through medium of press, to cooperate with the Census Bureau.

Lynn, Mass.: Cooperation of newspapers outstanding.

Boston, Mass.: Seventy-six-year-old woman called at census office as she wanted to be certain of enumeration.

Quincy, Mass.: Telephone call from a citizen wanting to know when the enumerator would call and that she would stay in till he got there.

Fall River, Mass.: Chairman Dunham of the chamber of commerce publicly stated: "I hope the people of this territory will cooperate to every extent because the facts are needed by both industry and commerce."

Brooklyn, N. Y.: Enumerators have been treated like old lost friends.

Hempstead, N. Y.: Citizens who have answered inquire, "Where are the personal questions?"

Brooklyn, N. Y.: A Brooklyn physician insisted upon canceling his professional appointments to await arrival of enumerator.

Brooklyn, N. Y.: Most people were surprised to find that questions were not as personal as they had expected and gladly cooperated.

Brooklyn, N. Y.: Superintendent of very large apartment personally conducted enumerator through building.

Long Island, N. Y.: Citizen telephoned saying he was leaving town and very anxious to be enumerated.

New York, N. Y.: Enthusiastic and willing response and answers to all questions.

Rocky Mount, N. C.: Average citizen said he was glad to give the information because the census was favorable to the whole country.

Asheville, N. C.: Public most pleased with reasonable questions requested. No requests for income blanks.

Tupelo, Miss.: Country school teacher drove his automobile 67 miles to operate the projector showing Census pictures during training school. No charge for his services.

Jackson, Miss.: Citizen stated that no real American would refuse to answer questions.

Salisbury, Md.: Reaction excellent. Only one refusal and that applied to mortgage question only.

Baltimore, Md.: Excellent reaction of public. Census is necessary to the welfare of every citizen.

Annapolis, Md.: Governor Herbert O'Conor, "Interesting experience and one which every good citizen should be happy to fulfill." Public surprised at lack of intimacy of questions and say that schedules are different than expected from gossip.

New Orleans, La.: One person called neighbors on phone and asked them to cooperate with enumerator.

Ville Platte, La.: School superintendents and teachers and ministers and papers actively cooperating.

Lakeland, Fla.: Local newspapers and civic organizations giving full publicity and best of cooperation.

Tampa, Fla.: Mayor of city has publicly appealed to all citizens for full cooperation and has allowed his return published.

California's Grapes of Wrath

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ARTICLE FROM FORUM FOR NOVEMBER 1939

Mr. GEARHART. Mr. Speaker, because so much fiction is presented in John Steinbeck's Grapes of Wrath as fact, allegations so far from the truth that they constitute nothing less than a base and unconscionable libel upon the fair name of a people of a great State, a representation of the true conditions in California should be spread upon the pages of the CONGRESSIONAL RECORD.

Because Mr. Frank J. Taylor has prepared a most excellent article in the nature of a reply to these scandalous misrepresentations in respect to the situation in this great western Commonwealth, I ask the unanimous consent of the Members of this body to extend that which he has written as a part of my instant remarks. Mr. Taylor's article first appeared in the November 1939 issue of the Forum magazine.

The article referred to follows:

[From the Forum for November 1939]

CALIFORNIA'S GRAPES OF WRATH

(By Frank J. Taylor)

Californians are wrathy over the Grapes of Wrath, John Steinbeck's best-selling novel of migrant agricultural workers. Though the book is fiction many readers accept it as fact.

By implication, it brands California farmers with unbelievable cruelty in their dealings with refugees from the Dust Bowl. It charges that they deliberately lured a surplus of workers westward to depress wages, deputized peace officers to hound the migrants ever onward, burned the squatters' shacktowns, stomped down gardens, and destroyed surplus foods in a conspiracy to force the refugees to work for starvation wages, allowed children to hunger and mothers to bear babies unattended in squalor. It implies that hatred of the migrants is fostered by the land barons who use the "Bank of the West" (obviously the Bank of America) and the "farmers association" (the Associated Farmers) to gobble up the lands of the small farmers and concentrate them in a few large holdings.

These are a few of the sins for which Steinbeck indicts California farmers. It is difficult to rebut fiction, which requires no proof, with facts, which do require proof.

The experiences of the Joad family, whose misfortunes in their trek from Oklahoma to California Steinbeck portrays so graphically, are not typical of those of the real migrants I found in the course of two reportorial tours of the agricultural valleys. I made one inquiry during the winter of 1937–38, following the flood which Steinbeck describes; I made another at the height of the harvest this year.

Along 3,000 miles of highways and byways I was unable to find a single counterpart of the Joad family. Nor have I discovered one during 15 years of residence in the Santa Clara Valley (the same valley where John Steinbeck now lives), which is crowded each summer with transient workers harvesting the fruit crops. The lot of the "fruit tramp" is admittedly no bed of roses, but neither is it the bitter fate described in the Grapes of Wrath.

NO JOADS HERE

The Joad family of nine, created by Steinbeck to typify the "Okie" migrants, is anything but typical. A survey made for the Farm Security Administration revealed that 30 was the average age of migrant adults, that the average family had 2.8 children.

Steinbeck's Joads, once arrived in the "land of promise," earned so little that they faced slow starvation. Actually, no migrant family hungers in California unless it is too proud to accept relief. Few migrants are.

There is no red tape about getting free food or shelter.

The F. S. A. maintains warehouses in 11 strategically located towns, where the grant officer is authorized to issue 15 days' rations to any migrant who applies, identifies himself by showing his driver's license, and answers a few simple questions about his family, his earnings, and his travels. In emergencies, the grant officer may issue money for clothing, gasoline, or medical supplies. The food includes standard brands of a score of staple products, flour, beans, corn meal, canned milk, and tomatoes, dried fruit, and other grocery items. Before the 15 days are up, the grant officer or his assistant visits the migrant family in camp, and, if the need still exists, the ration is renewed repeatedly until the family finds work.

Shelter is provided by the F. S. A. (a unit of the Federal Resettlement Administration) at model camps which Steinbeck himself represents as satisfactory. The one at Shafter is typical. A migrant family is assigned to a wooden platform on which a tent may be pitched; if the family lacks a tent, the camp has some to lend. The rent is a dime a day, and the migrant who wants to save the money can work it out by helping to clean up camp. The dime goes into a community benefit fund, administered by a committee. Camp facilities include toilets, showers, and laundry tubs, with hot and cold running water, a community house. These 13 camps cost around $190,000 apiece, and each accommodates some 300 families. Last summer there were vacant platforms, though in winter there is a shortage of space.

Various relief organizations divide the responsibility of providing food and shelter for California's migrants. Federal authorities, working through the F. S. A., assume the burden for the first year. After a migrant family has been in the State a year, it becomes eligible for State relief. After 3 years, it becomes a county charge. State relief for agricultural workers averages $51 a month in California, as compared with $21 in Oklahoma, less for several neighboring States. The United States Farm Placement Service notes that W. P. A. wages in California are $44 per month, in Oklahoma, $32. California old-age pensions are $32 per month; Oklahoma's, $20. These are United States Social Security Board figures. Records of the F. S. A. grant offices indicate that many migrants earned under $200 a year back home—or less than one-third the relief allowance in California. Thus thousands of "Okies," having discovered this comparative bonanza, urge their kinsfolk to join them in California, where the average migrant family earns $400 during the harvest season and is able, after the first lean year, to draw an equal sum for relief during 8 months of enforced idleness.

WAGES, HEALTH CONDITIONS

The advantages of life in California for migrant workers are not limited to the salubrious climate and largess.

When the harvest is on, the base wage for agricultural workers on California farms is $2.10 per day with board, as compared to $1 in Oklahoma, $1.35 in Texas, and 65 cents in Arkansas. These figures are from the United States Bureau of Agricultural Economics. Cotton pickers in California's San Joaquin Valley are paid 90 cents per 100 pounds. In Oklahoma the pay is 65 cents a hundred, in Arkansas and Texas 60 cents. California has 180 separate crops to harvest, and some crop is ripening somewhere in the State every month of the year. A fortunate migrant may work 8 to 10 months each year. Back home he was lucky to work 3 months.

Another advantage of life in California is the free medical service. Few of the migrants had ever seen the inside of a hospital or employed a doctor, dentist, or nurse before they came to California. Each F. S. A. camp has a full-time nurse and a part-time doctor to serve the migrant families without charge. Medical supplies, too, are free.

At the Shafter camp, I asked how many babies had been born in camp this year.

"None," the manager replied. "The mothers all go to Kern General Hospital."

At the hospital, supported by Kern County, I learned that, of 727 children born to migrant mothers in the county during the first 5 months of this year, 544 were delivered in the hospital, without charge. In fact, under State law, no general hospital may refuse a mother in labor. Yet in the Steinbeck book a camp manager is obliged to act as midwife.

It is a fortunate break not only for the migrants but for the Californians as well that the incoming streams of dilapidated jollopies, piled high with beds and utensils, converge at Bakersfield, seat of Kern County. As large as Massachusetts (and wealthy, thanks to oil), Kern County maintains a remarkable health service under the direction of Dr. Joe Smith, who believes that an ill person is a menace to others and that it is the county's duty to make him well. Dr. Smith's 18 nurses, each with a car, spend most of their time in schools and labor camps, checking the health and diet of children. Any migrant family needing medical service can have it free at Kern General, and some with contagious diseases receive it against their will.

Kern County, strategically located, is California's front-line defense against epidemics. Few migrant families manage to cross the huge area without at least one examination. Other counties to the north likewise employ nurses to visit the migrant camps, but they are not as selfishly altruistic as is Kern. Though resisting the nurses' attentions at first, the migrants are now eager for them.

One of the accusations in the Steinbeck novel is that State and county peace officers hound the migrants from camp to camp, to push them into strikebreaking jobs. But inquiry reveals that officers invade camps only when appealed to by health officials.

The health officer of Madera County found a group of migrants camped atop a huge manure pile. "It's warmer here," they protested, when he ordered them to move. Only when he invoked police authority would they budge.

One health deputy discovered a case of smallpox in a camp. Telling the family to stay indoors, he hurried to town for vaccine. When he came back, the entire camp had evaporated into the night, and, before all the exposed migrants could be traced and rounded up into isolation camps, health officers of the neighboring counties had to cope with over 600 cases of smallpox.

Investigating a typhus outbreak, a health officer found that several families had chopped holes in their cabin floors for toilets, without digging pits. In Santa Clara County, migrants were found camping around a polluted well. One of them explained, "The folks that was here before us used it," and they stayed on until deputy sheriffs removed them forcibly.

Outside nearly every agricultural community, from El Centro on the Mexican border to Redding near the Oregon line, is a shanty town or squatter camp. These are frightful places in which to live, devoid of adequate sanitation, often without pure water. Local authorities can do little about these rural slums, because they are outside city limits.

The most unsanitary squatter camp was that in the river bottom just north of Bakersfield, where squatters had made themselves at home on property of the Kern County Land Co., one of the State's major land "barons." The land company offered no objection to the squatter camp, but the citizens of Bakersfield did when the migrants' children came over the line to school and epidemics of flu, skin diseases, chickenpox, and other ailments depleted the classrooms. There were threats of vigilante action from irate parents, but what happened was quite different. Deputies from the county health office surveyed the camp, discovered that most of the occupants were employed and could afford to rent homes, that some of them had been there 7 years. After 6 months of patient persuasion, all but 26 families were induced to move to town. When the 26 refused to budge, the health officer had their flimsy shacks moved to higher ground. They are still there. The vacated shacks were pushed into a pile and burned by order of the health department. That is the prosaic story behind the lurid burning of Bakersfield's Hooverville, as dramatized in the Grapes of Wrath.

THE GREAT MIGRATION

The great flood of the winter of 1937–38, with which Steinbeck drowned the last hopes of the Joad family, hit the migrants hardest in Madera County, where thousands of them worked in the cotton fields. Near Firebaugh, the San Joaquin River rose in its rampage to wash out 800 campers. It was after dark one Saturday night when a deputy sheriff reported the plight of these unfortunates to Dr. Lee A. Stone, the wiry old health officer, an ex-southerner formerly on the staff of the United States Public Health Service. Dr. Stone mobilized all the trucks and cars he could find, hurried to the scene, moved the 800 refugees 30 miles through the blinding rain to the little city of Madera, and sheltered them in the schools. Then he raised funds by phone for temporary quarters.

Discovering that most of his unexpected guests had but recently come to California, he hit on the idea of returning them to their kinsfolk in Oklahoma, Arkansas, and Texas. When he had raised the necessary funds to buy railroad tickets, he hurried over with the news.

They listened in stony silence.

Finally, one of the men spoke up. "Thanks, Doc," he drawled. "Here we be and here we stay, and we ain't a gonna leave the promised land."

"No sirree, we ain't a gonna leave California," chorused the rest. And they didn't.

Almost all the counties in the San Joaquin and Sacramento Valleys have standing offers of free transportation back home for any migrant family. Not one family in a hundred has accepted.

No one knows how many migrants have poured into California since the last census was taken, because the count was not started until 1935, when the State department of agriculture instructed the plant-quarantine inspectors at the border to check and report incoming farm workers. To date, 285,000 of them have been reported, but the count is incomplete because many thousands have ridden in on freight trains.

The migrants' trek dates back to 1925, when cotton first became a major crop in California. Some authorities think that almost a hundred thousand families have moved into the State, mostly from the Dust Bowl area. This would mean half a million individuals, a migration exceeding the gold rush of pioneer days. Others who have studied the trek of the Okies—so-called because 42 out of every 100 migrants come from Oklahoma—place the figure at 300,000.

In either case, it is a tremendous lump of impoverished population for the people of the Great Interior Valley to assimilate. It is as if the entire population of Cincinnati were to visit Cleveland and, once there, decide to remain indefinitely as star boarders. And it has taken the combined resources of the State, the counties, the Federal Government, and the individual farmers to meet the emergency. Madera County, for instance, which had 15,000 residents when the invasion started, now has double that population; and most of the newcomers are public charges part of each year. Kern County has a population of 130,000 persons, of whom 35,000 are on relief. The county hospital budget has increased from $100,000 in 1926 to the present figure of $970,000, all of which except some $8,000, contributed by the Federal Government for the aid of crippled children, is paid by Kern's taxpayers.

CALIFORNIA'S SPECIAL PROBLEM

Owing to the peculiarities of agriculture in the Far West, the farmers of California are as hopelessly dependent on the migrant workers as the migrants are dependent on the farmers for jobs. For California agriculture differs from farming elsewhere in several ways.

Most California crops are so extremely perishable that they must be harvested on the day of ripening—not a day earlier or a day later. This is true of fresh fruits, such as peaches, apricots, and pears, which must be picked, packed, iced, and shipped to the hour. It is true also of field crops like lettuce, tomatoes, melons. Asparagus is actually harvested twice a day. Timely and uninterrupted handling of these perishables means the difference between a $300,000,000 yearly income and a multimillion expense for intensive planting, cultivating, irrigating, spraying, thinning, and harvesting. Most of the California farmers' customers live two to three thousand miles distant, beyond two mountain ranges, and it costs as much to deliver the foodstuffs to them in good condition as it does to battle the perennial droughts, the insects, the vagaries of soil and atmosphere in the struggle to grow the crops. Including nonperishables, the annual take from the soil totals around $600,000,000 and is the State's main livelihood.

Another peculiarity of California agriculture is the manner in which it is broken up into "deals," to use the local term for crops. There are about 180 deals in all, and they, too, are often migrant. The lettuce deal begins in midwinter in Imperial Valley, near the Mexican border; it migrates first to Arizona, then to the Salinas Valley, which from April to November is the country's salad bowl. Melon, tomato, spinach, fresh-pea deals likewise follow the sun north each spring and summer. Navel oranges ripen in midwinter south of the Tehachopi Range, Valencias in midsummer north of these mountains. The peach deal trails the apricot deal; then comes the prune deal, the grape deal, and finally cotton.

California is a long, slender State, broken up into a score of agricultural "islands." In the San Diego island, the growers concentrate on avocados and bulbs. The Santa Clara Valley is the prune and apricot island. The Sacramento Valley produces nine-tenths of the country's canned peaches. There are three grape islands, two lettuce islands, an asparagus island behind the dikes of the delta country—a sort of little Netherlands. There is a cotton belt in the San Joaquin Valley. In all these highly specialized, intensively cultivated regions, harvesttime comes with a vengeance.

For generations transient workers have appeared by the thousands at harvesttime.

The Mexicans pitched their tents in orchards or made camp in rude summertime shelters. They picked the fruit, collected their wages, and faded over the horizon to the next crop. They were good workers, with an instinctive touch for ripening fruit and melons, and better help than the orientals who preceded them. In 1934 the migrations of these Mexican workers ended abruptly, as their new agrarian government back home offered each returning family a slice of a confiscated estate.

The exodus of the Mexicans coincided with the influx of Dust Bowl refugees. For a time the Okies were the answer to the farmers' prayers. They still are, for that matter, except that there are now too many of them for the available jobs, and they have brought with them serious social problems.

Three years ago the University of California assigned Dr. R. L. Adams, professor of agricultural economics, to survey the State's farm-labor requirements. Dr. Adams says the crops require 144,700 workers in the peak months over and above the year-round hired hands. By midwinter this demand has fallen off to 59,000. In May it is back to a hundred thousand; in August it is 134,000. Thus there are at times nearly 86,000 more workers than jobs, even if there is no labor surplus. Today there is a surplus of fifty to seventy thousand workers, even at the harvest peak. Early this year the influx was tapering off, but in June 1,600 more agricultural workers were at the border than in June a year earlier.

HOUSING—A STUMBLING BLOCK

Unlike the Mexicans, the Okies do not disappear over the horizon at the end of each harvest. They linger on in the flimsy shelters intended only for the rainless California summer. When rains come in the fall, the camp sites are seas of mud; rubbish and filth accumulate; and the farmers are taken to task for the facilities provided for their unwelcome guests. Hence the migrant-worker problem is essentially a housing problem.

The F. S. A. has sought a solution in low-price cottages, costing $1,000 to $1,500 per unit and renting for $8.20 per month, including heat, light, and water. Each is surrounded by a half acre of land for a garden. These cottages are snapped up as soon as they are completed, but there are not enough of them, and they are usable only for workers who have ceased to be migrants. F. S. A. has another answer, a portable motorized camp—platforms, Diesel-powered electric plant, laundry tubs, and showers—so designed that it may be loaded on trucks and shifted with the crops and the demand for harvest hands. First tried out this summer, it may be the migrant camp of the future.

The farmers, who have added 10,000 cabins to the shelters provided for migrant workers in the last 3 years, look askance at the F. S. A. camps. Because of the perishable nature of their crops, California farmers live in terror of strikes. The Federal camps are feared as hotbeds of radical activities, a fear that dates back to 1931, when Communists undertook to organize the fruit workers and dispatched squads of agitators to drag workers from their ladders and intimidate their families. I found no evidence to justify this alarm. The Okies I talked with were oblivious to class struggle; all they asked was more work.

On many of the larger farms, such as the Tagus, the Hoover, the DiGiorgio ranches, the owners provide housing as good as F. S. A. demonstration communities and for less.

On the Tagus ranch, H. C. Merritt offers 200 permanent families neat little cottages for $3 to $5 per month, including a plot of ground for a garden. Some of the first white migrants chopped

up the partitions between the rooms and used them for firewood, although free wood was provided for the chopping. When he protested, the Okies explained they preferred to live in one-room houses. Now Tagus families are graduated from one-room to three-room houses as they qualify for them.

Mr. Merritt's attitude toward Federal camps is typical. "If my workmen live on the ranch and I tell them to be on hand at 8 in the morning to pick peaches, they're on hand," he said. "If they're in a Federal camp, I don't know whether they'll be here or not. While I'm looking for other pickers, the peaches drop on the ground, and a year's work is gone."

STUBBORN INDIVIDUALISTS

An inference of the Grapes of Wrath is that most of the California farm lands are in great holdings, operated by corporations or land barons. The State has 6,732,390 acres devoted to crops, and the 1935 census shows that 1,738,906 are in farms less than 100 acres in extent, 3,068,742 are in farms of 100 to 1,000 acres, and 1,924,742 are in farms of over 1,000.

An insinuation of the Grapes of Wrath is that wages are forced down by the Associated Farmers and the Bank of America, acting in conspiracy. Actually, neither the association nor the bank concerns itself with wages. Rates of pay are worked out through the farmer cooperatives in each crop or through local groups, such as the San Joaquin Regional Council, which agrees each spring on a base wage. California farmers pay higher wages than those of any State but Connecticut, according to the United States Farm Placement Bureau.

This same Federal organization conducted an inquiry into the charge aired in the Grapes of Wrath, that California farmers had distributed handbills through the Dust Bowl area, offering jobs to lure a surplus of migrant labor to the State. Only two cases were unearthed, one by a labor contractor in Santa Barbara County, another by an Imperial Valley contractor. The licenses of both have since been revoked. At the Associated Farmers head office in San Francisco, I saw hundreds of clippings from Midwest newspapers—publicity inspired by the association—advising migrants not to come to California.

The problem of connecting migrant workers who want jobs with farmers who need help is serious. A rumor will sweep like wildfire through migrant camps of jobs in some valley hundreds of miles distant. Two days later that valley is swamped with so many workers that the harvest which ordinarily would last a month is finished in a week. The United States Department of Labor, working with the State employment office, now maintains job-information services in 81 towns and cities. At any of these offices migrant workers may check on job prospects in any other area. But most workers still prefer to take a chance.

California's big question—what is going to happen to these people—is still unanswered.

East of Visalia, the F. S. A. is attempting an experiment in cooperative farming. On the 530-acre Mineral King ranch, purchased with Federal funds, 20 above-average migrant families were set to work raising cotton, alfalfa, and poultry, and running a dairy. At the end of the first year the farm showed a profit of $900 per family, more than twice the average family's earning from following the crops.

At Casa Grande, Ariz., the F. S. A. has another cooperative farm, of 4,000 acres, with 60 families working it.

Cooperative farms, directed by trained men from universities, produce good crops and good livings; but the Okies are rugged individualists. "I'm not going to have any damn Government telling me what I'm going to plant," exploded one of the Mineral King farmers, as he packed his family in the car and took to the road again. And so, in spite of the good intentions of the Farm Security Administration, the Governor's Committee on Unemployment, the Simon J. Lubin Society, the John Steinbeck Committee, and other organizations, the highly individualistic newcomers probably will work out their own destiny in their own way.

For a glimpse of how they may do it visit Salinas, in the lettuce island, which saw its first invasion 8 years ago. The first Okies in the area squatted in squalor outside the town until an enterprising wheat farmer divided his ranch into half-acre lots, which he offered at $250 apiece, $5 down, $5 a month. The Okies snapped them up and strutted around, proud of their property ownership. Today, in Little Oklahoma City, as the community is called, one can envisage the whole process of assimilation—the ancient trailer resting on its axles, a lean-to or tent alongside it, in the front a wooden shack and sometimes a vine-covered cottage. Off to the south some of the Okies are living in neat little three- to five-room cottages. The Okies of Little Oklahoma City are fortunate. They muscled into the lettuce-packing game and now have virtually a monopoly around Salinas, earning from 50 to 60 cents an hour for 8 or 9 months of the year. In that one community 3,000 migrants have achieved a respectable standard of living. Their children are intermarrying with the natives. Outwardly they are Californians.

What they have done can be done by others. Their accomplishment is a challenge to shiftless Okies and an answer to the broad accusations hurled so heedlessly in The Grapes of Wrath.

"I Saw Lee Surrender"

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

Mr. RANKIN. Mr. Speaker, yesterday was the 75th anniversary of the surrender of Robert E. Lee.

I am inserting as a part of my remarks an article written by Mr. Seth M. Flint, a Federal soldier who witnessed that surrender, and who pays General Lee one of the finest tributes I have ever read.

Robert E. Lee is today the most serenely inspiring figure on the horizon of human history. He is regarded as the greatest commander of all time. Theodore Roosevelt said that he was the greatest captain of the English-speaking race, although he said his greatest and last antagonist was the equal of Marlborough or Wellington. Major General Maurice, of the British Army, in his recent book on Lee, placed him above Wellington as the greatest commander the English-speaking race has yet produced.

Senator Ben Hill, of Georgia, said that he was Caesar without his ambition, Frederick without his tyranny, Napoleon without his selfishness, and Washington without his reward; that he was a foe without hate, a friend without treachery, a neighbor without reproach, a Christian without hypocrisy, and a man without guile.

In this day, when the entire world recognizes the greatness of this great southern leader, I am glad to insert in the RECORD this splendid tribute paid to him by a Federal soldier who saw him surrender to General Grant 75 years ago. [Applause.]

The matter referred to follows:

"I SAW LEE SURRENDER"

(By Seth M. Flint, with William Ross Lee)

When Robert E. Lee surrendered to Ulysses S. Grant at Appomattox Court House 75 years ago on the 9th of April, I was there; luck and ability to toot a bugle explained my presence. As far as I know, I am the last survivor. Running away from home, I had enlisted in Company H, Fifth United States Cavalry, in June 1862. I gave my name as Charles M. Seaver, and my age as 18, knowing that the Army shared my family's opinion that a 15-year-old was too young for war. Sixteen months of stiff campaigning incapacitated me as a fighting private, so I transferred to Company F as a bugler, a change that ultimately brought me to Appomattox.

In the spring of '64, my new company, together with Companies B and K, all under command of Capt. Julius W. Mason, was assigned as escort to Lieutenant General Grant. We found that the escort was for work, not show; we carried dispatches, guarded headquarters, had charge of the staff officers' supply wagons and commissary, erected and struck tents, and performed any miscellaneous tasks assigned. Gold braid and fanfare was not General Grant's idea of soldiering; he was a matter-of-fact soldier who never worried how he looked or what others thought of it.

Under his direction, the forward movement of the Army of the Potomac, begun on May 4, 1864, ended a little more than 11 months later. The Battles of the Wilderness, Spottsylvania, and Cold Harbor were behind us; the siege of Petersburg was over, ended by the Battle of Five Forks, when Lee's thin, stubborn lines were finally broken. Evacuating Richmond and Petersburg, Lee tried desperately to lead his hungry, decimated columns west, but we pressed him too hard. We caught up with them at Appomattox and the end was in sight; we were sure that the dwindling, but still unbeaten, forces of Lee could not escape. On that day there was an exchange of messages between the Federal and Confederate commanders.

HOW A WAR ENDED

On the morning of the 9th, the major part of the escort was left behind to guard the headquarters' wagon train, and the rest of us started out with the general and his staff along the rear of the main army. We had gone several miles when a horseman at top speed was seen coming from our front lines; as he drew near, I recognized him as a young lieutenant of General Meade's staff. He pulled his horse back on its haunches and handed a paper to Grant. We knew that a decision from Lee was expected on a proposed conference with Grant, and we jumped to the natural conclusion that it had finally come.

We crowded about the general in an effort to learn the answer; all of us, without doubt, believing that Grant held in his hand the decision whether it was to be peace or continued warfare. He read the message, but I was wholly unable to get from his countenance a clue to its contents. Then he handed the paper to a staff officer, who hurriedly scanned the words, and, in a voice surcharged with excitement, read aloud to his associates the fateful response of General Lee.

I got just the drift of the reading, which indicated that the Confederate leader had agreed to meet General Grant, but evidently the staff officers construed this to be assurance of surrender, for every last man of them burst into cheers, while we joined heartily. The only one who took no part in the impromptu celebration was General Grant, who merely looked on with bland amusement.

There was a half-decayed log lying by the roadside, and Grant sat down on it, calmly pulled a cigar from his cigar case, and, requesting one of his staff who stood nearby to furnish him a sheet of paper, he dug up a pencil from his pocket, hastily wrote a reply. He handed it to Lt. Col. Orville E. Babcock, with orders to take a few members of the escort, headed by Captain Mason, and ride on in advance of the rest of the party to locate the Confederate commander. It happened that I was the only bugler present, and so I went along, much to my satisfaction, for I was eager to see the great leader of the southern cause.

Babcock, carrying a white flag, such as it was, took his place beside Mason and me, and off we went toward the enemy's lines. Whether Lee was sparring for time was a matter of conjecture. We were, therefore, prepared for any eventuality; and, at a word from Captain Mason, I carried my bugle in one hand to sound the call to arms if we found that the Johnnies were trying to escape. That call would have been echoed all along our lines, and it would have been suicidal for them if they had attempted a getaway, for the Federal troops had them bottled up and outnumbered 5 to 1.

We swung around to the south and to the left wing of our forces, passing through the little settlement of Appomattox Court House, slumbering in the spring sunshine, and soon to awaken to discover itself famous. Out toward the right flank of the Confederates we galloped, every man alert. As we neared their lines the woods and hills shut off a view of the Union troops, but we could see some Confederates on the hillside in the distance. The headquarters tents of Lee were plainly visible, though I could see no other shelters.

We had ridden about three-quarters of a mile from the patch of houses when, a few hundred yards ahead, we saw a little party of gray-clad figures and several horses by the roadside. One of the men was sitting under a small tree. A companion stood nearby while a third man, evidently an orderly, was holding the bridle reins of two of the three horses. At a gesture from Colonel Babcock, Mason ordered a halt, and the staff officer, his white flag conspicuously displayed, rode on toward the gray-clad horsemen, accompanied by a trooper of the escort.

"I'll wager that's General Lee," said the captain, with a glance at me. "Let us hope things turn out all right."

I took a firmer grip on my bugle, to be ready for any possible emergency, my eyes glued to the scene before me. As the two Federals neared the spot, the man beneath the tree arose and Babcock and he exchanged salutes. The latter was tall, erect, and of fine physique. For a few moments they carried on what appeared to be a friendly conversation, much to our relief, and then the entire group started down the road toward us.

It was not difficult to recognize the famous commander of the Army of Northern Virginia. I had seen his picture, and, of course, knowing that we had gone out to meet him, I could make no mistake as to his identity. He measured up fully to my expectations—and those expectations were rather elaborate, I assure you. Though I was a lad of only 18, I had been in 15 or 16 battles during 3 years, and had come to have a wholesome esteem for the Johnny Rebs and their leader. In my active imagination he had become a sort of legendary figure. It had been his remarkable generalship that had prolonged the war far beyond its expected limits, and he loomed big and menacing as an opponent.

Well, there he was in person, he and Traveler; he was riding to meet his conqueror to negotiate terms of surrender—for him the last scene of the last act of the war drama. His companion, needless to add, was Colonel Marshall, of his staff.

And what a brave pair of thoroughbreds Lee and Traveler were! That horse would have attracted attention anywhere. He was a sturdy gelding, deep of chest, with small head and feet, and his color was appropriately Confederate gray, with the exception of mane and tail, which were black; a combination that made him a very striking and handsome animal. And when his master was in the saddle, take it from an old Federal trooper, it was a picture that was worth seeing.

General Lee's uniform was immaculate, and he presented a superb martial figure. But it was the face beneath the gray felt hat and hair that made the deepest impression on me; I say this because I can still recall it vividly. I have been trying to find a single word that describes it, and I have concluded that "benign" is the adjective I am after; because that means kindly, gracious; and despite its sternness on that day of long ago, I would still call his expression benign. And yet, I remember well that there was something else about him that aroused my deep pity that so great a warrior should be acknowledging defeat.

We joined the little party and rode back to the settlement. Appomattox Court House was a pretentious name for what then was a row of six or seven houses, and now is less. As we passed the first house we overtook a man, a Mr. McLean, who was walking along the street, and Colonel Marshall reined up beside him and told him that General Lee desired a room where he could hold a conference with Grant. Mr. McLean was astounded, both at the news and at the appearance of blue- and gray-clad soldiers riding together. He stared at the Confederate commander for a moment in silence, and looked over the Union contingent, as if in search of his famous adversary. Then he pointed to the nearest house, went to the door and knocked.

A woman answered the summons and, after a brief talk with her neighbor, she invited the two southerners to enter; but evidently the interior was unsatisfactory, for Lee and his companion quickly came out and Marshall requested McLean to direct them elsewhere. We rode slowly on until our guide stopped before a substantial brick house and informed us that he lived there and would be happy to offer its use.

It was an old-fashioned structure with chimneys at the gable ends; and, running along the front, a piazza painted white, with six wooden pillars supporting it. Broad steps, about 8 yards wide and seven or eight in number, led up to the platform; and there was a generous yard, partly enclosed by a picket fence, with several large trees standing sentinel-like about it.

General Lee and the colonel dismounted and, preceded by McLean, went into the house, leaving their horses in charge of the orderly; and we Yanks returned to the roadway to await the coming of Grant and his party.

It was perhaps 10 minutes later—it may have been only 5—when the Federal commander rode up with a few staff officers, the other members of the escort and several Union generals, among whom were Phil Sheridan, George Custer, Wesley Merritt, and Edward Ord.

There were three members of that little group who would probably attract attention anywhere; two of them for their noteworthy personal appearance and the third both for his appearance and reputation. The first of these was Custer, the "dandy cavalier" of the Federal Cavalry. A low-cut, generous collar, a red necktie that begged for notice, buckskin breeches, and a velvet jacket were usually his dress-up uniform; and topping this elaborate array was a patrician face with mustache and small goatee, and a head of luxuriant yellow hair that fell halfway to his shoulders. Effeminate, you might say, but there was nothing feminine about Custer. He was a dare-devil on horseback, who feared nothing, dared anything, and defied death with reckless abandon. It was this utter disdain of caution that lured him and his command to tragic massacre in 1876.

And there was Ely S. Parker, of the staff, an aide and military secretary to Grant, a man of superb physique and Titan strength, a full-blooded Seneca Indian, a descendant of Red Jacket, famous Indian chieftain. He had the so-called copper hue of his race, their long, black hair and dark-brown eyes. Grant had no one in his official household more devoted to him than the stoical Parker. He was a man of education and culture, a willing worker, and always courteous to the lads of the escort. It was he who, in his excellent handwriting, copied the terms of surrender from the rough draft prepared by the Federal commander.

Phil Sheridan—"Little Phil"—the dynamic leader of the cavalry of the Army of the Potomac, was the third of the trio; and he was a general who always had my respect and enthusiastic admiration. He was a pint-sized little fellow out of the saddle, a youngster of 34 years, about 5 feet 4 in height and 130 pounds in weight, but he had a strong Irish face. Put him on his horse, the splendid black charger, Rienzi, and he at once became a warrior of heroic proportions. And how that horse could travel, and how that lad could ride. No wonder that Thomas Buchanan Read had to resort to poetry to do justice to horse and man.

Grant looked an old and battered campaigner as he rode into the yard. His single-breasted blouse of blue flannel was unbuttoned at the throat and underneath it could be seen his shirt or undershirt, whichever it was; his top boots were spattered with mud; and splotches of mud were on his trousers. Unlike Lee, he wore neither sword nor sash, and the only marks of his rank were his shoulder straps.

Colonel Babcock informed his superior that General Lee was awaiting him in the house, and without more ado Grant climbed the steps, Babcock alone accompanying him.

A few minutes later, however, the staff officer came to the doorway and beckoned to the other officers, inviting them inside.

It was now about 2 o'clock, and we fellows who were on the outside were in for a long and anxious session of waiting. They say that the watched pot never boils, and it is certainly true that anxious waiting for the verdict seemed to prolong the outcome indefinitely. The day was very warm for early April, and the sun, which of late had been blotted out by heavy rain clouds, was brightly shining in a very clear sky. Spring was with us at last, and the trees were putting on a tinge of green, the buds showing plentifully on the branches. It was good to be alive on April 9, 1865, and it would be better still if this was the end of 4 years' war. It was Sunday and the Sabbath stillness brooded over the land, a welcome relief from the din and hustle and carnage of recent fighting.

There we were, a group of eager troopers in blue, and a lone orderly in gray. When 3 o'clock came and went, I began to wonder if our enthusiasm had exploded too quickly. It did not seem necessary to take all that time in deciding whether Lee should surrender or not. With the thoughtlessness of youth, I assumed that such a decision would be the matter of but a half hour at the most.

Four o'clock—and the door opened. Out came General Lee and Colonel Marshall, with somber faces. The conference was ended, but with what results?

Before the war began, and for some time before, Lee had been lieutenant colonel of the Second Cavalry, stationed in Texas. That outfit must have been the crack regiment of the American Army, for the roster of its officers included Albert Sidney Johnston, the colonel whose promising career was cut short at Shiloh: Lee; William J. Hardee, the senior major; George H. Thomas, "the Rock of Chickamauga," junior major; Earl Van Dorn, Kirby-Smith, Fitzhugh Lee, John B. Hood, and George Stoneman, captains and lieutenants. Several members of our escort, Lieutenant Churchill, Sergeant Brown, and Corporal Sam Howe, had served in the Second under Lieutenant Colonel Lee, and none had lost any of his high regard for his former commander.

That lad Howe, earlier in the war, had been captured and marched off to Richmond. It was his boast that because he was a one-time member of the Second Cavalry he was quickly paroled, given the freedom of the city, and shortly afterward, through exchange of prisoners, allowed his liberty.

Now, as General Lee came from the house, his soldierly figure erect, even in defeat, these three chaps stiffened up and gave him a salute, and the man in gray courteously returned it. I thought at the time that it was a fine thing for them and him to do. At the moment his soul must have been heavy with sorrow—the years of desperate struggle fruitless—and yet he could return the salute of Yankee troopers.

I heard Sergeant Brown say, after the departure of Lee and Marshall, that the former had called him by name as he recognized him; and several of the old boys remarked that it was a noteworthy circumstance that members of his former Texas command should be the first to meet him after the surrender of his army.

We quickly learned the happy news, and it spread like wildfire through the Army. Cheers could be heard all along our lines.

That night was one of the happiest I have ever known, and I will wager that the same statement goes for every man on the Union side. A gun salute in celebration had been started by enthusiasts in the late afternoon, but Grant had put a stop to it, presumably out of consideration for the feelings of the other fellows. But before darkness fell and afterward, there was music—patriotic selections played by the regimental bands—and a general jubilation. When I sounded taps, that sweetest of all bugle calls, the notes had scarcely died away when from the distance—it must have been from General Lee's headquarters—came, silvery clear, the same call; and, despite the sadness of the hour to the boys on the other side, I have a notion that they, like the Yanks, welcomed the end of hostilities and the coming of peace.

Perhaps I should end my story right here, but I want to add my bit to what has been published concerning the pow-wow of Union and Confederate generals at the McLean house on the day following the surrender. The reader may recall that General Grant, several of the Federal generals, and members of his staff and escort, rode out to the Confederate lines for a further conference, after which Grant went back to headquarters, while some of our officers and men remained behind to chat with acquaintances in Lee's army. Lieutenants Churchill, Brown, and Howe were among these fortunates, they having received permission to enter the camp of the Confederates. Later on, Sam told me that he had enjoyed a brief talk with General Lee, and was he proud of it!

I was one of the group that returned with General Grant, and I was a most interested observer of everything that occurred on and about that friendly piazza. Grant sat down and lighted a cigar. Three or four of his staff brought out chairs, and the little party relaxed into lively conversation. Grant was the picture of contentment as he puffed away, listening to the comment of his subordinates, and occasionally offering a remark of his own in his matter-of-fact way. Things had turned out as he had wished and planned.

We were soon to witness a remarkable get-together party on that old front porch and in that spacious yard. I doubt that anywhere in history can we find a similar gathering. The absentees had returned, and they had brought with them several of their late antagonists, riders in gray, but a few hours before foes of the Union; not as prisoners, not even as enemies, but as old friends and comrades. I remember how amazed I was as I saw that strange company; and when I learned that among them were Longstreet, Pickett, and Gordon—well, it certainly seemed impossible.

Perhaps you can imagine my reaction to the spectacle, after 3 years of desperate fighting, to see three of the most famous southern leaders, within 24 hours of Lee's surrender, shaking hands with Grant and chatting like long-absent neighbors with him and other Federal generals.

Naturally, I made a careful inspection of that formidable trio: Longstreet, rightly called "Lee's war horse," a stockily built, well-bearded fellow, who looked as if he could handle himself anywhere and make it decidedly interesting for any opponent, in either argument or fight; Pickett, the leader of that heroic charge at Gettysburg, whose handsome face, with its mustache and chin whiskers and goatee, with thick hair that reached well nigh to his coat collar, made him a composite of soldier and poet; and Gordon, the hard-hitting John B., who, in civilian clothes, would be taken for a judge or a doctor—a thinker, at any rate—and who had every earmark of a man who would go through hell and high water, if ordered to do so by his superior, and never ask the reason why.

And how Abe Lincoln would have enjoyed that confab. Like Grant, he would have grasped the hands of those soldiers in Confederate gray and welcomed them back home. Had he been spared, there would have been no reconstruction.

Soldiers don't carry hatred; they leave that to the stay-at-homes. We learned that in the next 20 years.

Hon. Charles L. McNary

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, April 11 (legislative day of Monday, April 8), 1940

ARTICLE FROM THE PORTLAND OREGONIAN

Mr. THOMAS of Idaho. Mr. President, on last Sunday, April 7, there appeared in the Portland Oregonian a most interesting and illuminating article concerning the distinguished senior Senator from Oregon, Hon. CHARLES L. MCNARY. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sunday Oregonian, Portland, Oreg., April 7, 1940]

MCNARY OF OREGON, A FORCE IN THE NATION—CHARLEY MAC, AMIABLE DISSENTER, FRIEND OF ROOSEVELT, REPUBLICAN LEADER, THROWS MONKEY WRENCHES AT THE NEW DEAL, AND HELPS IT, TOO

(By Richard L. Neuberger)

Political disagreement often breeds animosities which endure like limestone, but between President Roosevelt and CHARLES LINZA MCNARY, leader of the opposition to the President in the United States Senate, exists a warm personal friendship.

The President has political adversaries to whom he does not speak, so MCNARY's dry, rural amiability is predominantly responsible for this comradery. When the European war broke out, Mr. Roosevelt asked MCNARY to stay on hand in the Capital. He said Oregon was too far away in time of emergency for one of the country's levelest heads to be.

Rudyard Kipling, who was on the Pacific coast long ago and peered about for a typical westerner, would have found his objective in Senator MCNARY. The spokesman for the Republican minority in the Senate wears stubby bow ties, comfortable suits, and heavy gold cuff links. His home is the Willamette Valley farm where he was born 65 years ago. Agriculture is his primary interest.

MCNARY looks at the New Deal from a western perspective. He protests when it tries to centralize authority, pack the Supreme Court, or intervene in foreign affairs. He approves when it builds power and reclamation projects, provides old-age pensions, and gives aid to the farmers.

Gen. Hugh S. Johnson thinks MCNARY would be an ideal successor to Mr. Roosevelt in the White House. He points out that the Republicans, regardless of whom they nominate, will make gains in the industrial East. What they must do to win is carry the insurgent, agricultural West and Middle West. "For this particular strategy," declares General Johnson, "the Republicans have a ready-made candidate in Senator MCNARY."

Since 1933 the Oregon Senator has been the official leader of the Republican Members of the Senate. He has not always agreed with his followers. Only a week or so ago he opposed a proposal by Senator TAFT, of Ohio, to slash $5,000,000 from the appropriation for the Tennessee Valley Authority. A majority of the Republicans deserted him last year when he voted to authorize bonds with which the T. V. A. could buy out private utility companies.

Yet despite variance on particular issues, MCNARY holds his position by practically the unanimous consent of the other G. O. P. Senators. There has been no attempt to remove him as minority leader. He comes from a State with only five electoral votes, and he has supported the New Deal on numerous propositions, but there has been less opposition to him than to almost any other Senate spokesman in a generation.

One reason is MCNARY's general affability and mellow personality. Another is the fact that under his leadership a comparatively small number of Republicans have outmaneuvered the administration in major controversies. It was Senator MCNARY who devised the

strategy which resulted in the rejection of the scheme to add six new judges to the Supreme Court. This was the first important set-back suffered by President Roosevelt.

When the Court plan was proposed, McNARY counseled his followers to be quiet and not sound off against it. He prophesied the Democrats would begin quarreling among themselves, unless—and he stressed this emphatically—the Republicans made the plan a partisan issue. So the G. O. P. Senators were silent. McNARY and the late Senator Borah, of Idaho, even persuaded Senator VANDENBERG to telephone Herbert Hoover, long distance, to ask him, too, not to deliver any speeches on the question.

PREDICTION PROVED CORRECT AS DEMOCRATS ROWED

McNARY's prediction proved correct. The Democrats began rowing among themselves over the court scheme. Senator WHEELER, a new dealer, assumed the leadership against it. Democratic votes finally pigeonholed the bill indefinitely. During the debate one administration adherent screamed angrily, "You Democrats. Can't you see the Republicans are using you?"

Mr. Roosevelt is not the first President to be irked by the political stratagems of CHARLES L. McNARY. He drove his famous bill to put agriculture under the umbrella of the protective tariff, the McNary-Haugen bill, through two Congresses against the opposition of President Coolidge and later the opposition of President Hoover. The bill was vetoed by both Republican Presidents.

The McNary-Haugen bill set the tempo for a generation of thinking on the farm question. "The McNary-Haugen bill didn't win," said General Johnson recently, "but that fight made the election of Mr. Roosevelt possible, made the country conscious of the farm problem and the farmers conscious of Senator McNARY."

The day after President Coolidge vetoed the McNary-Haugen bill, Senator McNARY had a long and amiable visit at the White House. His genial personality bridges many political chasms. When Mr. Roosevelt had concluded his address to Congress last year on the state of the Union McNARY walked up to him.

"I guess we'll have to call that a natural, Mr. President," volunteered the Senator, whose maneuvers had licked the President on the Supreme Court issue.

CHARLEY MAC A POPULAR MAN IN SENATE CHAMBER

McNARY was the principal sponsor of Bonneville Dam. In fact, he was advocating Government reclamation and power undertakings long before the new dealers arrived at the Washington airport and railway station. He supported Senator NORRIS in 1922 in opposing the sale of the Muscle Shoals project to Henry Ford.

As President Roosevelt signed the authorization for the first appropriation at Bonneville he said, "I've got to give 'Charley Mac' his dam."

McNARY is "Charley Mac" to his good friends. When he returned to the Senate Chamber recently after an illness, practically the entire membership, Republican and Democratic, clustered around slapping him on the back. Five or six times polls of the press gallery have listed McNARY as the most popular Senator with the newspaper correspondents. "Charley Mac" is always a good source for news and background information.

One of McNARY's closest companions was the late Senator James Couzens, of Michigan. Although many times a millionaire, Couzens voted with the progressive wing of the Republican Party. One day, early in 1936, he and McNARY were eating lunch in the Senate restaurant. "Charley, you ought to go after the Presidency," said Couzens, "I'll contribute $100,000 to start the campaign."

The Oregon Senator shoved aside his bowl of clam chowder and scribbled for a minute or so on the back of a menu. He shoved what he had written across the table to his friend:

"The Presidential bee is a deadly bug.
I've seen it work on others.
O Lord, protect me from its hug,
And let it sting my brothers."

Jim Couzens is dead now, but there are other distinguished Senators who would like to see McNARY in the Executive Mansion. One of them is GERALD P. NYE, leader of the congressional neutrality bloc. Another is ARTHUR CAPPER, of Kansas, the veteran Corn Belt spokesman and publisher of several farm journals. He endorsed and placed in the CONGRESSIONAL RECORD a recent speech by Gov. Charles A. Sprague, of Oregon, launching Senator McNARY's Presidential candidacy.

On May 17 Oregon Republicans will pick McNARY as their choice for the party's nomination. He also will probably have the outright or tacit support of delegates from such States as Washington, Idaho, and Montana. However, McNARY is interested principally in forcing a specific and liberal farm platform on the Republican Convention. He says he has no illusions about his chance to be President. He does not think the conservative wing of the party would want him, and he is not on good terms with Mr. Hoover.

Most of the congressional independents are friendly with Senator McNARY. BOB LA FOLLETTE often asks McNARY to make his announcements when he is absent from the Senate. GEORGE W. NORRIS, the leader of the liberals, praises McNARY's record on power bills and rural electrification. The indomitable Borah frequently worked with McNARY on legislation of mutual interest to Oregon and Idaho.

As long ago as 1936 Mark Sullivan suggested that no Republican could so successfully as McNARY fuse the party's orthodox and unorthodox elements. The Senator himself believes that the farm question is the key to the performance of the G. O. P. at the polls this year. "I have arrived at the conclusion," he said recently, "that the Republican Party can be victorious if it demonstrates to the farm voters and those dependent on the farmers that the party is interested, as formerly, in their welfare."

AT STANFORD WAS FELLOW STUDENT OF HERBERT HOOVER

CHARLES LINZA McNARY was born in the summer of 1874 on a ranch, his pioneering grandfather homesteaded in the timbered Willamette Valley near Salem. There he still lives. On June 12 he will be 66 years old, although his pink cheeks and sandy hair affirm his Scotch-Irish background but deny his age.

McNARY attended Stanford University, where he was a fellow-student of Herbert Hoover. Tuition was paid waiting on table and McNARY insists he can still carry 5 platters of roast beef on one arm. Returning to his home, he studied for the bar at Willamette University and later became dean of that school's law department.

Frontier Oregon was a rich field for politics and McNARY became active in the Republican Party, generally being associated with the progressives. He ran for the Oregon Supreme Court in 1914 and was defeated under extraordinary circumstances. The final tally, after weeks of rechecking in hundreds of precincts, was Henry Benson, 34,609 votes, and CHARLES L. McNARY, 34,608.

"Just one of those things, I guess," said he, shrugging off the disappointment of that tormenting result. A year later McNARY was named chairman of the Republican State Central Committee. In the spring of 1917 Senator HARRY LANE died, a few weeks after he had been one of the six "willful men representing no opinion but their own" who stood to the end in the Senate against America's entrance into the World War.

Lane had been a Democrat and McNARY was a Republican, but both had liberal ideas and, although in favor of the war, McNARY was no jingo or militarist. He was appointed to the Senate vacancy by Governor James Withycombe, and after 23 years of service continues to hold the position. He has been reelected four times, and has been in the Senate longer than anyone else ever sent there from the State of Oregon.

DEFEAT WAS "JUST ONE OF THOSE THINGS"

McNARY's loyalty to agriculture is fortified by vocation; he is a farmer himself. Although one of the shrewdest lawyers on the Pacific slope, he spends the bulk of his time, when away from Washington, running Fir Cone, the 200-acre farm where he grew up. He raises filbert nuts, cherries, prunes, and pears. He developed the Imperial prune.

The ranch has been reconstructed several times and now is a rambling, colonial-style home nestling among tall evergreen trees. The name "Fir Cone" is symbolic as well as euphonious. McNARY would rather be there than in Washington, and he and his wife, who was his secretary, do not play a conspicuous part in Capital social functions. They have a 4-year-old adopted daughter, Charlotte, and in his office the Senator has a hobbyhorse to amuse her when she visits him.

Party ties hang lightly on McNARY. In fact, it was Oswald West, a Democratic Governor, who appointed him to a vacancy on the State supreme court in 1913. In 1933, after he became Republican Senate leader, McNARY firmly opposed punishing such Senators as HIRAM JOHNSON, who had deserted the party to campaign for Mr. Roosevelt. At the 1936 election in Oregon the Republican State central committee signed the statement in the Voters' Pamphlet for every G. O. P. candidate except one—CHARLES L. McNARY. He had his statement signed merely by a personal friend.

In the National Capital McNARY's closest friend is HIRAM JOHNSON of California, the veteran isolationist. They eat lunch together in the Senate restaurant two or three times a week. McNARY joined Johnson, Borah, and Nye in opposing repeal of the arms embargo last autumn. He also has been critical of "efforts to cause our flesh to creep with references to mysterious foreign forces that threaten our shores and, indeed, our homes."

PRESIDENT CONSULTS WITH HIM FREQUENTLY

Despite his dissent from the administration's foreign policy, Senator McNARY is constantly consulted by the White House and the State Department. The President regards him as one of the calmest, keenest heads on Capitol Hill. One afternoon, while conferring with congressional leaders, Mr. Roosevelt swung completely away from the others and became engrossed in a long, earnest conversation with McNARY.

James H. Rowe, one of the President's executive assistants, says that if Senator McNARY does not know Mr. Roosevelt's 1940 intentions, "then I guess nobody does." Rowe states that the Oregon Senator sees the President more frequently than almost anyone else except Cordell Hull and the members of his own family. In any important emergency or crisis, the Democratic administration almost invariably calls "Charley Mac" and asks for his advice.

Yet, just as he is independent of the Republicans whom he leads, McNARY also is independent of the President with whom he is friendly. He militantly opposed Mr. Roosevelt's bill to reorganize the executive departments, and he has been sharply critical of playing politics with relief, piling up a huge public debt and failing to solve the unemployment problem. He thinks the New Deal has centralized too much sovereignty in the National Capital, a perilous circumstance, in his opinion, for a State 3,000 miles away, like Oregon.

Tribute to Senator Carter Glass

EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 12 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. JESSE JONES

Mr. BYRNES. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered last night at the Hotel John Marshall, Richmond, Va., by Hon. Jesse H. Jones, Federal Loan Administrator, at the sixteenth annual banquet of the Virginia State Chamber of Commerce, where our beloved colleague, the senior Senator from Virginia [Mr. GLASS], was the honor guest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am greatly honored to be invited to your meeting and to have the privilege of addressing you on the subject of CARTER GLASS. I am aware that others could make a more pleasing address, but am not prepared to admit that anyone would appreciate the honor more than I or that anyone holds the Senator in higher esteem. We have been friends since the days of Woodrow Wilson, another of your great sons.

Virginia has produced many men of great stature, but in my view CARTER GLASS would not suffer in comparison with any of them. Had his time been in the days of the American Revolution he would have been found with George Washington, fighting for independence. Had it been during the period of 1812 he would probably have been captain of a frigate fighting for the freedom of the seas. Had it been some 20 years later than that he would have been supporting Sam Houston, another great Virginian, fighting tyranny for the freedom of Texas. And if he had been born a few years earlier than he was, he would have been with Robert E. Lee and Stonewall Jackson.

Better, perhaps, that he came when he did, growing to manhood in an atmosphere of reconstruction. The injustices of this period no doubt served to develop in CARTER GLASS a determination to devote his life to public service.

How studded with achievements has been his career. We first see him clerk of the Lynchburg City Council at a salary of $25 a month; a few years later publishing a newspaper, writing freely of the things which he believed to be for the best interest of his community and his country. He was so direct and plain-spoken in his writings as frequently to bring himself into actual or near physical combat. He learned early, in the stirring words of his political ancestor Patrick Henry, whom he holds in high regard, that "the battle is not to the strong alone."

In 1901, according to the then senior Senator from Virginia, John W. Daniel, he was the guiding spirit in the constitutional convention for Virginia that proclaimed for you a new constitution, effecting necessary suffrage reform.

We see him in your legislature, a member of the Virginia State Senate, fighting the battles of democracy, and this fight he has carried on these 40 years. He became a delegate to the Democratic National Convention in 1892, and has been a delegate to every Democratic National Convention since that time, always taking a prominent part, usually a member of the platform committee, writing his party's creed and charting its course.

Probably no more touching scene in a national convention was ever enacted than at San Francisco in 1920, when the great Bryan, appearing before the platform committee, rose to urge an immediate cash bonus for the service men engaged in the war. It will be remembered that Mr. Bryan had great power of persuasion in conventions. No one questioned his right to advocate the bonus, but his plea was so impassioned that he cut deep many of his colleagues, virtually accusing them of having "sacrificed nothing" in the war.

CARTER GLASS also has great power of persuasion. Instantly he was on his feet. His face flushed, he spoke: "I am going to say something here today that I have never repeated outside the confidence of my own family and the confidence of the President of the United States. During the war I tried to enlist. I went to Mr. Wilson to express my desire for active service in any capacity. He refused permission. He reminded me of my age and told me I was more needed at home. In addition he told me if I acted contrary to his wishes and did enlist, he would see to it personally that my period of any such service ended abruptly.

"But I did give my two sons to the cause. I did give my two daughters to war work, one of them being in the Red Cross. Several of my nephews enlisted, and one of them was shot to pieces, and it will be a long time before he regains his health, if he ever does. Also a great many other close relatives were in the service of their country. I tell you all this not to burnish my own shield because I am sure there are many others on this committee and elsewhere who can reply to this unwarranted aspersion better than I. I say it to indicate to Mr. Bryan that his references to those who 'sacrificed nothing' are not properly made when he seeks to apply them to those who are opposed to his bonus proposition. I repeat it because I shall be greatly interested to hear from Mr. Bryan's own lips if he can say for himself what, shamelessly, I have said for myself."

Stung by this rebuke, Mr. Bryan retreated into a corner of the room where he sat down, covered his face with his hands, and burst into tears. After a few minutes of emotion he walked back to where GLASS was sitting. The two men shook hands quietly, and together they turned to the wording of the plank, which GLASS dictated.

Thirty-nine years ago you sent him to Congress, and later to the United States Senate, with time out only for serving Woodrow Wilson as Secretary of the Treasury. CARTER GLASS could not be accused of gabbiness in his early days in Congress. Unlike most Members of the House of Representatives, he was serving his sixth year before he ever arose from his seat to address that body, and then it was to pay tribute to a deceased Member.

Ever a student, CARTER GLASS was setting his compass and getting his national bearings, and when Woodrow Wilson became President in 1913, he found no more effective ally than CARTER GLASS. It is well known that to CARTER GLASS, even more than to President Wilson, credit is due for the Federal Reserve Act, a sorely needed correction in our banking system. It is unnecessary here to recite in any detail the very stubborn opposition to this legislation, or the fact that failure of the system after its passage, was freely predicted by then acknowledged authorities on banking and finance. Briefly, however, Senator Nelson W. Aldrich had proposed a central bank, so arranged according to GLASS, that the larger banks of the country would inevitably become predominant in the control of credits, a situation obviously to the detriment of the country.

The American Bankers Association, under the influence of the bigger banks, endorsed the Aldrich plan. There was still another plan, which was endorsed by Colonel House, Senator Owen, and Mr. Bryan, Secretary of State. This proposal had the acquiesence of Mr. McAdoo, Secretary of the Treasury.

It was due to the persistence, and the ever-lasting fighting qualities of CARTER GLASS, backed by Woodrow Wilson, that the Federal Reserve Act was finally passed. President Roosevelt on the occasion of the official opening of the new Federal Reserve Building in Washington said that the creation of the system was due to the statesmanship of President Wilson and to the courageous leadership in Congress, for which the senior Senator from Virginia, CARTER GLASS, will always deserve the Nation's gratitude.

If you follow the life of CARTER GLASS step by step, you will find him to have always been ready to sponsor new legislation necessary to meet changing conditions. In 1932, when we were completely confounded economically, he voted to create the Reconstruction Finance Corporation to give Government financial aid to business, industry, and agriculture.

After the inauguration of President Roosevelt he voted for emergency legislation to save banks by providing them with capital instead of loans and to expand the note-issuing authority of the Federal Reserve System and permit Federal Reserve banks to make loans to all banks during the emergency, whether or not they were members of the System, and on such collateral as they might have available. He has voted for numerous amendments to the R. F. C. Act, and in 1937 sponsored continuation of its lending powers. The Glass bill of 1938 further expanded the Corporation's authority, particularly with reference to loans to business and industry.

In addition to the R. F. C., the Senator has voted for a great deal of other important liberal legislation, including particularly the Federal Deposit Insurance Corporation, the Securities and Exchange Commission, the Home Owners' Loan Corporation, the Home Loan Bank System, and the Federal Housing Administration.

Few men have been called to serve their country in as many different capacities as CARTER GLASS. For the past 20 years he has been in the United States Senate, and when he rises in that Chamber to speak, a hush falls over the galleries. The people there, like his colleagues on the floor, lean forward to catch his every word. His pungent phrases, his skill in rhetoric, and his ability to put so much weight, salt, and philosophy into just plain speech have challenged his adversaries and won the admiration of his colleagues on many occasions.

I have said many times before that CARTER GLASS has carried on the traditions of Virginia with great credit to his generation. He brought to Washington a searching mind and a capacity for hard work. Soon his force was recognized, and the Nation acclaimed his statesmanship. His political creed is a broad liberalism framed within the Constitution as interpreted by another Virginian whom he admires greatly, John Marshall.

The Senator finds it difficult to reconcile many things now being done by the National and State Governments with his own political philosophy, a philosophy which stems directly from statesmen he chiefly admires—Patrick Henry, Andrew Jackson, Clay and Calhoun, Grover Cleveland, and Woodrow Wilson. But notwithstanding this difficulty, he recognizes that changing conditions require new laws, new guideposts. To use his own words when once addressing the Senate, "I would not like to detain the Senate by telling it how often I have changed my mind in the last 40 years—always in the right direction."

Strong men change their minds and good friends cannot always agree. The Senator and President Roosevelt, like many of the rest of us, do not always see eye to eye on particular measures, but they have been fighting on the same team a long time, and will be again in the coming election.

The Senator thinks we have spent too much money, that we have paid too dearly for recovery, and that it will be difficult to bring our fiscal matters back into balance. You may agree with him. However, we in Virginia and Texas were fortunate in comparison with many other sections of the country; but as an official of the R. F. C. I saw so much grief, so much distress, and so many broken men during '32 and '33 that I am not prepared to say what price would have been too great.

Of course, we must adjust our outgo to meet our income. We must spend less or take in more. And this problem will be solved.

But that does not mean that we can go back to the old order of things. Most of the social laws that have been passed in recent years have a good purpose, and, when refined, seasoned, and properly administered, will prove of a great benefit to society. One difficulty with respect to any new law affecting business and industry is the time it takes for business to become adjusted to it.

I am not discouraged about our future, except as we may be affected by conditions across the seas. While we are not directly involved in war, we will be seriously affected by it. That is certain. We should not consider lightly the necessity for adequate national defense, even though the cost is great. Nor should we fail to begin taking into account conditions that will confront us when peace is made. We are the most fortunate people on the face of the earth, and under no circumstances should we allow the disorders of the Old World to undermine the integrity and national character of our great country and our form of government.

In the public concept of CARTER GLASS, the qualities that probably stand out most are his courage and his belligerency in debate. He is at his best when fighting oppression, oppression in any form—never afraid of the size or power of his foe, but to trusted friends he gives in full measure the happiness that flows from the best of human companionships. No one enjoys the companionship of friends more than CARTER GLASS.

He is essentially generous and just. For many years he has kept employed several hundred people in his newspaper plants, and it is said of him that he has never discharged but one trusted employee. This man was one of the best compositors Mr. GLASS had on his papers, but he had one besetting sin—he would get drunk. And when he got drunk, which was rare, he got very, very drunk and his spree might last for as long as a week. Finally Mr. GLASS, for the sake of discipline, had to fire him. Reluctantly he let him go but wasn't happy about it. And soon there was a compromise. Mr. GLASS reemployed him on condition that he stop drinking.

Not long afterward Mr. GLASS noticed a very strong smell of onions in the composing room at night when he went to "put the paper to bed." It finally dawned on him that Pat was still tippling, and covering it up with onions. This Mr. GLASS considered a break of faith, and went to fire him again. "Look here, Pat," he said, "whisky is bad, onions are bad, but the combination is intolerable." Whereupon Pat, bowing very low to the ground, said, "All right, Mr. GLASS, I'll never touch another onion as long as I live." And there the matter ended. Pat kept his job.

One of the Senator's biographers, Rixey Smith, says that proof of Senator GLASS' great tolerance is the fact that he has only had two secretaries in 40 years, each serving 20 years. Rixey is one of these.

CARTER GLASS is a true Virginian in every intimate fiber of his highly organized being, and the aphorism, "A prophet is not without honor save in his own country," does not apply to him, for nowhere is CARTER GLASS more deeply loved and more highly regarded than in Virginia.

He possesses the rarest of all human virtues, true humility. On one occasion when he was being lauded, he stated, "I am genuinely embarrassed by being praised for such things as integrity, independence, and courage. I regard those as virtues to the common man. In all my life, day in and day out, I have never done anything but what I would expect and what should be expected of the average man of good sense and good character."

The philosophy of CARTER GLASS, traced from early manhood, has been as unerring as an arrow shot from the swiftest bow of the early settlers of Virginia.

It has been my good fortune to know him for quite some years. I know him in many roles. I have seen him in fiery debate, with his caustic tongue routing sham and hypocrisy and leaving pretense in wreckage. I have seen him in council around committee tables. I have seen him at baseball games and football games, enjoying those sports with all the enthusiasm of the greatest fan. I have seen him at the races, wrestling matches, and prize fights with his lifelong friend, the late Admiral Cary T. Grayson, another great Virginian. I have thrilled at his fighting qualities, admired his sure and deep convictions, esteemed his straight thinking, and loved him for himself.

Notwithstanding his more than fourscore years, I like to think of CARTER GLASS spiritually as a kind of perpetual Peter Pan, resolved never to grow up into futility. And I end by venturing the hope that this spirit of his may go on down the years and be transmitted to the future youth of all the Nation; that it may serve to temper that youth with visions of loyalty and concepts of service, and to bind it, with fine idealism, to noble end.

Seven Pre-Roosevelt Years Contrasted With the Seven Under the New Deal

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

ARTICLE FROM THE NEW YORK SUN

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following table from the New York Sun:

[From the New York Sun]

SEVEN PRE-ROOSEVELT YEARS CONTRASTED WITH THE SEVEN UNDER THE NEW DEAL

The following table shows what the New Deal has done during its 7 years in power for the American Nation as a whole and for the major economic groups which it comprises.

Recently at Hyde Park the President presented a series of figures showing the progress of recovery since 1932. Of course, a comparison with the boom year of 1929 would have yielded an extremely depressing picture.

Since neither of these methods affords a fair and helpful gage, there is presented in the table below a comparison of the 7 pre-New Deal years—four of prosperity and three of stark depression—and the 7 New Deal years of recovery.

The comparison covers every field that the President mentioned in his statement, together with a number of other economic fields which he ignored, including that in which the New Deal scored its greatest achievement, the curtailment of bank failures:

	Average of 7 pre-New Deal years 1926–32, inclusive	Average of 7 New Deal years 1933–39, inclusive	Percent change
General:			
National income (1–A)	$69,062,000,000	$59,783,000,000	−13
Number unemployed workers (2)	4,820,000	10,617,000	+120
Federal tax burden (3–B)	$3,647,000,000	$4,331,000,000	+19
Cost of Federal Government (3–B)	$3,944,000,000	$7,570,000,000	+92
Change in public debt in 7 years (3–B)	−$1,029,000,000	+$20,985,000,000	
Change in per capita public debt (3–B)	−$21.98	+$152.41	
Number of bank failures (6–C)	1,128	613	−46
For the consumer:			
Wages and salaries (1)	$46,700,000,000	$37,300,000,000	−20
Interest received by individuals (1)	$5,200,000,000	$4,900,000,000	−6
Dividends received by individuals (1)	$4,860,000,000	$3,740,000,000	−23
For the farmer:			
Cash income from sales (4)	$9,043,000,000	$7,255,000,000	−20
Benefit payments from Federal Government (4)	0	442,000,000	
Total farm income (4)	9,043,000,000	7,697,000,000	−15
Cost of running Department of Agriculture (4)	$161,738,000	$831,455,000	+414
Value of agricultural exports (1)	$1,420,000,000	$738,000,000	−48
Value of agricultural imports (4)	$1,729,000,000	$1,074,000,000	−38
Commodity price index (5–D)	$87.3	$77.7	−11

	Average of 7 pre-New Deal years 1926-32, inclusive	Average of 7 New Deal years 1933-39, inclusive	Percent change
For labor:			
Weekly pay roll of factory workers (5)	$169,252,000	$148,334,000	−12
Total nonagricultural employment (5-J)	33,822,000	32,135,000	−5
Number of strikes (5)	795	2,505	+215
Number of workers affected (5)	301,600	1,176,500	+291
For business and industry:			
Index of industrial production (6-E)	98	93	−5
Average of 60 bond prices (7-G)	93.8	85.4	−9
Index of 420 common stocks (7-D)	122.0	87.0	−29
Amount of new capital issues (8)	$3,520,000,000	$629,000,000	−82
All exports, dollar value (1)	$3,990,000,000	$2,597,000,000	−35
All imports, dollar value (1)	$3,369,000,000	$2,134,000,000	−37
Dividends paid by corporations (10-F)	$7,277,000,000	$5,961,000,000	−18
Residential building, index (6-E)	79.0	32.0	−60
Private construction (1)	$6,410,000,000	$2,322,000,000	−64
Government construction, Federal, State, local (1-H)	$2,357,000,000	$1,890,000,000	−20
Department-store sales (1)	$3,931,494,000	$3,256,389,000	−17
Cars of revenue freight loaded (9)	45,766,000	32,844,000	−28
For the Federal jobholder: Number employed in executive departments (11)	558,300	771,830	+38

Sources: (1) Department of Commerce. (2) American Federation of Labor (3) U. S. Treasury Department. (4) Department of Agriculture. (5) Bureau of Labor Statistics, Department of Labor. (D) 1926 average equals 100. (E) 1923-25 average equals 100. (F) Figures for 7-year periods unavailable, comparison is for 5-year periods. (G) Priced from average yields. (H) Excludes W. P. A. (J) Excludes all work relief.

Common Sense From Landon

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Friday, April 12 (legislative day of Monday, April 8), 1940

EDITORIAL FROM THE KANSAS CITY STAR

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an interesting editorial from the Kansas City Star entitled "Common Sense From Landon."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Kansas City Star of April 5, 1940]

COMMON SENSE FROM LANDON

The address of Alf M. Landon to the Kansas Republicans may well prove to be the real keynote of the campaign. The former Kansas Governor did not indulge in rhetoric. He made no extreme statements. He got down to fundamentals.

The great test Governor Landon applies is the effect of the New Deal administration on employment. It is condemned because after 7 years of effort, as many men are out of work today as were out of work then.

This failure has come because of unwisely constructed legislation, constant experimenting, and prevailing uncertainty not merely from the experimenting but from the President's delight in "loose talk," his pleasure in "keeping the country guessing." All this has been attended by an extravagant spending policy that threatens eventual collapse and inflation.

In Mr. Landon's opinion, these failures are so deep-rooted in the administration that the only hope for their correction lies in a fundamental change at Washington. The next President must be able to "organize and weld the conflicting interests of the country so we can all pull together," and his administration must straighten out the financial mess with which the Roosevelt administration has shown itself unable to deal.

No more reasonable statement of the fundamental issues has yet been made. It is neither reactionary nor radical. It is in accordance with plain, old-fashioned American common sense. All the clever camouflage of the bright young men of the New Deal "brain trust" cannot cover up the essential failure of the New Deal or disguise the danger ahead.

The people of the United States, Democrats as well as Republicans, would do well to pay attention to what Governor Landon said at Wichita.

Americans From Greece

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Friday, April 12 (legislative day of Monday, April 8), 1940

ADDRESS BY ACHILLES CATSONIS AT AHEPA BANQUET

Mr. O'MAHONEY. Mr. President, Members of the Senate and the House of Representatives who were privileged to attend the banquet of the Order of Ahepa, at the Mayflower Hotel on March 4, were all greatly impressed by the appearance and the ability of the American citizens of Greek origin who spoke at that function. Their addresses called to mind the great debt which society owes to the ancient Greeks. These people have handed down to us in the modern world not only an example of outstanding accomplishment in literature and art but also a most impressive example of unfailing devotion to the fundamental principles of democratic government. One of the very interesting speeches made that evening was delivered by Mr. Achilles Catsonis. I ask unanimous consent that his remarks may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. "Symposiarch," good old-fashioned American toastmaster, I don't mind your calling on me in this manner, but object to your making my speech, for hardly much could be added more appropriate to the occasion than your opening remarks.

You have expressed disappointment that Senator WALSH, on whom you expected to call for one of the principal addresses this evening, was unable to attend, and that Senator KING, who was to make the other principal address, is indisposed and has asked to be excused from speaking. In that juncture of things, you invite me to pinch hit for these two eloquent and distinguished Americans. To substitute for either one would be more than enough; for both, the assignment is much too big. Perhaps I should grasp the moral of the story hurriedly narrated to me by Mr. W. Gwynn Gardiner, my distinguished associate, as I rose from the table for this ordeal. A young lawyer, not experienced in judicial subtlety, after the opposing side had finished its argument, insisted on making his argument, whereupon the judge admonished him, "All right, young man, go ahead; I am with you now, but don't know if I'll be with you when you finish." Would it not be wise for me to obey this admonition?

Since it appears I must proceed, and after invoking inspiration from divinities, near and remote, I begin with the thought most recent in my mind. I have been reading lately a book entitled "The Lost Continent of Mu." Col. James Churchward, the author, who states he has spent more than 50 years in search of man's first habitat, basing his finding on the Naacal tablets which he discovered in a temple in India and deciphered by the aid of the temple priest, and upon some 2,600 tablets recently unearthed in Mexico by William Niven, as well as on certain other ancient records, makes the startling revelation and asserts it as his belief that more than 50,000 years ago, stretching across the Pacific easterly from Central America and westerly well nigh touching the opposite shores, was couched a vast continent, larger than the United States by some 2,000 miles, known as the Land of Mu, and as the Lands of the West; that a superior civilization flourished upon this continent; that thousands of years ago, due to volcanic upheavals emanating from the earth's center and breaking through its crust the entire continent was submerged with its 64,000,000 of people; that this was the original home of man; that its first inhabitants were Greeks, and that the Greek alphabet when accurately deciphered is a short history of the destruction of Mu. Challenging and informative, and, if true, makes the Greek immigrant of today not a recent comer to the Western Hemisphere but a long-lost wanderer who, having ventured the round of the world, returns now to the point of beginning. Perhaps that accounts for his being at home in America.

And well may he feel at home for, laying aside for the moment the theory of Colonel Churchward, and viewing the Greek as among the recent comers to our shores, we find he was received by Americans of earlier advent not as a strange and unassimilable addition to the body politic but as a kind and kindred spirit, wholly sympathetic and in full accord with, the basic philosophy of American life. To him as to all others who have honestly tried to find, in America, a fresh outlook on life, and who believe that vibrant, dynamic and constructive effort are indispensable prerequisites to a useful life, America has been a haven and a field of opportunity. The institutions established by the founding fathers and maintained by successive generations of Americans at huge sacrifices and constant vigilance have been his to enjoy equally with those who link their race to the Mayflower. For him as for all others who have come within its jurisdiction the Constitution has been a protective mantle, a veritable palladium of the rights of man as vouchsafed in that immortal document.

Thus impelled and motivated the American Hellene sought to find his proper place in the social structure of his new country. In his own traditionally individualistic temper, and by constant application to his daily tasks he has demonstrated to his American friends that he is not lacking in the qualities which should characterize a good citizen. Indoctrinated in the belief that law is the sine qua non of a well ordered society this new venturer upon your shores has been responsive to his obligations as a law-abiding citizen. As a token to his industry you will seldom find him depending on public assistance. As the head of his family he is fully cognizant of his responsibilities, and strives to make possible for his children opportunities not available to him. Nor is he wanting in the traits requisite of a public spirited citizen, well remembering and molding his conduct in that regard by the exhortation of Pericles to the youth of Athens to pass their city on to their successors, not only not less but greater than they found it.

Yet, creditable as admittedly has been the record as an individual, of this reborn American he felt as he grew with America that more was possible by way of cooperative effort, that he had much to contribute to its welfare, that not only in taking but in giving even with greater measure, does the true citizen and patriot find happiness and contentment, and that his cherished rights, precious though they are become consecrated only when he is willing to match them with their correlative duties and sacrifices.

With such thoughts in mind a group of Hellenes in 1922 sought and obtained from the State of Georgia a charter to establish the American Hellenic Educational Progressive Association, popularly known as the Ahepa, to instruct the Greeks of America in the tenets of American Government; to strengthen and confirm their belief in the fundamental institutions of this country; to promote loyalty to its flag, instill reverence and respect for its traditions. More, to take an active part as good citizens in the life of America, and in addition, to marshal into active service for America the noblest attributes of Hellenic culture, believing that no nation has a monopoly on virtue, and that regardless of race or creed those who have joined the ranks of America have inherent cultural virtues worthy of preservation and diffusion into the body politic—all to the end that the race of man shall continue to live in an America of peace, happiness, and contentment. Not the words of a "front" these, but the spontaneous declaration of the founders, and connote exactly what they denote. Here mind and heart meet to reveal the wholesome faith of a simple people in the future of America, for indeed the founders of the Ahepa are plain, ordinary citizens, strangers to the latent implications of "fronts," frank in their intentions, having nothing to conceal and therefore in no need of "frontal" adumbrations.

Starting in Atlanta, nurtured in the South, the Ahepa in course of time spread its influence throughout the land and in its path has left a wholesome atmosphere. Not alone Greeks but others as well compose its membership. Many influential Americans honor us with membership because they believe in the aims of the Ahepa. the press generally approves its work and public opinion looks upon it as an unofficial arm of the Government.

In the 18 years of its existence the Ahepa has been the cynosure of Hellenic activity in the United States; it has given in a tangible and practical way instruction in the essential likeness of Americanism and Hellenism, thereby adducing the conclusion that the American Hellene should feel en rapport with the spirit of America; that for him there is neither room nor excuse for acts inimical to America; that his being a Greek means less to us if his conduct is subversive to American institutions and more if it reflects credit on his race. And further, laurels won by his ancestors ill fit his crown unless they serve as an incentive to emulate their achievements. In its auxiliary organizations the Ahepa has sought to find constructive activities for the women of Hellenic lineage, it has diverted from random environment the younger generation of Americans of Greek parentage and in various ways is endeavoring to make easier the transition and bridge the gap that generally exists between the first generation of Americans and their transplanted parents. In the course of this practical instruction we have sought to extirpate from the minds and hearts of our children any inceptive seeds of racial hatred and implant instead the spirit of brotherhood as more in consonance with the dignity of man. Moreover, the children of today as the citizens of tomorrow cannot, with hatred in their hearts, live in happiness and contentment with each other, all to the detriment of America. In brief, the Ahepa attempts to build citizens who should be found on the asset side of the citizenship ledger. In this connection I cite Will Durant, who in his The Life of Greece, reiterates and emphasizes what many others before him have said, that the first defeat of a nation comes from within. Racial hatred, class wars, doctrinal bigotry, unleavened citizenry, political infiltration and corruption breed discontent. When discontent assumes sizable proportions the temper of the people is turned from constructive to destructive effort. That is negative citizenship and we are against it. The American Hellene desires to be a positive citizen. We are here not to destroy but to build; only in that way can we truly aver that we are doing our duty to America.

Having briefly explained its work I am about ready to tell you what the Ahepa is, but believe I can make my definition clearer if I first tell you what it is not.

I repeat, the Ahepa is not a "front" of any kind, Christian or pagan, temporal or secular, because it has nothing to conceal and its doors are wide open; it is not a parasitic growth sapping the strength of America, as it gives but does not seek or expect relief; it is not an alien intruder engrafted upon the body politic of the Nation, as it is founded on proved and approved principles and in harmony with the spirit of America. Neither is it the instrument of elements subversive to America. It draws its sinews solely from its members. It owes and pays one only and undivided allegiance to the United States. It does not depend for its existence upon the favor of any special interest. It neither owes nor pays homage to any financial magnate, political pontiff, or professional agitator. Nor does it make obeisance to any of their ilk.

It is, though, a fraternal order, in the basic sense of the word, deriving its authority from the State of Georgia, and its charter on record in Fulton County of that State, clearly reveals its objects to be to teach its members pure and undefiled Americanism; to elicit virtues inherent in Hellenic character and blend and harmonize them with indigenous American culture; to direct the activities of its members in such channels as would make them happy in their environment and America proud of their achievements. To implement their native talents with preparation conducive to a more receptive attitude toward and a better understanding of American aims, ideals, traditions, and aspirations, and to instill in the American of Hellenic extraction as it should in the American of every other brand, including the native, an unshakeable belief in the manifest destiny of America, so that we may all wish, with Henry Ward Beecher, that Old Glory, whose stars redeem the night from darkness and whose beams give color to the morning, may float forever over a united, a happy, and a prosperous people.

The Sugar Program in Puerto Rico

EXTENSION OF REMARKS

OF

HON. BOLÍVAR PAGÁN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

STATEMENT BY HON. BOLÍVAR PAGÁN, OF PUERTO RICO

Mr. PAGÁN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the House Committee on Agriculture:

Mr. Chairman and fellow members of the Committee on Agriculture, may I, as Resident Commissioner from Puerto Rico, ask your attention for some minutes to bring briefly before you the sugar situation in Puerto Rico as is affected by legislation in force and as may be affected by proposed legislation under our study and consideration? I will go into the field, making only general remarks about the sugar problem as a whole. Someone else will go into the details and discuss the technical questions about the industry.

I myself am not a sugar man, nor am I connected at all in any way with the industry and business. I am spokesman for the whole of my insular people, comprising about 2,000,000 of American citizens who live and suffer over there and whose livelihood and welfare depend largely upon sugar, our main crop and basic industry, which gives a living, directly or indirectly, to 1 of every 2 inhabitants of Puerto, and which 2,000,000 loyal American citizens are entitled to a fair deal by our Congress.

Mr. Chairman, in appearing here before this committee, I come to discharge the greatest responsibility that could be entrusted to any representative of our island—that of presenting Puerto Rico's case with respect to sugar legislation. This is a matter of the most vital importance to the future welfare of Puerto Rico and every one of its nearly 2,000,000 people.

Here in the United States mainland you are accustomed to thinking of sugar merely as one of the many agricultural commodities which collectively yield an annual income of $8,000,000,000 annually.

Here, according to the United States Department of Agriculture, sugar ranks fifteenth as a source of farm income; far behind other crops such as corn, wheat, tobacco, apples, and so on. Even hay and alfalfa, feed for livestock, rank ahead of sugar as a source of income to farmers.

In Puerto Rico, gentlemen, sugar is our one and only large-scale crop, the principal source of food for our people. Sugar offers the one and only known means of improving the welfare of our people. Owing to market conditions and Federal restrictions, there is no possibility of expanding substantially the production of any other crop or industry. Between 200,000 and 250,000 of our workingmen, nearly half the total wage earners, are out of work, and they are permanently out of work unless our sugar industry is permitted to grow in a normal, healthy manner.

Moreover, because Puerto Rico is a part of the United States and within the tariff structure of this country, other world markets are closed to our farmers. Last year Puerto Rico was able to sell less than half a million dollars of its products to all foreign countries. If our people are to live, if our thousands of small farmers are to gain a livelihood, if we are to prevent widespread misery among our growing population, we must sell our surpluses here in continental United States. No other market exists.

We do, of course, have some other crops and industries, and I should like to tell you what has happened to them. Our tobacco industry in 1927 brought an income of $25,000,000. Last year that income was down to $5,000,000, because we grow a cigar-type tobacco only and the consumption of cigars has declined sharply.

We grow one of the finest coffees produced in the entire world. In 1926 that crop brought an income of $7,000,000. But by 1939 the figure has dropped to well under $1,000,000. The European countries in which our coffee once was widely used have turned to the cheaper Central and South American varieties, with which we cannot compete. Our fruits, principally pineapples and grapefruit, as recently as 1928 yielded an income of $7,500,000, but in 1939, owing to overproduction of grapefruit on the mainland and the lowering of the pineapple tariff, our income from those fruits was down to $1,300,000. We grow various other farm products; indeed, we have spent 100 years searching desperately for other crops with which to augment our diminishing trade, assisted by the best brains of the United States Department of Agriculture and of our own island. Yet last year sales outside the island of all other farm commodities than those mentioned were less than $1,000,000.

That is the picture in Puerto Rico. If we are to provide jobs for our thousands of unemployed, if we are to improve the living standards of the many others who barely get enough of the plainest food to eat, that improvement must come through sugar. I challenge anyone to name one other possible way of increasing our shrunken income. We know of no other crop which can be counted on to add even $1,000,000 to our insular income.

We could produce modest quantities of various other products common to the Tropics, but to do so we would have to use the lands which now will return more income, modest as it is, in sugar and other crops we now grow.

Please bear in mind that Puerto Rico has no great manufacturing industries with which to supplement its farm income. We cannot export petroleum products valued at $384,000,000 in 1 year as can continental United States, because we have no petroleum at all nor any other fuel. Puerto Rico cannot sell $44,000,000 worth of lumber and wood products to foreign countries, because we don't even have a timber supply for our own local needs. Nor can we export iron and steel products valued at $290,000,000 as can the United States mainland, because, gentlemen, we have no iron or steel nor any other minerals in important quantities.

All we have in Puerto Rico is a little over 1,000,000 acres of farm land and an inexhaustible oversupply of idle hands, ready and willing but unable to work. Because of our lack of raw materials, our manufacturing enterprises must be limited to processing the products of our soil or to working with expensively imported raw materials. Until Puerto Rico was placed under the Fair Labor Standards Act, we had some hopes of building up extensive handcraft industries to supplement our once thriving needlework industry, but now we no longer are attracting new enterprises.

Our sugar industry last year brought an income of $58,300,000, employing somewhere between 110,000 and 130,000 workers. The industry ranking next in importance was needlework, which provided an income of only about $7,500,000. The next largest agricultural product, tobacco, accounted for only $5,000,000. Indeed, sugarcane accounted for 60 percent of Puerto Rico's entire agricultural income. We are far more dependent on sugar than the great Corn Belt is on corn, than the Cotton Belt is on cotton, than the wheat States are on wheat. We are far more dependent on sugar than is any State of the Union. When our sugar production is reduced by act of Congress, there is no other cash crop we can turn to. The laborer who loses his job in the sugar industry, through restricted production, has no other job in prospect.

Yet, in spite of the fact that Puerto Rico is far more dependent on sugar than any other sugar-producing area in the world, we were singled out at the beginning of the sugar-control program as the only area required to reduce its production to any important extent. Instead of merely preventing the expansion of sugar production, the Jones-Costigan Act and later the Sugar Act of 1937 drastically reduced production, employment, and income in Puerto Rico's one large-scale crop.

That, gentlemen, was a bitter blow to labor on our island. The Labor Party, of which I have the honor to be president, had made remarkable progress in improving conditions for our workers. Indeed, in many respects labor enjoys a unique position in Puerto Rico. Child labor is prohibited, and you will not find a single child on the pay rolls of the sugar companies. Nor are women employed in that industry except in a few clerical positions.

Puerto Rico has a workmen's compensation act which is a model for many of the States to follow. That act pays benefits to injured workmen both in field and factory. In addition, we have an 8-hour day, which also applies not only to factory workers but to agricultural labor as well. Puerto Rico is the only sugar-producing area in the world to observe an official 8-hour day.

In recent years, however, we have had to go further. In order to give some income to as many workers as possible, we have found it imperative to follow a share-the-work policy, whereby laborers work only four, five, or six hours a day in many cases, thus letting otherwise unemployed laborers enjoy some income with which to feed their families.

In addition, wages in our sugar industry are determined by collective bargaining. Each year representatives of the sugar producers and of the workers' organization sit down and reach an agreement on wage rates. As a result of this modern practice, daily wage rates have risen more than 50 percent in the last 7 years, until at the present time the average hourly wage paid to Puerto Rican sugar workers exceeds average hourly farm wages paid in 16 of the States in the Union.

By 1934, when Puerto Rico had increased its sugar production to more than 1,100,000 tons, we in the Labor Party had high hopes that better days were ahead for the working people of Puerto Rico. We envisioned a gradual increase in the number of jobs and began to dream that the families of the workingmen would soon be able to enjoy more of the simple necessities of life. For the sugar industry, in spite of many setbacks from devastating tropical hurricanes, droughts, floods, attacks by cane disease, and unfavorable market conditions, was keeping pace with our fast-growing population. Yet even then unemployment was alarmingly high. Thus you can imagine, gentlemen, how the workers of our island felt last year, in 1939, when we were forbidden to harvest more than 851,000 tons of sugar, a decrease of 30 percent from our former peak production, for a reduction of 30 percent in production meant a like reduction of 30 percent in the number of full days of work that the sugar industry could give. And the unemployed sugar workers, remember, could not go to some steel mill or automobile factory, or even to a coal mine, to find a new job, because we are not blessed with those opportunities in Puerto Rico.

Not only the laborers, but the farmers as well, are hurt when our sugar production is restricted. Sugar is produced in Puerto Rico on nearly 12,000 farms, many of them exceedingly small, with no other cash income. In 1899 there were fewer than 3,000 farms growing sugar, but today the number is about four times as great.

These laborers, gentlemen, and these farmers are citizens of the United States; the same citizens who in 1917 registered for the draft during the World War to the number of more than 250,000; the same citizens who subscribed $10,000,000 for the Liberty Loans when this country entered that war; the same citizens who in 1898 were forcibly brought under the American flag with promises of freedom, liberty, and well-being and the prospect of a richer, fuller life. They are loyal, honest Americans, willing to share the misfortunes of this country, but at the same time expecting to share in its opportunities on the same basis as the more fortunate American citizens who reside on the mainland.

Moreover, our island responds in the States virtually every dollar received here from the sale of our sugar and other lesser products. Last year Puerto Rico spent $86,000,000 for products of farms and factories in continental United States. Its purchases provided more than 30,000,000 man-hours of work for mainland factories, and it bought the products of 800,000 acres of American farm land. Not one of the countries in South or Central America or elsewhere in Latin America purchased as much here as did Puerto Rico. We ranked ninth among all the countries of the world as a market for mainland business, and in 1936 ranked sixth as a market. Moreover, we buy a smaller percentage of our goods from foreign countries than do the 48 States themselves. In addition to our purchases of goods, we buy here practically all of our services, such as insurance. All goods shipped to or from Puerto Rico are carried in ships flying the United States flag.

Unlike certain foreign countries from which the United States buys sugar in large quantities, we respend here, not 70 cents of the dollar we receive for sugar, and not 80 cents, but 100 cents of the dollar. Giving Puerto Rico the privilege of selling sugar on this great market is not charity nor an act of kindness; it is plain, everyday, good business for United States businessmen.

In the year that the Jones-Costigan Act was passed, Puerto Rico, according to the United States Department of Agriculture, grew enough cane to produce more than 1,200,000 tons of sugar. Were the opportunity before us, in the light of improved methods, we could surpass that figure. Yet under the terms of this bill now being considered by this committee, we would be restricted to a production of 860,000 tons, even less than under the Sugar Act of 1937, whereas other domestic areas are granted increases.

It is not for Puerto Rico, perhaps, to say how much sugar should be produced by domestic areas and how much by foreign countries. But we do contend this, and with the utmost logic: If there are to be increases for any domestic areas, Puerto Rico, which is more dependent on sugar than any other area, certainly is entitled to share in those increases on the same basis as anyone else. Indeed, because of its extreme and unavoidable dependence on sugar, and in view of the high rate of unemployment and the complete ab-

sence of other opportunities for obtaining new income, Puerto Rico should be given first consideration when any increases are granted.

In conclusion, I wish to review the plight in which Puerto Rico and its laborers find themselves. During our best years, because of the island's limited resources, our per capita income has been only a fraction of that enjoyed here on the mainland. Even in the depths of the depression, workers in continental United States enjoyed far better standards of living than the best Puerto Rican ever has seen.

Yet in spite of our unfortunate state, Congress and the Federal Government have failed to view our problems realistically. The great need of our island is more income and more jobs. Yet each year, the various branches of the Federal Government, instead of planning improvements in our economic situation, have made matters worse than before.

To be sure, the Government is not responsible for the permanent loss of our coffee, tobacco, and grapefruit markets. Those losses were due to factors beyond the control of any of us. But Congress is responsible, at least indirectly, for the tariff reductions which have hampered our pineapple growers, for the Wage-Hour Act which has restricted and prevented the expansion of our hand-work industries. The Federal Government is responsible for the fact that, in the face of all these other adversities, Puerto Rico has received less Federal aid per capita during the last 7 trying years than any other State or Territory. And Congress is responsible for the fact that Puerto Rico not only cannot increase its sugar production, but actually was forced to restrict its production of sugar to a greater extent than any other area selling sugar on the domestic market. The workers of Puerto Rico beg that Congress sit back and review these various acts which, collectively, have placed our workers and our people in a position where they are powerless to help themselves, where they are completely unable to better their lives through any effort or ingenuity of their own.

The future of our people, gentlemen, has been taken over part and parcel by the Federal Government. The matter is out of our hands, except insofar as we can accomplish good by pointing out the tragedy which has occurred. If any of you know any other way in which we can feed our unemployed and improve the status of thousands of our employed workers who must live on a minimum amount of the barest necessities, I beg of you to tell me. If not, I urge you to give the fullest and most sympathetic consideration to all that I have said before you reach your final conclusion with respect to our island's sugar quota.

General Andrew Pickens, Sr.

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

STATEMENT OF HON. BUTLER B. HARE, OF SOUTH CAROLINA, BEFORE LIBRARY COMMITTEE, APRIL 1, 1940

Mr. HARE. Mr. Speaker, under leave to extend my remarks, I include the following statement made by me before the Library Committee, April 1, 1940, in support of House Joint Resolution 369:

Mr. Chairman and gentlemen of the committee, no people can become great and remain great who fail to cherish their traditions, honor their heroes, and perpetuate their history. With this thought in mind I introduced House Joint Resolution 369 some time ago providing for an authorization to appropriate $50,000 to erect an appropriate memorial to commemorate the life and services rendered by Gen. Andrew Pickens of South Carolina in securing our independence and the formation of our Republic.

General Pickens was born in Bucks County, Pa., September 19, 1739, and moved with his parents to South Carolina at the age of 13 in 1752. They settled in what was known at that time as the Abbeville district, some 75 or 100 miles south of the foothills of the Blue Ridge Mountains. Upon reaching his maturity young Pickens moved and settled near Pendleton, immediately at the foot of the mountains in the Indian settlement of Tamassee. The country at that time had only a few white settlers but was rather thickly populated with Cherokee Indians. He was a man of strong and courageous convictions and a firm believer in independence for the Colonies. His services, therefore, were at the command of his country at the very beginning of the Revolution. He had had previous experience as a lieutenant in the war against the Cherokees and was formerly a captain in the militia at Ninety Six but the first opportunity to display his qualities and virtues as a military leader was found in the battle of Kettle Creek in 1779, where he was assigned to meet Colonel Boyd and prevent his junction with Colonel Hamilton in Georgia. His success in dissipating the forces of the enemy at Kettle Creek was alone sufficient to make his name illustrious in the history of our State and Nation.

Following the fall or surrender of Charleston in 1780 practically all of the military leaders in South Carolina were either captured and imprisoned, or had agreed to surrender on parole, Gen. Andrew Pickens being one of the latter. Under the parole agreement all surrendered were assured and guaranteed British protection. For 6 months or longer the chances for independence were gloomy and seemed hopeless but when the British failed to give such protection as had been agreed upon, mobilization of troops under various leaders began to occur in different parts of the State, especially among the Presbyterians in the upper part of South Carolina, parts of Georgia, and North Carolina where by the action of British leaders in destroying their Bibles and heaping upon them other deliberate indignities the people were aroused in resentment and indignation to the point where they were again ready to fight for their religious and civil liberties as never before. However, General Pickens again demonstrated the superior virtues of a military hero when he inflexibly adhered to what he felt he was honor bound to do in maintaining his word under the parole agreement until the early part of January 1781, when the British leader, Maj. James Dunlap, raided his plantation, plundered his home, and ill-treated his family and neighbors he felt the parole agreement had been breached and he was again free to volunteer his services in behalf and in defense of his country.

But he was not willing to again take up arms against the British without openly declaring his purpose to those with whom he had made the parole agreement. He, therefore, sought an interview with the British officers and disclosed to them his intentions and his reasons therefor. Whereupon, he was earnestly advised against such action and assured that he would be executed should be fall into the hands of the British and that if he carried out his intentions he would thereafter "fight with a halter around his neck." This was a decisive moment in his life but he did not hesitate to say that he had consistently and honorably adhered to his parole agreement and since the British had violated their promise to him and the people of his State he felt completely absolved from any obligations whatever to the British Government and gave notice that thereafter he would "yield no quarter," and it was only a short time until he was found at the head of a company of 70 with a daily increasing number of the most determined and courageous men to be found in any battling contingency. We next hear of him commanding the volunteers from North Carolina, South Carolina, and Georgia at the Battle of Cowpens, where he carried terror into the hearts of Tarleton's Dragoons and won what was probably the most decisive victory of the Revolution in the South which, according to historians, was the first link in a grand chain of succeeding events which were to result in victory at Yorktown. In recognition of the distinguished services rendered here by General Pickens Congress presented him with a sword as a mark of his country's approbation.

During the year 1781 the war was carried on chiefly in the South, and in midsummer General Pickens, in the absence of Marion and Sumter, was in full command of all State troops and was later to take part with General Greene in winning one of the most complete victories in the annals of warfare at Eutaw Springs. Here the British laid down their arms and General Pickens in person received the sword of their commander, Major MacArthur. Some faint idea of the courage, sacrifice, and sufferings found among many who fought to a finished victory in this battle may be obtained from the following statement ascribed to General Greene:

"Posterity will scarcely believe that the bare loins of many brave men, who carried death into the enemy's ranks at Eutaw Springs, were galled by their cartridge boxes, while a folded rag or tuft of moss protected their shoulders from sustaining the same injury from the muskets. Men of other times will inquire, by what magic was the army kept together. By what supernatural power was it made to fight?"

The answer is found in the life, character, courage, and determination of such leaders as Pickens and others; it is found in the devotion, loyalty, determination, and cooperation of him and his followers, who had dedicated themselves to the task to securing liberty and freedom at any cost. Johnson, the historian, quotes General Greene as saying that many of the men who fought in the battle of Eutaw Springs "were as naked as they were born." General Greene himself, writing to the Secretary of War, states that at the time the Battle of Eutaw Springs was fought he had been in the field for 7 months without taking off his clothes. If I were an artist and had the authority to do so, I would paint a picture of this battle and place it in the home of every true American citizen that the youth of the land and succeeding generations may get a fair idea as to the price paid for our liberties, and fix in their minds some conception as to what it may cost to maintain them.

But, Mr. Chairman and gentlemen of the committee, I am not content to stop here and rest my case solely upon the military efforts and contributions of General Pickens in war, because he was equally as great in peace as in war. The poet has told us that "Peace hath her victories, no less renowned than those of war," and the services of General Pickens following the Revolution well illustrate this fact. Hostilities did not cease following the surrender of Burgoyne at Yorktown, especially in the South, where there were thousands of warlike Indians who were unwilling to give up their lands without a fight. For a third of a century General Pickens had lived among the Indians. They had learned to know

he was a fearless and successful warrior. At the same time, his conduct had been such as to command their respect and admiration. He was first selected by the Continental Congress, and later by President Washington, to negotiate treaties with the Indians, and this work alone would amply justify the memorial we are asking for in this resolution.

The first treaty effected was with the Cherokees at Long Swamp, Ga., October 17, 1782; another with the Creeks and Cherokees in 1785. The following year, 1786, he effected treaties with the Choctaws and Chickasaws at his home, Hopewell, where it is reported over 1,000 Indian delegates appeared and took part in the deliberations.

In the year 1800, along with General Wilkinson and Col. Benjamin Hawkins, of North Carolina, General Pickens was appointed to negotiate additional treaties with the Cherokees, Choctaws, Creeks, and Chickasaws. The treaty with the Chickasaws was on October 24, 1801; with the Choctaws a little later in the year; with the Creeks and Cherokees in 1802. As a result of these treaties the Indians ceded to the States or to the Union practically all of the land south of the Ohio and east of the Mississippi Rivers, including the States of Kentucky, Tennessee, North Carolina, practically all of Mississippi, a good portion of Alabama, and the northern part of Georgia, the lands in northern and western South Carolina having been ceded earlier.

General Pickens not only contributed valued personal services to his State and country, but he gave his son, Gen. Andrew Pickens, Jr., who was to render conspicuous service to his country in the War of 1812. I have introduced a resolution providing a memorial to him at Edgefield, S. C., but as this resolution is not now before us for consideration I shall not attempt to refer to his distinguished services until a further opportunity is afforded by the committee. General Pickens, Sr., bequeathed, also, a grandson, F. W. Pickens, who was to be Governor of his State at the beginning of the War between the States.

I sincerely trust, Mr. Chairman and gentlemen of the committee, that our presentation of the facts are sufficient to warrant favorable action on this resolution at an early date.

A Test of Credulity

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

ARTICLE BY KENNETH A. REID

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Kenneth A. Reid, general manager of the Izaak Walton League of America.

A TEST OF CREDULITY

(By Kenneth A. Reid, general manager, Izaak Walton League of America)

If you lived in a town where it was common practice to dump one's garbage in the public street or in a neighbor's yard, you would likely support with enthusiasm any new municipal ticket which campaigned on some such program as clean up our city; but if those who advocated the clean-up at the same time opposed an ordinance which would prevent the dumping of refuse in a new residential district, if and when it should be developed, could you have faith in their campaign program and promises to clean up the present nuisance of garbage and waste dumping in the present streets of your town?

Absurd! Of course it is, and yet it is exactly comparable to what the United States Chamber of Commerce asks the public to believe with respect to the program the chamber supports for the abatement of water pollution.

For several years the chamber has stoutly supported S. 685, the Barkley bill, and its predecessors, calling for study of water pollution but no control. The chamber has repeatedly stated and asked the public to believe that this study bill offers the most practical solution to the pollution problem, and that it would accomplish the desired objectives more expeditiously than the bills of the conservationists providing for actual Federal control. As recently as February 24 the chamber, in a printed bulletin urging support of S. 685, says with reference to the amendments made by the Rivers and Harbors Committee and included in the bill when it was subsequently passed by the House on March 1: "These amendments do not in any way alter the basic principles of the measure in maintaining State and local initiative with cooperation from the Federal Government." In other words, S. 685, as amended and favorably reported by the House Rivers and Harbors Committee, carried the full approval and endorsement of the United States Chamber of Commerce.

On March 1, 1940, S. 685, as amended by the House Rivers and Harbors Committee, came before the House for a vote. Representative Mundt offered one additional amendment which would simply stop the spread of pollution to new sources not now in existence. It carried no jurisdiction over present pollution or present polluters, so that as far as the current pollution problem is concerned, and as existing polluters might be affected, S. 685, as it passed the House, was in no way changed from the bill that was heartily endorsed by the chamber on February 24, 1940.

On March 14, 1940, the chamber issued a subsequent bulletin urging its members to oppose S. 685 as amended and passed by the House. The chamber stated that its reason for change in attitude was the Mundt amendment which would stop the spread of pollution, the inclusion of which has altered the character of the bill.

Isn't it rather stretching credulity to ask the public to believe that the chamber earnestly seeks pollution abatement when it now comes out and opposes its own recommended program solely because of one provision which would make a start toward the attainment of the desired and avowed objective? The chamber might ask their friends in the United States Public Health Service if they could successfully cope with any disease if they at the same time condoned its spread by opposing quarantine measures.

The National Resources Planning Board Is Performing a Good Service and Should be Extended

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

Mr. KEFAUVER. Mr. Speaker, I understand that opposition to this program rests on three arguments:

That it is not legally constitutional.

That it interferes with and duplicates other Government agencies.

That it is not doing anything at all—that it would be a waste of money.

In my opinion, this Board and program is legal, not only in the letter but in the more important intent of Congress.

When Congress established the Federal Employment Stabilization Board, in 1931, it desired that the President should be supplied with information for transmitting recommendations to Congress on employment and business activity and on programs for public work that could take up unemployment slacks. To Congress through the President.

This information might be partially supplied by the established Federal departments, but even the information obtained from them must be analyzed and compiled by somebody. Congress established the Board for that purpose. But Congress went further than that. It wisely recognized the need for—and I quote from the act—"information concerning advance construction plans and estimates by States, municipalities, and other public or private agencies, which may indicate the probable volume of construction within the United States or which may aid the construction agencies in formulating their advance plans." Congress established the Board for this purpose also. The power is there—for advisory reports only.

Now, to my mind everything that the National Resources Planning Board, which is continuing the work of the Federal Employment Stabilization Board merely under another name, has done and is continuing to do, bears a perfectly plain and substantial relation to the major objectives established by Congress in the language above.

What else are the reports on The Structure of the American Economy, and Patterns of Resources Use than a serious attempt to show the workings and results of fluctuations in business cycles, and to suggest ways to soften the shocks? What else are the public-works programs that the Board has assembled, from Federal agencies and through the forty-odd State planning boards, for the use of the P. W. A., the W. P. A.,

and other agencies that Congress has designated to execute those public works?

The very way in which the Board works through interdepartmental committees demolishes the argument that it is interfering with or duplicating the work of other Federal agencies. Many of those agencies have submitted written declarations of their satisfaction with the procedures and service of the Board. There is no further worry on that score.

The key to the usefulness of this Board lies in the task of assembling the programs of State and local public works. How many of your home towns have planned public-works programs? You can put down a lot of wishful thinking, of course, but that was just what led to the early criticisms of useless work and poorly planned projects.

In other words, how else do you compile a program of sound public works than by investigating the need for projects, and assisting States and communities to use the facts and their own judgment. You have to know the population situation, the economic, industrial and raw material situation, to judge the value of the proposed program of development. All the Board's reports have been simply an investigation of these factors.

You can not compile those programs entirely from Washington. More than 40 States have State planning boards—their combined appropriations nearly match the money given to the National Board. The Board has given, through its field staff, the necessary help to efficient operation that every new agency and program needs. With their aid, this help is now being extended to the increasing number—1,700 at present—of city and county planning boards, who are the foundations of a national public works program. This is going on in my own city—Chattanooga—in Georgia, in New England and throughout the Nation. The basis for business-like public construction programs is being assembled. But this work needs technical advice and support. No other Federal agency is equipped to give that support.

If you abolish the funds for the program of this Board you are saying that you do not believe in business methods—for all business plans—for not only this Federal Government but for every State government and every city government in this country.

This appropriation item is small, for a nation-wide activity. Yet you would say that this program, for 130,000,000 people—and reaching them pretty directly, too—is not worth as much as just one mile of superhighway off in one corner of this country—that it is not worth as much to the people as one county park, or one medium-sized highway overpass. I don't believe any newspaper editor in the country would back up such a position. I do believe that we should support a program that has no other object than to bring about economy and reduce waste in the city, State, and National programs of public construction and development.

The Blue and Gray Highway

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

Mr. GRANT of Alabama. Mr. Speaker, I have today introduced a bill to designate a highway from Chicago, Ill., to Miami, Fla., as the Blue and Gray Highway, the resolution being as follows:

Be it enacted, etc., That the Federal-aid highway extending from the city of Chicago, Ill., to the city of Miami, Fla., and designated as U S 41 from Chicago, Ill., to Nashville, Tenn.; U S 31 from Nashville, Tenn., to Montgomery, Ala.; U S 231 from Montgomery, Ala., to Dothan, Ala.; U S 84 from Dothan, Ala., to Valdosta, Ga.; and U S 41 from Valdosta, Ga., to Miami, Fla., be, and the same is hereby, designated as the Blue and Gray Highway.

There has been organized in Montgomery an organization known as the Blue and Gray Cradle Association. This association annually sponsors in Montgomery a blue and gray championship football game between teams selected from the leading college seniors in the North and South. The proceeds of this game go to charity. The outstanding athletes of this Nation give their time and energy for the benefit of the less fortunate. The association promotes good sportsmanship and citizenship between the young men of this Nation. While young men in other sections of the world are practicing hate, we in this great Nation are sponsoring clean athletics.

This game and the patriotic exercises held in connection with it are each year serving to bring our great sections closer together and are teaching and promoting real Americanism.

It is the wish of the Blue and Gray Cradle Association that this spirit will become Nation-wide. Sectionalism is over in this Nation. What better thing can we do to show this friendship and ties than to name a great national highway leading from the Great Lakes through Montgomery, the cradle of the Confederacy, to Miami on the Atlantic?

The Sidewalks of Washington—What Do the District Taxpayers Get for Their Money?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

Mr. HOFFMAN. Mr. Speaker, presumably the sidewalks of Washington are for the use of those who wish to freely pass to and fro while going about their business and trading in the mercantile establishment to which the sidewalks are appurtenant. But a union, United Cafeteria Employees Local Union, No. 471—C. I. O. affiliate—has taken over portions of the sidewalks in front of the National Press Building for their exclusive use by a picket line in the form of an elongated oval, marching in a closed file within 2 or 3 feet of the entrance of the Press Building. This union interferes with those who desire to enter that building, either for the purpose of patronizing the cafeteria operated by Arcade Cafeteria, Inc., or for other purposes.

The owner of the Press Building pays taxes. One of the reasons he pays taxes is to secure the protection of the law-enforcing officials for his property and his tenants. He does not get it from the District police.

His tenants are not getting that protection to which they are entitled and to that extent the District is cheating him out of what it sold him when it assessed his property and collected taxes from him. In turn, his tenants, including Arcade Cafeteria, Inc., are being cheated, for they pay rent to the owner of the building for the purpose of having a place where they may freely and without hindrance transact their lawful business.

Notwithstanding the payment of taxes by the owner, the payment of rent by the tenants, for the purpose of securing a place where they may carry on their business in a proper and a lawful manner, that right is being denied by the C. I. O.

And what is it all about and on what excuse does the C. I. O. monopolize a portion of the sidewalks in front of this building? It states its case in a mimeographed sheet headed, "Press Cafeteria on Strike." The first paragraph reads:

1. FOR RIGHTS OF COLLECTIVE BARGAINING

The management of the Press Cafeteria, in violation of the Wagner Act, refuses to negotiate a new contract. The old one expired March 18, 1940.

The subsequent paragraphs, of which there are four, show that the union has made certain demands upon the operators of the cafeteria to which the cafeteria owners have refused to agree.

There is nothing illegal about that. Long ago the Supreme Court held that an employer need not enter into a contract with a union. Nor was it the purpose of the act to compel an employer to enter into a contract with employees. That fact is clearly shown by the debates when the act was under discussion and by the report of both Senate and House Labor Committees. Were the rule otherwise; were the rule that the employer must agree with the employee, the result would be the turning over of the management of all business to employees, for carrying to a logical conclusion such a rule would mean that the employee had but to make a demand and the employer must agree to that demand.

This statement of the case for the union is as follows:

PRESS CAFETERIA WORKERS ON STRIKE

1. For rights of collective bargaining: The management of the Press Cafeteria, in violation of the Wagner Act, refuses to negotiate a new contract. The old one expired March 18, 1940.

2. For a 48-hour week: At present some workers are working 54 hours per week. The union demands a 48-hour week for all workers.

3. For an increase in pay: The union requests a reasonable increase in pay for all workers. The management has failed to prove that it is unable to raise wages. A large number of workers now receive as low as $10.85 net per week.

4. For paid holidays: The workers only get two paid legal holidays (New Year's and Christmas). The union demands all legal holidays paid.

5. For 2 weeks' vacation with pay: The workers now only get 1 week's vacation with pay.

The Press Cafeteria has standard food prices, but substandard working conditions.

The union has done everything possible to avoid a strike. It has called in a conciliator from the Department of Labor in order to change the stubborn and defiant attitude of the management but of no avail. The union had no alternative, therefore, but to take strike action.

The workers some of whom have served you faithfully for many years, regret the necessity of inconveniencing you by this strike. They hope, however, for your sympathetic understanding toward this action and appeal for your cooperation by not passing the picket line.

UNION, No. 471 (C. I. O.) UNITED CAFETERIA EMPLOYEES

The employer's statement shows a different situation; that statement shows, and I have seen no denial, that the union insists, among other things—and I quote:

The employer agrees not to discharge any employee without good and sufficient cause and shall first procure the consent of the union.

No self-respecting employer intending to remain in business can possibly permit a union to have the power to force him to retain any and all employees in his service.

The present case, as well as any, illustrates the reason for this. The cafeteria management discharged two employees because they engaged in a fight in the dining room. It discharged one other employee because he was accused in an affidavit with making improper advances and placing his hands upon a white female employee, and because still another white waitress charged him with an attempt to assault her in one of the storerooms. So we have a union in the city of Washington apparently standing back of the theory and demand that before an employer can discharge an employee who has made an assault upon one waitress, an improper advance to another, and who has placed his hands upon her person in an improper manner it must procure the consent of the union.

That certainly is no position for a union to take if it expects public support. Walk down in front of the Press Building and note the picket line, obstructing and interfering with ingress and egress to and out of the building and then remember that the pickets on that line are back of the demand that an employer cannot, without the union's consent, discharge one employee who has made an assault upon one and improper advances to another waitress.

The employer states its case in the following words, I quote:

On March 18, 1939, we entered into a contract with the United Cafeteria Employees Local Union, No. 471 (C. I. O. affiliate), covering the scale of hours, wages, working conditions, and so forth, applicable to our employees. This contract was mutually satisfactory to both parties.

Under that contract, during 1939, this company earned but 3.3 cents net on each dollar of sales.

On March 18, last, the union presented demands for wage increases, which, if agreed to, upon same volume of sales for 1940, would represent a net loss of one-fifth of one cent on each dollar, all other factors being equal. In addition to the increased wages demanded, the union also demands double pay for eight legal holidays.

In our efforts to negotiate a new contract with the Union's representative was shown the company's 1939 Federal income-tax return, showing the gross and net profit. The answer was that they were not interested in profits—only union wages. The union's business agent took the unqualified position that there is no relation whatever between the wages a company can pay and the profit it makes.

* * * * * * *

Wages, once agreed to, are the least of an employer's trials and tribulations. Actual management of our business, insofar as the hiring of efficient employees and the discharging of inefficient employees is concerned, is taken out of our hands and placed in the hands of the union. We quote the union's demands:

"The employer agrees not to discharge any employee without good and sufficient cause and shall first procure the consent of the union * * *.

Two cases will illustrate the impossibilities of such a demand, viz:

(1) On April 29, 1939, two of our colored employees engaged in a fight in the dining room. Affidavits by other employees and the arresting officer showed that both were drinking; that the fight was accompanied by much profanity and that while one wielded a knife the other employed an iron bar and threw heavy water glasses. Several items of company property were deliberately destroyed.

One of the men fled the police, the other was taken to Emergency Hospital for treatment. He was treated and discharged the following day. Seven weeks later he returned and demanded his job, which was refused on the grounds of his conduct and because of his absence of 7 weeks. In the interim he had been employed at another place. The union, for several weeks thereafter, insisted that he be reinstated, which was refused.

(2) The second incident occurred in August last, when a white girl complained to the management of the conduct of a colored employee, whom she charged, in an affidavit, had made improper advances to her and had placed his hands on her person. On August 7, still another white waitress charged the same colored employee with having attempted to assault her in one of the storerooms. Both charges were supported by affidavits of each girl. The colored employee was immediately discharged.

On August 15, 1939, a suit was filed by the discharged employee and the union, demanding $500 damages. On October 25, 1939, the case was tried. At conclusion of the plaintiff's case, verdict was rendered in favor of the cafeteria * * * the sole testimony being that of the union's business agent, and an admission by the union's attorney "that there was a great deal of merit in the reasons for his discharge."

Verdict for costs were awarded the cafeteria, and the union refused and still refuses to pay same. Verification of the facts can be had by reference to municipal court case No. 383,496.

CONCLUSION AND AN APOLOGY

We have no quarrel with the 35 of our employees who belong to the union. They have a moral and legal right to union representation. Many of our employees have been with us for several years and do not desire to be represented by the union. That also is their legal and moral right. The owners of the company are entitled to a fair return on their investment and for their labors.

The company has not refused to barter with the union's representatives but has refused to enter into a contract that takes away from the management the control of the affairs of the company and which makes the successful operation of the company unprofitable.

We have agreed to renew our present contract with the union, provided control of the company's operation remains in the management. This the union has refused. Thus the pickets.

We apologize to our patrons for any inconvenience they may have suffered as a result of the picketing.

HARVEY L. COBB,
President and Attorney.
ARCADE CAFETERIA, INC.

The officers in this city, either because of lack of authority or hampering restrictions, are not giving proper protection to the property owners; to the merchants; to the people who live here; to the people who come here to visit our Nation's capital. To Washington, from all over the country, come thousands upon thousands of our people. They come not only to see the Nation's capital; the magnificent buildings; the home of the Supreme Court; the Congressional Library; the legislative halls, and to visit the various departments but they come to see how laws are made, how the Nation's capital is governed.

What a disappointment it must be to the hundreds of thousands of visitors to observe on one of Washington's main streets the failure of the peace officers in the Nation's capital to give protection to the property owners, and to the mer-

chants of the city; to observe representatives of a particular group using hour after hour, to the exclusion of others, a certain part of the sidewalks; interfering with American citizens going in and out of places of business.

The Nation's capital should be an example to the rest of the cities of the country in the matter of law enforcement.

Here where the Senate Civil Liberties Committee sits so often to condemn employers and businessmen; where it fails utterly to act on the denial of the right of employers and businessmen to exercise their civil liberties, the people observe with their own eyes how the Government for one reason or another fails to protect the average citizen when the exercising of his rights comes in conflict with the claimed privileges of a labor organization which contributed to the election of the present Executive.

Perhaps our visitors are wondering whether the present administration will ever dare to lift its hand to enforce the law; to protect the average citizen, while Lewis roams at large, booming his threats of political reprisal. Lewis contributed his miners' $470,000 to Roosevelt's campaign fund. Lewis' daughter the other day walked on the picket line in front of the Press Building, and so Washington officers must stand aside while the C. I. O. picket lines interfere with the right of the people to travel about their lawful business.

Will this administration ever get its debt to Lewis paid? How long will we here in Congress permit such acts as these to continue? Will we ever assert our independence and give to the unorganized; to the citizens who pay the taxes; who pay our salaries, the protection which the Constitution guarantees to them? Or will we continue to let Lewis take his tribute upon the pay checks of every woman and every man who wants to work.

Pegler's Chronic Fault-Finding

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

EDITORIAL FROM THE WICHITA (KANS.) BEACON

Mr. HOUSTON. Mr. Speaker, under leave to revise and extend my remarks, I include in the RECORD an editorial from the Wichita Beacon, Wichita, Kans., of April 9, 1940, as follows:

[From the Wichita (Kans.) Beacon of April 9, 1940]

PEGLER'S CHRONIC FAULT-FINDING

Believing that every writer should be given the widest possible latitude, and that suppression is not the solution of any problem, the Beacon has continued the publication of columns by Westbrook Pegler, on which this newspaper strongly disagrees. Apparently Pegler believes he has been given some divine appointment to act as the guardian angel of the people of the United States, and that it is up to him to right every wrong, reform the entire country, and make it the kind of a place in which he would like to live.

Of course, he has received no such appointment. There can be no doubt that there is much in this country that can be criticized, and there undoubtedly is room for criticism on the subjects which have drawn Pegler's attention, but there is no earthly reason why any man should be continually mad at everyone. Pegler starts his column almost every day with a tirade against somebody. He should be one of the first to realize he cannot ram his private opinions down the throats of everybody.

Almost everyone in the United States knows that William Green is honest, truthful, and that he has devoted his time and energy not only in helping labor but in promoting the general welfare of the country. Of course, there are rascals in his organization, just as there would be rascals in every organization as large as the A. F. of L. But that does not mean that Mr. Green condones such rascals, nor do they have his consent to do the things for which they and he are criticized.

Westbrook Pegler is an able writer, one of the best newspapermen in the United States, who has shown marked ability in the past. Instead of constant criticism he could point out some of the fine points of a country in which there is still sufficient freedom of the press to permit him to say what he pleases. Pegler should not take advantage of that freedom to constantly harass other men and, by his ability to use the English language, to attempt to tear down the good work they have accomplished.

Evidently his recent vacation did him no good. His friends and well-wishers, of whom there are many among Beacon readers, sincerely hoped that his rest would settle his nerves and calm whatever disorder had upset his thoughts. Since the climate of Florida was not successful we can only hope that time will effect a cure and that, eventually, reason and logic will regain control of his mind and he will devote his ability again to some constructive subjects.

Marvel Mills Logan

EXTENSION OF REMARKS

OF

HON. VIRGIL CHAPMAN

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1940

Mr. CHAPMAN. Mr. Speaker, under leave to extend my remarks, I include an article published in the Kentucky Post, Covington, Ky., which was written by Mr. Clay Wade Bailey, of Frankfort, Ky., ardent admirer, trusted friend, and loyal protege of the late Senator M. M. LOGAN; memorial resolutions of the Agoga Bible Class of the First Baptist Church, Frankfort, Ky., of which class Senator LOGAN was the founder and for years the teacher; editorial from the Park City Daily News, Bowling Green, Ky., October 3, 1939; editorial from the Louisville Times, Louisville, Ky., October 3, 1939; editorial from the Kentucky Post, Covington, Ky., October 3, 1939; article by Mr. Rufus W. Weaver, of Washington, D. C., in the Western Recorder, prominent Baptist publication, of Louisville, Ky., October 17, 1939:

[From the Kentucky Post, Covington, Ky.]

CAREER OF SENATOR LOGAN WAS ONE OF CONSTANT POLITICAL SURPRISE—LATE SOLON WAS ENIGMA TO PRACTICAL, SCHEMING TYPE OF CAMPAIGNER—OFTEN CONFOUNDED WOULD-BE ADVISERS BY TURNING APPARENT DEFEAT INTO VICTORY—HAD WIDE KNOWLEDGE OF AFFAIRS

(By Clay Wade Bailey)

FRANKFORT, KY., October 6, 1939.—Many Kentuckians were shocked and stunned almost beyond measure Tuesday when word filtered in from Washington that MARVEL MILLS LOGAN, 64, junior United States Senator from Kentucky, had died.

His passing is expected to materially change existing political alliances in the State. His successor in the Senate will be Gov. A. B. CHANDLER. Lieut. Gov. Keen Johnson, Democratic candidate for Governor, will be Governor in fact 2 months earlier than he anticipated due to Senator LOGAN'S death.

Kentucky's junior Senator not only distinguished himself in the political field but also in other lines of endeavor. He was widely known as a churchman, member of fraternal orders, jurist, tax expert, and legal adviser. In whatever field he entered he made his mark, and his influence was keenly felt.

NEVER DEFEATED IN CONTEST

As a politician, he was an enigma to the practical, scheming type. They could not understand him, because of peculiar antics which always brought him success. He never was defeated in a political contest in his life. He always led his ticket, being several thousand votes stronger than his party running mates in each instance.

To demonstrate his running ability, he was elected county attorney of a Republican county (Edmonson) in 1901. In 1915 he was on the Democratic State ticket for attorney general. Governor Stanley won by 471. Other Democrats on the ticket won by from 3,000 to 5,000 votes, and Logan topped the ticket with a 10,000-vote lead.

In 1926 he sought office as judge of the court of appeals. Senator ALBEN W. BARKLEY, at the head of the ticket, carried the second appellate district by 3,000 votes. LOGAN won by 6,780 votes in the same territory. In 1936, as a candidate for reelection to the United States Senate, he carried the State by 2,500 more votes than did President Roosevelt.

CALLED JUDGE

LOGAN was familiarly known to his friends as either Mills or Judge. Few intimates ever called him "Senator." He first came to Frankfort in 1912 as an assistant attorney general, a post he occupied for 4 years. Four years later he was the unopposed Democratic candidate for attorney general, in the primary.

While in that office, his capacity for hard work became known among his colleagues. There was no case too hard for him to tackle. Tax cases, involving huge amounts, were taken to the Supreme Court by large railroad lines. Most of the attorney general's office shunned the job of handling the cases, but LOGAN took them and won them for the State.

While arguing before the Supreme Court, he told the Justices—without the aid of notes—amounts involved in the various assessments, the tax rate applicable, and the exact amount in dollars and cents of the tax due.

JUSTICE AMAZED

The late Chief Justice Edward D. White came forward with the inquiry:

"Young man, where do those figures come from; you do not refer to notes in your brief?"

The young lawyer responded:

"From my head. You take the figures, compute the tax rate, and you will arrive at the same result."

The Chief Justice tried the process, found that LOGAN had given the correct answers.

Early in 1917, Gov. A. O. Stanley called the general assembly into extra session to consider revamping the State tax laws. A State tax commission was created, and LOGAN resigned his post as attorney general and became the first chairman of the new commission.

MOVED TO LOUISVILLE

He continued in this capacity until December 1918, when he moved to Louisville to practice law. He remained there 4 years, then went to Bowling Green in 1922, only to emerge in 1926 as a candidate for judge of the court of appeals in his district.

On the court he was especially noted for his industry. He turned out an unusual number of opinions, and found time to make addresses to luncheon clubs, continue religious activity, and be active in one of the world's leading fraternal organizations.

He wrote the Louisville election contest case which held that the 1925 election held in that city was void for widespread frauds. He bitterly denounced "an inner circle of practical men" who had used sharp practices in the election.

His opinions read more like novels than legal documents. He stated his cases in terms understandable to the laymen. He had been on the court 2 months when a case from Pulaski County arose involving a provision in a deed providing for "good care and treatment of a black horse named Dick."

HELD SANE ACT

It was contended that this provision alone showed the man was mentally deficient. Ignoring the customary procedure of citing a lot of legal precedents, LOGAN wrote the opinion in simple language, and the only outside volumes used were a Bible and the book, Black Beauty. He used these books as authority to show that sane men loved horses, and that the peculiar clause was the act of a rational man.

Later, in a will contest, an attack was made because the maker was an old man, citing no proof to show specific acts of mental deficiency or insanity. LOGAN answered this argument with the words:

"Let not this court write that age dries up the fountains of wisdom. The old have wisdom the young know not of."

Early in 1929, prompted by a small group of personal friends, LOGAN decided he wanted to go to the United States Senate. He announced his candidacy early. Many politicians had wanted him to run for Governor, an office he never desired.

DOUBTED CHANCE TO WIN

There was a feeling that no Democrat had much chance for the Senate that year. The State had voted 176,000 for Hoover in 1928, and there was a Republican administration in power at Frankfort. The attitude of most Democratic politicians was that LOGAN would make a good candidate, but they doubted the ability of any Democrat to win.

He was given the party nomination without opposition. When time for the fall campaign was on, LOGAN wrote his own itinerary. His first speeches were to be in the mountains of southeastern Kentucky, where his opponent, JOHN M. ROBSION, was especially strong.

Seldon R. Glenn, now collector of internal revenue; the late Allie W. Young; and William F. Klair warned LOGAN against the trip. "Stay out of there," they counseled. "Let sleeping dogs lie. You'll stir up those mountain Republicans and you'll be beaten by 50,000 in that district alone."

He gave them this answer:

"The people of every section of Kentucky have a right to see the man who wants to represent them in the Senate. I'm going up there and see those people. I believe I can sell them a good bill of Democratic goods."

The results proved LOGAN, not the politicians, right. He came within an ace of carrying Harlan County, and when the returns from the mountain sections of the State alone trickled in from the November election, the Republicans knew they had taken a drubbing at the hands of the soft-spoken Brownsville-Bowling Green lawyer whose nasal twang had captivated them.

His victory over ROBSION for the Senate in 1930 paved the way for a series of unbroken Democratic victories in the State that have continued up to the present time.

Once in the Senate he soon attained considerable notice by his defense of David S. Barry, Senate sergeant-at-arms, who was hauled on the carpet for writing in a current magazine that "all Senators and Representatives are not crooks."

Barry had attempted to defend public officials from the cynical observation that "all public officers are crooks" in the opinion of LOGAN, but the Senate removed Barry, who died shortly afterward, brokenhearted.

He became an active Roosevelt supporter upon the latter's elevation to the Presidency. In 1936 he was a candidate for renomination to the Senate and was opposed by the powerful State organization of Governor Chandler, which backed former Senator J. C. W. Beckham for the post.

Few knew it at the time, but in 30 counties of the State LOGAN had no active campaign management. Politicians shunned the task or were soon dulled into a sense of inactivity by promises from the opposition. Then Logan rose to the occasion, took his campaign direct to the people.

He began a series of Saturday radio speeches that were classics. The fight seemed hopeless to many in the Senator's own headquarters, but on Thursday night before the August 1936 primary election, he whispered to a friend at Frankfort sitting next to him:

"I'm going to win this fight, as God be my judge, and show these politicians at Frankfort that a fight can be won without their aid."

Win, he did. The victory was narrow, but he emerged on top in the closest contest of his long career.

He enjoyed running for public office and never forgot a face or name. During repeated attempts to get him out of the way or shelved into a lifetime judicial position, there were those who believed that his final decision would be against the change, because they knew of his desire to meet people.

BROTHER NOMINATED

LOGAN'S political prowess was still recognized in the State this summer. Both major Democratic candidates for Governor sought his support. His answer was:

"My brother is a candidate for auditor of public accounts. I shall take no part in the race for Governor, unless one side or the other fights my brother. I shall construe that as a declaration of war against me."

The result was that his brother, David A. Logan, was nominated without serious opposition.

The Mammoth Cave National Park project first originated in his mind 30 years ago. He nursed the project alone many years before selling it to civic groups in the State. It is now a reality.

During the recent session of Congress he sponsored an administrative court bill to make decisions of administrative bodies subject to judicial review. The measure still is pending.

For years the Judge hair was a heavy black, and shaggy like a horse's mane. He permitted this extra growth of hair to be cut only a few years ago—as signs of gray began to appear about his temples.

LOVED BROWNSVILLE

Judge LOGAN always held a tender spot in his heart for Brownsville and his native county of Edmonson. He made few speeches in his career that did not contain complimentary references to Brownsville and Edmonston County, though he had long since moved away. Nevertheless, Brownsville was always home to him.

For 30 years every Democratic campaign in Edmonson County was closed by the Judge or Mills at Brownsville on election eve. It did not matter what the speakers' bureau of his party said, he always asked for and got Brownsville as his final assignment.

There he felt at home, for he knew practically every man, woman, and child in the county and most of them were his friends. There was no surprise when it became known that he had asked that his remains be interred there.

Senator LOGAN was no stranger to other lines of endeavor. He was an active member of the Baptist Church, where he taught Sunday school and had a record of which he was proud—35 years' continuous service at Sunday school without missing a single Sunday.

He was a member of numerous fraternal orders. He took a great interest in the Odd Fellows' organization, and rose to the highest position in that body—international grand sire.

LIBERAL WITH MONEY

He was liberal with his money to a fault. No beggar ever left LOGAN without a piece of change in his pocket, even if the Senator or Judge as he was best known here had to borrow from a friend to accommodate the one seeking aid.

Recently Judge LOGAN was offered a post with a New York law firm which would have paid him financially many times the salary of a Senator. He never accepted the offer, but he wrote an acquaintance:

"I have no desire to leave Kentucky. Few people know it, but the greater portion of my adult life has been given to Kentucky. I do not intend to let them down now. My friends live there. I love the State and its people. I have no desire for money, only enough to pay my bills."

His philanthropies were many. Many an orphan boy and girl received an education at LOGAN'S expense. He made no show of the matter, and would always remark to friendly critics who urged him to be more careful with his money, that "money is only a means to an end. I have no desire to accumulate money."

MEMORIAL RESOLUTIONS ON THE DEATH OF SENATOR M. M. LOGAN

MARVEL MILLS LOGAN was born in Edmonson County, Ky., on January 7, 1875, and on October 3, 1939, in the city of Washington,

suddenly, though peacefully, passed to his eternal reward. He died in harness, just as he would have chosen to do. His was an active life and eminently successful. It is a long, tortuous climb for a poor boy to make from the hills of Edmonson County to the United States Senate. MILLS LOGAN made it only by hard work, application to duty, efficient, conscientious public service, and the full and complete confidence of his fellowmen. His is a record of worthy and inspirational achievement which could well be used as a textbook in our public schools. He followed the star of his ideal from boyhood to the grave.

His long public life is too full of noble deeds to receive more than mere mention here. Suffice it to say that as county attorney of his native county, assistant attorney general, attorney general, judge of the court of appeals, and United States Senator he served with great credit to himself and honor to his State and Nation. He was devoted to the public interest and his death has left a vacancy among the leading citizens of the Commonwealth and caused a loss which we all deeply deplore.

In the fall of 1927 he was one of the moving spirits in the organization of the Agoga Bible Class of the First Baptist Church of Frankfort, Ky., and was its able teacher until called to Washington in the early part of 1931. As a Bible student and teacher he had few equals. He was fearless in his interpretation of the Bible, though generous toward those who might differ with him.

As simply and serenely as he had met the duties and responsibilities of each passing day, he faced the frontiers of the other world with the confident assurance of a satisfied traveler at his journey's end.

A beautiful thought which may well have possessed him in the last solemn hour is aptly expressed by the poet:

"When the long day's tramp is over,
When the journey's done,
I shall dip down from some hilltop,
At the going down of the sun,
And turn in at the open door,
And lay down staff and load,
And wash me clean of the heat of the day,
And the white dust of the road."

As a slight token of the friendship, affection, and high regard in which Senator LOGAN was always held by the members of this class, this expression of our appreciation has been prepared and is now offered as a heartfelt, though inadequate, tribute to a beloved teacher and citizen of the Commonwealth.

We extend to Mrs. Logan and the other members of the family our sincerest sympathy, and commend them to Him "who doeth all things well" with the assurance that in the afterwhile "all will be made plain." How fittingly your husband and father could have exclaimed in the language of St. Paul:

"I have fought a good fight, I have finished my course, I have kept the faith. Henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, shall give me at that day."

We, your committee, recommend that this memorial tribute be spread upon the records of the class, and that a copy thereof be transmitted to Mrs. Logan.

Respectfully submitted.

T. M. JONES,
D. E. WESTMORELAND,
HENRY HULETTE,
Resolutions Committee of Agoga Class.

[From the Park City Daily News, Bowling Green, Ky.]

M. M. LOGAN

The unexpected death early today of Senator M. M. LOGAN removes Bowling Green's most distinguished citizen. Well known throughout the Nation and enjoying some fame in various foreign countries, Senator LOGAN was outstanding as a jurist, statesman, fraternalist, churchman, and a citizen.

One of his accomplishments was achieving a position of trust and honor as the head of the Independent Order of Odd Fellows. A notable characteristic was his devotion to church and Sunday-school attendance and to church activities. His record as a citizen and the head of a family was exemplary. As a jurist he was imbued with the rare qualities of humor, foresight, legal knowledge, and tolerance, which led to his advancement to the highest judicial position in his native State. And as a Senator he continued to serve his constituency and his Nation in a manner above reproach.

MILLS LOGAN will long be remembered in southern Kentucky, even after national appreciation of his extremely creditable record has faded under the crush of passing events. For from a humble beginning, this Edmonson County boy advanced to a position of public trust, public appreciation, and public confidence rarely achieved in the history of the State.

Memory of his ideals, his accomplishments, and his sincere devotion to his duties will form a lasting memorial in the minds of the friends and neighbors who knew him best.

[From the Louisville (Ky.) Times of October 3, 1939]

KENTUCKY LOSES LOGAN

Senator M. M. LOGAN'S ability and engaging qualities made him widely popular among Kentuckians. He made his mark as attorney general and thereafter he was established in Kentucky politics.

He was a capital campaigner and a useful man in office. His health had not been good recently, but it was not supposed that he would not live out his term as an active Member of the Senate, to which he was twice elected.

His death is a loss to the administration inasmuch as he was a new dealer, although not invariably a supporter of the President, and never a rubber stamp.

Because of the state of the world and the state of the Nation the quality of the man who succeeds LOGAN is of great importance.

[From the Kentucky Post, Covington, Ky., of October 3, 1939]

A VALIANT PUBLIC SERVANT PASSES

Both State and Nation have lost a rugged and outstanding figure in political life in the death of Senator MARVEL MILLS LOGAN. He had the admirable trait of standing firmly for a principle and once he had decided on what he believed to be right, he was a vigorous champion of the cause.

Senator LOGAN as the junior representative of Kentucky in the upper House of Congress was a stanch supporter of the Roosevelt program since 1933. While he may not have agreed always with all the President's proposals, he was in the main an administration man. The Senator championed the Roosevelt program and the New Deal because he was a man of the plain people. He believed in those principles that meant true democracy rather than merely being a Democrat in party name.

Senator LOGAN'S strong forte was the law. Many of his friends thought he should have gone far in the Federal judiciary, for he was never happier than when delving into the Constitution and the principles and interpretation of the law. It was for this reason that Senator LOGAN did noble duty as a member of the Senate Judiciary Committee. It was he who had sponsored a measure to create a new Federal judicial district in Kentucky.

The State of Kentucky has lost a valiant servant in the passing of Senator LOGAN; the Nation has lost a champion of what was reasonable and just.

[From the Western Recorder, Louisville, Ky., October 12, 1939]

PASSING OF SENATOR MARVEL MILLS LOGAN

Hon. MARVEL MILLS LOGAN, the junior Senator of Kentucky, died suddenly in Washington, D. C., on October 3, 1939. He served the Commonwealth of Kentucky in many responsible positions, among them chief justice of the highest court of the State. He was known in Washington for his interest in Christian work. He taught regularly a large class of men in the Bethany Baptist Church. He was an active member of the committee on public relations, appointed by the southern Baptist convention. He was ever ready to defend the Christian faith. No other man in public life has had so fine a record for unbroken Sunday-school attendance as Senator LOGAN. His going is a loss to our Baptist cause in Washington.

RUFUS W. WEAVER.

WASHINGTON, D. C.

Logan-Walter Bill An American Magna Carta

EXTENSION OF REMARKS
OF
HON. EDWIN A. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 12, 1940

STATEMENT BY RICHARD A. STADERMAN

Mr. EDWIN A. HALL. Mr. Speaker, I have never seen as near-unanimous support for a bill among many groups of our people as is the case with the Logan-Walter bill, S. 915 and H. R. 6324. It is the product of many years of effort by the American Bar Association, especially by an important leader, Col. O. R. McGuire, chairman of the association's committee on administrative law as well as general counsel of the American Good Government Society of Washington, D. C. The bill has won endorsement of many State and city bar groups, as well as of the American Federation of Labor, the National Grange, and numerous trade associations of businessmen. A rule has just been obtained in the House, assuring debate of the bill on the floor of the House this session.

The Logan-Walter bill, although introduced by gentlemen of the Democratic Party, is a commendable nonpartisan effort which deserves the support of all forward-looking persons, regardless of party, if we are to avoid dangers such as many foreign nations succumbed to. I urge everyone to read House Report 1149, Senate Report 422, and Senate Document 145,

all of the present Seventy-sixth Congress, for a detailed explanation of the bill.

As part of my remarks, I include an article by Richard A. Staderman, of New York, president of the American Good Government Society, Washington, D. C. A large part of the Staderman article was printed in the New York Herald Tribune and numerous court and legal papers throughout the United States, and I quote the full text here:

[From the American Good Government Review, Washington, D. C.]

AMERICAN GOOD GOVERNMENT SOCIETY COMES TO SUPPORT OF THE LOGAN-WALTER, OR ADMINISTRATIVE-LAW BILL—DECLARES IT TO BE AN AMERICAN MAGNA CARTA AND LIKENS IT TO THE PETITION OF RIGHT

WASHINGTON, December 3.—The American Good Government Society has just announced through its president, Richard A. Staderman, that it was supporting the American Bar Association's administrative law bill, popularly known as the Logan-Walter bill, as an American Magna Carta as important to American business, labor, and farmers as the English Petition of Right. This announcement came on the heels of the ceremony at the Library of Congress where there was deposited for the duration of the war one of the original copies of the famed English Magna Carta, declared to be the spiritual ancestor of the Declaration of Independence and the United States Constitution.

President Staderman, in making the announcement, stated that:

"The recent deposit of a copy of the original Magna Carta in the Library of Congress is now known to every newspaper reader in America. In view of frequent arbitrary action of literally scores and scores of Federal bureaus and other administrative agencies, it is advisedly that the American Good Government Society has thrown its support behind the Logan-Walter administrative-law bill, now before Congress as America's Magna Carta for the protection of the individual citizen in his struggle against the ever-tightening grasp of the tentacles of the Federal Government upon his everyday life.

"Every citizen of the United States may at any time be wronged by arbitrary commands of somebody in any one of the myriad agencies of the Federal Government. A farmer, for example, may sell a bushel more than the quota of wheat imposed by some tin god of the A. A. A. Another farmer may compute the details of his acreage reduction so as to seed one furrow more than an erstwhile political hack, now a political busybody inspector, thinks should have been seeded.

"Businessmen are constantly harassed by members of a veritable army of Federal inspectors roving the country over. Perhaps there is a vague word in an advertisement, or perhaps a druggist has neglected to put on the label of a patent medicine what should be obvious to a child, namely, 'in event of severe abdominal pains, call your physician.' For such omission the druggist is liable to criminal prosecution and to seizure of the entire stock of his allegedly offending product.

"A laborer may prefer to be represented by a union to which he has belonged for 20 years, or he may prefer to bargain individually and have nothing to do with any union. Through a combination of loose statutory language plus bureaucratic decisions, often conflicting and equally vague, this worker has lost rights which he thought guaranteed by the United States Constitution. As things now stand, some petty chieftain of bureaucracy may threaten the employer with dire consequences if such employer bargains with that worker individually or with one particular union instead of another. The employer may be told to bargain with some other union officered by ambitious and professional agitators who have never worked in his shop. He is told to obey, or else.

"Suppose—and the supposition is based upon actual occurrances—a petty bureaucrat with an ounce of brains and a pound of authority decides to crack down on you or your neighbor for some alleged violation of a statute or secretly adopted rule. Depending upon the details, you may be jailed, you may have valuable property confiscated, or you may be assessed sufficient fines and penalties to throw you into bankruptcy in establishing that the denial of your rights was without basis in either valid law or in fact. When the average resources of more than 52 percent of the corporations in this country are $50,000 or less, there is no comfort in the fact that you must pay an average of $20,500 to contest some bureaucratic rule before the N. L. R. B., for instance.

"Even if you had the money to contest the case, you may have to contest rules which you never even heard about until the proceedings are brought against you. This has actually happened in a case now pending in the Department of Agriculture concerning the establishment of a sugar quota for certain farms in Puerto Rico. Other instances could be cited. An agency says there is a rule under which it intends to decide the case on the evidence which it has gathered. If you ask to see the rule, you are told that it is confidential and cannot be seen or maybe that it is no rule at all but only an order for interoffice guidance. Denied access to the rule and without knowledge of the case you have to meet, you nevertheless go through the motions, appear before sundry examiners, frequently without any legal training, and finally you get the case before some of the chief officials of the agency who, likewise, are often without legal training and too busy with their routine executive duties to even read the record of the case.

"Such a system of law administration is not a legal system. It is administrative absolutism run riot. Washington is overrun by lobbyists seeking to protect the rights of their clients, often through devious methods but by the only methods which seem to be effective in many instances. Yet just as frequently these lobbyists may be endeavoring to secure benefits and advantages for their clients to which they are not entitled under either the law or the facts.

"Anyone who expects a politician appointed to public office, where he can and does exercise uncontrolled legal authority, to cease to be a politician is simply too credulous to be without a guardian.

"The Federal administrative law bill—that is, the Logan-Walter bill—is intended to 'regulate the regulators' and to 'govern the governors.' It is the result of some 7 years of intensive study by the best brains in the legal profession of America. It has been approved by numerous legal, business, and labor organizations, and by leaders in agricultural areas. It has been unanimously approved by both the Senate and House Judiciary Committees of the United States Congress.

"We are aware that a reportedly communistically controlled legal organization is opposing the bill and that the bureaucrats in control of a bar organization of Federal workers are likewise opposed. These doubtless would be against the Sermon on the Mount because they did not write it, and would very probably object to the Ten Commandments.

"The American Good Government Society, entirely nonpolitical and interested solely in the betterment of government regardless of partisan politics, believes that the Logan-Walter bill should be enacted into law at the coming session of the Congress, and the society is behind the bill with all the power it has."

Forward in '40

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Senator STYLES BRIDGES, Republican, of New Hampshire, before the Bergen County Men's Republican Club, Hackensack, N. J., Thursday evening, April 4, 1940, at State Street School, as follows:

The last few months have been inspiring ones to me. During that time I have visited over 40 States in all parts of our country—North and South, East and West. I have talked to farmers, workers, housewives, manufacturers, business and professional men in all parts of the country. In nearly every case, I found a new optimism and fresh hope in the hearts of those to whom I talked. In these conversations I found a greater unity of opinion as to what needs to be done than I had dared to hope for. They have redoubled my faith in the American people and my belief that they will forge ahead once more if the Government gives them the chance.

The subject I have adopted for this speech indicates my views. Forward in 1940 should be our motto—and I firmly believe we will move forward to a Republican and an American victory this fall. In the middle 1920's our economic machine was running so well that we became careless. The American people began driving at a reckless speed and ignoring the red lights. In 1929 we crashed. The damage was not irreparable, but we were badly shaken and bruised and bewildered. In 1932 we decided that we needed not only a new chauffeur and different rules of the road, but a new car of a different model, run by a different fuel, taking us along new roads leading in new directions. These we have had. We have tried a Government-controlled economy, kept going by Government spending, taking us in the direction of a collectivist state. We have taken what we supposed were detours, and became caught in the quicksands of bureaucracy, crushing debt and taxation that threatens to become confiscation unless we save ourselves. We have tried short cuts, but have discovered that there is no easy road to recovery. We have tried tempting panaceas, but learned that there is no substitute for private enterprise, for an expanding economy of plenty, with private work creating increasing wealth, financed by private investment. Today the American people are increasingly aware of the dangers of the road along which they have been traveling, but increasingly united in the steps that must be taken to reestablish a genuinely free economy that will enable them to return and advance along the highway of solvency, self-government and freedom—the highway of true progress.

The trend became apparent with the elections in 1938, and has grown steadily stronger. Even some of those who support vast Government spending are realizing that taxation must fall upon the poor as well as the economic royalists.

"Of all the Federal revenue collected in 1929, 30.2 percent came from taxes bearing primarily upon consumption, such as excise taxes, customs, tobacco, and liquor taxes. * * * By 1938, the percentage of taxes, based primarily upon consumption, was 51.3 percent."

These figures are not published by the Chamber of Commerce in the hope of scaring American workers. They appear in the Legislative Program of the C. I. O. for 1940. In the fiscal year 1929, the Government collected something over $4,000,000,000 in revenue. In 1938, its revenues soared to well over six and a quarter billion dollars.

On the basis of these percentages a little over $1,218,000,000 of Federal revenue in 1929 represented taxes on consumption. In 1938, collections from taxes on consumption rose to nearly $3,202,000,000. That is an increase of nearly $2,000,000,000 in taxes levied, not upon the incomes of the wealthy, but upon every man, woman and child in the country in the added cost of everything they buy. And the New Deal talks of creating increased purchasing power! The man on the street is awakening to the price that he is paying for New Deal extravagance.

The American worker is realizing more and more clearly that he suffers from wasteful Government spending, not only through the taxes which he himself must pay but through the taxes levied upon business, in less employment and lower pay.

"One of the great drags upon industry during the past 7 years has been the burden of taxation that has been imposed upon big and little business. There are literally thousands of industrial and commercial concerns which have been forced into red figures by the taxes which have been imposed on flagging business. It is not a problem for labor alone, nor industry and agriculture alone. It is a problem which must be solved by an awakened citizenship. It is a problem to be discussed at every fireside.

"The hour has come for Americans to recognize the dangers that confront them and to join in a united effort to halt the drift toward national insolvency and industrial collapse, and to extend opportunity for the Americans of today and tomorrow."

That was the American Federation of Labor speaking, in a statement issued after a meeting in Miami, Fla., last February.

The only way to ease the tax burden is by a thorough revision of the tax structure. The only way to halt the drift "toward * * * insolvency and collapse" is "an immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus, and eliminating extravagance to accomplish a saving of not less than 25 percent." That is how the Democrats promised to do it in 1932. That is how the Republicans will do it when they take office in 1941.

If we are to go forward in 1940, if we are to safeguard our national currency, we must call a halt to subsidizing the rest of the world through purchases of foreign silver and gold at the expense of the American taxpayer. To make them outright gifts of hundreds of millions each year through paying artificially high prices to corner so much of the world's supply of these metals that we make them increasingly useless as currency and begin to wonder if we shall not have to give some of it back again is sheer madness.

During 1 week in February we paid $55,216,779 for foreign gold. That was an increase of $600,000 over the previous week. It represented payment for over a million and a half ounces of foreign gold at $35 an ounce. Before President Roosevelt raised the price of gold it was $20.67 an ounce. The cost of that same amount at that price would have been slightly over thirty-two and a half million dollars. In other words, we made an outright gift of over twenty-two and a half million dollars to other nations just in our purchases of their gold during 1 week alone.

According to the Treasury statement of March 25, our gold hoard was valued at nearly $18,400,000,000. That is an increase of more than $3,300,000,000 in 1 year.

The same thing has been happening on a less extensive and less expensive scale in regard to foreign silver, for which we have paid more than a billion dollars. We paid $70,000,000 in 1939. Thirty-one million, or nearly half of this, went to Mexico—the same Mexico which, having already expropriated American oil property so successfully, announced the confiscation of another million and a half acres of American property only last week. This time she has hit upon a newer and, to her, a better way. Previously, when land was expropriated under the Mexican agrarian law, the companies were able to put in a claim for compensation to the Agrarian Claims Commission, established in November 1938. This time, by claiming that the land, to which the companies concerned have held an undisputed claim for between 35 and 40 years, was never held legally in the first place, Mexico has apparently barred all hope of any compensation. Once more she is biting the hand that has done so much to feed her people.

The New Deal was going to raise prices generally by devaluing the dollar. It was going to raise our holdings of silver to one-fourth of our holdings of gold. It has succeeded in doing neither. Meanwhile the President has the power to raise the price of gold still further. He has the power to bring about inflation overnight with the hoards of silver and gold we now possess and whatever amounts we may acquire in the future under the monetary powers surrendered to him by Congress. The sooner we stop chasing the gold and silver rainbows, the sooner Congress reasserts its constitutional control over our currency, the better not only for us but for all the world.

If we are to go forward in '40, we must take the United States Government out of competition with its citizens. For 7 years private enterprise has lived in uncertainty as to what field was to be invaded next by an administration which was elected to office in 1932 on a platform which promised to take the Government out of competition with private industry.

One of the latest fields to be threatened by Federal invasion is that of life insurance. Few things are perhaps more remarkable in the development of our country during the last 40 years than the growth of life insurance. Between 1890 and 1937, our population increased 100 percent, while the amount of American life insurance in effect increased 2,500 percent. Today nearly one out of every two people in the United States has a life-insurance policy. One hundred million of them are either holders or beneficiaries of policies. Americans own 65 percent of all the life insurance in the world. And nearly two-thirds of all American life insurance is owned by people with incomes less than $5,000 a year. The story of the rise of life insurance in the United States is the story of the labors of the American people, of their thrift, and of their determination to provide for their own future and for that of their loved ones.

Today, this great American institution which has served the people so well is menaced by the shadow of political domination.

Already various plans have been devised by new dealers for putting the Government into the insurance business. The hearings before the Temporary National Economics Committee were used as a sounding board for the proposal of several possible plans for so-called burial insurance which would require compulsory contributions from every man, woman, and child in the country, and which, like the money collected for social security would be lumped in with the general funds of the Treasury. Last November Senator WAGNER proposed a voluntary plan by which insurance would be sold at post offices under the direction of the Social Security Board.

The pattern which the New Deal would follow, as revealed by the hearings before the T. N. E. C. and the various plans proposed, is aimed at the substitution of Federal control of life insurance for the State regulation which has heretofore proved so successful. The Securities and Exchange Commission would be given control of insurance investments, while the Social Security Board would sell insurance in competition with private companies. Voluntary plans would later be replaced with compulsion, while Government ownership and political control of the vast reservoir of funds of all types of insurance seem to be the ultimate goal.

Few people object to a fair and impartial investigation. If increased regulation is proved necessary, then let us have it. But the American people are unwilling to place the savings they have invested in insurance at the mercy of political bureaucrats in Washington. This will not happen under a Republican administration. Nor will any American citizen live in fear that his business or his job may be taken over by the Government.

If we are to go forward in 1940, the flow of funds into private industry must be released. What is needed is not vast Government spending but private spending that will go into expansion of industry, creating productive jobs at productive wages. New dealers are fond of saying that so long as private industry cannot or will not do the job it must be done by the Government. Private industry can and will do the job if it is given half a chance. In addition to easing the burden of taxation, legitimate investment in industry must be encouraged.

First and foremost, the administration of the Securities and Exchange Commission must be drastically changed. Here is an agency, presumably established for the prevention of fraud in the issuance of securities which has been given powers so broad as to make the five men who compose the Commission virtual dictators of the financing of private enterprise. No one knows just what interpretation or new regulations may be made tomorrow.

Since the first of the year many new restrictions have been clapped upon the issuance of new securities. The Commission has begun the operation of the death-sentence clause of the act of 1935. There is no telling how far this will go. Moreover, despite the vast amount of detailed information already required, the Commission demanded early last month that all registered utility holding companies and their subsidiaries make available complete information on all purchases and contracts entered into with any corporation, the aggregate value of which is $10,000 or more a year. This unprecedented move involves not only the utility companies themselves, but amounts to an investigation of the activities, methods of doing business, and contract arrangements of corporations who are outside of the utility field, but who supply services, merchandise, and equipment for utility concerns. Upon inquiry, the utilities were told that the Public Utility Holding Company Act empowered the Commission to investigate utility expenditures and to pass on their propriety and the conditions under which they were made.

In this latest move, by assuming authority over all utility expenditures and contracts, the S. E. C. will be able to affect the business of companies which do not come under the Utility Holding Company Act.

If the flow of new capital into industry is to be encouraged, the cost of registering securities with the Commission must be lowered. The amount of information required of all companies should be reduced to a minimum and the harsh penalties for omission modified. The Commission should be limited to the function for which it was created by Congress—the protection of the public. It should make new investments, and thus new business and new jobs, easier and not erect new barriers to industrial expansion.

The tremendous cost of creating a job is not generally realized. In the electric utility industry the cost is approximately $45,000 for each employee. In the steel industry, it is at least $11,000 per worker. The average in manufacturing industries is approximately $8,000 per employee, while the average for all businesses is $4,000.

Before new jobs can be created for the unemployed, the businessman must have the money with which to create them. Unless he has sufficient profit at the end of the year, he can scarcely be expected to expand. Unless the investor feels reasonably certain of a chance to make a profit, he can scarcely be expected to put his money into that business. The lack of profit and the lack of new investments are two of the greatest factors responsible for the failure of business to expand and to absorb the unemployed. They help to explain the phenomenon which new dealers seem unable to understand of idle savings in the banks, idle men walking the streets while factories are operating far below capacity. A Republican administration can and will bring them together in the only way in which this can be accomplished, by making it worth while for the investor to invest and for the producer to produce and to hire more men, by making possible a fair return for the risk involved and a fair reward for endeavor.

If we are to go forward in 1940 we must adopt a program of true reciprocity in our trade with other nations. The American people are in favor of stimulating trade through treaties with foreign countries, but they are awakening to the fact that the present program as it has been administered has not only failed to accomplish all that was promised for it, but has done far more harm than good to our economy.

We were told that under a program of multilateral treaties we would gain not only from the treaties to which we ourselves were parties but from those concluded between other nations. On March 1 of last year 10 of the 20 countries with whom we had treaties at the time had in effect several treaties apiece which were bilateral in character, thus excluding the United States from any of their benefits. This, added to the devaluation of their currency by a number of these nations, has constituted serious discriminations against the United States. And yet we have persisted in making concessions to all the world, except Germany, while receiving concessions from only one nation with each treaty.

We were told that the reciprocal program was the only way in which to revive world trade and our share of it. According to the Review of World Trade, published by the League of Nations, our percentage in world trade in 1938 was about what it was in 1935, the first year the agreements went into effect. It was 3 percent lower than in 1929 and a tenth of 1 percent lower than in 1932.

By 1938 our export trade was still 40 percent below the 1929 level, and there was less than 2 percent difference between the countries with whom we had signed trade agreements and those with which we had not.

It is true that by 1938 our export trade had increased by 37 percent from the level of 1935. But our exports had increased by more than 42 percent in 1935 from the level of 1932. Thus the rate of increase was greater before the inauguration of the trade-treaty program than it has been since. It is also true that exports to trade-agreement countries increased at a more rapid rate than to those countries with whom no agreements had been signed. However, the nonagreement countries have been and remain our best customers. Meanwhile much of the trade which has bolstered up our exports in the last few years has been in armaments and implements of war.

It is true that our total imports declined between 1935 and 1938. However, the importation of competitive goods, upon which duties have been reduced, particularly in agriculture, has increased, displacing American farms and factories, American farmers and workers.

The American Wage Earners' Protective Conference, the tariff group of the American Federation of Labor, representing millions of our workers, and the National Grange, representing millions of our farmers, have long recognized that if wages and prices are to be raised in this country they must be protected from the competition of cheap foreign labor; that legislation designed to achieve a higher standard of living for our people may be torn down by such competition; and that the increasing inflow of competitive products means the transfer of American jobs abroad at a time when we have over 9,000,000 unemployed at home.

They demand adequate protection of their means of livelihood. They do not ask for embargo duties achieved through logrolling, but an adequate protective tariff which will prevent the inflow of foreign goods below the American cost of production. They demand ample hearings before treaties are drawn, and a chance to ratify them through their representatives in Congress.

New dealers claim that Congress is incapable of wisely performing this function which was entrusted to it by the Constitution. That is but another way of saying that you, the people of New Jersey and the other States, are incapable of choosing representatives who will legislate in the interests of the Nation as a whole. If Congress is unworthy to pass on these treaties, once they have drawn, then it is unworthy to write legislation. I do not believe that. The American people do not believe it. The Republican Party will return to the American people through their chosen representatives a voice on this question which so vitally affects their lives.

If we are to go forward in 1940 we must remain at peace. That is first and foremost in the hearts of men and boys, of fathers and mothers, of sweethearts and wives, of Americans everywhere. In nothing are they more united than in their prayerful determination to avoid involvement in another European conflict. Some of them are apprehensive lest by word or deed Government officials lead those on one side to hope for our entry into the war and the other side to hostility and perhaps to reprisal. They approved the passage of the cash-and-carry amendments to the neutrality law. But that approval was not merely a desire to give assistance to the Allies; it was a desire to keep American ships and American citizens out of the zone of possible danger. Their first concern is not to give aid to one side or to hinder the other, but the protection of America. They are heartily in favor of a strong national defense; but they do not see why we should go 300 miles out to sea to look for trouble, which is what we are doing today in attempting to patrol this area.

This is not a policy of isolation, but rather one of strict neutrality. It is not to shut one's eyes to the effect of the conflict in Europe upon us, but to realize that we cannot govern the conduct of war abroad or dictate the peace at its conclusion. It is not to be indifferent to the fate of the democratic ideal in the world, but to realize that the only place we can assure its preservation is here at home. It cannot be enforced upon others, even by going to war, as we learned to our sorrow once before. We can inspire by the force of the example of the success of the democratic ideal, as we have done before. We can use our influence at the conference table, once peace has been restored, to achieve the democratic solution of the problems with which the whole world is faced—provided we are prepared to do so first by having achieved the democratic solution of our problems at home.

If we are to go forward in 1940, we must have a rebirth of the spirit of enterprise and industry, of initiative and hard work, by which men have forged ahead since time began. Conditions are changing, as they have since the dawn of history, and as they will continue to do until the end of time. But these fundamental laws of progress remain the same, and no man or men can change them. Progress cannot be achieved for a people by the Government, but the Government can and must make it possible for the people to go forward in their own right. There never has been a time when individual labor and enterprise and talent were of no avail, and there never will be. The American people are not lacking in these characteristics. These qualities have been thwarted; they have been repressed in recent years by Government folly; but they are still there, awaiting release.

If we are to go forward in 1940, we must have a rebirth of that spirit of unity and tolerance by which Americans have always advanced through voluntary cooperation. A people incapable of that cooperation must fall prey to a dictatorship, under which unity is enforced through regimentation. Those who would take us toward statism do not believe that the American people are capable of solving their problems through working together of their own free will. I say to you that they are.

If we are to go forward in 1940, we must have a rebirth of the courage that dares to overcome all obstacles, the faith that persists in spite of temporary set-backs and discouragement, the vision that sees the America that we and future generations will build. Americans are not lacking in that courage. They have not lost in their faith. They are not without a vision of the things they can and will achieve. But that spirit must reassert itself anew.

We will go forward in 1940, and embark upon a crusade to carry forward once more all that is symbolized to us in the one word "American." To that crusade the Republican Party is humbly dedicated. We will not fail.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

LETTER FROM THE STARK TRI-COUNTY BUILDING TRADES COUNCIL

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

STARK TRI-COUNTY BUILDING TRADES COUNCIL,
Canton, Ohio, April 8, 1940.

Representative JAMES SECCOMBE,
House of Representatives Office Building, Washington, D. C.

DEAR SIR: The Stark Tri-County Building Trades wish to protest the awarding the paving of streets, sewers, and other projects that require skilled workmen to W. P. A. All the work that has been done by W. P. A. has not been up to the standard that you would expect of a contractor and the cost has been as great; and if there is any damage to the property, the contractor has to stand for the same. W. P. A. does not pay any attention to the damage and the property owners stand double expense.

We feel that the contractor would absorb all the men that is working on projects and would pay the prevailing wage and the worker would have more than just an existence.

We also believe that the present set-up of the W. P. A., under military authority (Colonel Harrington), is leading us into dictatorship.

Prior to June 1939, the Works Progress Administration carried on its operations on a basis which was acceptable to the building trades movement, building craftsmen being employed at prevailing wage rates in effect with respect to the various trades. However, even then, contractors in the construction industry were deprived, at least to some extent, of business to which they were entitled because the Government engaged in building construction which, under normal circumstances, would have been let to private contractors.

In June 1939 a deplorable condition was imposed by the Federal Government on skilled construction workers when it eliminated a provision for paying the prevailing hourly wage rate to craftsmen employed on W. P. A. projects, and substituted therefor a subnormal wage. As a result, skilled craftsmen were suddenly forced to accept wage slashes of more than one-half less than the prevailing wage rate, while hours were lengthened to 130 per month or refuse to work under such conditions. This resolved itself into a situation decidedly injurious to the wage structure in the construction industries and so jeopardized wage agreements that union members in the building trades had no other alternative than to decline to accept such employment, be it private or Government, at such drastic reductions in their hourly wage rate.

We now propose that construction and remodeling work planned by the city be restored to the basis which was in effect prior to the time that Government agencies injected themselves into the construction industry, as a continuation of such practice will result in demoralization, not only for craftsmen engaged in the industry, but also contractors who encounter difficulty in maintaining their establishments because of the Government's entrance into the construction field formerly controlled by private enterprise.

The system of Government participation in building construction under W. P. A. served a useful purpose in providing employment for the unemployed in the building trades so long as the prevailing hourly wage rate remained in effect. However, willing submission to such drastic wage reductions as decreed by Government order in June of 1939, would have resulted in nullifying working agreements as in effect between private contractors and unions, or would have resulted in an impossible situation where members belonging to the same union would have worked at wage rates more than 50 percent in variance.

You will very likely realize that such a situation as outlined above automatically bars union craftsmen from obtaining employment on projects set up under W. P. A. auspices. These are conceded to be the better craftsmen, but in justice to themselves and principles involved, are unable to accept employment on W. P. A. at wages less than half that paid in private industry.

In Toledo a cursory survey of the proposed painting project that calls for the painting of 13 bridges as set up under W. P. A. auspices would involve an estimated cost of $23,000, according to interested parties identified with the painting industry while the total cost if done under private bid would be approximately $3,000 lower than that estimated as total cost under W. P. A. The private award would of necessity provide full coverage and payment into various funds as protection in case of injury to workers, and likewise would make employees eligible for unemployment insurance, old-age insurance, etc., as set up as of benefit to the workers engaged in private industry. This coverage would not be provided under a W. P. A. set-up.

We believe it appropriate that municipal government, as well as other branches of local government, should revert to their normal manner of operation and disassociate themselves from paternalism and Government supervision in functions purely of a local nature. We believe construction and remodeling projects should be let on a merit basis to qualified and responsible contractors, so that an early return to normalcy in the city's business relations shall be assured.

We are particularly interested in that construction and remodeling programs calling wholly for skilled craftsmen be awarded to private contractors on a basis calling for responsible bids. This will not only help to alleviate the unemployment situation of skilled craftsmen who have faced a winter of unemployment, but will likewise result in saving industries for the city that are not finding it difficult to survive. Contractors who have spent a lifetime building their business are looking forward to the time when they, too, will be enabled to reestablish themselves as living and integral parts of the community.

Either private industry must be given an opportunity to revitalize itself and resume the normal ways of conducting its business with reemployment of the unemployed, or the relief rolls will continue to be crowded, with its attendant heavy cost to the city and nothing saved except that further chaos will result.

While there is an apparent difference in the cost to the city if the painting of the bridges and other forms of construction and remodeling is let to private contractors rather than under W. P. A. auspices, yet it must be recognized that the welfare of its citizens who pay taxes is dependent to some extent upon the city returning to a normal manner of functioning, keeping also in mind the welfare of its industries.

We believe our request as contained herein is deserving and proper and will serve the best interests of the community. We urge that it be given fullest consideration.

Cordially and sincerely,

STARK TRI-COUNTY BUILDING TRADES,
E. C. SAGER, *Secretary.*

Farm Credit Administration

EXTENSION OF REMARKS
OF
HON. WALTER M. PIERCE
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 12, 1940

STATEMENT BY THE SECRETARY OF AGRICULTURE

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued yesterday by the Secretary of Agriculture:

UNITED STATES DEPARTMENT OF AGRICULTURE,
Washington, D. C., April 11, 1940.

Secretary Wallace today issued the following statement:

The public is entitled to accurate information concerning the real issues in the controversy over the Farm Credit Administration and the farm-credit situation generally.

Efforts have been made to persuade everyone interested that the Department of Agriculture's supervision of F. C. A. and support of proposals to help debt-burdened farmers threatens to wreck the credit structure of agriculture.

In the light of experience gained since the Farm Credit Administration became a part of the Department of Agriculture, I can say that certain farm-credit policies in the past have been unsound and, if continued without modification, will cause serious losses to land banks and farmer borrowers. The real threat to our farm-credit structure is to go on as we have been going.

The Department of Agriculture now is taking steps to place the credit policy of the Farm Credit Administration on a sound basis.

A foreclosure crisis last fall clearly revealed that the land banks have been following unsound and "soft credit" policies, and this situation is further revealed by the appallingly large number of their borrowers who are unable to meet their present payments.

The revaluations and reappraisals made in 1933 and 1934 helped put farm credit on a sounder basis. But experience has demonstrated that these revaluations and reappraisals were not realistic enough. There were "soft" reappraisals. In thousands upon thousands of instances, high valuations bailed out the creditors but left the farmers with debts they can never pay. To use a banking term, this sort of thing might have made the position of banks and insurance companies more liquid, but it failed to help the farmers and the credit structure of agriculture.

Some of the figures on the farm-debt situation are more revealing than loose statements about "private enterprise" and "soft credit":

(1) The land banks and land bank commissioner have foreclosed over 85,000 loans since 1933, including voluntary deeds to avoid deficiency judgments; last year more farmers were foreclosed by the land banks than by any other class of creditors holding farm mortgages.

(2) More than 250,000 loans, or approximately 25 percent of the total, are now delinquent; the delinquency increased steadily in 1937, 1938, and 1939.

(3) The stock in 60 percent of the 3,700 national farm-loan associations has been wiped out or so badly impaired that loans no longer can be made through the associations.

It should be emphasized that these losses of capital investment are not the fault of the officers or directors of the national farm-loan associations; nor is it the fault of the associations that they have been unable to perform the services for which they were originally intended. The lending policies of the Farm Credit system have not been realistically related to the national and international situations which have affected farm income, but, as I stated, this was not the fault of the local associations. Governor Black, of the Farm Credit Administration, already has taken steps to meet—as well as he can with existing authority—the situation shown by the figures I have quoted and by other pertinent facts.

Wherever possible he has reorganized to keep loans on a sounder basis; and this has relieved some of the heaviest debt pressure. About 50,000 loans, most of which were unwisely written for relatively short-term repayment, have been reamortized. New repayment programs have been worked out for several thousand of the most heavily indebted farmers. Some of these borrowers will make payments according to their income or crop yield. The Farm Security Administration is being asked to help those who are in a very bad financial condition but who still have a chance to pay out.

But these measures cannot solve the underlying problem. In the light of experience there are at least three basic needs. The first of these is revision of interest rates. They should and can be lowered from original contract rates ranging between 4 and 6 percent. Instead of weakening, this action will strengthen the land banks since debtors will be better able to pay.

Second, the responsibility for losses on loans should be placed where it belongs—on the Federal land banks which make the

loans and not on the national farm-loan associations, most of which have become insolvent. As I have stated, most of the losses to the associations were incurred not because of poor management or the attitude of its directors or officers but because of factors largely beyond their control.

A third need is the elimination of the requirement that the borrower acquire stock amounting to 5 percent of his loan. In practice, this requirement has added 5 percent to the amount borrowed and has injured the debtor. A farmer needing $1,000, for example, had to borrow $1,050. Because of this situation the farm debt of the country is $111,000,000 higher than it otherwise would have been. This $111,000,000 of added debt has not protected the associations. The quicker we get rid of this pseudo-cooperative feature of the present system, the better off we will be.

I feel sure that when farmers understand what is going on they and the organizations which represent them will support moves for sound credit and away from soft credit. When land-bank interest rates are high other creditors are in a position to charge farmers rates that are too high, regardless of how many farms are foreclosed as a result. The reasons for much of the opposition to low interest rates to farmers should be clearly understood by farmers and by the general public. With the increase in tenancy threatening the stability of agriculture and with the European war complicating efforts to raise farm income, I cannot understand how genuine friends of agriculture can continue to oppose efforts to place the whole farm-credit situation on a better basis.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

TELEGRAM FROM DUBILIER ELECTRIC CORPORATION

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram received by me from a constituent:

WASHINGTON, D. C., *April 4, 1940.*

Hon. CHARLES A. EATON,
Washington, D. C.:

The Cornell Dubilier Electric Corporation and its subsidiaries, of South Plainfield, N. J., employing over 1,600 people, have been ordered by the National Labor Relations Board on March 29, 1940, to reinstate 36 employees whose term of service was less than 6 months and dismiss 36 employees whose terms of service is over 3 years.

An old contract with the American Federation of Labor expired in 1939 after running for 2 years, and a new contract entered into March 1939 for a period of 2 years has been ordered canceled. This contract of March 1939 was entered into only after the most intensive collective bargaining and a week's work on the part of a conciliator from the Bureau of Conciliation of the Department of Labor.
